

## Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

## Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

## Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

The date shows when this volume was taken.

All books not in use for instruction or research are limited to four weeks to all borrowers.

Periodicals of a general character should be returned as soon as possible ; when needed beyond two weeks a special request should be made.

All *student* borrowers are limited to two weeks, with renewal privileges, when the book is not needed by others.

Books not needed during recess periods should be returned to the library, or arrangements made for their return during borrower's absence, if wanted.

Books needed by more than one person belong on the reserve list.

## ARTICLES, &c.

Adams, Prof., on the Training of Teachers, 464.  
 American Universities, 255.  
 Appointments and Vacancies, 25, 70, 182, 216, 250, 293, 326, 384, 425, 462, 495.  
 Armstrong, Prof., on Early Lessons in Science, 257.  
 Bevan, J. O., on the Equipment of the Teacher, 501.  
 Bowen, H. C., on Histories of Literature, 139.  
 Brain Functions, New Light on, 28.  
 British Academy, 379.  
 Butler, Prof., President of Columbia, 253.  
 Cambridge Conference, 496.  
 Cholmley, R. E., on Rewards and Punishments, 457.

## COLLEGE OF PRECEPTORS:—

General Meetings, 70, 328.  
 Meetings of Council, 29, 76, 143, 177, 234, 257, 297, 332, 425, 458, 505.  
 Pass Lists:—  
 Teachers' Diploma Examination.—  
 Christmas, 1901, 77; Midsummer, 1902, 335.  
 Certificate Examination.—Christmas, 1901, 97, 144; Midsummer, 1902, 345, 426.  
 Professional Preliminary Examination.—March, 1902, 187; September, 1902, 426.  
 Lower Forms Examination.—Christmas, 1901, 111; Midsummer, 1902, 365.

Commercial Linguists, Our Need of, 74.  
 Co-operative Secondary Schools, 73.  
 Coronation Honours, 292.

## CORRESPONDENCE:—

Annual Ceremonial—W. H. Collins, 296.  
 Bodleian Oration—E. A. Phipson, 497.  
 College of Preceptors and the Education Bill—J. O. Bevan, 295; H. W. Eve, 296.  
 Educationists' Opportunities—S. Bate-man, 296.  
 "Empirical"—J. J. Findlay, 457, 498.  
 Half-Yearly Meeting—J. O. Bevan, 379.  
 Member's Friendly Remonstrance—C. B. Guttenberg, 497.  
 Needs of Small Endowed Schools—T. Allen, 498.  
 Private Schools and Public Competition—Principal, 458.  
 Registration, The Order in Council on—Observer, 143.  
 Registration and the Supply of Teachers, A. M. Inghis, 223.  
 School Inspection—Observer, 18.  
 Sliphod English—E. Latham, 380.  
 Teachers' Registration Council—T. Allen, 296, 380.  
 Tenure of Head Masters—Head Master, 457.  
 Training of Secondary Teachers—Mag-ister, 19; A. M., 20; S. A. Burstall, 252.

Education, University School of, 465.  
 Education Bill, Head Masters' Associa-tion on, 75.  
 Education Gossip, 24, 69, 183, 216, 251, 294, 327, 385, 424, 463.  
 Endowments and Scholarships, 215, 250, 291, 292, 325, 326, 383, 384, 423, 462, 495.  
 Equipment of the Teacher, 501.  
 Euclid and Geometry, 289.

EVENING MEETINGS at the College of Preceptors. Papers read at:—  
 Histories of Literature: by Mr. H. C. Bowen, 139.  
 The Teaching of Elementary Mathe-matics: by Dr. J. J. Findlay, 184.  
 The Feelings as a Factor in School Training: by Mr. J. L. Paton, 219.  
 Notes on American Universities: by Prof. Knight, 255.  
 The Teaching of Geography: by Mr. L. W. Lyde, 463.  
 The Equipment of the Teacher: by the Rev. J. O. Bevan, 501.

Feelings as a Factor in School Training, 219.  
 Findlay, Dr. J. J., on the Teaching of Elementary Mathematics, 184.  
 Fixtures, 23, 69, 181, 214, 249, 291, 325, 383, 423, 461, 494.  
 Geography, Teaching of, 463.  
 Germany, University Life in, 424.  
 Gordy, Dr., on a University School of Education, 465.  
 Hamilton, A., on Modern Languages in the Army, 386.  
 Histories of Literature, 139.  
 Honorary Degrees, 182, 250, 291, 325, 494.  
 Ideal University for London, 294.  
 Knight, Prof., on American Universities, 255.

## LEADING ARTICLES:—

Cambridge Conference, 450, 489.  
 Country and the Bill, 373.  
 Education Bill, 169, 209.  
 Education Bill in Committee, 281, 317.  
 King's College, London, 282.  
 Multiplication of Universities, 241.  
 Nature Study, 318.  
 Registration of Teachers, 59, 127.  
 Secondary Problem, 449.  
 Tenure of Assistant Masterships, 59.  
 To be or not to be—"Scrapped": 415.  
 Training Problem, 14.  
 Weary Waiting, 13.

Literary Items, 25, 183, 216, 251, 293, 327, 385, 424, 463, 495.  
 London Mathematical Society, 40, 90, 158, 198, 234, 270, 306, 518.  
 Lyde, L. W., on the Teaching of Geo-graphy, 463.

MATHEMATICAL QUESTIONS AND SOLU-TIONS:—Aletrop, 87, 156, 195, 232, 267, 304, 336, 515; Arnold, L., 393; Bate-man, H., 196, 268, 303, 395, 516; Bates, G. N., 304; Beyens, Prof., 156; Bhat-tacharyya, Prof., 88; Biddle, D., 88, 195, 231, 268, 269, 337, 435, 437, 477, 515; Biggs, R., 195; Blaikie, J., 87, 156, 196, 304, 394, 436; Blythe, W. H., 267, 304; Carse, L. W., 87; Cuyler, Prof., 476; Chakravarti, Prof., Byomkamesa, 232; Chartres, R., 87, 155, 197, 231, 267, 436, 515; Christie, R. W. D., 38, 87, 156, 195, 231, 269, 303, 305, 336, 394, 436, 476, 516; Clayton, R. B., 232, 269; Cochez, Prof., 338, 436; Collins, M., 89; Constable, S., 87, 303; Cullen, J., 88, 303, 476; Cumm-ingham, Lieut.-Col., 38, 87, 88, 156, 195, 231, 267, 303, 336, 337, 393, 394, 395, 435, 476, 516; Curjel, H. W., 155, 156, 196, 232, 267, 269, 394, 435; Daniel, V., 232, 476; Davis, R. F., 37, 196, 267, 268, 303, 393, 516; De Vries, Prof., 88, 196, 267; Dew, H., 269; Durell, C. A., 232; Editor, 88; Elliott, Prof., 38; Escott, Prof., E. B., 336; Frizer, T., 38; Garrett, C. A. B., 395; Geuse, Prof., 39, 475; Goodwin, H. B., 395; Gordon, A., 87; Greenstreet,

W. J., 195, 267; Griffiths, I., 267, 304; Hardy, G. H., 87, 476; Harris, H. W., 437; Heppel, G., 231, 516; Heyden, A. F. van der, 155, 475; Hills, G. F. S., 394, 516; Hillyer, C. E., 268; Hjorsn, J. P., 196; Hudson, Prof., 231, 336; Huntington, E. V., 232; Isserlis, L., 395; Knowles, R., 156, 232, 303, 338, 395, 435; Laisant, C. A., 39, 475; Lamic, 88; Lawson, J. S., 337; Lemaire, J., 268; Lemone, Prof., 435; MacColl, H., 37, 155; Mackenzie, J. L., 196; Macleod, J., 515; MacMahon, Major P. A., 38; Marks, Constance I., 38, 267, 337, 437; Martin, A., 394, 435; Mitcheson, T., 304; Morley, Prof., 195, 267; Morrice, G. G., 195; Muir, Dr., 38, 336, 515; Muirhead, R. F., 231; Nanson, Prof., 89, 195, 196, 232, 267, 268, 336, 395, 435, 437, 475, 515, 516; Nesbitt, A. M., 37, 156, 195, 232, 267, 268, 337, 395, 436, 475, 515; Neuberger, Prof., 38, 89, 196, 435, 476; Omega, 437; Orchard, Prof., 232, 337, 436; Peachell, F. H., 88; Peele, T., 303, 395, 435; Peirce, B., 475; Peiris, M. R., 155, 393; Plummer, H. C., 37; Poole, A. W., 269, 303, 337, 338, 516; Prescott, J., 37, 88, 231, 232, 303, 338, 435; Quero, 87; Rau, R., 155; Reny, L. E., 155, 156, 232, 268, 338, 516; Reeves, F. W., 155; Roach, T., 155, 195, 196, 232, 268, 338, 435, 436, 516; St. Clair, J. C., 196; Salutation, 88; Sanjana, Prof., 37, 88, 89, 155, 196, 232, 267, 303, 305, 336, 337, 395, 437, 475, 477, 515, 516; Scott, T. C., 231, 515; Simmons, T. C., 87, 196; Sircorn, Prof., 37, 155, 336; Symons, E. W., 196; Taylor, C., 435; Taylor, H. M., 336, 475; Taylor, J. H., 232, 336, 395, 475; *θ β*, 155; Third, J. A., 37, 196, 267; Trachtenberg, H. L., 195, 338; Tucker, R., 88, 156, 195, 232, 268, 304, 338, 435, 437, 477, 516; Webster, H. W., 303, 304; Whitehead, R. F., 233, 394; Whitworth, W. A., 196, 303, 435; Wiggins, T., 38, 155, 195, 269, 393; Wol-stenholme, Prof., 305; Worthington, W. R., 475; Yonigman, C. E., 196, 303, 477, 515; Zerr, Prof., 157.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)  
Principal—H. R. REICHEL, M.A.

The Session began on October 1st, 1901. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## WESTFIELD COLLEGE (FOR WOMEN),

HAMPSTEAD, LONDON.

THREE ENTRANCE SCHOLARSHIPS, of the value of from £40 to £50 a year for two years, will be offered for competition at an Examination to be held on June 24th and 25th, 1902.

Candidates must not be under 18 years of age, and must have passed the Matriculation Examination of the University of London. The successful candidates will be required to come into residence in October next, and to read for the B.A. or B.Sc. Degree of the University of London. Entrance forms and full particulars may be obtained from the Secretary, Miss S. M. SMER.

## BIRKBECK INSTITUTION,

BREMS BUILDINGS, CHANCERY LANE, E.C.

## OXFORD LOCAL EXAMINATIONS.

LONDON COMMITTEE (BOYS).

The Regulations for the Senior, Junior, and Preliminary Examinations for 1902 can be obtained from the Secretary,

E. LAYMAN, Esq.,  
1 Garden Court, Temple, E.C.

ALLEYN SCHOOL, EAST DULWICH.—The Office of HEAD MASTER will shortly be vacant, and the College Governors of Dulwich College invite applications therefor.

Candidates must be Graduates of some University of the United Kingdom, and must not be over forty years of age. The emoluments consist of a fixed stipend of £100 per annum, a sum of not exceeding £100 per annum in lieu of a residence, and a capitation payment of £1 a year for each boy attending the School. The School now contains 600 boys, and is administered under schemes of the Endowed Schools Commissioners. Application in writing, stating age, Degree, and other particulars, together with Testimonials, limited to four, must be sent to the CLERK, not later than 29th January, 1902.

Further particulars can be obtained on application to the CLERK, Dulwich College, London, S.E. No personal canvassing will be allowed.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON).

YORK PLACE, BAKER STREET, W.

The Lent Term begins on Thursday, January 16th. The College provides instruction for students preparing for the University of London Degrees in Arts, Science, and Preliminary Medicine; also instruction in subjects of General Education. There is a Training Department for Teachers, a Hygiene Department, and an Art School.

Students can reside in the College.

Full information from the PRINCIPAL.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON).

YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The Session for 1902 opens on Thursday, January 16th. The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

A Course of Saturday Morning Lectures for Teachers on School Hygiene will begin January 18th.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

### THE INCORPORATED

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER, M.P.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss A. YELLAND.

Further particulars may be obtained on application to the PRINCIPAL.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS,

EDINBURGH.

Principal—Miss M. E. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. Several Heriot Bursaries of £30 are offered in October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

FRENCH AND GERMAN CONVERSATION in Home of Family of Swiss Gentlepeople recommended by English ladies. Comfortable Rooms, good Cooking. Beautiful University town and good climate.—CLOTHE, La Clairière, Route de Frontenex, Geneva.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS proposes to appoint a SECRETARY, who will not necessarily be required to devote his whole time to the work. Salary £150. Apply at once to Mr. W. H. D. ROUSE, Rugby School.

WANTED, an Original ESSAY (about 2000 words) on the present Educational Crisis. Elementary Teachers' opinions. State terms to EDUCATIONALIST, c/o. Deacon's, Leadenhall Street, E.C.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

## JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Headmasters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## TO WOMEN GRADUATES.—A

SCHOLARSHIP of £25 is offered to a Student entering the Maria Grey Training College for Women Teachers in Secondary Schools in January, 1902. Preference given to a London B.A. Apply—Miss ALICE WOODS, Salisbury Road, Brondesbury, N.W.

Just Published. Price 5s. net.

## A NEW PORTUGUESE AND ENGLISH GRAMMAR AND COMMERCIAL HANDBOOK.

Concise and complete with every detail of grammatical precision. In Six Parts. Comprising Grammar, Commercial Terms, Correspondence, Dictionary of Phrases and Abbreviations, Exercises, Idioms, and Questions. Meets a long felt want.

By JOHN C. MASCARENHAS, F.C.S., &c. (Royal Portuguese Academy), Professor and Examiner in Portuguese, &c. Copies may be had of the Author by remitting 5s. (post free) to 21 Rutland Road, Upton Park, London; or of the Publishers, HIRSCHFELD BROS., 13 Farnival Street, E.C.

FREE.

## PROFESSOR DENNEY AND MR. LYDDON-ROBERTS,

Principals of the Normal Correspondence College, have, through the courtesy of the College of Preceptors, issued the following

### FREE GUIDES.

- |   |           |
|---|-----------|
| 1. A.C.P.                                     | 64 pages. |
| 2. L.C.P.                                     | 76 "      |

## A CONCISE DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES.

By F. E. A. GASC.

## BELL'S SCIENCE SERIES.

NEW VOLUME. Crown 8vo, 3s. 6d.

## ELEMENTARY INORGANIC CHEMISTRY.

By JAMES WALKER, D.Sc., Ph.D., F.R.S., Professor of Chemistry in University College, Dundee.

*The best and most complete Set of Works on Grammar.*

*Suited to all Forms and Classes.*

## Works by C. P. MASON, B.A., F.C.P., LATE FELLOW OF UNIVERSITY COLLEGE, LONDON.

- 177th—182nd THOUSAND. Price 3s. 6d., cloth.  
**ENGLISH GRAMMAR, including Grammatical Analysis.**  
The aims kept in view throughout have been not only to set before the learner, in the plainest and most exact form, the facts and laws of English Grammar, but to give him clear and broad views of the structure of our language, and of the functions and history of its component parts.
- 62nd—66th THOUSAND. Price 3s. 6d., cloth.  
**A SHORTER ENGLISH GRAMMAR, with copious and carefully graded Exercises, containing the pith of the "English Grammar," with fewer minutiae and more exercises.**
- 127th—136th THOUSAND. Price 2s., cloth.  
**OUTLINES OF ENGLISH GRAMMAR for the use of Junior Classes.**
- 135th—144th THOUSAND. Price 1s., cloth.  
**FIRST NOTIONS OF GRAMMAR for Young Learners.**  
Price 2s. cloth.
- PRACTICE AND HELP IN THE ANALYSIS OF SENTENCES.**  
This work contains a careful exposition of the mutual relations of the constituent elements of sentences, with illustrations and exercises, and a large selection of miscellaneous examples of all grades of difficulty, accompanied by indications of the proper mode of analysing them.
- CODE STANDARD ENGLISH GRAMMAR, adapted to the requirements of the successive standards of the new Code. Five Parts.**  
Price 1s., cloth.
- ENGLISH GRAMMAR PRACTICE.**  
This work consists of the Exercises appended to the "Shorter English Grammar," published in a separate form. They are arranged in progressive lessons in such a manner as to be available with almost any text-book of English Grammar.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

# PROFESSOR MEIKLEJOHN'S SERIES.

*Just Published. 470 pp.+viii. Price 2s. 6d.*

## A SCHOOL HISTORY OF ENGLAND.

BY

**J. M. D. MEIKLEJOHN, M.A.,**

Professor of the Theory, History, and Practice of Education  
in the University of St. Andrews;

AND

**M. J. C. MEIKLEJOHN, B.A.,**

Sometime Adam de Brome Exhibitioner, Oriel College,  
Oxford.

1. This book is intended for scholars of from fourteen to sixteen years of age.

2. It is quite a new book, and not an abridgment of Professor Meiklejohn's "New History," to which, however, it is an easy stepping-stone.

3. The book contains clear and convincing Maps and Diagrams.

4. Dates, Chronicles, and Summaries (to aid in preparation for Examinations) are appended to every reign.

5. Full Genealogical Tables, explaining all difficult points, are also given.

6. The book also contains an Index of Historical Terms, together with references to the pages in the text where they are treated.

7. It comes down to the end of Queen Victoria's reign.

8. The book concludes with a chapter on the growth of the Empire and the Imperial instinct in the British Colonies. In this chapter reference is made to the chief recent events in the development of our Empire, to the annexation of the two new South African Colonies, and to the constitution of the Australian Commonwealth.

*Full particulars and Specimen pages may be had from the  
Publisher.*

*107 pp.+viii. Price 1s.*

## THE BOOK OF THE FRENCH VERB.

By **J. DE CUSANCE.**

This little book is a complete Grammar of the French Verb, in its assertive, interrogative, and negative forms. It also contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

**A Short Geography**, with the Commercial Highways of the World. **Nineteenth Edition.** Crown 8vo, 196 pp. . **1s. 0d.**

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid.*

"Clearness and conciseness exemplified."—*The Private Schoolmaster.*

**Europe**: its Physical and Political Geography, with Chapters on Latitude and Longitude, Day and Night, and the Seasons. With a Double-Page Map in Colour. By **M. J. C. MEIKLEJOHN, B.A., F.R.G.S.** 96 pp. . . . . **6d.**

**Africa**: its Geography, Resources, and Chronicle of Discovery up to 1897. By **M. J. C. MEIKLEJOHN, B.A. Oxon.** **Third Edition.** Crown 8vo, 76 pp. . . . . **4d.**

**The British Colonies and Dependencies**: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By **M. J. C. MEIKLEJOHN, B.A.** **Third Edition.** Crown 8vo, 96 pp. . . . . **6d.**

**A Short History of England and Great Britain**, B.C. 55 to A.D. 1890. **Fourteenth Edition.** Crown 8vo . . . . . **1s. 0d.**

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature: and we find, though not with the usual emphasis, the Professor's expertness in the use and disposition of type."—*Education.*

**Outlines of the History of England and Great Britain to A.D. 1890.** **Fifth Edition.** Crown 8vo, 84 pp. . . . . **6d.**

**The Caxton History Reader.** **TUDOR PERIOD.** With Biographies of Leading Persons. Small crown 8vo, 233 pp. . . . . **1s. 4d.**

**A Short Grammar of the English Tongue**, with Three Hundred and Thirty Exercises. **Twelfth Edition** . . . . . **1s. 0d.**

**A Short History of the English Language.** Crown 8vo, 76 pp. . . . . **1s. 0d.**

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. . . . . **1s. 6d.**

**A New Spelling Book.** With Side Lights from History. **Eighth Edition.** Crown 8vo, 152 pp. . . . . **1s. 0d.**

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian.*

**One Hundred Short Essays in Outline.** By Prof. **MEIKLEJOHN.** **Fourth Edition.** 110 pp. . . . . **1s. 0d.**

"This is undoubtedly one of the most useful books for pupil teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher.*

**Fables, Anecdotes, and Stories for Teaching Composition**, with Outlines and Hints on Letter Writing. **Fifth Edition.** Crown 8vo, 160 pp. . . . . **1s. 0d.**

**A First French Book.** By **J. DE CUSANCE.** With a Preface by Professor **MEIKLEJOHN.** Crown 8vo, 120 pp. . . . . **1s. 0d.**

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News.*

**A Short Arithmetic.** By **G. A. CHRISTIAN, B.A.,** and **A. H. BAKER, B.A.** Crown 8vo, 196 pp. . . . . **1s. 0d.**

With Answers, **1s. 6d.**

"For boys and girls competing for the various County Council Scholarships nothing better could be desired."—*The Teachers' Aid.*

"It is one of the best Short Arithmetics ever produced. A great feature is the large number of examples culled from the various public examinations."

*The Teachers' Monthly.*

# METHUEN'S JUNIOR SCHOOL BOOKS.

Edited by **OLIVER D. INSKIP, M.A., LL.D.**, Head Master of Framlingham College, and **W. WILLIAMSON, B.A., F.R.S.L.**, Head Master of the West Kent Grammar School, Brockley, S.E.

A New Series of Class-Books suitable for Candidates preparing for the Oxford and Cambridge Junior Local Examinations, and for the Lower and Middle Forms of the Public Schools.

Each volume is the work of a Master who has had considerable experience in teaching his subject, while special attention has been paid to the arrangement of the type and matter, which is as clear and concise as possible. The books contain numerous Examination Papers, and, where the subject requires it, are fully illustrated. In scholarship, in excellence of printing, and in lowness of price, this series will be found inferior to no other.

**A Class Book of Dictation Passages.** By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over 200 large Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark, St. Paul's School.

## BLACKIE'S LITTLE FRENCH CLASSICS

Messrs. BLACKIE & SON have the pleasure to announce a new Series of French Books under the above title, the aim of which is to provide students of French literature with well printed selections over a wide range in a cheap and handy form. Each book consists of from 32 to 40 pages, uniform in size with the well known Junior English Classics, and contains, in addition to the French Text, a brief Introduction and short Notes. The price is **Fourpence**. Complete list on application. The first books are as follows:—

**SELECTIONS FROM RABELAIS.** Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

**MOLIÈRE—SCENES FROM LE MÉDECIN MALGRÉ LUI.** Edited by W. J. CLARK, M.A., Ph.D.

**LESAGE—SELECTIONS FROM GIL BLAS.** Edited by H. W. ATKINSON, M.A., of Roseall School.

**MADAME DE SÉVIGNÉ—SELECT LETTERS.** Edited by Miss M. F. VERNON HARCOURT, of Notting Hill High School.

**PROSPER MÉRIMÉE—MATEO FALCONE, &c.** Edited by J. E. MICHELL, M.A., of Westminster School.

## The Educational Times.

### Weary Waiting.

No one will be surprised to hear that the schoolmasters—as Mr. Moss said, on their behalf, at the Head Masters' Conference—find it “weary waiting” for promised legislative reforms, which they are invited to discuss over and over again in every succeeding year, but which are never seriously pressed forward in the House of Commons. The Chairman of the Conference on secondary training, whose proceedings we report this month, used a still more vigorous expression when referring to the continued procrastination of the Government in the matter of the Teachers' Register. The profession has been steadily demanding registration for many years past; the Consultative Committee has shown how simply and systematically it may be worked; and yet no one who understands what is going on from day to day has any confidence that we are near to the fruition of our hopes. The speaker to whom we have referred calls this prolonged delay a crying shame, and he is entirely in the right of it. Still, there are some who maintain that the present Government are destined to do great things for education, and that their supporters would not suffer them to throw away the opportunity of something like heroic legislation in 1902. We shall see. We have certainly no desire to end the record of 1901 in a pessimistic spirit.

Although the last year has produced outwardly no development in the educational situation, and there has been much to increase the despondency of the less sanguine in educational matters, a real advance has, nevertheless, been made. The ideas of educationists with regard to the character of future reform, and particularly of principles which should underlie and inform the Secondary Education Bill, have had time to permeate larger masses of the people. One need only watch the columns of the daily Press to be satisfied as to this. No gathering of teachers or conference relating to educational questions passes unnoticed; and—most hopeful sign of all—it is seldom that a prominent politician addresses the public without dealing with the subject of education. It is true that many members of Parliament preserve an open mind as to the exact form

which the Education Bill should take. In some cases this suggests a vagueness with regard to the issues at stake, which is not far removed from ignorance. In the real educational world there has been substantial progress towards a conception of true ideals; and schoolmasters will be found much better prepared to criticize and appreciate the Government's forthcoming Bill than they were a year ago.

There was a good attendance at the Head Masters' Conference held at Cambridge on December 20 and 21. The guests of the University included sixty head masters and seventy assistant masters. The proceedings of the Conference prove indisputably the steady growth of the interest taken in professional discussions by the head masters of the great non-local schools. In their desire to make the Conference interesting to all, the Committee fell into the unfortunate mistake of including too many subjects in the agenda. There were twelve different questions to be discussed, two of which had three subdivisions. There were also some instances of loose drafting, which led to a waste of time at the meetings. It is clear that so many subjects, ranging from the Education Bill down to newspaper reports of a certain class of trials, cannot be profitably dealt with in two meetings. In the interests of the influence which ought to attach to the resolutions of the Conference, it is hoped this error will be in future avoided.

The first and most important subject discussed was the constitution of the future Secondary Education Authority. Apparently the resolution proposed and adopted was designedly framed so as not to raise any question as to the future of School Boards or the control of elementary education. It is as follows:—

That the new Local Authority for Secondary Education should be so constituted as to secure for each locality the advantages of higher education, and that, with this view, it should not be constituted by an election *ad hoc*. A majority of its members should be members of the County Council, and it should include an adequate proportion of persons having a practical knowledge of secondary education.

This is an adoption of the mode in which the present Technical Instruction Committees are constituted. Unfortunately the resolution affords the Government little assistance towards helping them to a policy on the most critical part of their new Bill. It is an open secret that the local control of elementary education is the one matter which prevents their education proposals taking a definite shape. Many good

Conservatives are desirous of preserving some of the elements of parish representation now on School Boards, and it is thought this may be done by means of the correlation of powers between District Councils and County Councils. It is to be regretted that the Head Masters' Conference was not a little bolder in facing the graver issues of the controversy.

### *The Training Problem.*

At the present time, when the conditions of establishing a Register of Teachers by the Board of Education are shortly to be laid before Parliament, the question of providing for the training of teachers for secondary schools is a matter of pressing importance. In order to make good their claim to be regarded as members of a learned profession, teachers must be prepared to submit to the same conditions as are imposed for membership of the other learned professions—conditions that include a period, more or less prolonged, of preliminary training. At present it certainly cannot be affirmed that this condition has been fulfilled in the case of the secondary teacher, nor to more than a limited extent in the case of the public elementary teacher. It is to be regretted that the discussion on the subject of training which took place at the College of Preceptors on December 13 was conducted almost entirely by representatives of training institutions, while the opinions of those most nearly concerned—namely, the heads of schools, on the one hand, and assistant masters and mistresses, on the other—were not elicited. The two letters which we print in our correspondence columns make up to some extent for this deficiency, and serve to account for the reluctance on the part of teachers to avail themselves of the means of training hitherto provided.

We are afraid it must be admitted that the demand for specially trained teachers for secondary schools does not at present exist to any great extent, whether for reasons indicated by "Magister" or for others which have not yet been put forward; and as long as men of good academic standing, though without professional training, are preferred to men with training, though with inferior academic attainments, intending teachers can scarcely be expected to make the necessary sacrifice of time and money in order to acquire that which is apparently but lightly esteemed. The case of the trained teachers for the public elementary schools is not precisely in point; for it is generally admitted that what is done in the denominational training colleges is not so much to train students in principles and methods of teaching as to provide for young men and women, who have already during their five years' apprenticeship acquired considerable practical experience, that higher and more intimate knowledge of the subjects of instruction which they have not had the opportunity of acquiring in the school. The position of the secondary teacher is the converse of this: he has in most cases already attained a certain standard of knowledge at the university or elsewhere, and is set to gain experience in teaching by actual practice in the school, under the supervision of the head master.

Is it reasonable to expect that the mere setting up of a Register of Teachers (with or without the requirement of training for admission to the register) will of itself entirely

change the situation? It can hardly be assumed, in the present state of opinion, that registration can be made compulsory on those competing for employment, or that boards of governors can be compelled to make it a necessary qualification for the headship of their schools.

We shall hardly be suspected of undervaluing that professional training which the authorities of the College of Preceptors have so long advocated, and which they have endeavoured, at great cost, to carry out in a systematic way. For many years they have provided for acting teachers means of instruction in principles and methods the validity of which they could constantly put to the test in their daily work. The result of their experiment in making provision for more complete and formal training does not give much ground of hope for the success of schemes laid out on similar lines. If circumstances at present make complete formal training impracticable, might not a serviceable substitute be found, if heads of schools and governing bodies would set themselves to provide means of training for their masters in the schools themselves, in some such way as that indicated in the last paragraph of "Magister's" letter?

### NOTES.

OWING to the fact that the proceedings at the reception of the deputation from the University colleges by the Chancellor of the Exchequer were private, we can only assume that Sir Michael Hicks-Beach will increase the grants if the Chancellor sees his way to getting the money. At present the total Treasury grant stands at £25,000, distributed among eleven colleges. £4,000 is given to each of the three Welsh colleges. Some of the colleges are known to be crippled by a lack of income, which not only prevents development, but in fact affects the efficiency of existing departments. Sir Michael Hicks-Beach, while promising to continue existing grants for the present, emphasized the point that the Exchequer refused to accept liability for University education in England. He also maintained that the object of these grants was to stimulate local effort, which could only be done by attaching to them conditions as to the raising of local funds. We can understand the hesitancy of the Treasury in view of the uncertain extent of its obligations under the forthcoming reorganization of secondary education. It is time that the noble munificence of Sir Josiah Mason and Mr. John Owens should be imitated by other wealthy men. That Liverpool, Manchester, and Cardiff University colleges should have to stand begging at the door of the Treasury is a disgrace to both Lancashire and South Wales.

At the annual general meeting of the Modern Language Association, held at the College of Preceptors, great prominence was given to the advantages of the "New" or "direct" method of teaching. Most of the speakers testified to the good results attained by its use; and there can be little doubt, when the chief end in view is the speaking of a living language, the method is distinctly preferable to the old. As a matter of fact, the method hardly deserves the name of new, as it has been in vogue for many years past in many private schools and coaching establishments. It has the merit of making lessons more interesting, and brings the

child's intelligence, as well as his already acquired stock of linguistic knowledge, to aid his further efforts. Whether it can produce sound and accurate scholarship remains to be seen; although for the majority of boys this is not so important as the power of conversing freely in another language.

MR. BALFOUR'S speech at the Goldsmiths' Institute was refreshing from the fact that it was free from any pessimistic note. The time, however, has not yet arrived when doubt should be suggested as to the efficacy of a multiplication of technical institutions and teachers to restore British industries to their former position. Owing to the apathy of the race, as well as our Government's, they have not yet been fairly tried. The *post hoc ergo propter hoc* argument is, we admit, not a sound one. In Germany industrial prosperity has, it is true, followed the spread of technical instruction; but in the United States it has existed in spite of a striking lack of provision for technical instruction in schools. Mr. Balfour did well to warn his hearers that technical instruction not grounded on a sound knowledge of principles will never achieve a great success. Lord Roberts, speaking the other day to the Woolwich cadets from a riper experience of life, did not forget to lay stress on the training of character, without which no instruction can be of permanent value. This is, we fear, too little recognized both in schools and in technical institution.

On December 20 about seventy old friends and pupils of Mr. Francis Storr entertained him at dinner at the Holborn Restaurant. The chair was taken by Prof. S. H. Butcher, an old Marlborough pupil, and the company included Sir George Young, Sir Richard Jebb, M.P., Sir Joshua Fitch, Mr. P. A. Barnett, Mr. Oscar Browning, Mr. Basil Champneys, Mr. C. Colbeck, Mr. H. W. Eve, Prof. Gonner, Mr. C. R. Hodgson, Mr. F. S. Marvin, Mr. H. Millington, Mr. W. E. Mullins, L.C.C., Mr. Pogson Smith, Mr. M. E. Sadler, Mr. Arthur Sidgwick, Mr. H. Yates Thompson, Dr. Wormell, and a number of friends and pupils in about equal proportions. Unfortunately, the day selected was that on which the Head Masters' Conference was enjoying the hospitality of Trinity College, Cambridge, or that distinguished body would have been strongly represented. Expressions of regret for enforced absence were very numerous, and included letters from the Bishop of Richmond, the Dean of Canterbury, the Head Masters of Marlborough, Haileybury, Bedford, and Birmingham, Dr. Mahaffy, Dr. W. A. Fearon, the Vice-Provost of Eton, the Rev. A. J. Church, Mr. Gilbert Murray, Mr. Pinches, Prof. Hales, "Ascott Hope," and many others. The speeches testified to keen appreciation of Mr. Storr's work in many directions and to warm personal affection. Several old pupils dwelt on his teaching and influence; not only had he inspired them with literary enthusiasm, but he was the first person, it was again and again repeated, who had taught them to *think*, to examine the grounds of their opinions, and to love knowledge for its own sake. The Chairman and other speakers paid a well merited tribute to the services he has rendered to education in general; it was universally recognized that, in the course of the last twenty

years, there had hardly been an educational movement, whether for the improvement of methods, the training of teachers, or the promotion of *esprit de corps* and professional dignity among them, in which he had not taken a leading part, and borne the burden and heat of the day. Rarely has a more cordial send-off been accorded to a schoolmaster retiring from the active duties of his profession, and rarely has it been better deserved. All joined in wishing Mr. Storr health and energy for the many useful educational activities for which he will now have increased leisure.

MR. CARNEGIE'S offer of £2,000,000 to the Government of the United States, towards the formation of a National University, has not been accepted by President Roosevelt. The gift was to be made in Steel Trust bonds, and Mr. Carnegie stipulated that the bonds should be retained by the Government for a long period. As industrial trusts have been the cause of most labour troubles and political agitation in the United States of recent years, President Roosevelt's decision is easily explained. At the same time, Mr. Carnegie can hardly be expected to create a panic in Wall Street by realizing two million pounds' worth of Steel securities in the open market. The result would be the dislocation of the arrangements made by the Steel Trust for the control of the iron and steel industry. The plum, however, is such a fine one, that some solution of the difficulty will, no doubt, be discovered.

WE understand that the Prince of Wales was greatly impressed during his recent tour by the number of school cadet corps taking part in the reception celebrations in the Colonies. Proposals have been made by the Head Masters' Committee to the Commander-in-Chief, with a view to the encouragement of military drill in secondary schools. It is recognized that in the majority of schools it will be found impracticable to form cadet corps, but it is thought there will be no serious difficulty in arranging for a certain amount of military drill with physical exercises in most schools. As a first step, the Education Department, with the assistance of the War Office, is compiling a manual of drill and physical exercises. If the scheme succeeds, it will be further developed by issuing carbines fitted with Morris tubes, which will enable firing practice to be safely carried on where only short ranges are available. Lord Roberts urges the commanding officers of regimental districts to co-operate with any head masters who desire to encourage the drill and training of boys.

THE latest novel suggestion in education is that all children in schools should be taught how to make a will. It is unnecessary to state that the idea hails from America, where novelties of all kinds soon find some person ready to test them experimentally. When we remember that the will of a minor has no legal effect, the instruction on the subject imparted in schools would not be of much use, unless attendance at continuation classes be made compulsory when the child attains twenty-one. Perhaps the suggestion was made in the interests of lawyers, who are reported to drink, at circuit messes, to the health of the man who makes his own will.

## SUMMARY.

### THE MONTH.

In anticipation of the next Government Bill, a statement has been signed by Cardinal Vaughan on behalf of himself and the Roman Catholic bishops of the Province of Westminster, laying down the principles which ought to guide them on the question of the "control of elementary and secondary education by the County Councils."

1. They take it for granted that the payment of public moneys, whether derived from the rates or the taxes, will be made equitably to the maintenance of all schools fulfilling the educational conditions, irrespective of creed.

2. They consider it essential that there should be placed on the Education Committee of the County Council representatives of the great educational interests that have grown up with the Education Department.

For this purpose it is suggested that each of the school associations should nominate one representative to sit among the co-opted members of the Education Committee of the County Council, one and the same nominee, elected by the school association, to represent the interests of both elementary and secondary denominational schools on such Education Committee.

THE bishops urge that such representation is not sought in order to weaken or control the Local Authority of the County Council, but to secure (a) placing the Education Committee in full possession of the needs, &c., of denominational schools; (b) the removal of friction between the Committee and religious bodies having a stake in the education of the nation; (c) the insurance of the smooth working of the machinery by making the Committee include both voluntary and School Board interests. This consideration is stated to be urgent. The Committee, being the heir of the School Board, will, it is argued, be inclined to favour its own schools unless the inclination be adjusted by the presence of representatives of denominational schools. The absence of such representatives is stated to have already been prejudicial in the matter of technical education grants. The Education Committee will, say the bishops, be the educational citadel of each county, and, unless great Christian educational bodies are represented on it, these bodies will be constrained from the first to "take up an attitude of well-founded fear and suspicion." This will "inevitably lead to the introduction into County Council elections of organized politico-religious animosities and contests." The document concludes with the following resolutions:—

3. The bishops consider it essential to the natural growth of Christian schools throughout the country that the clause in the Scotch Education Act of 1872, Section 67, which recognizes the increase of such schools, regard being had to the religious belief of the parents, should be introduced into the English Bill.

4. They hold that it is an essential condition to the existence of their schools that the managers shall retain in their hands the right of appointment and dismissal of teachers; while, at the same time, public bodies responsible for public money may naturally claim a representation of the school management for sanitary, financial, and scholastic purposes, in a proportion not exceeding one in three.

5. In the case of scholarships granted for secondary education, they consider that these should be tenable in every school in the district recognized as efficient.

6. They desire that there shall always be an appeal from the Educational Authority of the County Council to the Board of Education at Whitehall.

THE DUKE OF DEVONSHIRE has addressed a letter to Sir John Hibbert, calling attention to his statement in a letter to him that "in the Education Bill introduced last Session, the Education Committees which it constituted were invested with powers of making schemes, from the operation of which no schools were excepted by the Bill," and to the expression of a fear that such schemes might operate to the detriment of non-local schools. Having stated that he understands Sir John to refer to the schemes mentioned in Clause 1 of the Education Bill, 1901 (No. 1), his Grace goes on to say that those schemes are for the constitution of Education Committees, and are entirely different in their character from the schemes which may be made under the Charitable Trusts Acts or the Endowed Schools Acts. It was not the intention of the framers of the Bill to confer on any Local Education

Authority, by scheme or otherwise, any power of exercising control over, or interfering with, the affairs of any school, except those established, maintained, or aided by the Authority. In case of aid, a Local Authority would, of course, have power to attach conditions to the aid, but a school which did not receive aid would remain independent. Such, says the Duke, was the intention of the Bill, and he has been advised that such was its effect.

On December 13 the sixth annual distribution of prizes was held at the South-Western Polytechnic, in Manresa Road, Chelsea. Mr. Sidney Webb (Chairman of the Technical Education Board of the London County Council) presided, and, in opening the proceedings, said London was far ahead of any other city in the world in regard to the provision in the evening of education in its widest sense for young men and women from the age of sixteen. Mr. Tomlinson, the Principal of the Institute, said, although the volume of work of both day and evening classes had rapidly increased, the increase had been much greater in the day than in the evening classes. He expressed gratification that some place had been found for the Polytechnic in the reconstituted University of London. Prof. Rücker, Principal of the University of London, said:

There were magnificent educational opportunities, and there was magnificent educational material, in London. But all the endeavours that were being made were scattered, and the object of the University was to focus them into one strong effort in order that they might advance as a well ordered army towards one common end. If that could be achieved—if they could knit the colleges and polytechnics into one great educational machine—they might hope to accomplish something worthy of the metropolis and of the Empire. The aims of the University of London would be, above all, practical. They should aim at having great technical institutions which would prepare men for their work in life, and, though they would not merely set up difficult standards for students to pass, they nevertheless hoped that all those who came within the range of the University would acquire something beyond the mere knowledge which enabled them to take their parts in life. He hoped the relations between the polytechnics and the University would become closer, but the University had a difficult task to perform, and they must be given some little time.

EARL SPENCER sent a letter to a meeting of the Education League at Northampton on December 17. Being prevented from taking the Chair, he wrote to say that he had no confidence that the Government Education Bill next Session would meet the requirements of the nation. Those who followed educational questions keenly must fight for the following:—Defend the School Board system for primary education, which had done, and was doing, admirable work in our big towns; strive to get a wide, popular system of secondary education, which was essential in combination with technical education for our manufactures, if the latter were to compete successfully with those of other nations; advocate the principle of representative control for all State- or rate-aided grants for education, whether primary or secondary; defend with the utmost vigilance the right of religious freedom among the pupils in all schools receiving State aid; and oppose payments without rigid safeguards and conditions to schools under denominational control. They should not necessarily demand one Authority for managing all education, but, whatever Authority was created for secondary education, it should be in touch with primary and technical education.

On December 17 Principal Dale presided over a meeting of the Committee appointed to formulate a scheme for the proposed University of Liverpool. Those present at the meeting included Sir John Brunner, Bart., M.P., Sir E. Lawrence, Miss Florence Melly, Miss E. G. Holt, Mrs. G. Holt, Dr. Patterson, Dr. Caton, Profs. Gonner and Grunbaum, the Rev. John Sephton, and Messrs. John Lawrence, J. W. Alsop, R. Muir, Alderman Bowring, Alderman Burgess, Austin Taylor, A. F. Warr, M.P., E. K. Muspratt, C. W. Jones, C. S. Jones, &c. A draft report was submitted, and, on the motion of Sir John Brunner, seconded by Mr. Alsop, unanimously approved. The report will in due course be submitted to the Council of University College, until which time it is considered as of a confidential nature. The report recommends the establishment of a University, with full equipment for the teaching of science and commercial subjects; and that immediate steps be taken to bring the scheme before the public, with a view of enlisting general support and the necessary endowments. In all probability, should the Council approve, the Lord Mayor will be asked to call a town's meeting.

THE Head Masters' Conference began their annual meeting at Cambridge on December 20. The Rev. H. W. Moss (Shrewsbury), who presided, said they were all anxious that the Government should seriously take in hand the question of secondary education. They were weary of delays. The subject was of national importance, and they ought to appeal to members of both parties in the House of Commons to deal with it outside the vortex of party politics. The Rev. W. H. Keeling (Bradford Grammar School) moved: "That in the new Education Bill the new Local Authority for Secondary Education should be so constituted as to secure for each locality the advantages of higher education, and that with this view (1) it should not be constituted by an election *ad hoc*; (2) a majority of its members should be members of the County Council; (3) it should include an adequate proportion of persons having a practical knowledge of secondary education." As to the "*ad hoc*" election, he held that it would lead to a dreary repetition of the scenes with which School Board elections had made them painfully familiar. Secondary education would become a question of political and religious warfare, and the higher training would be largely in the hands of uneducated or half-educated people. The Rev. J. Browne (Stonyhurst) seconded, and the motion was carried. The Rev. R. D. Swallow (Chigwell) moved that secondary schools should have the right of appeal from the Local to the Central Authority. He said, if they were left to be governed by a body like a Local Authority, from which there was to be no appeal, he was afraid in some particulars they would suffer exceedingly. There were County Councils who had shown a disposition to use the power of the purse in an arbitrary fashion to enforce their own views upon schools, and there was a disposition to interfere in the details of the curriculum, which was the proper work of the governing body and head masters, and certainly not of the Local Authority. They need to be protected against the Local Authority. The resolution was seconded by the Rev. A. F. Ratty (St. John's School, Leatherhead), and carried.

On Saturday the Conference discussed the relative advantages of different systems of modern language teaching. It was introduced by the Rev. G. C. Bell, of Marlborough College, who said that no system could be permanently satisfactory which relied largely on the help of foreigners, and the present system ought to be accepted as a temporary method until there could be native-born teachers fully qualified for their work. In 1896 the Modern Languages Association of America appointed a committee of twelve to consider the position of modern languages in secondary education, and to examine into and make recommendations upon methods of instruction, training of teachers, and other kindred subjects. Would it not be possible to organize in England a similar body for similar purposes by the co-operation of Universities with various associations of secondary school teachers? Such a committee could have at its disposal a mass of information about methods and results on the Continent of Europe and America which would help it to solve the problem of modern language teaching in this country. No resolution was proposed, but the Conference expressed its satisfaction with the suggestion by asking the committee to print and circulate the paper among head masters and assistant masters.

THE REV. M. G. GLAZEBROOK (Clifton College) proposed: "That the Committee be instructed to represent to the proper authorities that it is desirable that there should be a uniform limit of age for candidates in entrance scholarship examinations at Oxford and Cambridge, and that this limit should be fixed at nineteen on the following July 1." The Rev. W. C. Eppstein (Reading School), while seconding the motion, thought that there might be some difficulty in making the necessary alterations in the statutes. The Rev. the Hon. E. Lyttelton (Haileybury College) said the proposal would take away the self-government among the boys which was the best educational system in the world. He hoped that any step to take away the best boys from the public schools would be strongly resented. Dr. James (Rugby School) warned the Conference to pause before lowering the ordinary age at which boys went to the University. By fixing a definite limit for all scholars they would not be giving all boys a fair chance. The Rev. H. M. Burge (Winchester School) opposed the motion on the ground that it was not reasonable to expect all boys to mature in the same way and at the same time. The conference rejected the motion by a large majority. Mr. J. S. Phillpotts (Bedford Grammar School) moved:—"That a higher standard of English should be required on entrance into second-

ary schools; and that the study of English ought to receive more encouragement at the schools themselves." Dr. Rendall (Charterhouse) moved to omit the first section of the resolution, but the original motion was carried.

THE Modern Language Association opened its annual meeting at the College of Preceptors on December 19. Mr. F. Storr took the Chair. Mr. Twentyman, Acting Hon. Secretary, spoke to the steady increase in the number of members, and said that a sub-committee had been appointed to consider the question of a report on the French text-books and readers in use in English secondary schools. A presentation was made to Mr. W. G. Lipscomb, late Hon. Secretary, now Head Master of the Isleworth County School. Prof. Rippmann read a paper on "The New Method of Teaching Modern Languages," and dwelt on the importance of logical and practical continuity in teaching.

The principal end was not to make the child acquire information and accomplishments, but to develop and increase the powers of the intellect. First, there must be sound teaching of the mother tongue, without which the teacher of French or German would not be able to do more than tinker. The written form of English was largely historical, and tended to obscure the spoken form, and therefore ear training was important. A child soundly trained would have learnt to see, which was much, but also to express in clear terms what was seen. For the linguistic training of English children, the Professor gave the preference to German over French, in the first instance because of the greater resemblance of the two languages, and because a young child's vocabulary consisted mostly of words cognate with German; later, the child's vocabulary would include more Romance words, and then French should be taught. He expressed his views upon the stages and details of instruction, enforced the importance of sound preliminary instruction in English as enabling more time to be given to the study of modern languages, and remarked that literature should come before the history of literature. He approved of every word of Mr. Eve's article on the teaching of modern languages in the work entitled, "National Education."

MR. R. P. ATHERTON (Haileybury) and Mr. L. von Glehn (Merchant Taylors') read papers on "Practical Results with the New Method." In the course of his paper, Mr. Atherton said that a merchant had told him that he had had to refuse to employ at least a score of public-school boys, whom he would have wished to push forward, because they could not speak either French or German.

PROF. MAHAFFY, of Dublin, the new President of the Association, took the Chair at the second day's sitting. In the course of his presidential address he remarked that, if he knew anything about modern languages, it was due to his good fortune in receiving a practical education and in not having been sent to an English public school. The number of languages in the world at the present time was enormous—some eight hundred, he believed were known—and, as if there were not enough spoken in Europe, we were threatened with a revival of some which we thought we had escaped, such as Czech in the east of Europe and Irish in the west. All these various languages formed a very great bar to the world's civilization. If only some attempt had been made by the English to assimilate their spelling to the pronunciation, he believed English would now be, as he believed it would be in the long run, the language of commerce throughout the whole world. That, however, was not sufficient. We must be able to communicate freely with the French and the Germans, and, though it was a very great waste of time, the ideal throughout Europe must be a trilingual one. Every educated person must try to learn to speak English, French, and German.

## UNIVERSITIES.

(From our Correspondents.)

THE second week in December saw the end of a very uneventful term; if it had not been for the discussion provoked by the proposals of the University Library Syndicate, we should have been able to dispense with the services of an historian. The unlucky controversy to which reference has been made still smoulders. Although the Senate emphatically rejected the scheme put forward by the Syndicate, a fly-sheet issued by the Librarian immediately after the voting proclaims *urbi et orbi* that technically the vote means nothing. The Librarian, maybe, is technically right, but the effect of his somewhat hasty criticisms will be to make certain

unprejudiced voters very shy in accepting any further proposals of the Syndicate without careful and accurate scrutiny. The impending sensation for the next two terms is the memorial addressed by certain members of the Senate to the Council praying for the appointment of a Syndicate to consider what changes are advisable in the present course for an ordinary degree, with special reference to the question of allowing candidates to substitute two "specials" for the present arrangement of one "general" and one "special" as the course for the B.A. degree. The controversy is sure to arouse a certain amount of heat; so that it might be advisable to consider what is the present situation.

The theory of the present scheme is that for, roughly, half a man's academical career he should devote himself to the subjects of ordinary school education; while after attaining to that standard he has to specialize in such subjects as law, theology, history, and science.

The first examination, the Little-go, which is purely school work, can now be passed before the candidate comes into residence; the general examination, which can be taken and disposed of by the end of the fourth term, includes papers on a Latin author, Greek author, period of history, Acts of the Apostles, statics, algebra, hydrostatics, and heat, together with an essay on the subjects of the special period of history. This examination, by a gradual process of improvement, is now really of some educational value, if the word education signifies the training of the mind as opposed to the assimilation of crude material. When the "general" has been passed the candidate is supposed to be trained sufficiently to embark on some special line of study that is to use the perfected machinery of his brain in the acquisition of knowledge in due form. A very wide choice is offered. Practically every department of human knowledge is represented in the list of "specials"—as examples chosen at random, physics, music, political economy, botany, theology, law, and history. The new movement is to do away with the excellent general examination, and to force the candidate to do two "specials." The first criticism which suggests itself is that the very idea of specializing is negatively *pro tanto* by those who require two "specials" to be taken—require four "specials," and where would the specialization show itself? Of course, the whole movement is destined to come to a bad end, but before the memorial is finally disposed of much valuable time will be wasted and much printer's ink expended. The continual tinkering with examinations in the interests of the so-called practical educationalists has disgusted the more moderate men, and it is realized by a few that the new proposals are only a cover for an insidious attack upon Greek as a compulsory subject in University examinations.

The election of Mr. E. H. Griffiths to the Principalship of the University College of South Wales has deprived the University of one of its ablest and most energetic workers. For the past twenty-five years Mr. Griffiths has, in combination with another member of the University, carried on the work of a poll coach with distinguished success; literally thousands of men have passed through his hands, and yet time has been found by this indefatigable worker to pursue a course of experimental work in physics which has been described by the greatest living authorities to be epoch-making. To the success of this research work the University has not contributed in the slightest degree; in fact, though inadequate provision for the teaching of the pollman renders the poll coach a necessity, colleges still ignore the fact that they cannot do what is necessary for their own men. Mr. Griffiths was himself a pollman, there being no Tripos in his time which recognized the subjects in which he took an interest. His scientific studies were the amusement of his riper years, and the result serves to justify the remark of an eminent bishop who attributed his own success to the fact that he never did any hard work till he was thirty. The examination lists for the past term have caused searchings of heart in certain quarters; in particular the lists for the "specials" in History and Mechanical Science have come in for strong criticism; but it is a recognized fact that the standards required raising, and now that the change has taken place somebody is bound to feel it. It has been quite a usual thing for a man to work one term for an examination which, according to the regulations, requires six months, and then grumble because he just falls short of the standard. So many men fail to realize that those who do not pass their Little-go at the end of their first term at the latest must be working against time for the rest of their University career: each pluck renders the accumulated mass of examinations more difficult to deal with, and then comes disaster. The obvious solution of the whole difficulty is for the colleges and

the University to combine in saying that no man can properly enter upon a University career until he possesses sufficient knowledge of school subjects to allow him to pass the Previous Examination.

It has been decided to establish in memory of the late Prof. Sidgwick a lectureship in Moral Science, the stipend being the usual one of £50 per annum. It is curious how bodies consisting chiefly of lecturers add one more to their own numbers. A detailed account of the attendance at some University lectures would furnish interesting reading. The present writer openly confesses himself a heretic, and is disposed to question whether the services rendered by certain professors and lecturers are worth as many pence as the pounds in their respective stipends. This criticism of course leaves out of sight the fact that professorships and similar offices may be considered rewards for past work. If so, let the recipient choose his own form of *solatium*—a lump sum for choice, and rustic retirement.

The Clergy School is now under the judicious management of the Rev. H. J. C. Knight, who has given up a college living to resume work for which he is so admirably fitted. The promotion of Dr. Chase to a professorship and the headship of a house will only nominally sever the connexion of the professor with the school. Dr. Chase's influence will be still available for good, although another may be in actual command.

Personal Items of the Month:—Member's Prize, English Essay, H. W. V. Temperley, King's College; Crosse Scholarship, Campbell West-Watson, Emmanuel College; Whewell Scholarships: (1) G. C. Rankin, Trinity, (2) R. A. Chadwick, St. John's, and H. R. D. May, St. John's.

## CORRESPONDENCE.

### SCHOOL INSPECTION.

*To the Editor of the Educational Times.*

SIR,—Your leading article on "Inspection of Secondary Schools" in the *Educational Times* for November raises questions of great importance to teachers in such schools.

There is still—notwithstanding all that has been said and written on the subject—a very vague idea as to what kind of inspection is needed, and as to the benefits that are to be expected from it.

The Head Masters prematurely assured the Duke of Devonshire that they would *welcome* inspection, and no doubt they had in mind at the time some ideal inspection which would benefit education in general, or their own schools in particular. Others who—desiring to have their schools hall-marked as efficient, or having an idea that other schools than their own are inefficient—are fully convinced that inspection is needed to weed out and clear the ground of many schools that "ought not to be tolerated."

Notwithstanding the declarations of these and of others in favour of inspection, it is doubtful whether either by the public or by teachers there is any general desire for State action in this direction. Yet, though the "breeze" is wanting, it seems to be taken for granted that the inspection timidly introduced will become in time general. Some even venture to hope that it will be compulsory on all schools in the immediate future.

The time, therefore, appears opportune for teachers to consider the matter earnestly as one closely affecting them and their interests, as well as the interests of those under their charge. It unfortunately happens that the various sections of teachers in secondary schools have no unanimity on educational topics; each goes its own way, and the consequence is that their influence on educational reform is weak and unproductive. They may, as a consequence, have ultimately forced upon them a kind of inspection as intolerable and baneful as that experienced in elementary schools for the last thirty years.

What is inspection expected to do for education? If desirable, how is it to be carried out, and what relation should it bear to the teachers and their schools? These are questions that need elucidation and consideration. Those who strongly advocate inspection claim, among other things (1) that many schools exist which ought not to be tolerated; (2) that, in consequence, the health and the education of the rising generation are sacrificed on the altar of public apathy or ignorance; (3) that impostors are by no means uncommon, trading upon the gullibility of the public, by prospectuses which are more or less fraudulent. In other words, they claim that the State should step in, and make itself responsible for the *purity* and *efficiency* of the secondary schools. A large amount of truth mixed up with erroneous ideas is characteristic of these views.

That "the evil is ever mingled with the good" is as true of schools (public or private) as of other matters. It is equally true that the health of the rising generation should be the concern of the State over every section of the people, whether congregated in schools, chapels, churches, factories, houses, Government offices, or even Courts of Justice. It is also desirable that impostors should be amenable to the same treatment as those in other vocations. It must, however, be clearly shown how inspection is to remedy these evils, and how schools are to be adjudged "unworthy to exist." In what other businesses do not some exist and thrive that ought not to be tolerated, that sacrifice the health of their employees for the acquisition of wealth, that are more or less impostors, trading on the credulity of the people? Yet it is not advocated for these businesses that they should be carried on under State supervision and inspection, or that they should be certified as approved by a Department of State. The doctor, the lawyer, the chemist, the dentist, &c., are required to show their credentials, and afterwards are no further amenable to State interference in their avocation.

The Factory Acts protect the health of apprentices and workmen, and a further extension of these Acts could equally protect pupils in schools and those who assemble in other institutions. In other words, the State exercises a "minimum interference" in the interests of the community on institutions that derive no public aid from its funds. True, says the enthusiastic reformer, but there is an Adulteration Act for foods, and there ought to be one for education. This is all very plausible, but it must be remembered that it is easy to determine with accuracy and certainty the adulteration of food, thereby inflicting no injustice on the offender. But can this be said of education? By what test can the spurious be detected from the genuine in the latter case? It is possible to measure the amount and accuracy of knowledge acquired by instruction, but this is no test of education given. For thirty years has this country measured education by the output of information gained by instruction, and has based its payment on such results, only to wake up and acknowledge the fallacy of the test and admit the mistake. If any one doubts this, let him read the circulars addressed by the Board of Education to inspectors, teachers, and managers on the evils of over-instruction and the need for more educative methods. It is not easy for any inspector, however experienced and sympathetic, to gauge the educative value of a school by an annual visit.

Of what value then can inspection be to education? Inspectors can certify premises, report on the aims of the school, discover the needs of the district and ascertain whether such school supplies the kind of education desirable for the neighbourhood, determine whether such school requires supplementing, give advice where desired, suggest aid where deserving or advantageous, co-operate with the head of the school in furthering whatever may be advantageous to education, and keep the State well informed of all that comes under survey. Thus while in no way interfering with the organization of a school, having no control over the curriculum or the working of the institution, leaving the individuality of the teacher unimpaired, aiding by suggestions or advice where appreciated, such an inspector would meet with little or no opposition; nay, would probably be cheerfully received, with advantage to the school and education.

The question, therefore, is can such reasonable limits be put to the officers employed by a State Department? The tendency of such officers is to become autocratic officials, and the tenour of your leader betrays the general misgivings prevalent. The Board of Education has in some degree by circular placed limits on the functions of inspectors in elementary schools. If, therefore, a circular were drawn up stating categorically the functions and duties for those employed in the inspection of secondary schools the path would be somewhat cleared, and the aims of such inspection seen.

One thing is certain—that any form of inspection, voluntary or otherwise, which induces principals to abandon their originality of method or of organization, for the sake of having their schools "hall-marked" as satisfying a State Department, and therefore worthy of public support, will be to such an extent a loss to education. The tendency of the pedagogue is already unfortunately too much inclined to a groove, and it would be lamentable if any State action should increase this tendency.

The Board of Education has already embarked upon "voluntary inspection" with caution and tact, but teachers will do well to remember that there is every probability that before long efforts will be made by over-zealous reformers to bring about compulsory inspection in all schools. If the foundation of schemes

and the manipulation of such delicate matters are left to those who have but an outside interest in education or some specific interest in furthering such schemes, the results may be disastrous. That such schemes are in the air may be seen from the *Educational Times* for November, in the report of the lecture delivered at the monthly evening meeting on "School Hygiene." The lecturer is reported to have said:

I have had in my mind in the preparation of this address the formulation of a scheme whereby the efficiency of our secondary schools may be determined. At present, in a great number of cases, the degree of this efficiency is an unknown quantity. One result of the organization of secondary education, which, as we trust, is on the eve of accomplishment, will be the application of certain criteria and tests to every school in order to ascertain whether a particular establishment lives and works up to its professions and prospectus and whether it is a valuable asset in the educational wealth of the country.

An inspection such as is contemplated would have regard mainly to the following particulars:—(1) the suitability of the school premises, (2) the adequacy and efficiency of the teaching staff, (3) the sufficiency of the apparatus and appliances for teaching, (4) the organization of the school—its curriculum and time-table. The head would be required to send beforehand to the inspector all printed particulars respecting the school, e.g., prospectus, reports, results of public examinations, &c., together with information as to the number of pupils on the books and in average daily attendance; the curriculum and time-table; the classification into forms, with the number of pupils in each, their ages, with the length of time they had been in the school and in the form; the names and qualifications of assistant teachers (class teachers, visiting teachers, and teachers of special subjects); the dimensions of the class-rooms and dormitories, particulars of playground, and the arrangements for physical education.

The inspector would visit the school, see each class in working order, be present at the giving of lessons, and himself put questions to the pupils on the subjects of instruction. To such an inspection as this, conducted, not by a spectre, but by a true inspector—with real human sympathies—no teacher worthy of the name would raise objection; rather would he welcome it as enabling him to correct his own point of view and readjust it with the aid of an expert whose experience must necessarily be wider and his generalizations more complete.

Principals of secondary schools should carefully note that this test is proposed for every school—we presume "aided or unaided"—and that "no teacher worthy of the name would raise objection" to such a scheme.

OBSERVER.

### TRAINING OF SECONDARY TEACHERS.

To the Editor of the *Educational Times*.

SIR,—Among those who were present at the joint meeting of members of the College of Preceptors and of the Teachers' Guild on the 13th instant there must have been some who would have liked to say a word on the subject of discussion from the head master's point of view; but the discussion itself was almost entirely confined to professors of education and those who were interested professionally in training institutions. The advantage of a period more or less long of formal training was, no doubt, taken for granted at the College of Preceptors, whose attempt to realize their ideal, as was admitted by the Dean, had so signally failed; and it may have required some courage on the part of an acting head master to give expression to opinions which could hardly fail to be regarded as savouring of Philistinism. And yet it would, I think, have been well if the current opinion of heads of schools on this really "vexed question" had not been withheld on such an occasion; and, with your permission, I would venture to indicate one or two points on which a good deal of scepticism as to the real value of the training at present provided prevails among them.

A head master who is not a mere routinier regards his school as an organism of which he is the ruling spirit, and his assistants as the instruments of his policy. He expects them to carry out his instructions, to adopt his methods, and to regard themselves as parts of an organized whole. Hence, in engaging his assistants, he may possibly hesitate to give the preference to men with preconceived ideas as to how their work should be done, how the time-table should be constructed, how discipline should be maintained, how this or that subject should be taught—who are disposed rather to criticize their chief than to take their orders from him, and to regard their form as an experimental field on which to put in practice the theories they have learnt in the training college. Again, it cannot be postulated that the men who come from the training college will be better equipped as to their knowledge by the training they have received, while they may not improbably have imbibed notions of their own superiority to the dry bones of instruction,

and an exaggerated notion of the importance of methods of "educating" the young mind, without special regard to the medium through which the work of education is to be carried out. Moreover, in the training institutions which at present exist, at the universities and elsewhere, although the course of training is, as a rule, intended to be post-graduate, it is clear from what was said by Mr. Keatinge that the great majority of the students have not passed their final schools; and, in the present dearth of men desiring to be trained, it is not to be wondered at that the best class of students are not attracted to them. And if inferior men are led to take up a course of training as a substitute for academic distinction, a head master may perhaps be excused if he is not disposed to accept the substitute.

Educational theorists are never weary of declaiming against the tyranny of outside examinations, and of claiming to have their work judged by some ideal standard which makes small account of the accuracy of the knowledge possessed by the pupil. But until a less fallible means of testing the results of teaching has been devised, and accepted by those responsible for the efficiency of a school, as well as by the parents of the pupils, the head master must see to it that his work will stand the recognized tests, and he has a not altogether unfounded suspicion that such means of training as he has become acquainted with will not greatly help him in producing the results expected of him, even if it does not militate against the success of his efforts.

Hitherto the head master of a secondary school has in many cases been content to accept the responsibility for the training of his own teaching staff, and, in doing so, he is in fact working on the plan which is adopted in Germany, where the training of the *Secundarlehrer* is begun, continued, and ended in the school, under the direction of head masters appointed and paid by the State to take upon themselves the extra work involved in such instruction and supervision. Is it too much to hope that in the development and systematization of some such method may be found the solution of the problem of the professional training of teachers for our secondary schools?—I am, &c.,

MAGISTER.

To the Editor of the Educational Times.

SIR,—Mr. Barnett, at the meeting of the College of Preceptors on December 13, no doubt hit upon the true cause of the difficulty in getting those entering the scholastic profession to fit themselves therefor by a preliminary course of training. It is not a good investment of time and money. For of what value is the commodity gained by such expenditure? True, the medical practitioner in his training sinks a larger amount of capital; but, besides that he is obliged to do so, the knowledge and experience he acquires in his training are of recognized value, and are counted at once in the remuneration he gets for his services.

But are the knowledge and experience gained by the intending teacher in the training proposed for him at all generally recognized as of undoubted value? Would those engaging teachers pay more for their possession? Not head masters, I imagine. They would prefer to train their assistants themselves on their own lines. They would give no more consideration to the results of such training than would a tradesman to any smattering his apprentice might have picked up in a technical school. And it is only by the higher appreciation of their services by those engaging them that teachers can look for recouping themselves for the expenses of training.—I am, yours, &c.

A. M.

#### TEACHERS' TENURE IN NEW YORK.

To the Editor of the Educational Times.

SIR,—Referring to the paragraph relative to the school system of New York on page 478 of your issue of December 2, 1901, I beg to invite your attention to the fact that the nearly twelve thousand officials of the school system of New York are under the strictest sort of Civil Service regulations. They may only be dismissed for cause, and after a hearing secured to them by law. They may only be appointed from an eligible list which is prepared without the slightest reference to personal, political, or religious influence. It gives a wrong impression to permit the inference to be drawn that the teachers and principals of the schools of New York are at the mercy of political changes in the city government.—Respectfully,

NICHOLAS MURRAY BUTLER, Acting President.

Columbia University, New York.

December 11, 1901.

**Euripides.—Alcestis.** With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. (*Junior and Senior.*)  
 — **Alcestis.** Edited by M. L. EARLE, Ph.D. 3s. 6d. (*Junior and Senior.*)  
**Thucydides.—Book VII.** Edited by E. C. MARCHANT, M.A. 3s. 6d. (*Senior.*)  
 — **Books VI. and VII.** Edited by Rev. PERCIVAL FROST, M.A. With Map. 3s. 6d. (*Senior.*)

### ELEMENTARY EXPERIMENTAL SCIENCE.

- Experimental Science.** (Section I. PHYSIOGRAPHY.) By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. 2s. 6d.  
**Elementary Physics and Chemistry.** By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. In Three Stages. 1s. 6d. each.  
**Elementary General Science.** By A. T. SIMMONS, B.Sc., and LIONEL M. JONES, B.Sc. 3s. 6d.  
**Exercises in Practical Physics.** By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. In two Parts. 2s. each.  
**Experimental Course of Practical Science.** Part I. By HUGH GORDON, M.A. 1s.  
**Elementary Practical Physics.** By R. A. GREGORY, F.R.A.S. 2s. 6d.

## NEW EDUCATIONAL BOOKS.

### MACMILLAN'S MANUALS FOR TEACHERS. NEW VOLUME.

- Principles of Class Teaching.** By J. J. FINDLAY, M.A., Headmaster of the Cardiff Intermediate School for Boys. Globe 8vo. [*Ready shortly.*]

- The King's Weigh House Lectures to Business Men.** By the Right Hon. Lord AVEBURY, F.R.S.; C. A. MONTAGUE BARLOW, LL.D., M.A. SIR COURTENAY BOYLE, K.C.B.; HERBERT E. CRABB; W. EVANS; Colonel H. M. HOZIER, C.B.; A. J. WILSON; and T. M'KINNON WOOD, LL.D., D.L., J.P. With an Introduction by M. E. SADLER, Christ Church. Crown 8vo, 2s. 6d.

### BRITISH ASSOCIATION MEETING AT GLASGOW, 1901.

- Discussion on the Teaching of Mathematics,** which took place on September 14th at a Joint Meeting of two Sections—Section A, Mathematics and Physics; Section L, Education. Chairman of the Joint Meeting the Right Hon. Sir JOHN E. GORST, K.C., M.P. Edited by JOHN PERRY. Crown 8vo, stiff boards, 2s. net.

- Modern Book-keeping and Accounts.** In Three Parts. By WILLIAM ADGIE, F.C.A. Part I. Elementary. Globe 8vo, stiff boards, 1s. 6d. [*Hooper and Graham's Series.*]

- A Geography of Wales intended chiefly for use in Welsh Schools.** By A. E. L. HUDSON, B.A., Oxon. Illustrated. Globe 8vo, 1s. 6d.

- Algebraical Examples Supplementary to Hall and Knight's Algebra for Beginners** and ELEMENTARY ALGEBRA (Chaps. i.—xxvii.) By H. S. HALL, M.A. With or without Answers. Globe 8vo, 2s.

- Primer of Geometry.** Comprising the Subject-Matter of Euclid I.—IV., treated by the Methods of Pure Geometry. By H. W. CROOME SMITH, B.A. Crown 8vo, 2s.  
*Royal College of Science Magazine.*—"Will speedily find favour, especially with teachers and students who have already found a want of common sense in the ordinary method of treating geometry."

- An Elementary Treatise on the Calculus,** with Illustrations from Geometry, Mechanics, and Physics. By GEORGE A. GIBSON, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. Crown 8vo, 7s. 6d.  
*Educational News.*—"Teachers of higher mathematics would do well to make a careful examination of this book. Many members of our profession have, through disuse, allowed their knowledge of the calculus to rust; to those we can recommend no better book than this, for the author is most up to date in his facts and nomenclature."

- Introductory Physics for Irish Intermediate Schools.** Being a First Year's Course of Exercises in Practical Physics. By R. A. GREGORY, Professor of Astronomy, Queen's College, London, and A. T. SIMMONS, B.Sc.Lond., Associate of the Royal College of Science, London. Globe 8vo, 2s.

- Practical Chemistry.** An Experimental Introduction to Laboratory Practice and Qualitative Analysis from a Physicochemical Standpoint. By R. ABBEGG and Professor W. HERZ. With 3 Tables. Crown 8vo, 6s.

- Experimental Hygiene.** An Introductory Course of Work in the Principles of Domestic Science. By A. T. SIMMONS, B.Sc.Lond., Associate of Royal College of Science, London, and E. STENHOUSE, B.Sc.Lond., Associate of Royal College of Science, London. Globe 8vo, 2s. 6d.  
*Educational Times.*—"The style is clear, and the whole book bears the impress of the practical teacher, who knows the value of short and simple experiments which the learner can carry out for himself. . . . The illustrations and diagrams generally are distinctly above the average of those found in English school-books."

- Hygiene for Students.** By EDWARD F. WILLOUGHBY, M.D.(Lond.), Diploma in State Medicine of the London University, and in Public Health of Cambridge University. Globe 8vo, 4s. 6d.

# CAMBRIDGE UNIVERSITY PRESS.

## BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS' EXAMS., JULY AND DECEMBER, 1902.

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

**A Midsummer Night's Dream.** With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. Sixth Edition. 1s. 6d.

GUARDIAN.—"For schoolboys of fourteen and upwards this edition is not to be beaten, and we can congratulate Mr. Verity and the University Press upon the publication of what will probably become the standard school edition of this play."

**Julius Cæsar.** Sixth Edition. With further additions. 1s. 6d.

GUARDIAN.—"It is as good, and deserves as much praise, as its predecessors. As we said of them, we may say of this book, that in both notes and introduction Mr. Verity displays sound scholarship and learning, while he never forgets that he is writing for boys."

### PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
Macaulay	Lays of Ancient Rome	J. H. Flather	1 6
SCHOOL WORLD.—"Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."			
Milton	Sonnets	A. W. Verity	1 6
Scott	Lady of the Lake	J. H. B. Masterman	2 6
"	Marmion	"	2 6
GUARDIAN.—"Far and away the best school edition of the poem we have seen, and it will be difficult, probably impossible, to improve on it."			
Caesar	De Bello Gallico, Book I.	A. G. Peskett	1 6
"	" Books II.—III.	"	2 0
Cicero	De Senectute	J. S. Reid	3 6
Livy	Book II.	R. S. Conway	2 6
SCHOOL WORLD.—"This book is a really brilliant piece of editing, and is one of the best of the many excellent volumes of the 'Pitt Press Series.' This edition must be used in all classes where Livy is to be begun or continued."			
Horace	Odes, Book I.	J. Gow	2 0
Vergil	Aeneid, Book V.	A. Sidgwick	1 6
Euripides	Alcestis	W. S. Hadley	2 6
"	Hecuba	"	2 6
Xenophon	Anabasis, Book I.	A. Pretor	2 0
"	" Book IV.	"	2 0

**The Elements of English Grammar.** By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Forty-sixth to Fifty-fifth Thousand. Extra fcap. 8vo, 2s. 6d.

**An English Grammar for Beginners.** By A. S. WEST, M.A. Fifty-fifth to Seventy-fifth Thousand. 1s.

**A Key to the Questions contained in West's Elements of English Grammar, and English Grammar for Beginners.** By A. S. WEST, M.A., Trinity College, Cambridge. 3s. 6d. net.

SCHOOL WORLD.—"This key will supply a real want to the majority of teachers. . . . It is well arranged, and the answers are carefully drawn up."

### PITT PRESS SHAKESPEARE FOR SCHOOLS.

NEW VOLUME NOW READY.

**Shakespeare.—Macbeth.** Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. 1s. 6d.

### PITT PRESS SERIES.

## FRENCH AND GERMAN SUBJECTS FOR CAMBRIDGE LOCAL EXAMS., DECEMBER, 1902.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
Malot	Remi et ses Amis	M. de G. Verrall	2 0
GUARDIAN.—"Mrs. Verrall's notes are models of what 'junior' notes should be. . . . The vocabulary is apparently complete, and the whole book may be with confidence pronounced excellent of its kind."			
Brockmann-Chatrian	Waterloo	A. R. Ropes	3 0

### CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

**A Short History of the Expansion of the British Empire.** By W. H. WOODWARD, Christ Church, Oxford. With 7 Maps. Cloth, 4s. Cloth extra, gilt top, 5s.

**An Outline History of the British Empire from 1500 to 1870.** By W. H. WOODWARD. Based upon the same author's "History of the Expansion of the British Empire." With Maps and Tables. 1s. 6d. net.

SCHOOL WORLD.—"This is an abridgment of the author's 'Short History of the Expansion of the British Empire' which we welcomed two years ago. The arrangement of chapters and the general order of the subject-matter have not been varied, and therefore it is excellently adapted to put into the hands of pupils, while the teacher reserves for himself the 'Short History.' All the maps but one of the other book are also retained, and we take this opportunity to heartily recommend both books to those who have not yet heard of the author. It is a most excellent piece of work, and cannot be neglected by any who teach any part of the period covered."

**Outlines of the History of the English Language.** By T. N. TOLLER, late Fellow of Christ's College, Cambridge, Professor of English in the Owens College, Manchester. Crown 8vo, 4s.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
Milton	Lycidas and Comus	A. W. Verity	2 0
Caesar	De Bello Gallico, Book I.	E. S. Shuckburgh	1 6
Phaedrus	Fables, Books I. and II.	J. H. Flather	1 6
Vergil	Aeneid, Book V.	A. Sidgwick	1 6
Xenophon	Anabasis, Book I.	G. M. Edwards	1 6
"	" Book IV.	"	1 6

Cambridge Editions of Caesar, Vergil, and Xenophon.—The attention of school-masters is called to the fact that there are now two editions of some of the works of these authors in the Pitt Press Series and the Cambridge Series for Schools and Training Colleges. The Editions in the Cambridge Series for Schools and Training Colleges have Complete Vocabularies. If, in ordering, the Edition required is not specified, the Pitt Press Edition, without vocabulary, will be sent.

### CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

BOOK.	EDITOR.	PRICE.
First Book of Samuel	Prof. Kirkpatrick	*2s. net.
Ezra and Nehemiah	Rt. Rev. H. E. Ryle	*3s. net.

St. Mark's Gospel	Rev. G. F. Maclear	*2s. net.
(The same with Greek Text, 4s. 6d.)		
St. John's Gospel	Rev. A. Plummer	*3s. net.
Acts of the Apostles	Prof. Lumby	*3s. net.

\* Smaller Editions, 1s. each.

**Fifteen Studies in Book-keeping.** With a Selection of Worked and Unworked Examination Papers. By WALTER W. SNAILUM, Professional Associate of the Surveyors' Institution. Crown 8vo, 3s. 6d. net.

This book has been written to combine a thorough explanation of the principles of double-entry book-keeping with a course of work suitable for preparation for the examinations held by the Society of Arts, Civil Service, Lancashire and Cheshire Union of Institutes, and kindred examining bodies.

BOOKMAN.—"A book which seems to supply admirably a long-felt want. It teaches its subject from the start, and does not presuppose the possession of knowledge which it professes to impart."

COMPLETE EDUCATIONAL LISTS ON APPLICATION.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, 1902.

## FORECASTS AND COMMENTS.

January 1, 1902.

THE Half-yearly Meeting of members of the Fixtures. College of Preceptors will be held on Saturday, January 25.

\* \* \*

AN Educational Conference of members of the Teachers' Guild will take place in the Lecture Hall of the College of Preceptors on January 13 and 14.

\* \* \*

THE annual meeting of the Head Masters' Association will be held at the Guildhall, on January 9, 10, and that of the Assistant Masters' Association at St. Paul's School, on January 10 and 11.

\* \* \*

THE Oxford School of Geography has made the following arrangements for Hilary Term, 1902. The lectures and laboratory instruction will be given in the Old Ashmolean Building, Broad Street. The Reader in Geography, Mr. Mackinder, will lecture weekly on "The Historical Geography of Europe" (continued), on Mondays at 12 noon, commencing Monday, January 27. The Reader will give informal instruction at hours to be arranged with students. The Lecturer in Physical Geography, Mr. Dickson, will lecture weekly (1) on "Map Projections," on Fridays at 10 a.m., commencing Friday, January 24; (2) on "The Climatic Regions of the Globe," on Saturdays at 10 a.m., commencing Saturday, January 25; and (3) on "Military Topography," at hours to be arranged. Practical instruction in surveying and mapping will be given by Mr. Dickson and Mr. Darbishire on Fridays and Saturdays from 11 a.m. to 1 p.m., and at other hours to be arranged.

\* \* \*

THE Lecturer in Regional Geography (Mr. Herbertson) will lecture (1) twice weekly on "The Regional Geography of Continental Europe," on Tuesdays and Thursdays at 12 noon, commencing Tuesday, January 21; (2) weekly on "The British Isles," on Mondays, at 5 p.m., commencing Monday, January 27; and (3) weekly on "Types of Land Forms," on Wednesdays, at 12 noon, commencing Wednesday, January 22. He will give practical instruction in regional geography on Tuesdays and Thursdays, from 10 a.m. to 12 noon; in geomorphology on Wednesdays, from 10 a.m. to 12 noon; and at other hours to be arranged. He will also be in attendance at the school on Mondays, Tuesdays, and Thursdays, from 4 to 6 p.m. The Lecturer in Ancient Geography (Mr. Grundy) will lecture weekly on "The Topography of Greece in relation to Herodotus and Thucydides," on Saturdays, at 11 a.m., commencing Saturday, January 25. The Lecturer in the History of Geography (Mr. Beazley) will lecture weekly on "The Period of the Great Discoveries, 1486-1650," on Fridays, at 5 p.m., commencing Friday, January 24.

\* \* \*

THE great success which has attended the Conferences of Science Teachers held during the Christmas vacations of recent years has encouraged the Technical Education Board to arrange another Conference, which, it is hoped, will be attended by a very large number of teachers from elementary and secondary schools and technical institutes. The Conference will be held on Thursday, January 9, and Friday, January 10, 1902, and there will be two meetings on each

day, from 11 to 1 and 2 to 4. The meetings will be held at the South-Western Polytechnic, Manresa Road, Chelsea, S.W. A discussion will follow the addresses on each occasion.

THE programme of the Conference is as follows:—

*First Meeting.*—Thursday, January 9, at eleven o'clock. Chairman: Mr. T. A. Organ, Vice-Chairman of the Technical Education Board of the London County Council. Addresses will be delivered by Miss Alice Ravenhill, Inspector to the Technical Education Department of the West Riding County Council, on the "Teaching of Hygiene," and by Francis Warner, M.D., F.R.C.S., F.R.C.P., on "Mental School Hygiene."

*Second Meeting.*—Thursday, January 9 at two o'clock. Chairman: Sir Henry E. Roscoe, F.R.S., Vice-Chancellor of the University of London. Addresses will be delivered by Frank E. Beddard, M.A., F.R.S., Vice-Secretary and Prosector of the Zoological Society of London, on the "Teaching of Natural History"; and by Prof. W. B. Bottomley, M.A., F.L.S., of King's College, on "The Value of Natural History Collections for Teaching Purposes."

*Third Meeting.*—Friday, January 10, at eleven o'clock. Chairman: Prof. A. W. Rücker, F.R.S., Principal of the University of London. Addresses will be delivered by Prof. R. Hedger-Wallace (formerly of the Department of Agriculture, Victoria, and the Government Horticultural College, Melbourne), on "American Systems of Nature-Study"; and by Mr. D. Houston, Lecturer in Biology to the Essex County Council, on "Nature-Study in Schools."

*Fourth Meeting.*—Friday, January 10, at two o'clock. Chairman: The Countess of Warwick. Addresses will be delivered by E. E. Hennesey, B.Sc., Principal of the Lady Warwick School, Bigods Hall, Dunmow, on "Technical Education in Rural Secondary Schools," illustrated by lantern slides; and by Prof. Meldola, F.R.S., of the Finsbury Technical College, on "Pioneer Work in Secondary and Technical Education in Rural Districts."

A COLLECTION of home-made apparatus for science teaching in schools will be on view during the days of the Conference; and the chemical, physical, and mechanical laboratories of the Polytechnic will be open for inspection. The assistance of teachers who have designed such apparatus is specially desired, in order to make this section of the work as useful as possible. Packages of apparatus should be sent to Mr. H. B. Harper, South-Western Polytechnic, Manresa Road, Chelsea, S.W., not later than Saturday, January 4. Free admissions will be granted to as many teachers as the Conference room will accommodate. Applications for tickets of admission should be made to Dr. Kinmins, Park Lodge, Harrow-on-the-Hill; or to Mr. C. A. Buckmaster, 16 Heathfield Road, Mill Hill Park, W.

ON Friday, January 10, Mr. Holman, H.M.I., will deliver a lecture before the London Branch of the British Child-Study Association in the Ruskin Room of the Sesame Club, 29 Dover Street, Piccadilly. The chair will be taken by Dr. Fletcher Beach at 8 p.m.

THE Chamber of Commerce has arranged for two courses of lectures on the machinery of business during the coming term. Mr. Charles Duguid, Financial Editor of the *Westminster Gazette*, author of "The Story of the Stock Exchange," "How to read the Money Article," will deliver two lectures on "The Stock Exchange and its Machinery." The lectures will commence at 6.30 p.m. on Thursdays, the 13th and 20th February, 1902.

MR. C. ROZENRAAD, Fellow of the Institute of Bankers, and Fellow of the Royal Statistical Society, will deliver two lectures on "Foreign Exchanges." The lectures will commence at 6.30 p.m. on March 20 and 27, 1902. The syllabus of the lectures to be delivered by Mr. C. Duguid, and Mr. C. Rozenraad, with other particulars, will be announced early in the New Year. Admission to the lectures will be by ticket only. Students in the lectures and classes held at the offices of the London Chamber of Commerce will be admitted to the above lectures free of charge. Others desirous of attending these lectures should apply for tickets of admission

to the manager of the Educational Department of the London Chamber of Commerce, 10 Eastcheap, E.C.

THE Reid Fellowship of Bedford College, London, in Arts or Science, of the annual value of £50, tenable for two years, will be awarded in the Easter term, 1902. Candidates must be Associates of the College, and graduates of the University of London.

DR. J. LAWRENCE, M.A., will give a course of lectures in the Lent term on Tuesdays at 4.30 p.m. on Icelandic, with reading of "Gunnlaugssaga." This course is held under an inter-collegiate arrangement between Bedford College and University College, for the encouragement of honours and post-graduate work in the higher study of the English language and literature.

THE Lent term of Bedford College for Women (University of London) will begin on Thursday, January 16. Students come into residence on Wednesday, January 15. The first lecture of the course on Icelandic will be given by Dr. Lawrence on Tuesday, January 21, at 5 o'clock. The first lecture of the course on Anthropology will be given by Dr. Marett Tims on Monday, January 20, at 4.30 o'clock.

WE have it frankly from the mouth of a  
Education Conference head master that he and his col-  
Gossip. leagues, when declining to take part in another  
professional Joint Committee on the principles

which should be contended for in a Secondary Education Bill, had no desire to make light of the value of solidarity. They would, with pleasure, have renewed the discussions and resolutions of the past few years if they had been able to hope for any practical outcome of joint representation to the Duke of Devonshire.

WHILST we are in the domain of gossip it may be added that some of the coolest heads at Whitehall and South Kensington refuse to be sanguine as to the passing of a comprehensive Education Bill this year. We do not concern ourselves with the reasons given.

IT is hoped, in some quarters, that the Treasury grant to the University Colleges, which has stood at £25,000 since 1897, will be further increased this year. Reading and Exeter have not yet secured a place in the Treasury List; but they are hoping, in spite of the warnings of the Chancellor of the Exchequer, that their application this year may be successful.

THE PRINCE OF WALES will be one of the youngest of Chancellors. As he has expressed his readiness to accept the nomination of the Welsh Court to a position formerly held by his father, he will be definitely elected on January 10.

THE desire of Carnarvon to provide a site for the University College of North Wales appears to have put the Bangor folks on their mettle. Bangor is not a wealthy town; but she promises to buy and present to the college six acres of the Bishop's Park, at a cost of about £5,000.

GREAT gifts are sometimes great oppressions; but we doubt whether any University or college would be wise enough to refuse any integral part of a million on that account. It requires a wealthy and prudent State to do that. Mr. Carnegie was, perhaps, a little too ingenuous in asking the United States Government to accept a trust of "ten million dollars Steel debentures" on behalf of a new research University. President Roosevelt and his advisers appear to have come to the conclusion that the State had better not become a trust debenture holder.

EVERY ONE will remember the difficulty which arose out of Mr. Stanford's provisional endowment of the Californian University as a memorial to his son. The terms of the will, administered by his widow, were not quite clear; but she was allowed the usufruct of a considerable share of her husband's estate. She has now executed a trust by which the Leland Stanford Junior University receives a total endowment of over five millions sterling.

CARDIFF has a somewhat new idea for an educational association. A few days ago the Mayor of Cardiff presided over a meeting in the women's "normal department" of the University College with the object of forming a general educational society, to include representatives of all kinds of educational agencies, such as the University College, technical schools, intermediate, higher-grade, elementary, free libraries, the local Press, &c. The objects of the society were explained by Prof. Mackenzie, and, subsequently, thirty-seven members were appointed to draw up a constitution. The list included the Mayor (Mr. Frank J. Beavan), Principal Griffiths, and many others.

THE PRINCE OF WALES has promised to visit Manchester in March, in order to open the new hall of Owens College.

A PETROLEUM INSTITUTE has been opened in Bevis Marks by Dr. Dvorkovitz, who asks us to announce that five studentships, each of the value of £50, will be offered for competition next year.

SEVERAL Carnegie Research Scholarships are offered by the Iron and Steel Institute, on Mr. Carnegie's foundation, for competition next year. Candidates must not exceed the age of thirty-five.

THE Worcestershire County Council has determined to contribute the annual sum of £1,500 towards the endowment of Birmingham University.

OF the two candidates whom we mentioned last month as selected for the Principalship of Cardiff University College, the final choice fell on Mr. Griffiths, M.A. of Cambridge, who was warmly supported by Lord Kelvin.

THE Council of Almoners of Christ's Hospital have selected the Rev. A. W. Upcott, Head Master of St. Edmund's School (the Clergy Orphan School), at Canterbury, to succeed, at Horsham, the Rev. Richard Lee as Head Master of the school.

THE Head Mastership of the Perse School, Cambridge, has been accepted by Mr. W. H. D. Rouse, assistant master at Rugby, and formerly Fellow of Christ's College. Mr. Rouse, who has written an authoritative history of Rugby School, besides a number of volumes which appeal to school-boys or to scholars rather than to the general public, has been an invaluable secretary to the Assistant Masters' Association, who will find his place difficult to fill. It will also be remembered that Mr. Rouse is Secretary of the Committee of the Education Section of the British Association.

CAPTAIN JOHN BROUGH, R.M.A., is nominated Assistant Professor of Fortification at the Royal Naval College, Greenwich.

MR. H. W. RICHMOND, M.A. of King's College, Cambridge, has been appointed University Lecturer in Mathematics for a period of five years.

DR. EMANUEL LASKER, the champion chess player, has been appointed Lecturer in Mathematics at Owens College, Manchester.

THE Head Mastership of Leeds Grammar School is vacant by the resignation of the Rev. J. H. D. Matthews, who has accepted preferment in the Church.

MISS LEAHY, Head Mistress of the Oxford High School, has been appointed to succeed Miss Neligan as Head Mistress of the Croydon High Schools. Both positions are under the Girls' Public Day School Company.

MISS HILDA MARTINDALE, formerly a student of Bedford College for Women, holding the Bedford College Hygiene Certificate, has been temporarily appointed on the staff of the Factory Department of the Home Office.

It is always pleasant when an academic appointment falls to a man or woman who is known to us by other than strictly academic merits. Mr. W. H. D. Rouse, of Rugby, who assumes the Head Mastership of the interesting Perse foundation at Cambridge, is academic enough. It is not long since we noticed his admirable little classical charts and his freshly conceived introduction to Latin verse-making.

To students of Modern Greek, and to such as are dubbed Philhellenes, Mr. Rouse is very well known for his wise and persistent advocacy of Hellenic claims, literary and otherwise. He has also translated into English a considerable number of Greek stories.

A FEELING not entirely alien in its character will be associated in some minds with the appointment of Dr. Lasker to one of the Mathematical Lectureships at Owens College. Do they run strong in chess at Owens? In any case, we have always understood that Dr. Lasker was well reputed for mathematics at his own German University; and he has contributed several papers to the London Mathematical Society.

THE writer of a short article on "American Education," in Murray's *Monthly Review* for December, observes that it is curious to note that, "while we in England are attempting to-day to bring the Local Authorities into closer touch with the schools, the tendency in the States seems to be in the direction of placing the school outside politics." It is to be doubted whether any strong party of Englishmen would wish to establish a political control of popular education. It is certain that no such control would satisfy the nation. No doubt there are party anarchists amongst us. All the more reason why we should work steadily for the co-opted experts.

THE Coronation being a subject which ought to inspire the mind of every British writer of verse, *Good Words* is offering £75 in cash prizes (the first prize being £50) for the best Coronation odes submitted before the following dates:—If posted in the British Isles or any part of Europe, by March 31, 1902; if posted in any part of North or South America or the West Indies, by April 10, 1902; if posted in any part of India or His Majesty's Asiatic possessions, by April 20, 1902; if posted in any part of Australasia, by April 30, 1902. The odes must be received at the office of *Good Words* by the above dates. The editor informs us that invitations to compete are being sent to all the remotest corners of the British Empire.

MAXIM GORKY is at present a prophet with much honour, not only in America and England, but also in his own

country, Russia. So great, indeed, is his influence becoming that the Russian Government, having ordered him to leave St. Petersburg, prevented him, it is said, from travelling to Moscow, and despatched him in the direction of the Caucasus. Gurky's life is now familiar to all book lovers. Several of his short stories have been published in this country, where, as in America, his great novel, "Foma Gordyef," or "Thomas the Proud," is selling largely.

### TRAINING OF TEACHERS FOR SECONDARY SCHOOLS.

ON Friday, December 13, a joint meeting of the members of the College of Preceptors and of the Metropolitan Sections of the Teachers' Guild was held in the Lecture Hall of the College of Preceptors, Bloomsbury Square, for the purpose of discussing the present position and future prospects of training institutions for teachers in secondary schools. The chair was taken by Mr. FRANCIS STORR.

The discussion was opened by Mr. P. A. BARNETT, who said he had not undertaken to read a paper or give an address. He merely intended to open a discussion on the present position and future prospects of training institutions for teachers in secondary schools, and to present as many points as he could think of as suitable for the discussion, which he hoped would carry them to some profitable conclusion. In regard to the present position, that was much easier to deal with than to say what were the future prospects, and he did not propose to imperil his reputation for prudence by venturing into the regions of prophecy. It would be convenient if he endeavoured to explain the present condition of things and how it had grown up, because, unless they could see how they had arrived at it, they could hardly comprehend the difficulties that presented themselves and the slow progress which the training of teachers had made, so far as secondary institutions were concerned. First, it must be evident that the training of secondary teachers in England bore all the marks of being a native product, and bore all the marks—as, in fact, was the case—of having arisen out of economic circumstances, and of never having been properly, systematically, and scientifically thought out. About sixty or seventy years ago it was found that there was a great dearth of teachers for the people, and certain public bodies formed for that purpose set themselves to supply teachers for public elementary schools. But they were face to face with this very obvious difficulty—that there were not enough people sufficiently well trained to deal with the vast area that had to be covered. Then arose the two great societies—the British and Foreign School Society and the National Society; and those societies, on the same lines, and guided in the main by the same traditions, set themselves to supply the want which they had discovered. In consequence of the operations of those two great societies, various training schools were established up and down the country, and became the origin of the training colleges of the public elementary system with which they were acquainted. He dwelt upon that point particularly for this reason: that the training of secondary teachers, as we know it in England in its chaos, was directly connected with the traditions which had established training schools for primary teachers; and, if they would only bear that in mind, they would be able to account in some measure for the defects of the present arrangements for supplying secondary teachers with training, and to understand the foolish and very often perfectly baseless prejudice with which the training of teachers is sometimes regarded. For when people attacked the training of teachers they might be sure that very many of them thought only of a particular sort of institution, a particular routine, a Government-devised programme, a Government-examined institution, and all the inconveniences that attached themselves to a bureaucratic organization. As a matter of fact, secondary training institutions in this country had grown up round those primary institutions; because, although the primary colleges—those supported by the State—had not made any particular excursions into secondary training, the adoption of primary training by the local University colleges had led them, after providing for primary training, to address themselves also to the task of establishing facilities for the training of secondary teachers. Except in one conspicuous case—that of Oxford, where the two systems had been kept rigidly apart—he thought they would find that the same authorities at universities were administering the training of both primary and secondary teachers. They must not suppose that progress was not being made because only a very few people come in to be trained; they must not think that therefore there was a deficient sense of the necessity of training. He believed that the battle, so far as it was a purely academical one, had been fought and won. There were few people outside certain circles who did not admit the necessity of training for secondary teachers. There were, however, here and there rather extraordinary exceptions. An American friend a few days ago told him that, in talking over training and education with a very distinguished headmaster of a very distinguished public school, he was told by this gentle-

man that he knew nothing about Pestalozzi, and could not conceive that he would be any better if he did; which probably would be true in that particular case. But so long as that feeling existed in some quarters, so long as that insensibility prevailed, there would always be small corners which they could not touch. Yet he felt sure that most teachers—any teacher, indeed, who had thought the matter over and read what had been written on the subject—must feel that it must be better for him to be criticized, to criticize himself, and to profit by what other people had done and what they could teach him. They would probably have access to a paper that had just been put into his hands, drawn up by the Incorporated Association of Assistant Masters in Secondary Schools, which pointed out that there are secondary training departments established at Oxford, Cambridge, Owens College, Manchester; King's College, London; the Yorkshire College, Leeds; at Aberystwith, Bangor, and Birmingham; and they might have added at Sheffield, and he thought also at Liverpool. All these institutions trained in some measure on the same lines, but there were one or two remarkable differences. They would notice that the course of training in most cases was intended to be a post-graduate one, and there was a very great difference of opinion as to the propriety of that. At Birmingham the point of departure had been practice in the schools. That is to say, the Birmingham authorities offered a limited and qualified training, and, of course, the consequent certificate after examination, to those people who already had passed a sort of apprenticeship by actual work in the schools for some time. Now, it seemed to him that was a hint they might very well lay to heart. It would not do for them to approach the great body of teachers, and say they ought not to have a teaching diploma until they had got their degree, for this reason: that it was certainly possible for a man or woman to be a very good teacher up to a certain definite point under the B.A. standard, and yet be unable, for one reason or another, to get a full degree. The fact was there were people who could do many things well, and who did so without being able to explain why. He thought Birmingham had been wise in this particular, that it had said to the teachers already in actual practice of their craft: Come and complete your knowledge as well as you can under the circumstances, and you shall have a diploma. This, then, was the condition of things at the present time; and, when people complained that teachers did not come in their hundreds to be trained, he thought they ought to remember this also, that they could not expect a large body of people who had to earn their bread to put themselves through a severe course of training, and then at the end of it get salaries which it would be too much to say were anything like an adequate return on their investment. He did not himself think there could ever be any material improvement or increase in the number of persons who presented themselves for training, until the country woke up to the fact that teaching was a learned profession, and that it ought to be adequately remunerated. Just before he entered the room a letter was put into his hands from a man whose word would carry great weight wherever teachers came together—Prof. Withers, of Owens College, Manchester—who said: "There can, I think, be no question that all other remedies for the defects in English education are, in comparison, unimportant when weighed against an improvement in the career and the qualifications of the teaching staff of our schools. An impression still prevails in this country, even among teachers themselves, that teaching is unskilled labour, for which no technical preparation is required; hence the low status of the schoolmaster's profession and the wretched rate at which he is paid. Unless this matter of training is grappled with by the teachers and by bodies like the College of Preceptors and the Universities, in conjunction with one another, it is not likely that anything effectual will be done to raise the efficiency, and therefore the dignity, of the teaching profession." He was not going into the region of prophecy, but there was one thing pretty certain, that when the conditions of registration were made more stringent, they would have moved a little way on towards their goal. He still thought that at the basis of this question—which so many would persist in treating *in vacuo*—there was an economic difficulty; and, if they wanted people to do their work properly and to come forward and prepare themselves for it, they must offer them an adequate return.

Mr. J. W. ADAMSON (King's College) said he noticed one or two points in Mr. Barnett's address which he could not very well reconcile. They were told that teaching was a learned profession, and they were urged somewhat to lower the qualifications for entrance into that profession on the ground that many of them could do some things well for which they could not give the reason why. He did not see that that could be said to be a mark of a learned profession; and on that ground he should rather insist upon something in the nature of a post-graduate course for the teacher. They had been reminded that the majority of the colleges and organizations which made arrangements for the training of secondary teachers were connected with primary schools, and from his point of view the danger lay in that very fact. For reasons of which there was no need to remind them, it had always been the rule in primary training schools to combine the students' general education with technical training, and carry them on side by side. That was done not so much because it was thought to be an ideal system, but because there

was no choice in the matter. Mr. Barnett's remark about doing things well without knowing the reason why pointed to the fact that there was an art in teaching as well as a theory. Training, as he understood it, meant not merely the communication of the theory of teaching, but really meant initiating the student into the practice of his art; and, as they all knew, that required a very considerable amount of time, if it were only for the sake of the art, to say nothing of the theory. That being so, it seemed to him that, in the case of University students, the course of training proper should come after the general course of study had been completed—that is, after graduation. If they carried on the practical work at the same time, it must reduce the amount of time and attention a man could give to his general education; and, in the case of a teacher, his degree would mean something less than it perhaps might for other people. He did not think any teacher, whether primary or secondary, was in a fair position if he were compelled to carry on his general education *pari passu* with his professional training. It meant that one of the two things would be neglected.

Mr. M. W. KEATINGE (Oxford) said so far the principal point discussed had been whether training should be after the degree or before the degree. At Oxford, where they had had something like a hundred and eighty students in training during the last four years, the men were allowed to take up training when they had passed Moderations, and a few of them did so, so that he had experience of men who were reading for the finals and of men who had completed their degree. He need scarcely say that no college tutor would like a man who was reading for Honours to mix up his reading with anything else; so that men who had begun the work with him before their degree had been men of not the highest calibre. He could only say that his experience of these men had been extremely unsatisfactory. In most cases he found that his work had gone to the wall, and he had been obliged to tell the men they must come to him again after they had taken their degree. There was another point in this connexion. As a rule, when the men first came to him, the first thing he had to persuade them was that the work was worth doing; and he found the best way was to ask them to work eight or nine hours a day, and to see that they did it. If a man was working for anything else, it was impossible to insist upon a great deal of work from him. There appeared to him to be one or two obstacles which he could point to in the way of secondary training. In the case of a good class of student with a good degree, who could be persuaded to work at the thing in earnest, the first hindrance that he met with was that there were hardly any really first-class books to give a student to read, especially if he could not read German. A good deal of the English and American literature on the subject was of such a character that it was difficult to put it into the hands of a critical young man, as it did not tend to impress him with the dignity of the subject. A second difficulty was to a certain extent bound up with the first—viz., that those who were engaged in training had not definitely decided what the science of education was to include. They had not put it within a ring-fence, so to speak; and it was his firm conviction that they were greatly hampered by the old nomenclature. A third obstacle from which they suffered badly was the lack of funds.

Mr. H. W. EVE, Dean of the College, said one great difficulty in the training of secondary teachers was to find suitable practising schools. In the experiment they had conducted at the College they had, indeed, succeeded in obtaining permission to do a little work at one or two secondary schools. There was also the difficulty of finding men to avail themselves of the opportunity. In reference to the point made by Mr. Barnett with regard to the economic position, he was afraid there was a very real danger ahead of them—namely, an attempt to set up schools at low fees—which must inevitably tend to lower salaries. If the schools were not set up at low fees, parents would not send their children to them; so, it seemed to him, they were—not, he hoped, in an *impasse*—but in a situation which it would take a great deal of statesmanship to solve. With regard to the question of post- or pre-graduate courses, there was one consideration which it was worth bearing in mind—namely, that it was an advantage to a teacher to be learning some fresh subject with a view to teaching it. Take the very common example of men going abroad to learn foreign languages, after their degree. They set themselves deliberately to work, not to learn modern languages as if they were going into the diplomatic service, but with the view of teaching constantly before them. The German Government was being approached to found an institution in England for such students, where their studies might be directed. It would be a good thing if some one would set up an institution of the kind in France and Germany. In the same way, he should like to see people studying such a subject as arithmetic with a definite view of teaching it. He was constantly finding out that there were things which he did not teach properly, and he was sure there were others in the same position. He was inclined to think that if men, instead of aspiring to low honours, would read for a pass degree, and, during their reading, study the pass subjects with the view of teaching them, they might make very good teachers. It would require some time for that to be appreciated, because at present it was taken for granted that the highest Honourman was the best teacher, as indeed was very often the case.

Prof. J. WELTON (Yorkshire College, Leeds) said he was afraid he could not throw much light on the question whether training should be post-graduate or not, for his own mind was not made up on the subject. Probably he would answer the question differently for different classes of institutions. He could not, with all deference, agree with Mr. Keatinge as to the necessity for the ring fence. Most students he had trained for secondary schools had certainly been doing two things at the same time. Of course a difficulty was experienced in the division of interest on the part of the student; but the greatest difficulty of all was to secure a sufficient amount of practical work, and that was a difficulty which he had not been able to solve. This obstacle to training was much felt at Leeds, where considerable difficulty was experienced in prevailing upon head teachers to allow students in training to teach in secondary schools. Another obstacle was the lack of available funds for carrying on the training.

Prof. FOSTER WATSON (University College of Wales, Aberystwyth) said he was greatly interested in what Mr. Keatinge had mentioned as to the number of secondary students he had had in training, and asked as to the class of schools into which such students had gone. Whilst the teachers for the primary schools were now obtaining in day training colleges, and in many of the residential colleges, a good University education, and were becoming many of them excellently equipped academically as well as professionally, the secondary teachers were scarcely facing the problem of professional training. Nothing in the way of preparation could be too good for the teacher—either further academic opportunities for the elementary teacher, or the best of professional training for the secondary teacher. But for both he urged that the training should be post-graduate. All training should be on the broadest lines possible—the elementary teacher in training should see something of secondary-school teaching, and the secondary teacher in training should be in touch with primary-school teaching. Further, both should, if possible, have some acquaintance with good infant-school teaching and good higher-school and college teaching. In short, whilst teachers were in training on specialistic lines for either primary or secondary work, it was invaluable that they should grow into the idea of the continuity and unity of all teaching, through seeing different grades of teaching work, even if the emphasis in their own training had to be laid on the work of one kind of school.

Miss WALKER said that the financial question was really the chief factor of the training problem, and that question was not the same for primary and secondary teachers, seeing that the latter had to pay their own expenses. She would like to know how many secondary schools gave higher salaries to trained assistant masters or mistresses, and how many governing bodies made the possession of a teaching diploma a condition of eligibility for headship of a school.

Miss WOODS (Maria Grey Training College) bore out what had been said by Mr. Keatinge as to the difficulty of getting the best class of material for training in the existing colleges. Women who had passed through a University course, and had obtained the coveted distinction of a University degree, were apt to regard technical training as a work of supererogation; and, while they were in some cases desirous of adding to their academic *testamur* the nominal advantage of having gone through a short course of instruction in principles and methods which might pass muster as "training," many were unwilling to sacrifice a year's income and to pay out as much as they would have earned in the time, in order to obtain that thorough professional training which was not at present adequately appreciated by heads of schools. Thus the authorities of training institutions were unable to insist on a sufficiently high standard of general attainments in applicants for admission; and the system was unfairly handicapped by comparative inferiority in the intellectual quality of part of the output. It was not easy to see how the difficulty was to be met, unless by recognition of the necessity of training as an essential qualification for admission to a Register of Teachers.

Mr. ANDERTON agreed with what had been said by Mr. Eve as to the advantage of making a special study of a subject with a view to teaching it.

Mr. BARNETT, in reply, said it had been pointed out that the main defect in the present condition of things was the difficulty of getting the right people to come forward, and getting them to work under proper conditions. He believed that the whole difficulty was an economic one. They would not get any considerable number of people to come forward, after taking their degrees, unless they were offered something better than £70, £80, or £90 a year. Until teachers arrived at a proper sense of the importance of the work, and until the public could be got to pay properly for the services performed, they could not, and ought not to, expect that all intending teachers would take their degrees before they submitted themselves to professional training. His own belief was that the best results of training had hitherto come from the presence of two or three carefully selected students in a school under the supervision of the head master or mistress. He had in mind several schools where that was the practice, and the teachers who had come from those schools had proved themselves most efficient.

The CHAIRMAN, in winding up the discussion, said the question appeared to be an economic one at the bottom, and he thought they would not solve it by any kind of trade union, but by raising the pro-

fession of teaching, and then the economic laws would come into play. The reason why teachers were so miserably paid now was because the market was overstocked; and that was because there was no proper test for a teacher. When they got a Register of Teachers—and it was a crying shame that they had been kept waiting so long, that (if he was rightly informed) the Board of Education had not yet considered the recommendations of the Consultative Committee—things would be different. He hoped that when the regulations for registration were published training would be found to be one of the conditions of teachers being placed on the Register. He congratulated the meeting on the thoroughly practical character of the discussion.

A vote of thanks to the Chairman concluded the proceedings.

### TENURE OF MASTERS IN ENDOWED SCHOOLS.

THE following letter has been addressed by the Council of the Incorporated Association of Head Masters to the Board of Education:—

SIR,—On behalf of the Council of the Incorporated Association of Head Masters, we are instructed to ask you, as Secretary of the Board of Education, whether you will consent to receive a deputation from this Association on the subject of the tenure of masterships in endowed schools.

Under a recent Order in Council the Board now possesses the powers heretofore exercised over endowed schools by the Charity Commission, including the power to make and to amend schemes for administering such schools. In particular the deputation would draw your attention to the provisions in such schemes relating to the tenure of masters, i.e., appointment, dismissal, and appeal in the case of dismissal.

Our present application arises from the fact that the Board of Education is now called upon to initiate, as well as to authorize, schemes which contain provisions regulating the tenure of masterships in endowed schools. The practice under the Charity Commission has been of late, and for many years, to assign to the governing body on the one hand full responsibility for both the appointment and the dismissal of the head masters, and to assign to the head masters, on the other hand, full responsibility for the appointment and the dismissal of the assistant masters. This practice, though general, has not been universal, since in a small proportion of schemes, in case of dismissal, an appeal to the governing body was provided for assistant masters.

The question of tenure has recently attracted considerable attention from the public; without calling evidence or conducting any investigation, certain Local Authorities have passed resolutions suggesting changes in the provisions for the appointment and dismissal of assistant masters. Such action on the part of Local Authorities is, perhaps, consequent upon the practice of the Charity Commission in supplying them, as having a legal interest in the matter concerned, with copies of all local schemes. It is, moreover, usual for such Authorities to be represented on governing bodies.

It thus appears that besides the two administrative agencies recognized under endowed school schemes, viz., the governing body and the head master, there are two parties whose claims to an interest under such schemes will doubtless receive the attention of the Board when school schemes are either made or amended.

Under these circumstances the Council of this Association earnestly request that you will allow them to place before you for the consideration of the Board reasons why the Board might see fit to refer the question of tenure to the Consultative Committee for investigation and report before introducing into existing endowed school schemes changes affecting the conditions of such tenure.

The Association consists largely of head masters under endowed school schemes, and, in asking for a deputation, desires to urge that any changes to be introduced may be made in the interests of the general efficiency of the schools, and not only in a partial consideration of the interests concerned.—We are, yours faithfully,

R. P. SCOTT } Honorary  
R. D. SWALLOW } Secretaries.

37 Norfolk Street, December 7, 1901.

### NEW LIGHT ON BRAIN FUNCTIONS.

CONSIDERABLE interest attaches to the publication by Mr. Grant Richards of Dr. Bernard Hollander's "Mental Functions of the Brain." We have had many works on the brain and its relation to mind during the past forty years, one of them at least almost epoch-making so far as the study of the encephalon is concerned. But it is doubtful whether even Ferrier's great work will, with

the next generation, rank in importance with Dr. Hollander's. So far as original research is concerned Ferrier's is undoubtedly the greater work. He set about his investigations, as we may say, without any *parti pris*. Dr. Hollander, on the contrary, starts out with the firm conviction not only that Dr. Gall, the founder of phrenology, was on the right track so far as brain function is concerned, but that many of his facts and assumptions were correct. We all know how Gall was maligned and ridiculed, and how even to the present day his alleged *capitulum* method of "mapping out" the brain is still scoffed at and derided by many, and those not the least acquainted with science. Slowly but surely, however, through the labours of a multitude of observers, modern investigation is coming back to the point reached by Gall a hundred years ago. Most of those observers were probably unconscious of the trend of their facts. They wrote down their record and then left it; and Dr. Hollander's service to science has been in the main to search out and collate these records, hundreds in number, to co-ordinate them, and to show how they bear upon Gall's great discovery. For there can be no doubt to-day that his theory of the division of the brain into a number of organs, each with its separate function, is the true one. Many educated people nowadays are ready to acknowledge not only that the brain is the organ of mind and emotion, of the sensory and motor powers, but that the different mental functions, or faculties as we call them, have their seat in different parts of the cerebral mass. While they are ready to acknowledge this much, however, they draw the line at phrenology. That they hold to be a pseudo-science, self-condemned, as they affirm, by its unscientific methods. Yet, strange to say, every one of Dr. Hollander's eight hundred or more facts and cases, gathered from medical and scientific journals and works by leading authorities on physiology and mental science, support not only Gall's theories, but his system of organology. In other words, the "organs" of the phrenologist, discovered or located in the first instance from observation of the contour of the skull, are proved in a large number of cases to be correct by clinical and pathological observations. Thus we are given a hundred and fifty cases which incontrovertibly establish the fact that melancholia arises from a morbid or diseased condition of the "convolutions lying under and around the parietal eminence—viz., the angular and supra-marginal gyri," that is, the convolutions allocated by phrenology to the organ of cautiousness: caution, fear, or circumspection being the normal action of the faculty. In many of the cases given a simple surgical operation cured the patients, and sent them forth "as normal men."

In the same manner several hundred cases are cited which demonstrate that there is an intimate relation between lesions of the brain "in the middle portion of the cortex of the temporal lobe and the manifestation of irascibility and of destructive mania, as shown in various forms of insanity." Now this middle portion of the temporal lobe is the position allocated in the phrenological system to "destructiveness," or, as it is sometimes called, "energy." Similarly, we have localizations of kleptomania or theft, corresponding with the organ of "acquisitiveness" of hunger and thirst, corresponding with the organ of "gustativeness," Ferrier's "gustatory centre"; and of the affections, such as maternal love, in the occipital lobe, where phrenology locates the organs of philoprogenitiveness and friendship. Under this head one very curious case is given. A youth, sixteen years of age, killed his father and brother, and attempted to poison his mother. He was religiously inclined. *Post-mortem* examination showed the frontal lobe well developed, while the occipital lobe was defective. Other cases, running on almost parallel lines, are given, and, although they may not be accepted as conclusive in regard to the fact they go far towards establishing, they cannot be set aside as unimportant.

Equally interesting are the author's observations touching the localization of "special memories"—namely, for words, places, events, numbers, music, &c. His theory—and, of course, it is that of phrenology—is that memory is not a single faculty, but that each mental faculty has its own memory. "There exist partial, special, and local memories, each of which has its special domain, and which are so independent that one of them may get enfeebled and disappear without the others necessarily presenting any corresponding change." There is nothing more striking in Dr. Hollander's book than the verification, so far as his facts go, of the localization of the perceptive faculties as mapped out by phrenology. It is, of course, impossible to give them in detail in a short article. One or two instances, therefore, must suffice. In one case—that of a railway fireman the frontal part of whose brain was punctured by the spout of an

oil-can—there occurred loss of memory of previous events, of forms, of objects, and places, “the lesion corresponding to the location of phrenologists.” In another case—that of the wife of an Army officer—the subject, “though intellectually quite normal, . . . could not distinguish either time or locality, and mistook objects.” The *post-mortem* examination revealed “intermeningeal hæmorrhage at the anterior root of the superior and middle convolutions,” the location of the phrenological organs of “time” and “locality.” From the *Australian Medical Journal* (July 15, 1893) is quoted the case of a man who suffered “a fracture of the base of the skull just behind the orbits, there being a fissure about a quarter of an inch in width. . . . Much lacerated and contused brain was removed. On recovery the patient had lost the conception of the quality and position of foreign bodies, their weight and resistance, through the sense of touch.” In this case, also, the lesion is said to have corresponded “to the localization of phrenologists.” Another physiological record describes the case of a man “who, after fracture of the skull, forgot the shape of objects, and, though he could draw well an object before him, made a shapeless blur when the object was withdrawn.”

Similar cases are given bearing upon the colour-sense and upon that of music or “tune,” the location again agreeing with that of the phrenologists. These, it must be acknowledged, bear out the contention of the followers of Gall, who place the seat of the intellect in the anterior lobe of the brain. It might be thought that there was no need to state this as a fact at the present day, when most people acknowledge the truth of the observation; yet we have men like Drs. Bastian and Hughlings Jackson affirming that the posterior lobes of the brain had more to do with the intellect than the anterior.” In view of the cases given by Dr. Hollander bearing upon the functions of both the posterior and the anterior lobes, it will, one would think, be impossible for Drs. Bastian and Jackson to persist in their opinion as to the localization of the intellectual powers.

Our author proceeds from the anterior lobes of the brain to the convolutions occupying the dome of the skull. These are held by the phrenologists to be concerned with moral and religious powers. In support of this theory, Dr. Hollander brings some striking facts, though they are hardly so conclusive as those relating to the propensities and emotions. Still, it is impossible to get away from such facts as those exemplified in the quoted cases of religious mania in which *post-mortem* examination showed tumour or lesion at the vertex of the brain—the location, it must again be pointed out, of the phrenological organ of veneration.

In a work recently published on psychology, the author, after referring to some experiments in regard to the sensory and motor areas of the brain, hazards the remark: “Hence it will be seen there is no truth in phrenology.” One can hardly doubt that a great deal of what has passed current as “gospel,” according to the old phrenology, will have to go; but it appears equally indubitable that, after a century of rejection, Gall’s doctrine will have to be accepted, and his facts acknowledged or rejected on evidence. What a revolution that means in our systems of philosophy, in our educational methods, and even in our theory of morals may easily be imagined.

ALFRED T. STORY.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on December 14. Present: Dr. Wormell, Vice-President, in the Chair; Rev. J. O. Bevan, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Crookshank, Miss Dawes, Mr. Eve, Rev. Dr. Hiron, Mr. Ladell, Mr. Pinches, Dr. R. P. Scott, Rev. Dr. Scott, Rev. T. W. Sharpe, Rev. J. Stewart, and Rev. J. E. Symms.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Christmas Certificate and Lower Forms Examinations had been held on December 10-13, and that the number of candidates was about 7,800.

He reported that the Medical Council at their last meeting had accepted the scheme submitted by the College for a preliminary examination for intending medical students. The new examination would come into operation on January 1, 1902.

He reported that the number of entries for the forthcoming Diploma Examination, to take place in the second week in January, was over 450, and was considerably in excess of the number entered for any previous examination of teachers conducted by the College.

The Diploma of Licentiate was granted to Miss E. M. Dobbs, who had passed the required examination.

Professor Sully was appointed to deliver the psychology course of lectures at the College in the early part of 1902.

Saturday, January 25, was fixed as the date of the next Ordinary General Meeting of the members of the College.

Dr. K. Breul, Cambridge, was elected a member of the Council, to fill the vacancy caused by the resignation of the Rev. Dr. Poole.

The draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean, for final revision.

Mr. L. Skyrn, Highfield Terrace, Heckmondwike, Yorks., was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education, 1899-1900, Vol. I.

By the SMITHSONIAN INSTITUTION, WASHINGTON, U.S.A.—Reports of the United States National Museum, 1897, Part II., and 1899; Report of the Smithsonian Institution, 1899.

By MISS CROMBIE.—Portrait of George Combe.

By G. BELL & SONS.—Bell’s Latin Course, Part III.

By BLACKIE & SON.—Atkinson’s Selections from Lesage’s *Gil Blas*; Barnett’s *Émémides of Eschylus*; Clark’s Selections from Molière’s *Le Médecin malgré lui*; Downie’s *Byron’s Child*; Harold’s *Pilgrimage*, Canto II.; Matthews’ *Kotzebue’s Der gerade Weg der beste*.

By C. J. CLAY & SONS.—Kirkpatrick’s *Psalms xc.-cl.* (Cambridge Bible for Schools and Colleges); Verity’s *Shakespeare’s Macbeth*.

By W. B. CLIVE.—London University Guide and University Correspondence College Calendar, 1901-2.

By HACHETTE & Co.—Conversational Exercises and Object-Lessons based on Holzel’s Conversational Wall Pictures (Italian, Spanish, and Dutch, Part I.); Rey’s *De Sœur’s Histoire de la Princesse Rosette* and *La Petite Souris Grise*; Soreau’s *Moréau’s Contes à ma Sœur*.

By MACMILLAN & Co.—Hall’s *Algebraical Examples*; Poiré’s *French Course*, Second Year.

By RIVINGTONS.—Household’s *Anson’s Voyage Round the World*, Calendar of University College, Nottingham.

## REVIEWS.

### HISTORY OF PHILOSOPHY.

*A Student’s History of Philosophy.* By Arthur Kenyon Rogers. Ph.D. (Macmillan.)

Prof. Rogers, of Butler College, now follows up his “Brief Introduction to Modern Philosophy” with a substantial volume surveying the whole course of philosophy (in the West) on a scale and a method adapted to class-room work with students. His “chief aim has been simplicity, in so far as this is possible without losing sight of the real meaning of philosophical problems.” Such an aim puts a severe strain on the writer, for practically it amounts to the task of shaping his exposition for popular use within an inadequate space. Minor names have to be ruthlessly suppressed, “unless some literary or historical interest creates the presumption that the student is already acquainted with them in a general way”; that is to say, “some literary or historical interest” is allowed to interfere *pro tanto* with the writer’s essential purpose, which is philosophical. This deviation, if not so good for the book, may yet probably be good for the student or popular reader. On like principle, Prof. Rogers omits the minor points of the teaching of the philosophers to whom he gives substantial recognition. Having cut away so many details, he addresses himself to the larger names, dealing with the main problems with which they have made an impression, and directing special attention to the spirit in which they philosophized. Opinions would, in any case, differ as to the right omissions in a work of this kind. It seems a pity, however, that the mediæval period, which is admitted to be “intrinsically of great importance,” should have been severely cut down owing to “marked disadvantages” from the standpoint of an introductory course. And when Prof. Rogers says, and says with too evident truth, that he “has not attempted to trace the more technical lines of influence from one philosopher to another,” he seems to abrogate a very essential requirement of the historian of philosophy. The apology he offers—that such lines of influence “are almost impossible for the student to grasp”—appears to lead him to something perilously suggestive of self-stultification. Where is the use of a history of philosophy to students that need to be coddled in this fashion? Surely the first thing is to put your student through a course wherein he is technically indoctrinated in all the main problems; and the next thing is to show him the historical development. If the necessary technical basis is well and truly laid, there can be no excuse for handling the history so gingerly; if it is not well and truly laid, it comes to be more or less a waste of time to lead him through a history that he is not fitted to understand. Fortunately Prof. Rogers’s practice issues in happier results than his theory of procedure invites one to anticipate.

Prof. Rogers’s second aim has been to give the thought of the writers in their own words, whenever he conveniently could—

"particularly where the literary interest can be made to supplement the philosophical." This is a distinct advantage. What we do not like about it is the author's nervous distrust of the philosophical interest in and by itself. No adventitious aid, literary or other, need be depreciated or ignored; but any student of philosophy that fails to find the interest of the problems a sufficient attraction does not deserve to be catered for, any more than a student of geometry that wants to be coaxed by Euclid in verse. The special advantage of "the thought of the writers in their own words" is precision of presentment and avoidance of the dangers of paraphrase. So we can still regard Prof. Rogers as having gone the right way to work, though his main grounds for the course he has taken seem comparatively weak. His third principle has been to exhibit the history of philosophy through the systems of individual men, at the same time "bearing in mind the need of relating these to the more general history of civilization." His main effort in this latter object is what he calls "a somewhat mild reproduction of the Hegelian philosophy of history," which is surely not the last word on the subject, and might in various points have been modified with advantage. The time-honoured principle of expounding "the systems of individual men," of course, has its obvious recommendations. We confess, however, we should now like to see some writer attempting the plan of following each great problem separately in its continuous development. Such a course would seem to have a specific educational value; and a general history could then follow with much more tangible results.

The Greek philosophy, together with the middle ages and the transition to modern philosophy (which, as we have already indicated, is rather severely compressed), occupies just over one-half of the volume. Modern philosophy is thus somewhat limited in treatment, the period from Hegel being disposed of in thirty pages. The chief representatives are Schopenhauer, Comte, and Spencer, with brief incidental notice of Darwin; while Herbart, Fechner, Bentham, and the Mills are just mentioned. If even mere mention is made of Hartmann, Lotze, or Bain, we have missed it. However, it still remains to be acknowledged that, within the limits we have specified, Prof. Rogers has written a thoughtful and solid book, which will be helpful to general readers as well as to students in the class-room. The chief writers selected are treated with reasonable fullness and with adequate knowledge; and, though the style is sometimes heavy, the intellectual interest is always soberly maintained. The volume is a very favourable example of the abounding energy of academic thinking and teaching in the American Universities.

*The Lore of Cathay; or, The Intellect of China.* By W. A. P. Martin, D.D., L.L.D. (Oliphaunt, Anderson, & Ferrier.)

Dr. Martin is a citizen of the United States, well known as the author of "A Cycle of Cathay," "The Siege in Peking," and other works on China. For a quarter of a century he was at the head of the Tung Wen College, an outcome of the collision with the West in the second Chinese War at the end of the fifties. In 1897 he was made President of the Chinese Imperial University, established after the disastrous war with Japan. The present work deals with Chinese science, literature, religion, and philosophy, including a full account of their education and of the famous examination system. Of the chances of progress the writer, as may be gathered from his opening chapter, "The Awakening of China," takes a sanguine view. Both the great revolutions of remote ages and the events of the last fifty years seem to justify his opinion. He reminds us, of course, of their anticipations of Western discoveries, such as printing and gunpowder, and points out that they seem to have reached, at any rate, an approximation to such modern ideas as those of the luminiferous ether and the conservation of energy. To Chinese literature more space is devoted. Of their poetry, which constitutes so important an element in the intellectual life of the educated classes, some attractive specimens are given. One by an exiled Minister of State, who flourished about 200 B.C., reminds Dr. Martin of Edgar Poe's "Raven." The concluding lines are thus translated (the bird of ill omen is speaking):—

Fortune's wheel is ever turning,  
To human eye there's no discerning  
Weal or woe in any state;  
Wisdom is to hide your fate.  
That is what it seem'd to say  
By that simple "Well a day."

No less charming are the lines which are said to have won from Confucius the hand of his daughter:

A speck upon your ivory fan  
You soon may wipe away;  
But stains upon the heart and tongue  
Remain, alas! for aye.

In prose, he tells us, great perfection of style is attained. Conciseness and antithesis are its chief characteristics. The polished essay, *wen chang*, an exposition, in stereotyped form, of some text from the classics, is practised by old and young. Originality of thought is quite absent from these compositions, but infinite pains are taken with the subtle combination of words and the introduction of apposite and suggestive allusions to the classics. The writer finds a parallel in the assiduous practice of Latin verse, in the form in which it was cultivated before it became, as it often is now, an initiation into the close study of the best English poetry.

The account of Chinese education is particularly interesting. It is for boys only. Women who have succeeded in acquiring knowledge are, no doubt, highly honoured; but, as a general rule, girls are not educated at all. The State has no need of them in official positions. Early home education is practically non-existent. The mother and nurses are themselves uneducated; and usage generally prohibits the father from instructing his own children. The work of the teacher begins about the seventh or eighth year, and is inaugurated by an elaborate ceremonial. The first four or five years are of the dreariest; they are devoted to reading, copying, and learning by heart the classics, which, it should be borne in mind, are written in what is to the modern Chinaman a dead language. No attempt is made to explain their meaning. Moreover, each child works by himself, and that under the ferule; the stimulus of class work is entirely wanting. The next stage brings in translation, too often reduced, as is not quite impossible with us, to a mere effort of memory. Composition, in its elementary forms, is introduced at the same time, and becomes the main object of the third stage. Throughout, the aim is to cultivate style, not thought or originality. The conception of education is, in fact, totally different from ours: its object is not the development of the faculties of all members of the community, but the conservation of the repose of the State, the maintenance of an adequate supply of educated officials.

Of the examination system a full account is given. It does, indeed, afford a perfect illustration of one form of the *carrière ouverte aux talents*. At the first examination, which turns wholly on penmanship and grace of style, only one per cent. are allowed to pass. In the second stage, intended to test reading and scholarship, penmanship no longer plays a part. The exercises are copied by an official scribe before being submitted to the examiners. Here, again, only one per cent. qualify, or one in ten thousand of the original competitors. The last stage, in which about three per cent. are successful, alone admits to the chance of entering the public service. Even beyond this there are further examination successes to be won. Of the fairness of the procedure the writer is evidently convinced, and he points out its incidental advantages. It serves as a safety-valve for the ambitious, who might otherwise become fomenters of sedition; it acts as a counterpoise to absolute monarchy; and it enlists the educated gentry on the side of existing institutions. It is worth mentioning that the chapter on these examinations was originally drawn up in the interest of Civil Service reform in America.

With the other chapters we have no space to deal; they give information as to the Universities, the three religions of China, and some episodes of Chinese history.

#### THE PRINCIPALITY.

"The Story of the Nations."—*Wales*. By Owen M. Edwards, Fellow of Lincoln College, Oxford. (Fisher Unwin.)

Almost incredible as it may seem, this work is the first attempt at a complete history of Wales that has ever been published. The dearth of historical literature in the Welsh language is a curious phenomenon not easily explained in the face of the undoubted conservative instincts of the race. The history of a Celtic race, owing to continual tribal strife and family feuds, is far more difficult to unravel than that of a Teuton nation. History, in a scientific sense, showing how the national forces and environment in one epoch explain the course of the nation's development in the succeeding age, is almost impossible in the case of the Celtic races. In fact, many chapters of Mr. Edwards's "Wales" illustrate this difficulty, suggesting rather a boiling

cauldron in which the solid elements appear and disappear, controlled by no apparent law, than a river flowing onward in its destined course. The author has, however, earned the gratitude of his countrymen by making an honest effort to wipe away the reproach which has clung to their literary reputation from the days when the old monastic chroniclers of Strata Florida laid down their pens after sorrowfully registering the death of Llewelyn and the loss of their nation's independence. The early history of the race down to the Norman conquest is but slightly treated, and no clear line is drawn between legend and fact. The moot point whether Druidism was ever a cult of the Brython Celt, as distinguished from the Goidel, among other matters of some difficulty, has no light thrown upon it. Even the "Gododin" and the works attributed to Llywarch Hen and Taliesin are not dealt with as a means of affording some indication of the condition of the nation between the departure of the Romans and the influx of the Normans into South Wales. It is a period which in spite of Prof. Rhys's labours remains tantalizingly obscure. We cannot hope to penetrate closely into the history of the Celtic race in Wales during the Roman occupation. The Roman was not observant, and treated the race with an indifference which has been imitated by their neighbours in later times. This may be accounted for by the fact that the Celt does not interest his fellow-men as a nation, but only as an individual.

Mr. Edwards makes full use of the monastic annalists in treating of the Norman and English conquests of Wales. At times he seems, indeed, to reproduce too closely the style of the chronicles of the "Brut" when writing of a hero he admires. "Of medium height was Griffith ap Conan, with flaxen hair and round ruddy face. . . . His neck was round, his skin white. Mighty he was of limb, straight and fair to see." He makes full use of Gerald's "Itinerary" to present a clear picture of Welsh life at the end of the twelfth century, and goes some way towards satisfying his readers that Owen Gwynedd and Lord Rees—the great Arglwydd Rees of the Chronicles—as well as Llewelyn the Great in the first half of the thirteenth century, had a truly unselfish national policy. Mr. Edwards will find English and German historians loth to admit the existence of constitutional ideals among the Celts before their subjugation by the Teuton. Mommsen's hard saying is based on too solid fact to be easily questioned, and even in Mr. Edwards's pages the constant family feuds and treacherous self-seeking of the chief actors go far to show that the Welsh would have failed to develop stable political institutions. The last struggle for independence and the changes brought about by the introduction of English rule are clearly dealt with. We expected to find a fuller treatment of the period immediately preceding the rising of Glendower. Mr. Edwards does not seem to have seen before writing this part of his work the valuable paper on Owain Lawgoch in the last volume of the *Cymmrodorion Transactions*. In later times authority in matters of Welsh history is more distinct, and the author's difficulties arise from the necessity of selection. He has trodden an unbeaten track with skill and judgment, and, if the impression left of the nation and its development lacks something in definiteness, we must not forget the difficulties attendant upon a pioneer journey into such a wide expanse. The book is admirably produced and well illustrated.

#### SHILLETTO.

*Greek and Latin Compositions.* By Richard Shilleto, M.A. (Cambridge University Press.)

It augurs well for the endurance of Shilleto's reputation that there should be an eager demand for his compositions a quarter of a century after his death. To many—perhaps, to most—scholars of the present day many passages included in the large selection that Mr. Graves has made are already quite familiar. The copies have been passed on in manuscript from generation to generation of Cambridge men; and for them it has been

among their purest joys  
To work them off upon their boys.

Indeed, Shilleto's composition is, in its way, a joy for ever. We doubt if there has been any other scholar who could point to so large a body of first-rate work. Evans had as much to show in verse; and his best work was not inferior to Shilleto's. There are living scholars who can write as good Greek and Latin as he wrote, had they the need to write or the opportunity; but in Shilleto's case it is the quantity that astonishes; for, bulky as this volume is, it by no means represents all that he wrote, and we specially regret that no room has been found for any of those

original squibs in Greek with which, like Evans, he was wont to amuse his friends at Cambridge.

Shilleto excelled in Attic Greek, and that language has had no more enthusiastic disciple. His enthusiasm was contagious, and infected even mathematicians who heard him dilate upon the most scholarly, the most glorious language that the world has ever known. He thought in Attic, standing, as a caricature shows him to this day, before the fire-place of his lecture room; and Attic was his theme as he chatted with the Master of his adopting college, who on that subject was perforce content to be a listener. Over Latin his mastery was less absolute, though in that tongue his proficiency was such as can be attained by few; but in Greek he was pronounced the greatest scholar that England had produced since Gaisford; and it is matter for rejoicing that at last an authoritative selection of his composition enables the present generation to know how extraordinarily intimate was his knowledge of the classics.

This, too—the tenacity of his memory—is a matter that may well excite admiration and astonishment. Constant reading of the texts with many pupils had made his mind a store-house of phrases and idioms. He must have written Greek and Latin with great rapidity: he never falters for the word or phrase that he wants. In Latin it is possible that his reminiscences occasionally tricked him; but in his Greek it is impossible to detect an expression that can be questioned.

Is it still possible that other "remains" of his might be published? There are the skits in Greek, English, and Latin, once the jest of combination rooms. How many of these survive we do not know, but some are undoubtedly in the possession of old pupils. The papers of Mr. Graves, Mr. A. W. Spratt—himself an excellent composer—the lamented R. A. Neil, and others who knew him well, might supply some. And a portion of his *adversaria* still remains in manuscript.

Schoolmasters have been very well supplied with good models of late; and, as Dr. Postgate has written, "the volumes of versions recently issued by the two Universities are generally admitted to mark a distinct advance upon their respective predecessors. They show no less spirit and more fidelity, a nicer appreciation of idiom and a more conscientious use of the file." Shilleto's copies, unfortunately, were never revised by their author; yet composition masters will certainly be eager to avail themselves of work that on every page shows some signs of the master hand that wrought it.

#### A SCHOLAR'S MEMORIAL.

*Aristophanes, The Knights.* Edited by R. A. Neil. (Cambridge University Press.)

From the "Confound it all" of the opening line to the dog-and-donkey sausage of the *finale* Mr. Neil's commentary on "The Knights" is not only the best work on Aristophanes that has appeared in England, but it is one which need not fear comparison with the best Continental editions. Neil had a most retentive memory, he read assiduously and widely, he collected and collated unremittingly. But that he was something more than a scholar of the best type his intimate friends well knew, and his pupils somehow instinctively felt. He was the kind of scholar whom journalists, after a single visit to a college common-room, persist in declaring to be extinct in the old Universities. In the old days, when teaching was left to coaches, and life fellows and two-bottle men flourished, the brain power that was not expended during the day was available for post-prandial usage. Nowadays the best force is used up in the lecture room. Here was a man with a touch of genius occupied daily and hourly during term with the routine work of a great college and a University readership; so that his own work had to be left for the late hours. "The night cometh," he would say, "when all men must work"; and with that he would go off to his reading, which was continued not infrequently far into the night. His early death, before he had put the finishing touches to the book at which he had worked for some twenty years, was a deplorable loss not only to his University, but to English scholarship.

The introduction is only a fragment; but it serves to show how completely Neil was master of his learning. It is bright, fresh, and full of striking observations. It shows too that Neil's acquaintance with modern literature was scarcely less close than his knowledge of the ancient classics. Apparently Neil intended to write a general introduction to the Old Comedy; but he was stopped by death just as he was getting into the subject. The commentary, which appears to be complete, shows us an ideal interpreter of Attic comedy, for the commentator, besides.

possessing the nicest appreciation of the meaning, had explored every side of ancient life and thought, and had collected an immense mass of illustrative material. It is seldom, indeed, that so much valuable information is compressed into the modest dimensions of a college commentary. The translations are admirable, racy as well as scholarly. Neil's learning was, indeed, the reverse of ponderous; and he never runs into the danger of burying Aristophanes' wit under a load of information. Of the three appendices, two deal with linguistic points; but the most generally interesting is the third, the subject of which is tragic rhythm in comedy. The editor maintains that "Aristophanes seldom, if ever, uses a purely tragic iambic line without an intention; and thinks that even in Plautus and Terence we may notice 'the tendency to use a less resolved rhythm where dignity or pathos is a desired effect.'" If this is so, it is surely curious that a tendency to the use of resolved feet is to be observed in tragedy just where a pathetic effect is sought.

We do not doubt that this edition of "The Knights" is final; and it is a worthy monument of a lamented scholar's taste and erudition.

#### CHILD STUDY.

*The Mind of a Child.* By Ennis Richmond. (Longmans.)

When most of us are feeling that child-study has been carried to somewhat absurd lengths and in absurd directions, it is good to take up a book which treats the matter in a sane way and from a common-sense point of view. The author deprecates the over-busy child-analysis of the present day, and thinks that we are in danger of thrusting ourselves in at a point where interference is an impertinence greater than any mistake of which our forbears were guilty. She considers the spiritual side of child life is neglected for the scientific, and we are too anxious to separate the "is" from the "ought." But surely no satisfactory work can be done unless these are kept separate, and so long as those who pursue the purely scientific aspect—the "is"—keep entirely to this aspect, no harm can be done. It is, in fact, in the confusion of the "is" with the "ought" that the difficulties arise of which Mrs. Richmond speaks. She herself in this book contributes a few powerful essays on the "ought"—on the spiritual side, as she terms it.

An unusual sense of proportion is displayed in these pages: the child is not treated as an all-important unit, but as a part of the family. Let us live *with* our children rather than *for* our children is the key-note; and it will certainly appeal to the average parent in a way that more extravagant outbursts on the importance of the child mind have failed to do. To mention a few points, by way of illustration. "Parents are too apt," says Mrs. Richmond, "to connive or even laugh at children's faults, until they become inconvenient, when they are punished clumsily, recklessly, and unreasonably, often ineffectively, since neglect has caused them to grow from faults into vices. Moral teaching must in all directions be more positive than negative." Although this is an ancient educational *dictum*, and familiar to all from the parable of the seven devils, it is here driven home with fresh vigour and excellent practical illustrations, as to inculcating a love of Nature, of art, and so on. The extreme importance of teaching a child to take no thought about his own happiness is well put: he is to be dependent on others for it, to *expect* them to see to it, as he is to regard it as his business to see to theirs. Closely connected with this is the much neglected virtue of gratitude. "The spirit in a child which 'takes for granted' is the spirit we want to get rid of; and the only way of doing this is so to train a child that he always sees the giver standing behind the gift." Good advice is given as to a child's endless babbling, with which every one is familiar. Many child-enthusiasts speak with ridiculous awe about such streams of questions. Mrs. Richmond takes the saner attitude of Richter on the point, and would say "Don't talk nonsense," although she would be the first to recognize an intelligent request for information. There is an unfortunate amount of repetition in the book, especially on the subject of respect to parents. The description of Wordsworth's "Anecdotes for Fathers" is not quite correct, the subtlety of the little poem being thereby missed.

#### IN THE DAWN OF RENAISSANCE.

"Periods of European Literature." Edited by Prof. Saintsbury.—V. *The Earlier Renaissance.* By Prof. Saintsbury. (Blackwood & Sons.)

Seven out of the twelve projected volumes of Messrs. Blackwood's "Periods of European Literature" are now complete; and

those who have subscribed to the series, and have been glad, *faute de mieux*, to receive the works of the several contributors as they appeared, without regular chronological sequence, will begin by this time to appreciate their nearer approach to continuity. The general editor has reserved for himself, in addition to "The Flourishing of Romance and the Rise of Allegory" and "The Later Nineteenth Century"—volumes with which we have already dealt—the specially interesting and unbackneyed period of the later fifteenth and earlier sixteenth centuries. This was the epoch of the last literary blossoming of the Greek and Latin humanities in Western Europe, the last phase of which Italian scholars, followed by Elizabethan and their French contemporaries, called the Italianation of England and France. The revival of learning was to bear its harvest before the vernacular in the three Western nations assumed a literary form; and its most characteristic fruit was moulded on the Latin classical metres.

Mr. Saintsbury is in his element when reviewing and comparing the humanists of the fifteenth and sixteenth centuries—Politian, Pontanus, Vida, Bembo, and others. A few extracts from the poems which he describes would have made his pages more interesting to the general student—who, apart from the texts, cannot find much to edify him even in the *cinquecento*. The ripening of the vernaculars, and the constant efforts to utilize them for literary expression, are very interesting to trace. We have mentioned some of the fresher aspects and less trite features of Prof. Saintsbury's work, and we may add that he is neither trite nor conventional in dealing with the better known men of the on-coming age—with Ariosto, and Rabelais, and Marot, and Marguerite de Valois. Altogether, the editor has made an excellent contribution to his own series, which will send many of his readers to consult at first hand with the mediæval Latin humanists.

## GENERAL NOTICES.

### CLASSICS.

*Horæ Latinae.* Studies in Synonyms and Syntax. By Robert Ogilvie, M.A., LL.D. (Longmans.)

The late Dr. Ogilvie, who occasionally contributed to this journal, was for thirty years Inspector of Schools for Scotland, and before he received that appointment he had been a schoolmaster, first at Banchory-Devenick and afterwards at Fochabers. It was from Dr. Melvin, of Aberdeen Grammar School, that he early acquired the interest that he retained through life in the discrimination and definition of Latin words, especially of apparent synonyms. He moved through life with a classical author in his hand—or, at the least, in his pocket—and was for ever "a-takin' notes." Thus he amassed a great quantity of valuable information upon Latin usage and of apposite examples. All this material he had thoroughly digested; and, as to his enthusiasm he added the gift of clear exposition and accurate classification, the work of his spare hours acquired a permanent value. It is now published, partly as a memorial of a versatile and scholarly man, partly in the expectation that the collection will prove useful to those who have to write Latin. For the latter purpose the articles have been arranged alphabetically by Mr. A. Souter under the English headings. Although the five hundred articles are of a miscellaneous character, and much that they contain is current in ordinary grammars and dictionaries, the expectations entertained by those responsible for the publication of Dr. Ogilvie's book are likely, we think, to be realized. Its utility to students of Latin prose will, in all probability, be considerable. But we cannot commend the judgment of the editor. The form and price of the book are such that it cannot become a student's hand-book. Its place will be in school and college libraries. Perhaps the most valuable articles are those that deal with the Latin equivalents or substitutes for the simplest English vocables, such as *a, the, yes, no*. In other cases, on the contrary, such as the rules about *quisquam* and *dubito*, Dr. Ogilvie only states what every well taught pupil knows already; and we think that the bulk of the book might have been reduced with advantage by judiciously selecting from the articles and omitting those that deal with such elementary points. We do not suppose that any one who would be likely to consult such a book would need to be told the difference between *nubere* and *ducere*, between *amare* and *diligere*, between *diu abesse* and *longe abesse*; and it can only be the pardonable enthusiasm of a collector that prompted Dr. Ogilvie to record such elementary distinctions. His editor, then, should have omitted the obvious, and have published only what has some claim to novelty or is not to be found in ordinary books of reference. Probably the exercise of such a choice would have reduced the size and price of the work by quite one-half, and would thereby have rendered it more available as a manual for students.

*The House of Atreus; being the Agamemnon, Libation-bearers, and Furies of Æschylus translated into English Verse.* By E. D. A. Morshead. (Macmillan.)

Mr. Morshead's translation of the "Oresteia" is a welcome addition to the charming "Golden Treasury Series," and has fairly earned its place there. The version was meant for those to whom the Greek of Æschylus is a closed book, but it won the good opinion of scholars as well. The edition is a reprint of that issued in 1899, and we may take it that Mr. Morshead does not propose to introduce any further changes. It is, therefore, necessary to point out that in many places he offers an interpretation of the text that wins no support from the recent commentators. Thus, for instance, who is prepared to say that

Though they can silence and annul the prayers  
Of those who on us cry

is a possible rendering of *ὅτων δ' ἀτέλειαν ἐμαῖσι λιταῖς ἐπικραίνειν*, as though *ἀτέλεια* meant "non-fulfilment"? Despite the good qualities of his rendering, which is smooth, readable, and neat, it certainly seems defective now in the matter of scholarship, with which Mr. Morshead has, apparently, taken no pains to keep abreast. Still, to this objection it may fairly be replied that the rendering was never meant for scholars, and, if they find it worth while to meddle with it, they must accept it as it is. For English readers it remains the most successful attempt to convey to them some idea of the trilogy.

*The Private Life of the Romans.* By H. W. Preston and L. Dodge. (American Text-Book Agency.)

This little book, well printed and illustrated, gives, in 150 pages, a readable account of Roman life. Of course, it is very far from being exhaustive; but the authors have seized the salient points, and students of the Roman poets will find this short sketch a valuable companion. Where so much compression has been necessary, it is strange to find here and there little bits of padding that might have made way for more valuable matter. Still, the book is very well done, and should make those who use it realize that the Romans were quite human people like themselves. It makes one feel at home with the ancients to read that "entire wigs were much worn in the first century." For our part we should have liked to hear a little more about rank and fashion under the Empire. Did great ladies ever wear gray hair in those days? We doubt it much, since gold-dust was always to be had. And then the Appian Way and its branch roads—we should like to hear more about them, as about other matters that perplex the reader of Empire poetry. But, in the main, we have got as much as could fairly be expected from so short a manual.

*Q. Horati Flacci Satirarum, Liber I.* Edited by James Gow, Litt.D. (Pitt Press.)

This edition, as might be expected from the editor's excellent notes on the Odes, is a valuable contribution to the study of Horace. The notes, without being too elaborate, not only give all that schoolboys require, but will be found suggestive to scholars. They contain some interesting suggestions by Prof. Postgate, published in the *Classical Review* for July last. For example, in I. 108, for the difficult "qui nemo ut avarus se probet" the reading "nemo ut quia avarus se probet" is suggested; in III. 59, for "nullique malo latus obdit apertum," the rendering "bars his side (i.e., his company), so that it is open to no bad man." Specimens of suggestive notes of Dr. Gow's are that on

"Quis manus insudet volgi Hermogenisque Tigelli,"

"It would appear that Hermogenes talked about books, but never bought any"; that on "avidus aegros," "sick persons who eat too much, a comparison between thoughtless *aegri* and thoughtless *teneri*"; and the analysis of the argument at the beginning of Satire VI.

*Caesar's Gallic War.* Book II. Edited by J. Brown. (Blackie.)

This is a reprint, with illustrations, of an edition which seems to have had some popularity. The introduction and its illustrations are the same as those of Book I, already noticed in these columns. The illustrations to the text are fancy pictures poorly engraved. The notes are rather uninteresting and decidedly inferior to those in Mr. Peskett's well known edition. For example, "nullo certo ordine" is described as an ablative absolute; it is surely an example of the ablative of attendant circumstances, of which the ablative absolute is a particular case. Again, *castris* in "castris continuit" and *oppido* in "oppido recipere" are called "local ablatives, the preposition being omitted." It is clearly pointed out in Roby that the local ablative—or, rather, locative—is confined to names of towns, a few stock phrases, and cases where "the place is also the means." Besides, omission of prepositions is dangerous doctrine. The book needs careful revision with the best modern grammars.

#### MODERN LANGUAGES.

*Interlinear German Reading Book.* By F. Hahn and C. A. Thimm. (Marlborough & Co.)

This is a reprint of an old book, with the spelling corrected according to the new system. The value of interlinear translations in learning a language is a matter of opinion. In any case, the text should be printed a second time without the translation if the book is to be of any use in schools.

*French Test Papers for Civil Service and University Students.* By E. B. Le François. (Blackwood.)

The author confides to us his low estimate of examinations: "they are like lotteries—the lucky numbers win. These test papers must infallibly contain some of those lucky numbers—questions that will be set sooner or later." Again: "The students who have worked these tests carefully will, at the appointed time, solve satisfactorily to themselves and to everybody else concerned the puzzles set before them either by the Civil Service Commissioners or the University Syndicates." On looking at these papers we recognize at once what examinations the author had in mind; they are based on the French papers set at the Army Entrance Examination, which are about as bad as they possibly could be. Practically all their weak points are reproduced here—passages from unseen translation taken largely from authors of a previous age; questions on literature and history which presuppose cram of the worst kind; questions on grammar which are quite in the old style, and in many cases badly worded. That such a book should be produced and expected to sell is a sad commentary on the low state of some of our modern language examining. In order to substantiate our statements we select a few questions as typical: "Give a few French words of (a) German, (b) Italian, and (c) historic origin. When must you use *mon, ma, ton, ta, son, sa* before a noun feminine? Sketch briefly the life of Louis XIV. Say what you know of M. de la Rochefoucauld and Mme. de la Fayette: mention their literary productions. Who were the following persons:—Stanislas Leszczynski, Don Carlos, Damiens, Duc de Choiseul, Duc d'Aiguillon? What was the old form of most words ending in *au* or *ou*, like *oiseau, marteau, cou, fou, sou, beau*? State which most important parts *que* can act in French—illustrate. Give a list of the most celebrated French prose fiction writers of the nineteenth century, mentioning some of their works. What parts of a French verb take a circumflex accent? Who were the 'Encyclopadists'? Describe their influence on the times. Give the names of a few philosophers of the eighteenth century," &c. We wonder what our classical colleagues would say if any one proposed to set Latin test papers of this type to their classes.

*Neue Russische Grammatik für Kaufleute und Gewerbetreibende.* By F. Glikin. (Leipzig: Gloeckner.)

The appearance of this, the first Russian grammar of the kind, marks the progress of commercial education in Germany. A vigorous attempt has of recent years been made by German traders to seize the Russian market, and in this they have the aid of the commercial schools, where the Russian language is becoming more and more a recognized subject. The present manual forms one of a series which has at different times received notice in these columns; and it fairly represents the advantage gained from studying the language of commerce as supplying all the illustrations needed for rules of grammar. The author's aim has been to simplify the study of the verb, which he has exhibited under three "aspects," and has shown how the noun admits of being treated under no more than four declensions. Whilst limiting himself to what is essential, he has succeeded in affording a complete view of the language. One of the chief drawbacks to the extension of British trade connexion with Russia is the unwise dependence of exporters here upon German or Jewish commission agents. If some young Englishmen were but encouraged to go to Russia with the view of acting as resident agents, and others offered employment as travellers, each class being soundly acquainted with the language, the need of a work in English like the present German publication would be quickly manifest. As it is, those readers acquainted with German who wish to master commercial Russian would do well to obtain M. Glikin's book. Both the Society of Arts and the London Chamber of Commerce already offer facilities for intending examinees, of which but too few have yet availed themselves. Here is an efficient help. The reading lessons, exercises, and forms of letters are all excellent.

*Russian Self-Taught, with Phonetic Pronunciation.* By C. A. Thimm and J. Marshall. (Marlborough.)

This is one of the useful "self-taught" series, and an intelligent learner will be able to get a good deal out of it. It is mainly a question of memory; in addition to the elementary grammar there are long lists of words, vocabularies, and idiomatic phrases.

*The Practical Sound and Sight Method of Language Teaching: French.* By H. T. Mark and F. R. Prellberg. (Sonnenschein.)

This is intended as a text-book for teachers using the "direct" method. The designation "sound and sight" is explained as meaning that the method "supplements the spoken word with the printed word," a process hardly unfamiliar to most of us. The first part consists of questions and answers, not, of course, to be learnt by heart. They are arranged so as to teach a good deal of simple construction without too large a vocabulary. There are rather long explanations of the meanings of nouns, adjectives, and so on, which the teacher can use or not as he likes. There is one picture of a boy gathering apples, but no use is made of it in the French part of the work. In the second part there is more systematic grammar, illustrated by rather longer questions and answers. There are also some pieces for reading, of which hardly enough use is made in the questions and answers. The type is remarkably large and clear. Digitized by Google

## MATHEMATICS.

*First Year's Algebra.* By C. H. French, M.A., and G. Osborn, M.A. (Churchill.)

This little book will probably be welcomed by many, and more especially by those who are already acquainted with the "Elementary Algebra" by the same authors. In the present publication the writers have issued, without alteration and by themselves, the first fifteen chapters of the larger work just named. The short course carries students up to, but does not include the solutions of, simultaneous equations.

From the same authors and publishers we have a second edition of the *Elementary Algebra*.

*Algebra.* By E. M. Langley, M.A., and S. R. N. Bradly, M.A. (Murray.)

This is an algebra for beginners, and satisfies the requirements of the First Stage of the Directory of the Board of Education. The authors, in their preface, dwell on the fact that, for junior pupils, written text, however good, is of but little value as compared with competent oral instruction: hence their book, for the most part, leaves the task of explanation to the teacher, and consists mainly of a statement of rules and a series of fully worked illustrative examples, followed at short intervals by sets of exercises to be attempted by the pupils themselves. There is a certain proportion of theory introduced, but this is probably intended for teachers rather than for their scholars, and embodies the suggestions of experience as to the best methods of establishing the various rules. The connexion between arithmetic and the more elementary portions of algebra is throughout the volume, as far as possible, brought out, and in many cases numerical examples and exercises are given as preliminary to similar ones involving algebra. The writers also insist on the use that may be made of geometry and of concrete illustrations as aids to the study of algebra.

## MISCELLANEOUS.

*Stanley's Life of Dr. Arnold.* Teacher's Edition. With Preface by Sir Joshua Fitch. (Murray.)

Stanley's "Life of Dr. Arnold" has been selected by the Board of Education as a subject of examination for intending teachers, so that this edition will be heartily welcomed. Mr. Findlay has already published selections from the "Biography," bearing especially on Arnold's school work; but many will prefer to have the entire book. As Sir Joshua Fitch (who has already written on Arnold) points out in his interesting preface, it is well that teachers of all grades should be reminded, not only of Arnold's actual achievements in education, but also of his wide interests and that sympathy with all the best movements of his time which added so much to his influence as a schoolmaster. It may not be out of place to reproduce Dr. Martineau's estimate of his work, quoted by Mr. Findlay:—"The peculiar character of the English gentleman being assumed as an historical datum, the aim of education should be to penetrate and pervade this with a spirit of Christian self-regulation. He was aware how great was the revolution implied in the accomplishment of this end; that moral heroism must take the place of feudal independence, devout allegiance of personal self-will, respect for faithful work of the ambition for careless idleness, manly simplicity and earnestness of gentlemanly *poco-curante-ism*, the true shame for evil of the false shame for good; that contempt of pleasure must be added to the contempt of danger and of pain, and courage to defy corrupt fashion and opinion to the hardihood which resists the aggression of unjust authority." It may indeed be that, in some respects, Arnold's influence, perpetuated as it has been by a long line of high-minded successors—and that by no means at Rugby alone—has been a hindrance, as well as a help, to educational progress. It has tended to maintain something like a monopoly for classical study, while raising and ennobling it, and to rivet the link between the professions of schoolmaster and clergyman, now believed by many to be an obstacle both to the promotion of the fittest and to the growth of professional solidarity. But, for all that, his work will always be remembered as one of the noblest achievements of the nineteenth century.

*Scientific Research: a View from Within.* By Stephen Smith. (Elliot Stock.)

The research here referred to is that by means of vivisection. The author is a member of the Royal College of Surgeons, and the book purports to be an account of what he himself has seen. The coloured illustrations show the operations performed on frogs, dogs, and rabbits at such institutions as the Physiologic Institute of Strassburg, Leipzig, or Florence. The author asks and answers in his own way the question: Does such scientific research on the bodies of living animals involve cruelty? This evidence is an affirmative answer overwhelming in its conclusiveness. It is of the nature of the words of a barrister who had to reply to one maintaining that the wheels of a certain machine could not exceed a certain size: "Gentlemen, these are the wheels."

*Intermediate Practical Physics.* By John B. Wilkinson. (Chapman & Hall.)

This is a description of experiments in mechanics, hydrostatics,

sound, heat, light, magnetism, and electricity likely to be set at the Intermediate and Preliminary Scientific Examinations of the London University. They are, however, not always the simplest or most exact form of experiment for the purpose in each case. For instance, to determine the refractive index of a solid or liquid that can be put into a cell with transparent parallel sides, the easiest plan is to interpose the substance between the lens and the screen when an image made by a convex lens is cast on the screen. The descriptions, however, are very clear, and will be easily followed in the laboratory.

*A Class-Book of English History.* By Arthur Hassall, M.A. (Rivingtons.)

Historical research has recently been very active, and our English history has in consequence to be re-written. This class-book by the editor of "Periods of European History" incorporates the results of recent investigations, and is brought down to the close of the nineteenth century. It contains about 600 pages, is well arranged, and maintains a due proportion—or what the author calls historical perspective—in all its parts. Notes, subjects for class, and blackboard illustrations are added to each chapter.

*Mathematical Law in the Spiritual World.* By Eustace Miles, M.A. (Bell & Sons.)

"Mathematics," says the author, "cannot really be a cold unreligious science; religion cannot really be an inaccurate, unmathematical emotion." The book is, however, little more than an application of mathematical phraseology to the illustration of religious truths. In this there is necessarily, perhaps, some distortion. The argument occasionally reminds us of a skipper's proof that 2 and 3 do not necessarily make 5. He acted as surgeon of his ship, having a book of symptoms and a cabinet of numbered mixtures. In one case, as mixture No. 5 was exhausted, he put together 2 and 3 and killed his patient.

*A Geography of Wales.* By A. E. L. Hudson, B.A. (Macmillan.)

There are plenty of excellent maps in this handbook, and a number of interesting illustrations of scenery from photographs and drawings; there is also a thorough topography of the country. But the style of the book is not suited for pupils; there are no broad lines of description appealing to the imagination and memory, but a mass of facts concerning railways, population, municipal government, and so forth, calculated to damp the ardour of the most sanguine seeker for information, and it must be admitted that the average boy or girl is not naturally drawn to detail of this kind. But, as a book of reference for the teacher, it will no doubt prove exceedingly useful, since Wales has had but scant attention from writers of geography.

*The Castaways of Meadow Bank.* By Thomas Cobb. (Methuen.)

Three boys and a girl take a boat one afternoon during the floods to see a house the lower part of which is under water. They climb in at the window, and the boat drifts away. For four days they manage to exist in the deserted house, and the terrible situation brings out their diverse characters. One boy makes a punt, and, by means of it and courageous swimming, rescues the others. The story is very clearly and vividly told, and well illustrated. The size of the book is small, as the old-fashioned children's books used to be, and we fancy this will prove an additional attraction.

*Boys and Girls of Other Days.* By John Finnemore. (A. & C. Black.)

This is the second series of stories in English history, the first dealing with the earliest times to Henry VII. This volume takes the tale down to Sedgemoor, and includes such splendid opportunity for romantic incidents as the Armada, the Gunpowder Plot, and the Great Plague. The book is in every way as interesting and well illustrated as its predecessor.

*An Idler's Calendar.* By G. L. Apperson. (G. Allen.)

The essays contained in this volume have, for the most part, appeared as "turnovers" in the *Globe*, and deal with such subjects as "Jack Frost," "Spring Poets," "Honeysuckle," "The Voices of the Sea," "Fireside Travels," and so on. They are written in good English, without preciosity, and make pleasant reading for an idle half-hour. There are plenty of poetical quotations—some new to most readers, others old friends one is glad to be reminded of—and a good deal of miscellaneous information about old customs and the like, such as may be gathered from books like "The Book of Days." The book has the qualities most to be desired in such unpretending *causeries*—good taste and suggestiveness.

*Philips' Geographical Summary for Advanced Competitive Examinations.* By G. Webb. (G. Philip & Son.)

This summary is intended to be used with an "Advanced Geography" issued by the same publishers, and is intended for the use of Civil Service candidates, for whose benefit some two hundred questions from old examination papers are appended. One of the strong points of the book is the full description of railway and ocean routes—in which, by the way, New Zealand is rather shabbily treated. The defects are that no distinction is drawn between important and trivial facts, and that the lines on which the book runs are too purely topographical, with little or no suggestion of the exercise of the reasoning powers, which, as we are beginning to realize, is the most valuable side of geographical teaching.

*Biblia Innocentium.* Part II. By J. W. Mackail. (Longmans.)

Parents who find the Bible a somewhat difficult book for children will perhaps be able to make use of this instead. It is a history of the establishment of Christianity in one-page chapters, beginning with the birth of Christ and ending with the Apocalypse, but embracing a great deal of extra-Biblical legend. The language of the Bible is followed so closely that it seems a pity that any variation was deemed necessary: for instance, "The Son of Man has nowhere to lay His head" is in no way easier than the expression we are all familiar with; and many will feel that something is lost in this departure from our common literary heritage. Others again will object to the mixture of legends of the Saints with the Biblical record, no distinction whatever being made between historical facts and the merest fancy—between, for instance, St. Paul's mission at Athens and the story of St. Christopher.

*The Temple Reciter.* Edited by E. E. Speight, B.A. (Marshall.)

Here we have verses in Scotch, Irish, German-English, American, and even Cockney dialect, and the subjects range from Browning's "Holy Cross Day" to Thackeray's "Little Billee." Although divided into four parts, there is apparently no classification of the extracts, nor any reason for such division. Teachers will find the book handy for composition lessons and occasional readings.

*Deborah's Dressing; and Other Stories.* By Catherine E. Vernham. (National Society's Depository.)

This is a pleasantly written collection of stories, some of them turning on the good side of lads who had the credit of being *mauvais sujets*. The stories are simply told, without false sentiment.

*The Teacher's Manual of Composition.* By Robert S. Wood. (Macmillan.)

Teachers will find this little book a great boon to them in the really difficult matter of making English composition lessons attractive to little people. While thoughts and ideas are new, attention to methods of expression is always irksome, and a teacher is often at his wits' end to think of fresh plans to induce children to speak and write well. There is material here that will suffice him for a long time, from infant classes to children in their teens.

WE HAVE ALSO RECEIVED the following publications and new editions:—

"Warwick Edition" of George Eliot's Works.—*Theophrastus Such, Essays, &c.*

*The Spanish Gypsy, Jubal, &c.* (Blackwood.)

*Sir Walter Scott's Talisman, Abridged for the use of Schools.* (Macmillan.)

*Otto's German Reader, Books I, II.* Seventh edition; and *German Conversation Grammar*, method Gaspey-Otto-Sauer for the study of modern languages. Twenty-eighth edition. Revised by Prof. Lange. (Julius Groos, Heidelberg; and Sampson Low.)

"Blackwoods' English Classics."—*Scott's Marmion.* Edited by Alexander Mackie, M.A.

"Blackie's English Classics."—*Byron's Childe Harold's Pilgrimage.* Canto II. Edited by John Downie, M.A.

"Blackie's Junior School Shakespeare."—*King Richard III.* With Introduction and Notes. By F. G. Webb, M.A.

"English Classics for Schools."—*Anson's Voyage Round the World.* Text reduced; with Introduction, Notes, and Glossary. By H. W. Household. (Rivingtons.)

"Longmans' Ship Series Pictorial Geographical Readers."—*The British Isles.* (Longmans.)

"Rivingtons' Handbooks to the Bible and Prayer-Book."—*St. Luke.* By Rev. Morley Stevenson, M.A.

*The Agapé and the Eucharist in the Early Church: Studies in the History of the Christian Love-feasts.* By J. F. Keating, D.D. (Methuen.)

*The Child and the Prayer-Book.* Elementary Lessons on the Book of Common Prayer. By John Dickinson, B.A., Sub-Inspector of H.M. Board of Education. (Church of England Sunday School Institute.)

*Bible Scenes and Pictures.* By the Rev. Robert R. Resker. (Same publishers.)

*The Boy's and Girl's Companion for 1901.* (Same publishers.)

*The Church Worker.* Vol. XX. 1901. (Same publishers.)

*The School World.* Vol. III. (Macmillan.)

*Calendar, 1901-2, University College, London.* (Taylor & Francis.)

*London University Guide and Correspondence College Calendar, 1901-2.* (University Tutorial Press.)

"Arnold's School Series."—Introductory Book and Books I, II, III, IV, of *Britannia History Reader.*

Chambers's Geographical Readers of the Continents."—*Australasia.* Chambers's *English Manuals.* Book VI.

"Chambers's Continuous Readers."—Mr. G. A. Henty's historical tale *The Sole Survivors.*

"The Pitt Press Shakespeare."—*Macbeth.* Edited by A. W. Verity. (Cambridge University Press.)

"Dinglewood Shakespeare Manuals."—*Julius Cæsar.* With Questions and Notes. By Stanley Wood, M.A. (John Heywood, Manchester.)

## OXFORD UNIVERSITY PRESS.

### BOOKS SUITABLE FOR THE COLLEGE OF PRECEPTORS EXAMINATIONS, 1902.

**SHAKESPEARE.** Select Plays. Edited by W. ALDIS WRIGHT, D.C.L. Extra fcap. 8vo. *Julius Cæsar*, 2s.; *Midsummer Night's Dream*, 1s. 6d.

**MILTON.—POEMS.** Edited by R. C. BROWNE, M.A. In Two Volumes. New Edition, Revised. Extra fcap. 8vo, 6s. 6d. Sold separately, Vol. I, 4s.; Vol. II, 3s. In paper covers: *Lycidas*, 3d.; *Comus*, 6d. Edited, with Notes, by O. ELTON, B.A. *Lycidas*, 6d.; *L'Allegro*, 4d.; *Il Penseroso*, 4d.; *Comus*, 1s.

**SCOTT.—LADY OF THE LAKE.** Edited, with Preface and Notes, by W. MINTO, M.A. Extra fcap. 8vo, 3s. 6d.

—**MARMION.** Edited by THOMAS BAYNE. Extra fcap. 8vo, 3s. 6d.

**A FRENCH PRIMER.** Consisting of Accidence and Syntax. For use in Middle and Lower Forms. By ARTHUR H. WALL, M.A. Crown 8vo, 2s.

**A CONCISE FRENCH GRAMMAR.** Including Phonology, Accidence, and Syntax, with Historical Notes. For use in Upper and Middle Forms. By the same Author. Crown 8vo, 4s. 6d.

**GERMAN COMPOSITION.** A Theoretical and Practical Guide to the Art of Translating English Prose into German. By H. LANGE. Third Edition. 8vo, 4s. 6d.

By JOHN BARROW ALLEN, M.A.

**AN ELEMENTARY LATIN GRAMMAR.** New and Enlarged Edition. Extra fcap. 8vo, 2s. 6d.

**A FIRST LATIN EXERCISE BOOK.** Eighth Edition. Extra fcap. 8vo, 2s. 6d.

**A SECOND LATIN EXERCISE BOOK.** Second Edition. Extra fcap. 8vo, 3s. 6d.

**AN ELEMENTARY LATIN DICTIONARY.** By CHARLTON T. LEWIS. Ph.D. Square 8vo, 7s. 6d.

**CÆSAR.—THE COMMENTARIES.** For Schools. With Notes and Maps. By CHARLES E. MOBERLY, M.A. *The Gallic War.* Second Edition. Extra fcap. 8vo. Books I-III, stiff covers, 2s.

**CICERO DE SENECTUTE.** Edited, with Introduction and Notes, by L. HUXLEY, M.A. Extra fcap. 8vo, 2s.

**HORACE.—ODES.** Book I. Edited by E. C. WICKHAM, D.D. Extra fcap. 8vo, 2s.

**OVID.—TRISTIA.** Book I. The Text Revised, with an Introduction and Notes. By S. G. OWEN, M.A. Second Edition. Extra fcap. 8vo, 3s. 6d.

—**TRISTIA.** Book III. With Introduction and Notes. By S. G. OWEN, M.A. Second Edition. Extra fcap. 8vo, 2s.

**VIRGIL.** With an Introduction and Notes. By T. L. PAPPILLON, M.A., and A. E. HAIGH, M.A. *Æneid.* Books IV-VI. Crown 8vo, 2s.

**A GREEK-ENGLISH LEXICON.** Abridged from LIDDELL and SCOTT'S Quarto Edition. Square 12mo, 7s. 6d.

**EURIPIDES.** In Single Plays. Edited with Introduction and Notes. Extra fcap. 8vo.

*Alcestis.* By C. S. JERRAM, M.A. Fifth Edition. 2s. 6d.

*Bacchæ.* By A. H. CRICKSHANK, M.A. 3s. 6d.

*Hecuba.* By C. H. RUSSELL, M.A. 2s. 6d.

**XENOPHON.—ANABASIS.** Book I. Edited for the use of Junior Classes and Private Students. With Introduction, Notes, &c. By J. MARSHALL, M.A. Extra fcap. 8vo, 2s. 6d.

—**ANABASIS.** Book IV. By the same Editor. Extra fcap. 8vo, 2s.

**MANUAL OF THE FOUR GOSPELS.** By the Rev. T. H. STOKES, D.D. Part I.—*The Gospel Narrative.* Part II.—*The Gospel Teaching.* Crown 8vo, 3s. 6d.; or separately—Parts I and II, 2s. each.

**OLD TESTAMENT HISTORY FOR SCHOOLS.** By the same Author. In Three Parts, 2s. 6d. each.

**A SCHOOL HISTORY OF ENGLAND.** Down to the Death of Queen Victoria. With Maps, Plans, and Bibliographies. By OWEN M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON, A. J. CARLYLE, and W. G. POGGON-SMITH. Crown 8vo, 3s. 6d.

**THE "JUNIOR" EUCLID.** By S. W. FINN, M.A. Crown 8vo. Books I and II, 1s. 6d. Books III and IV, 2s.

**EUCLID REVISED.** Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his First Six Books. By R. C. J. NIXON, M.A. Third Edition. Crown 8vo, 6s. Book I, 1s. Books I, II, 1s. 6d. Books I-IV, 3s. Books V, VI, 3s. 6d.

**GEOMETRICAL EXERCISES FROM NIXON'S "EUCLID REVISED."** With Solutions. By A. LARMOR, M.A. Crown 8vo, 3s. 6d.

**GEOMETRY FOR BEGINNERS.** An easy Introduction to Geometry for Young Learners. By G. M. MINCHIN, M.A., F.R.S. 1s. 6d.

**ARITHMETIC.** With or without Answers to the Exercises. By R. HARGREAVES, M.A. Crown 8vo, 4s. 6d.

**FIRST LESSONS IN MODERN GEOLOGY.** By A. H. GREEN, M.A., F.R.S. Edited by J. F. BLAKE, M.A. With 42 Illustrations. Crown 8vo, 3s. 6d.

**ELEMENTARY POLITICAL ECONOMY.** By EDWIN CANNAN, M.A. Second Edition. Extra fcap. 8vo, stiff covers, 1s.

Also Published by Henry Frowde.

**THE TEACHERS' COMMENTARY ON THE NEW TESTAMENT.** By F. N. PELGOUET, D.D.

Vol. I.—*The Gospel according to St. Matthew.* 8vo, 5s.

Ready shortly.

Vol. II.—*The Acts of the Apostles.*

**THE OXFORD CHAUCER.** The Complete Works of GEOFFREY CHAUCER. Edited, from numerous Manuscripts, by the Rev. WALTER W. SKELTON, Litt.D. With full Glossarial Index and Portrait. Crown 8vo, cloth, 3s. 6d.; on Oxford India Paper, from 8s.

Educational Catalogue on application.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

# New Books and New Editions

## FROM MR. MURRAY'S EDUCATIONAL LIST.

### MR. MURRAY'S HOME AND SCHOOL LIBRARY.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

**ALGEBRA. PART I.** By E. M. LANGLEY, M.A., Senior Mathematical Master, Modern School, Bedford, and S. N. R. BRADLY, M.A., Mathematical Master, Modern School, Bedford. Feap. 8vo, 1s. 6d.

This volume is specially adapted to the requirements of the First Stage of the Directory of the Board of Education, South Kensington. Answers, for teachers only, can be obtained separately.

Prof. JOHN PERRY, of the Royal College of Science, South Kensington, writes:—"I never do praise a book unless I believe it to be good. Your Algebra (regarded as a book for beginners) pleases me very much indeed. I cannot imagine an Algebra prepared for schools in general, and especially for use by teachers in general, which would come nearer to my notion of what an Algebra ought to be, than yours."

**A FIRST COURSE OF PRACTICAL SCIENCE.** With Full Directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLAISTONE, F.R.S. Feap. 8vo, 1s. 6d.

These lessons are taught on the heuristic method, with a view to stimulating the learner's powers of observation and experiment.

**FIRST MAKERS OF ENGLAND.** Julius Cæsar, King Arthur, Alfred the Great. By Lady MAGNUS, Author of "Boys of the Bible," &c. With Illustrations. Feap. 8vo, 1s. 6d.

This volume is based on the recommendations for history teaching made by Prof. Withers at the invitation of the School Board for London.

IN THE PRESS.

**A SHORT HISTORY OF COINAGE.** By Lord AVEBURY, F.R.S., &c. With many Illustrations.

**HEROES OF THE WEST.** A Biographical Sketch of Modern History. By the Rev. A. J. and Mrs. CARLYLE and F. S. MARVIN, M.A. Two Vols.

**TELEGRAPHS AND TELEPHONES.** By Sir W. H. PREECE, K.C.B., &c., sometime President of the Institution of Civil Engineers.

**ELECTRIC WIEMEN'S WORK.** By W. C. CLINTON, B.Sc. (Lond.), Demonstrator in the Pender Laboratory, University College, London.

The above two volumes are written with particular reference to the requirements of the Examinations of the City and Guilds of London Institute.

**VILLAGE LECTURES ON POPULAR SCIENCE.** By the Rev. C. T. OVENDEX, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Two Vols.

A Complete List of the Volumes in this Series will be sent post free on application.

### MR. MURRAY'S NEW SERIES OF SECONDARY EDUCATION TEXT-BOOKS.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

**BRITAIN OVER THE SEA.** A Reader for Schools. Compiled and Edited by ELIZABETH LEE, Author of "A School History of English Literature," &c. Editor of "Cowper's Task and Minor Poems," &c. With four Maps of the British Empire at different periods. Crown 8vo, 2s. 6d.

This School Reader is conceived on novel lines. The extracts are arranged in sections, comprising "The English Colonies up to 1900," "Australia," "India," "South Africa," &c.; and the selections range from the works of Sir Walter Raleigh to the speeches of Lord Beaconsfield. It contains a literary introduction, and the name of the author, who is a contributor to the *Dictionary of National Biography*, carries assurance that the editorial work is well done.

Mr. P. A. BARNETT (H.M. Inspector of Training Colleges):—"I congratulate you on the production of a very excellent piece of work. I hope the schools will use it, but it is almost too good for them."

**COMMERCIAL FRENCH.** In Two Parts. By W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, Assistant-Master at Merchant Taylors' School, and MICHEL BECKER, Professor at the Ecole Alsacienne, Paris. Author of "L'Allemand Commercial" and "Lectures Pratiques d'Allemand Moderne." With a Map in each volume.

PART I.—Consisting of Simple Sentences and Passages in French, with occasional Business Letters, and containing in an Appendix a clear system of French Grammar, with special reference to the Verb. Crown 8vo, 2s. 6d.

"... most useful, the best thing of the kind that has come in our way."—*British Weekly*.

"An excellent book, which we recommend warmly... a most careful piece of work."—*Educational Times*.

PART II.—An Advanced Commercial Reader. Crown 8vo, 2s. 6d.

**COMMERCIAL KNOWLEDGE.** A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelsswissenschaff* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"... contains concise and accurate descriptions of all kinds of commercial routine, from the functions of the Board of Trade to a facsimile of a bill of lading, and should be in the possession of every one who intends to embrace a commercial career."—*The Scotsman*.

A Complete List of the Volumes in this Series will be sent post free on application.

A Complete Illustrated Catalogue of Standard Educational Works published by Mr. Murray may be had, post free, on application. This Catalogue includes Sir William Smith's Famous Series of Students' Manuals, Smaller Manuals, Dictionaries, Principias, &c.

### NATIONAL EDUCATION:

ESSAYS TOWARDS A CONSTRUCTIVE POLICY.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

CHAP.

8vo, 7s. 6d. net.

- 1.—**Aims and Methods.** By the EDITOR.
  - 2.—**Church Schools and Religious Education.** By the Rev. BERNARD REYNOLDS, M.A., Prebendary of St. Paul's, Diocesan Inspector of Schools, London.
  - 3.—**Registration and Training of Teachers.** By FRANCIS STORR, B.A., Editor of "The Journal of Education."
  - 4.—**The Inspection of Secondary Schools.** By Sir JOSHUA G. FITCH, LL.D., formerly H.M. Chief Inspector of Training Colleges.
  - 5.—**Science in Education—The Need of Practical Studies.** By Prof. H. E. ARMSTRONG, LL.D., Ph.D., F.R.S., Professor of Chemistry at the Central Technical College.
  - 6.—**Industrial Needs.** By A. D. PROVAND, formerly M.P. for Glasgow.
  - 7.—**Commercial Education.**—(a) **Secondary.** By T. A. ORGAN, B.A., L.C.C., formerly Chairman of the Technical Education Board. (b) **University.** By Prof. W. A. S. HEWINS, Director of the London School of Economics and Political Science.
  - 8.—**Agricultural Education.** By JOHN C. MEDD, M.A., Executive Member of the Agricultural Education Committee.
  - 9.—**The Teaching of Modern Languages.** By H. W. EVE, formerly Head Master of University College School.
- Bibliographical Note, &c.

**STANLEY'S LIFE OF ARNOLD.** Teachers' Edition. With a Preface by Sir JOSHUA FITCH, LL.D., formerly H.M. Chief Inspector of Training Colleges. Large type, 800 pages, in One Volume, with Photogravure Portrait, and Sixteen Half-tone Illustrations. Crown 8vo, 6s.

This work is set by the Board of Education for the Elementary Teachers' Certificate, 1902.

**HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND.**

Chapters I.—IX. Bound together in One Volume for the special use of Candidates for the London University Examinations. Crown 8vo, 5s.

**A GENERAL HISTORY OF EUROPE, 350-1900.** By

OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps and Genealogical Tables. Crown 8vo, 9s.

**THE GREAT PERSIAN WAR AND ITS PRELIMINARIES.**

A Study of the Evidence, Literary and Topographical. By G. B. GRUNDY, M.A., Lecturer at Brasenose College, and University Lecturer in Classical Geography, With Maps and Illustrations. Demy 8vo, 21s. net.

This book deals in detail with the campaign of Marathon, and with that of the years 480-479 B.C. The author has personally examined the scenes of the great events recorded, and has made surveys of Thermopylae and Plataea for the purpose of the work. There are introductory chapters on the relation between the Greeks and the Oriental Monarchies prior to the year 490 B.C. The book is fully illustrated by maps, photographs, and sketches of the main sites of interest.

**THE DAWN OF MODERN GEOGRAPHY.** A History of

Exploration and Geographical Science, from the Opening of the Tenth to the Middle of the Thirteenth Century (A.D. 900-1250). By C. RAYMOND BEAZLEY, Fellow of Merton College, Oxford, Author of "The Dawn of Modern Geography, from the Conversion of the Roman Empire to 900 A.D." With Maps and Illustrations. Demy 8vo, 18s.

This volume includes an account of the Scandinavian Explorers, and the Saga travel literature; of the Pilgrims and Religious Travellers, such as Sawulf and Benjamin of Tudela; of the Merchant Travellers, such as the Elder Polos; of the Missionary and Diplomatic Travellers, such as William de Rubruquis and John de Plano Carpini; and of the Scientific Geographers and Map Makers, such as Matthew Paris, Henry of Mainz, Lambert of St. Omer, &c. With some notice of the Arab and Chinese Geographers and Travellers of this time, such as Edrisi, &c.

As in the former volume, the object of the present is to give a thoroughly representative and so complete account of geographical progress during a great part of the Middle Ages. Beginning with the changes wrought by the Northmen, this second instalment brings down the narrative to the close of the Crusading era, and the highest point of the Empire of the Mongol Tartars.

### The Progressive Science Series.

Large crown 8vo. 6s. each Volume.

NEW VOLUME.

**THE STARS: A Study of the Universe.** By Prof. SIMON NEWCOMB.

A List of the Volumes already published in the above Series will be sent post free on application.

**MATHEMATICS.**

*Geometrical Note by R. F. DAVIS, M.A.*

Let ABC be a triangle, O its circum-centre, and D the middle point of its base BC. Produce AO, AD to meet the circum-circle again in L, H; draw DN perpendicular to AL. Then

$$\begin{aligned} &= 2AL \cdot AN \\ &= 2AH \cdot AD \quad (\text{since DHLN is cyclic}) \\ &= 2(AD^2 + BD^2). \end{aligned}$$

If D, instead of being the middle point of BC, divides it so that

$$BD : CD = q : p,$$

then  $p \cdot AB^2 + q \cdot AC^2 = (p + q) AL \cdot AN = (p + q)(AD^2 + BD \cdot CD)$ , as before.

**14927.** (A. M. NESBITT, M.A.)—Defining a cardioid as the locus of the extremities of a straight rod of length  $2a$ , which moves so that its middle point describes a circle of diameter  $a$ , while the rod is constrained to pass through a point on the circumference of the circle, prove geometrically that, "If three circles through the cusp of a cardioid touch the curve, their three points of intersection are collinear."

*Solution (I.) by the PROPOSER; (II.) by JOHN PRESCOTT.*

(I.) If OQC<sub>1</sub>R be generating circle, centre E, and OR be perpendicular to the rod PP', then RP is normal to cardioid at P, and Q is mid-point of rod, so that C<sub>1</sub> is centre of circle through O which touches cardioid

at P. Thus the centres of the three circles are (C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>) three points on generating circle; and common chord of circles with centres C<sub>1</sub>, C<sub>2</sub> will be OO<sub>3</sub>, where O<sub>3</sub> is image of O in C<sub>1</sub>C<sub>2</sub>, i.e. OO<sub>3</sub> = 2OK<sub>3</sub>. But K<sub>1</sub>K<sub>2</sub>K<sub>3</sub> is the SIMSON line of O with respect to triangle C<sub>1</sub>C<sub>2</sub>C<sub>3</sub>; therefore O<sub>1</sub>, O<sub>2</sub>, O<sub>3</sub> are collinear points.

[The rest in Volume.]

**14937.** (Professor S. SIMCOM.)—D, E, F are any points taken along the sides BC, CA, AB respectively, of the triangle ABC. Prove that  $(AE \cdot BF \cdot CD) / (AF \cdot BD \cdot CE)$  is unaltered by projection.

*Solution by H. C. PLUMMER.*

Let AD, BE meet in O; CO and AB in F'. Let

$$(AE \cdot BF \cdot CD) / (AF \cdot BD \cdot CE) = x.$$

$$\text{But } (AE \cdot BF' \cdot CD) / (AF' \cdot BD \cdot CE) = 1.$$

$$\text{Therefore } x = (BF \cdot AF') / (AF \cdot BF') = \{ABF'F\},$$

and is unaltered by projection.

**14655.** (J. A. THIRD, M.A., D.Sc.)—From the vertices of a triangle ABC lines AX, BY, CZ are drawn to the opposite sides, such that the angles CAX, ABY, BCZ, taken the same way round, are together equal to 180°; and AX', BY', CZ' are drawn from the vertices to the opposite sides, parallel to CZ, AX, BY respectively. Show that the circumcentres of AX'X', BY'Y', CZZ' are collinear.

*Solution by Professor SANJANA, M.A.*

Suppose through A two lines are drawn to the base BC, such that CAX' = φ<sub>1</sub>, BAX = θ<sub>1</sub>; let us find the trilinear coordinates of the circum-centre of AX'X'. The coordinates of A are (p<sub>1</sub>, 0, 0); of X, [0, p<sub>1</sub> sin(A - θ<sub>1</sub>) / sin(B + θ<sub>1</sub>), p<sub>1</sub> sin θ<sub>1</sub> / sin(B + θ<sub>1</sub>)]; hence those of the mid-point of AX are

$$\left[ \frac{1}{2}, \frac{\sin(A - \theta_1)}{2 \sin(B + \theta_1)}, \frac{\sin \theta_1}{2 \sin(B + \theta_1)} \right],$$

omitting the factor 1/2 p<sub>1</sub>. The line through A perpendicular to AX is  $\beta \cos \theta_1 + \gamma \cos(A - \theta_1) = 0$ ; hence the perpendicular bisector of AX is

$$\beta \cos \theta_1 + \gamma \cos(A - \theta_1) = k(\alpha \sin A + \beta \sin B + \gamma \sin C),$$

where k may be determined from the fact that the mid-point above lies on this line; this gives for k the value 1/2 sin(B + θ<sub>1</sub>), and we get for this bisector the equation

$$\beta \sin(B + 2\theta_1) + \gamma \sin(B - A + 2\theta_1) - \alpha \sin A = 0.$$

Similarly the perpendicular bisector of AX' is found to be

$$\gamma \sin(C + 2\phi_1) + \beta \sin(C - A + 2\phi_1) - \alpha \sin A = 0.$$

Solving these equations simultaneously, we obtain for O<sub>1</sub>, the circum-centre of AX'X',

$$\alpha / \cos(A - \theta_1 - \phi_1) = \beta / \cos(B - \phi_1 + \theta_1) = \gamma / \cos(C - \theta_1 + \phi_1) \dots (1).$$

So, also, if lines through B are drawn to CA such that ABY' = φ<sub>2</sub>, CBY = θ<sub>2</sub>, and through C to AB such that BCZ' = φ<sub>3</sub>, ACZ = θ<sub>3</sub>, the coordinates of O<sub>2</sub> and O<sub>3</sub>, the circum-centres of BY'Y' and CZZ' respectively are

$$\alpha / \cos(A + \phi_2 - \theta_2) = \beta / \cos(B - \theta_2 - \phi_2) = \gamma / \cos(C + \theta_2 - \phi_2) \dots (2),$$

$$\alpha / \cos(A + \theta_3 - \phi_3) = \beta / \cos(B + \phi_3 - \theta_3) = \gamma / \cos(C - \theta_3 - \phi_3) \dots (3).$$

In the present case, as CAX + ABY + BCZ = 180°, we get ACZ = BAX + CBY, that is, -θ<sub>3</sub> = θ<sub>1</sub> + θ<sub>2</sub>; also, as BY' is parallel to AX, φ<sub>2</sub> = -θ<sub>1</sub>; so θ<sub>3</sub> = -φ<sub>1</sub> and φ<sub>3</sub> = -θ<sub>2</sub> = θ<sub>1</sub> + θ<sub>3</sub> = θ<sub>1</sub> - φ<sub>1</sub>. Thus the three circum-centres are given by (1) and

$$\alpha / \cos(A - \phi_1) = \beta / \cos(B + 2\theta_1 - \phi_1) = \gamma / \cos(C + \phi_1) \dots (2'),$$

$$\text{and } \alpha / \cos(A - \theta_1) = \beta / \cos(B + \theta_1) = \gamma / \cos(C + 2\phi_1 - \theta_1) \dots (3').$$

The line joining the last two will be found to be

$$\alpha \sin(B - C + 2\theta_1 - 2\phi_1) + \beta \sin(C - A + 2\phi_1) + \gamma \sin(A - B - 2\theta_1) = 0,$$

and O<sub>1</sub> may be easily shown to lie upon this.

**14751.** (H. MACCOLL, B.A.)—The chance that A is true (assuming nothing as to B) is a; the chance that B is true (assuming nothing as to A) is b; and the chance that A is true, assuming B true, is k times the chance that B is false, assuming A false. Show that the dependence of A upon B is  $(1 - a)(k - kb - a) / (1 - a - kb)$ , except when the numerator and denominator of this fraction both vanish. Discuss this exceptional case. (See Reprint, Vol. LXXII, pp. 79, 80.)

*Solution by the PROPOSER.*

We assume that A and B are neither certainties nor impossibilities; so that a and b must each be > 0 and < 1. Let a' = 1 - a and b' = 1 - b. From the formulæ A'/B = 1 - A/B, and A/B = a/b · B/A, we get

$$\frac{B'}{A'} = 1 - \frac{B}{A'} = 1 - \frac{b}{a'} \cdot \frac{A'}{B} = 1 - \frac{b}{a'} \left( 1 - \frac{A}{B} \right) = 1 - \frac{b}{a'} + \frac{b}{a'} \cdot \frac{A}{B}.$$

And from our data we have A/B = k B'/A'. These two equations give us

$$A/B = k(a' - b) / (a' - kb);$$

$$\text{and, by definition, } \delta(A/B) = A/B - a = (1 - a)(k - kb - a) / (1 - a - kb).$$

The numerator and denominator of this fraction both vanish when k = a + b = 1. In this case δ(A/B) may have an infinite number of values all consistent with the data. For example, let a = 2/3, b = 2/3, k = 1. To illustrate geometrically, let x points (see Fig. 1) be marked in the circle A outside the circle B, y points in B outside A, 6 points in the area common to A and B, and 6 points outside both A and B. Let the symbol A as a statement assert that a point P taken at random out of the whole x + y + 12 points marked in the circle E will be one of the x + 6 in A, and let B assert that it will be one of the y + 6 in B. From our data

$$(x + 6) / (x + y + 12) = a = \frac{2}{3},$$

$$(y + 6) / (x + y + 12) = b = \frac{2}{3}.$$

These two equations are not independent, each being equivalent to 2x - 3y = 6, so that an infinite number of values of x and y will satisfy them; and, whatever values of these we take, the

Fig. 1.

expression given for  $\delta(A/B)$  will assume the form  $\frac{p}{q}$ . Yet all the values of  $\delta(A/B)$  corresponding to the arbitrary values assigned to  $x$  and  $y$  will be real and different. For example, when  $x = 6$  and  $y = 2$ , we get  $\delta(A/B) = \frac{2}{3}$ . When  $x = 9$  and  $y = 4$ ,  $\delta(A/B) = 0$ . When  $x = 12$  and  $y = 6$ ,  $\delta(A/B) = -\frac{1}{15}$ . And for all these different values of  $\delta(A/B)$  we have the same data,  $a = \frac{3}{2}$ ,  $b = \frac{1}{2}$ ,  $k = 1$ ; which shows that these data alone are insufficient to determine  $\delta(A/B)$ .

But when the number of points marked in the area common to A and B is not equal to the number outside both A and B the formula for  $\delta(A/B)$  will not take the form  $\frac{p}{q}$ , and will always determine the one and only possible value of the dependence  $\delta(A/B)$ . For example, suppose (as in Fig. 2) we have  $a = \frac{3}{2}$ ,  $b = \frac{1}{2}$ ,  $k = \frac{3}{2}$ . It is evident from the figure that  $\delta(A/B) = -\frac{1}{3}$ , and this result will also be obtained from the formula without any reference to the figure. Any values of  $a, b, k$  which will make  $\delta(A/B)$  in the formula greater than 1 will indicate inconsistency of data, as, for example,  $a = \frac{3}{2}$ ,  $b = \frac{1}{2}$ ,  $k = \frac{3}{2}$ . When  $a = \frac{3}{2}$  and  $b = \frac{1}{2}$ ,  $k$  cannot exceed  $\frac{1}{2}$ .

Fig. 2.

**14985.** (Professor NEUBERG.)—Ramener l'un à l'autre les déterminants

$$\begin{vmatrix} x_1 + x_2 - x_3 - x_4 & y_1 + y_2 - y_3 - y_4 & x_1x_2 + y_1y_2 - x_3x_4 - y_3y_4 \\ x_1 + x_3 - x_2 - x_4 & y_1 + y_3 - y_2 - y_4 & x_1y_3 + y_1y_3 - x_2y_4 - y_2y_4 \\ x_1 + x_4 - x_2 - x_3 & y_1 + y_4 - y_2 - y_3 & x_1y_4 + y_1y_4 - x_2y_3 - y_2y_3 \end{vmatrix},$$

$$\begin{vmatrix} 1 & x_1 & y_1 & x_1^2 + y_1^2 \\ 1 & x_2 & y_2 & x_2^2 + y_2^2 \\ 1 & x_3 & y_3 & x_3^2 + y_3^2 \\ 1 & x_4 & y_4 & x_4^2 + y_4^2 \end{vmatrix}.$$

Solution by Dr. MUIR, F.R.S.

Calling the first determinant  $D_3$  and the second  $D_4$  and denoting  $x_i, x_j, y_i, y_j$  by  $\sigma_{ij}$ , we increase the fourth column of  $D_3$  by  $\sigma_{23} + \sigma_{24} + \sigma_{34}$  times the first column, and diminish it by  $\sigma_{12}$  times the second column, and by  $\sigma_{13}$  times the third column, the result being

$$\begin{vmatrix} 1 & x_1 & y_1 & -\sigma_{12} - \sigma_{13} - \sigma_{14} + \sigma_{23} + \sigma_{24} + \sigma_{34} \\ 1 & x_2 & y_2 & -\sigma_{12} + \sigma_{34} \\ 1 & x_3 & y_3 & -\sigma_{13} + \sigma_{24} \\ 1 & x_4 & y_4 & -\sigma_{14} + \sigma_{23} \end{vmatrix}.$$

If this be multiplied columnwise by  $-8$  in the form

$$\begin{vmatrix} -1 & 1 & 1 & 1 \\ 1 & 1 & -1 & -1 \\ 1 & -1 & 1 & -1 \\ 1 & -1 & -1 & 1 \end{vmatrix},$$

we obtain

$$-8D_3 = \begin{vmatrix} 2 & -x_1 + x_2 + x_3 + x_4 & -y_1 + y_2 + y_3 + y_4 & 0 \\ 0 & x_1 + x_2 - x_3 - x_4 & y_1 + y_2 - y_3 - y_4 & 2(-\sigma_{12} + \sigma_{34}) \\ 0 & x_1 - x_2 + x_3 - x_4 & y_1 - y_2 + y_3 - y_4 & 2(-\sigma_{13} + \sigma_{24}) \\ 0 & x_1 - x_2 - x_3 + x_4 & y_1 - y_2 - y_3 + y_4 & 2(-\sigma_{14} + \sigma_{23}) \end{vmatrix} = -4D_3;$$

and therefore

$$2D_4 = D_3.$$

**14988.** (Major P. A. MACMAHON, F.R.S.)—Prove that that portion of the expansion of the algebraic fraction

$$\frac{1}{\{1 - s_1(a_1x_1 + a_2x_2)\}^p \{1 - s_2(b_1x_1 + b_2x_2)\}^q} \quad (p \geq q),$$

which is a function of  $s_1x_1$  and  $s_2x_2$  only has the expressions

$$\frac{1}{D^q (1 - s_1 a_1 x_1)^{p-q}} \left\{ 1 + \binom{p-1}{1} \binom{q}{1} \frac{d}{D} + \binom{p-1}{2} \binom{q+1}{2} \frac{d^2}{D^2} + \binom{p-1}{3} \binom{q+2}{3} \frac{d^3}{D^3} + \dots \right\},$$

where  $D = 1 - a_1s_1x_1 - b_2s_2x_2 + (a_1b_2 - a_2b_1)s_1s_2x_1x_2$  and  $d = a_2b_1s_1s_2x_1x_2$ .

Solution by Professor E. B. ELLIOTT, F.R.S.

Writing  $a_1, a_2, b_1, b_2$  for  $s_1a_1x_1, s_1a_2x_1, s_2b_1x_2, s_2b_2x_2$ , respectively, and  $y$  for  $s_2x_1$ , the problem is to extract from

$$\{1 - (a_1 + a_2y)\}^{-p} \{1 - (b_2 + b_1y^{-1})\}^{-q}$$

the part whose expansion in powers of  $a_1, a_2, b_1, b_2$  is free from  $y$ . The part is clearly the infinite expansion

$$(1 - a_1)^{-p} (1 - b_2)^{-q} \left\{ 1 + pq \frac{a_2b_1}{(1 - a_1)(1 - b_2)} + \frac{p(p+1)q(q+1)}{1.2} \frac{a_2^2b_1^2}{(1 - a_1)^2(1 - b_2)^2} + \dots \right\};$$

but a finite expression for it is desired.

Now the expansion here is also the part free from  $y$  in that of

$$(1 - a_1)^{-p} (1 - b_2)^{-q} (1 - y)^{-p} \left\{ 1 - \frac{a_2b_1}{(1 - a_1)(1 - b_2)} y^{-1} \right\}^{-q},$$

i.e., of  $(1 - a_1)^{-p} (1 - y)^{-p} \{ (1 - a_1)(1 - b_2) - a_2b_1y^{-1} \}^{-q},$

i.e., of  $(1 - a_1)^{-p} (1 - y)^{-p} \{ D + d(1 - y^{-1}) \}^{-q},$

i.e., of  $D^{-q} (1 - a_1)^{-p} \left\{ (1 - y)^{-p} + q \frac{d}{D} (1 - y)^{-p} (y^{-1} - 1) + \frac{q(q+1)}{1.2} \frac{d^2}{D^2} (1 - y)^{-p} (y^{-1} - 1)^2 + \dots \right\}.$

But,  $r$  being any positive integer, the part free from  $y$  in the expansion of  $(1 - y)^{-p} (y^{-1} - 1)^r$  is that in the expansion of  $(1/y)^r (1 - y)^{r-p}$  which is zero unless  $r < p$ , and if  $r < p$  is

$$\frac{(p-r)(p-r-1)\dots(p-1)}{r!}, \text{ i.e., } \binom{p-1}{r}.$$

Hence the finite expression required is as stated.

**14971.** (ROBERT W. D. CHRISTIE.)—Find factors of  $N^4 + 1$  by an easy general solution where  $N^2$  takes the form  $(M^2 - 24)10$ . (See Quest. 13707.) Ex.  $14506^4 + 1 = 210469913$  and  $210378169$ .

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

The present solver has given in a communication to the London Mathematical Society (as yet unpublished) a method of considerable generality of factorizing the functions  $N^2 - (x^2 + y^2)$ , called *Quartans*; the following is a slight sketch of what is here wanted.

Let  $N = x^2 + y^2 = (x^2 + Cy^2) - y^2 = P^2 - Q^2.$

This requires  $z^2 = 2Cx^2 + (C^2 - 1)y^2.$

If this diophantine be solvable in integers  $(x, y, z)$ , it will yield an infinite train of factorisable quartans. Also, it was shown that every quartan, even if prime, would yield (several) values of  $C$ , each leading to a solvable diophantine.

Ex.—Take  $N_0 = 17 = 2^4 + 1^4 = 9^2 - 8^2$  as base-quartan. Here  $x_0 = 2, y_0 = 1$ , giving  $2^2 + C.1^2 = \pm 9$ , whence  $C = 5$  or  $-9$ . Taking  $C = 5$  gives the diophantine  $z^2 - 10x^2 = 24y^2$ . Assuming  $y = 1$ , the diophantine  $z^2 - 10x^2 = 24$  will yield a train of  $N = x^4 + 1^4$ .

The initial solution  $8^2 - 10.2^2 = 24$ , together with the unit-form  $19^2 - 10.6^2 = 1$ , yields, by the usual rules, two infinite trains of solutions

$$z = 8, 32, 1208, 45872, \&c., \&c.; \quad 272, 10328, \&c.;$$

$$x = 2, 10, 382, 14506, \&c., \&c.; \quad 86, 3266, \&c.;$$

each solution giving the factorization of a quartan.

Thus the fourth case gives the required  $N$ ,

$$14506^4 + 1^4 = (14506^2 + 5.1^2)^2 - 12.45872^2 = 210424061^2 - 45872^2 = 210378169.210469913.$$

A table, prepared by the SOLVER (not yet published) of the roots of the congruence  $x^4 + 1 \equiv 0 \pmod{p}$ , shows that  $N$  has no factors  $< 10,000$ . With this start, LAURANCE'S process now shows both these large factors of  $N$  to be prime.

**14854.** (Rev. T. WIGGINS, B.A.)—Take a point P within a triangle ABC. Denote the lines PA, PB, PC by  $x, y, z$ , and the angles PAC, PBA, PCB by  $\alpha, \beta, \gamma$  respectively; show that (1)

$$\frac{ax}{\sin(C - \gamma + \beta)} = \frac{by}{\sin(A - \alpha + \gamma)} = \frac{cz}{\sin(B - \beta + \alpha)};$$

(2) if  $C - \gamma + \beta = 90^\circ$ , then  $a^2x^2 = b^2y^2 + c^2z^2.$

Solutions (I.) by T. FRAZER; (II.) by CONSTANCE I. MARKS, B.A.

(I.) 1.  $\frac{x}{PZ} = \frac{\sin B}{\sin(A - \alpha + \gamma)}$ ,  $\frac{y}{PZ} = \frac{\sin A}{\sin(C - \gamma + \beta)}$ ;

hence  $\frac{x}{y} = \frac{\sin B \sin(C - \gamma + \beta)}{\sin A \sin(A - \alpha + \gamma)}$ ;

$\therefore \frac{ax}{by} = \frac{\sin(C - \gamma + \beta)}{\sin(A - \alpha + \gamma)}$ .

Similarly, by producing BP to meet the circle,

$$\frac{ax}{cz} = \frac{\sin(C - \gamma + \beta)}{\sin(B - \beta + \alpha)}$$

Hence  $\frac{ax}{\sin(C - \gamma + \beta)} = \frac{by}{\sin(A - \alpha + \gamma)} = \frac{cz}{\sin(B - \beta + \alpha)}$ .

$$2. \frac{b^2y^2 + c^2z^2}{a^2x^2} = \sin^2(B - \beta + \alpha) + \sin^2(A - \alpha + \gamma) \text{ [since } C - \gamma + \beta = 90^\circ \text{]}$$

$$= \sin^2(180^\circ - \beta - C - A + \alpha) + \sin^2(A - \alpha + \gamma)$$

$$= \sin^2(180^\circ - 90^\circ - \gamma - A + \alpha) + \sin^2(A - \alpha + \gamma)$$

$$= \sin^2[90^\circ - (A - \alpha + \gamma)] + \sin^2(A - \alpha + \gamma) = 1.$$

$$a^2x^2 = b^2y^2 + c^2z^2.$$

Hence

(II.) Let  $A'B'C'$  be a new triangle formed by joining the feet of the perpendiculars from  $P$  on  $BC, CA, AB$ .

Draw  $PK$  perpendicular to  $A'B'$ .

The quadrilaterals  $PA'B'C', PC'A'B, PB'C'A$  are cyclic.

Hence it follows that the angles  $A', B', C'$  are respectively equal to  $C - \gamma + \beta, A - \alpha + \gamma, B - \beta + \alpha$ , and that  $z \cdot PK = PA' \cdot PB'$ . Now

$$A'B' \cdot PK = PA' \cdot PB' \sin C = z \cdot PK \sin C,$$

$$\text{whence } A'B' = z \sin C.$$

Similarly, it may be shown that

$$C'A' = y \sin B \text{ and } B'C' = x \sin A.$$

Therefore, since the sides of any triangle are proportional to the sines of the opposite angles,

$$\sin(A - \alpha + \gamma) : \sin(B - \beta + \alpha) : \sin(C - \gamma + \beta) = by : cz : ax,$$

$$\text{or } \frac{ax}{\sin(C - \gamma + \beta)} = \frac{by}{\sin(A - \alpha + \gamma)} = \frac{cz}{\sin(B - \beta + \alpha)}.$$

If  $C - \gamma + \beta = 90^\circ$ ,

$$b^2y^2 + c^2z^2 = a^2x^2 [\sin^2(A - \alpha + \gamma) + \sin^2(B - \beta + \alpha)]$$

$$= \frac{1}{2}a^2x^2 \{2 - [\cos 2(A - \alpha + \gamma) + \cos 2(B - \beta + \alpha)]\}$$

$$= a^2x^2 [1 - \cos(A + B - \beta + \gamma) \cos(B - A + 2\alpha - \beta - \gamma)]$$

$$= a^2x^2 \text{ [since } \cos(A + B - \beta + \gamma) = \cos \frac{1}{2}\pi = 0 \text{].}$$

8874. (Professor GENESE, M.A.)—The locus of the centres of sections of the conicoid  $f(x,y,z) = 0$  by planes containing the axis of  $z$  is the conic determined by  $df/dz = 0, x(df/dx) + y(df/dy) = 0$ .

Solution by C. A. LAISANT.

$$\text{Let } y = mx \text{ ..... (1),}$$

the equation of a particular plane containing  $OZ$ . Then  $f(x, mx, z) = 0$  is the equation of the projection, on  $OXZ$ , of the variable conic.

The centre is given by (1) and

$$\frac{\partial f}{\partial x} + m \frac{\partial f}{\partial y} = 0, \quad \frac{\partial f}{\partial z} = 0 \text{ ..... (2).}$$

Hence, eliminating  $m$ ,

$$\frac{\partial f}{\partial z} = 0, \quad x \left( \frac{\partial f}{\partial x} \right) + y \left( \frac{\partial f}{\partial y} \right) = 0.$$

Note.—We have here: (i.) the conjugate plane of the direction  $OZ$ ; (ii.) the conicoid locus of the middle points of the chords passing by  $O$ ; the intersections give the answer.

QUESTIONS FOR SOLUTION.

15026. (The late Professor SYLVESTER, F.R.S.)—It is well known that, if a prime number  $p$  is of the form  $6i + 1$ , we may always write  $4p = m^2 + 27n^2$ . Required to show that  $\frac{1}{3}(p + 1^4m + 1)$  may be made integer by assigning the right sign to  $1^4$  and that, according as this integer is even or odd,  $\frac{1}{3}(p - 1)$  will be a cubic residue or non-residue of  $p$ .

15027. (ROBERT W. D. CHRISTIE.)—Find the primes having 2 as a root. Show that  $f$  has primitive roots are 2,  $p - 4, \frac{1}{3}(3p - 1), (p + 1)2$ , where  $p$  is a prime of form  $4m - 1$ . Hence  $bc^2 + d^2 = \{(m - 1)(9m - 5)\}p$ . Generalize this result for primes having  $r$  as a root. Show incidentally  $p = 2n^2 - 1$  cannot have 2 as a root.

15028. (Professor SANJANA, M.A.)—If  $K_n = 2^{2n}B_n$ , where  $B_n$  is the  $n$ th number of BERNOULLI, and if  $c_n, s_n$  represent  $\cos n\phi, \sin n\phi$  ( $\phi$  being any angle), prove that

$$\frac{K_n}{(2n)!} c_1 - \frac{1}{3!} \frac{K_{n-1}}{(2n-2)!} c_3 + \frac{1}{5!} \frac{K_{n-2}}{(2n-4)!} c_5 - \dots$$

$$\dots + \frac{(-1)^n}{(2n)!} c_{2n} + \frac{(-1)^{n+1}}{(2n+1)!} c_{2n+1} = 0,$$

$$\frac{1}{2!} \frac{K_n}{(2n)!} s_2 - \frac{1}{4!} \frac{K_{n-1}}{(2n-2)!} s_4 + \frac{1}{6!} \frac{K_{n-2}}{(2n-4)!} s_6 - \dots$$

$$\dots + \frac{(-1)^n}{(2n+1)!} s_{2n+1} + \frac{(-1)^{n+1}}{(2n+2)!} s_{2n+2} = 0.$$

In particular, when  $\phi = 0$  each formula reduces to

$$\frac{K_n}{(2n)!} - \frac{1}{3!} \frac{K_{n-1}}{(2n-2)!} + \frac{1}{5!} \frac{K_{n-2}}{(2n-4)!} - \dots + \frac{(-1)^n}{(2n)!} + \frac{(-1)^{n+1}}{(2n+1)!} = 0.$$

15029. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Show that the value of

$$\left[ \int_0^\infty \left( \frac{x^4 + 9}{3x^2} \right) e^{-(x^4 + 9)/3x^2} dx \right] \left/ \left[ \int_0^\infty \left( \frac{x^4 - 9}{3x^2} \right) e^{-(x^4 - 9)/3x^2} dx \right] \right.$$

lies between 4 and 6.

15030. (Major P. A. MACMAHON, F.R.S.)—Prove that the sum of the fourth powers of the binomial coefficients of order  $n$  is

$$\sum_{p,q} \frac{(2n-p-q)!}{p!q!(n-2p-q)!(n-p-2q)!(p!)^2(q!)^2}$$

for all positive integral values of  $p$  and  $q$  for which the expression has a meaning.

15031. (ALETROP.)—Résoudre en nombres entiers  $x^{-2} + y^{-2} = z^{-2}$ .

15032. (R. KNOWLES.)—In DE MORGAN'S *Calculus*, p. 257, the following examples are given:—

$$2.3.4 + 3.4.5 + 4.5.6 = \frac{4.5.6.7-1.2.3.4}{4} = 204;$$

$$2.3 + 3.4 + 4.5 + 5.6 = \frac{5.6.7-1.2.3}{3.1} = 68.$$

Show that these results can be obtained by means of the coefficients in the expansion of  $(1-x)^{-n}$ .

15033. (R. TUCKER, M.A.)—Three circles are given by

$$x^2 + y^2 + C = 0, \quad x^2 + y^2 + Ax = 0, \quad x^2 + y^2 + By = 0.$$

Find the area of the triangle formed by the polars of their radical centre with respect to the three circles. [Has the question been considered in the general, or any particular form, geometrically or analytically?]

15034. (Professor NEUBERG.)—Construire en grandeur et en direction les axes de l'hyperbole équilatère qui touche les côtés  $AB, AC$  d'un triangle aux sommets  $B$  et  $C$ .

15035. (Professor SANJANA, M.A.)—Two tangents  $TP, TQ$  are drawn to a conic from a point  $T$ , such that the centre of the in-circle of the triangle  $TPQ$  lies on the conic. Prove that  $T$  lies on a confocal conic  $K$ , and the chord of contact envelops another conic  $K'$ ; that the internal bisector of the angle  $PTQ$  envelops the conic  $K$ , and that it is equally inclined to the axis with the chord of the contact. In the parabola  $y^2 = 4ax$ ,

$$K \equiv y^2 + 4ax - 8a^2 = 0, \quad K' \equiv y^2 + 4ax + 8a^2 = 0;$$

in the ellipse  $x^2/a^2 + y^2/b^2 = 1$ ,

$$K \equiv \frac{x^2}{a^2} - \frac{y^2}{b^2} - \frac{a^2 - b^2}{a^2 + b^2} = 0, \quad K' \equiv \frac{x^2}{a^2} - \frac{y^2}{b^2} - \frac{a^2 + b^2}{a^2 - b^2} = 0;$$

for the hyperbola, change the sign of  $b^2$ .

15036. (Professor NANSON.)—Prove that two conics have twelve common normals, and that the orientation of the common normals is not altered if either conic is replaced by a confocal. [By orientation is meant sum of angles made with an arbitrary line.]

15037. (C. E. YOUNGMAN, M.A.)—Given two triangles  $ABC, A'B'C'$ , inscribed in the same conic  $S$ , and each in perspective with the triangle  $A_1B_1C_1$  formed by  $AA', BB', CC'$ : take any point  $P$  on  $S$  and draw  $PA', PB', PC'$  to cut  $BC, CA, AB$  respectively at  $D, E, F$ . Prove that  $AD, BE, CF$  meet at  $Q$  on the conic  $S'$  circumscribed to  $ABC$  and inscribed in  $\Delta_1B_1C_1$ ; and that  $P, Q$  are in line with the fourth intersection of  $S$  and  $S'$ . In particular, the focus and the GERGONNE point of any parabola inscribed in  $ABC$  are in line with the STEINER point.

15038. (Professor N. BHATTACHARYYA.)—If  $\Omega, \Omega'$  be the BROCARD points of a triangle  $ABC$ , and  $O$  be the centre of the BROCARD ellipse, prove that

$$(\Omega A^2 - \Omega' A^2)/c^2 + (\Omega B^2 - \Omega' B^2)/a^2 + (\Omega C^2 - \Omega' C^2)/b^2$$

$$= (\Omega' A^2 - \Omega A^2)/b^2 + (\Omega' B^2 - \Omega B^2)/c^2 + (\Omega' C^2 - \Omega C^2)/a^2$$

$$= 2(1/b^2 + 1/c^2)(\Omega A^2 - OA^2) + 2(1/c^2 + 1/a^2)(\Omega B^2 - OB^2)$$

$$+ 2(1/a^2 + 1/b^2)(\Omega C^2 - OC^2)$$

$$= 1 - 16\Delta^2/(b^2c^2 + c^2a^2 + a^2b^2),$$

where  $\Delta$  is the area of the triangle.

15039. (Professor MORLEY.)—Let the two points at which the sides of a triangle subtend equal angles (to modulus  $\pi$ ) be called the equiangular points of that triangle. Let the isogonal conjugate of the point at infinity on the EULER line of  $abc$  be  $d$ . Prove that the eight equiangular points of the four triangles  $bed, eda, dab, abc$  lie on a circle.

15040. (R. CHARTRES.)—Find the mean value of the  $n$ th power of the area of a cyclic quadrilateral whose perimeter ( $2s$ ) is constant, and deduce the results for (1) a kite, (2) a triangle.

15041. (D. BIDDLE.)—Two equal circles being in external contact, a straight line crosses both, entering the one at  $P$ , and issuing from the other at  $Q$ . Find the mean length of  $PQ$ .

**15042.** (H. BATEMAN.)—Eliminate A, B, C from the equations  
 $\sin 2A \sin A = l \sin B \sin C,$      $\sin 2B \sin B = m \sin C \sin A,$   
 $\sin 2C \sin C = n \sin A \sin B.$      $A + B + C = \pi.$

**15043.** (Professor COCHEZ.)—Étudier les courbes  
 (1)  $x^4 - x^2y + 4x^2 - xy + 1 = 0,$     (2)  $x^4y^2 - x^3 + 4x^2y^2 - x + y^2 = 0.$

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**8093.** (H. MACCOLL, B.A.)—The integral  $\int dy \int dx$  is subject to the restrictions that  $y$  and  $x$  are each between the limits  $a$  and  $-a$ ,  $a$  being positive, and also that  $y + ax - c$  is negative,  $c$  being positive. Determine the limits of integration for each of the different cases which depend upon the values of the constants.

**8330.** (T. C. SIMMONS, M.A.)—On a square table having no rim,  $n$  equal circular discs A, B, C, ... are thrown at random, and  $n$  random lines  $a, b, c, \dots$  all drawn, in this order, parallel to some one edge. Prove that, if the length of the table =  $l$ , and the diameter of each disc =  $d$ , then (1) the chance that every disc will fall on its own corresponding line is  $P_n = (2l)^{-2n} (4dl - d^2)^n$ ; but (2) the chance that all the discs will fall on the one first-drawn line is

$$p^n = \frac{2}{l^{n+1}} \left\{ \int_0^{ld} (\frac{1}{2}a + x)^n dx + \int_{ld}^{2ld} a^n dx \right\} = \frac{d^n}{(n+1)l^{n+1}} \{n-1+2^{-n}\}.$$

**8416.** (A. GORDON.)—Required a curve such that the expression  $d^2y/dx^2 - (a+b)(dy/dx) + aby$  shall be a maximum or minimum at every point, the curve passing through two given points and the origin.

**9300.** (GEORGE HEPPEL, M.A.)—If a whole number, when divided by prime numbers  $m$  and  $n$ , gives remainders  $a$  and  $b$  respectively, what will be the remainder when it is divided by  $mn$ ?

**9839.** (Professor KALIPADA BASU.)—A triangle of given species circumscribes a given triangle; prove that, when the area of the circum-triangle is a maximum, the perpendiculars at the vertices of the given triangle to the sides of the variable are concurrent.

**10501.** (W. J. GREENSTREET, M.A.)—A length equal to five-fourths of the radius of curvature is measured off on the normal at any point to the curve  $r^3 = a^3 \cos 3\theta$ . Show the locus of points so obtained is the curve  $r^{\frac{1}{3}} \cos \frac{2}{3}\theta = (\frac{1}{2}a)^{\frac{1}{3}}$ .

**10652.** (Professor SYLVESTER.)—Prove that the equation  
 $a \left( 1 + x + \frac{x^2}{1.2} + \frac{x^3}{1.2.3} + \dots + \frac{x^m}{1.2.3\dots m} \right)$   
 $+ b \left( 1 - x + \frac{x^2}{1.2} - \frac{x^3}{1.2.3} + \dots \pm \frac{x^m}{1.2.3\dots m} \right) + c = 0$   
 cannot have more than two real roots.

**10824.** (J. L. MACKENZIE, B.A., B.Sc.)—The tangents at points A and B on a circle, and their chord of contact, cut a given line in L, M, P respectively. Any circle through L and M cuts the given circle in H and K, and PH, PK cut the given circle in X and Y; prove XY parallel to LM.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, December 12, 1901.—Major MacMahon, R.A., F.R.S., Vice-President, in the Chair. Ten members present.

On the motion of the Chairman, seconded by Prof. A. Lodge, the Treasurer's report was adopted, and votes of thanks passed to the Treasurer and Auditor.

The following were elected members:—G. Birtwistle, B.A., Fellow of Pembroke College, Cambridge; A. Perronet Thompson, B.A., Scholar of Pembroke College, Cambridge; and the Rev. J. Cullen, S.J. Mr. R. J. Dallas was admitted into the Society.

Prof. Love communicated a paper by Mr. J. H. Michell "On the Flexure of a Circular Plate." Prof. Lamb spoke on the subject of the paper.

Lt.-Col. Allan Cunningham, R.E., gave a short sketch of Euler's method of finding "Amicable Numbers," and announced the discovery of two real pairs, A, B; where  $A = fa$ ,  $B = fb'b'$ . Thus in one pair (A, B),  $f = 3^1.7.11^2.19$ ; in the other pair (A, B),  $f = 3^5.7^2.13.19$ . In both pairs  $a = 8747$ ,  $b'b' = 53.161$ .

## From WILLIAMS & NORGATE'S

### List of School Books on the German Language.

#### GRAMMARS AND EXERCISES.

**WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE.** With Exercises on Conversations, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Re-written. Crown 8vo, cloth, 6s.

# BLACKIE & SON'S BOOKS FOR COLLEGE OF PRECEPTORS' EXAMINATIONS, 1902

**Jullus Cæsar.** Edited by A. D. INNES, M.A. Cloth, 1s.  
[*The Warwick Shakespeare.*]

**Jullus Cæsar.** Edited by W. DENT. Cloth, 8d.  
[*Junior School Shakespeare.*]

**Jullus Cæsar.** Edited, with Introduction, Notes, &c.,  
in "The Picture Shakespeare." Cloth, 1s.  
Specially adapted for College of Preceptors' Examinations.

**Midsummer Night's Dream.** Edited by EDMUND  
K. CHAMBERS, M.A. 1s. 6d. [The Warwick Shakespeare.]

The Academy says:—"It is wonderfully rich in illustrative matter, and no aspect or interest of the play is neglected. In his treatment of chronological and historical questions Mr. Chambers is modestly convincing and delightfully sane: two rare praises for Shakespearian scholars. In brief here is an edition to be unreservedly recommended."

**Midsummer Night's Dream.** Edited by W. F.  
BAUGUST. 8d. [Junior School Shakespeare.]

**Lycidas.** Edited by H. B. COTTERILL, M.A. [In the press.]

**The Lady of the Lake.** Edited by W. KEITH  
LEASK, M.A. 1s. Cantos I., II., III., separately, 3d. each.

**Marmion.** Edited, with Introduction, Notes, &c. 1s.  
Cantos I., II., III. separately. I., 4d.; II., 3d.; III., 3d.

**Horatius.** Edited, with Notes, &c. 3d.

**Caesar—Gallic War.** Edited by Professor BROWN,  
M.A. Illustrated. Books I., II., III., 1s. 6d. each.  
[Blackie's Illustrated Latin Series.]

**Horace—Odes I.** Edited by STEPHEN GWYNN, B.A.  
Illustrated. 1s. 6d. [Blackie's Illustrated Latin Series.]

**Xenophon's Anabasis—Book I.** Edited by C. E.  
BROWNIGG, M.A.

**The Oxford Manuals of English History.**  
With Maps, Genealogies, and Index. Price 1s. each.

- I. THE MAKING OF THE ENGLISH NATION (55 B.C. 1135 A.D.).
- II. KING AND BARONAGE (A.D. 1135-1327). By W. H. HUTTON, B.D.
- III. ENGLAND AND THE HUNDRED YEARS' WAR (A.D. 1327-1485).
- IV. ENGLAND AND THE REFORMATION (A.D. 1485-1603).
- V. KING AND PARLIAMENT (A.D. 1603-1714).
- VI. THE MAKING OF THE BRITISH EMPIRE (A.D. 1714-1832).

**The Warwick Histories.** (For pupils in Lower  
Forms.)

- III. STORIES FROM ENGLISH HISTORY (55 B.C. to 1485 A.D.). 1s.
- IV. STORIES FROM ENGLISH HISTORY (1485 to 1688). 1s. 4d.
- V. STORIES FROM ENGLISH HISTORY (1688 to present time). 1s. 6d.

**Euclid's Elements of Geometry.** Edited by  
A. E. LAYNG, M.A. With Exercises, Appendix, and Examination  
Papers. Books I. to VI., and XI., 3s. 6d.; Book I., 1s.; II., 6d.;  
III., 1s.; IV., 6d.; V. and VI. together, 1s.; XI., 1s. 6d. Books  
I.-II., 1s. 3d.; I.-III., 2s.; I.-IV., 2s. 6d. KEY to Book I., 2s. 6d.;  
complete, 5s.

London: BLACKIE & SON, LIMITED, 50 Old Bailey, E.C.

## Cambridge Local and College of Preceptors Examinations, 1902.

**Wright's Synopsis of English History. B.C. 55—A.D. 1888.**  
(For Preliminary Students.) 6d.

**Outlines of English History. B.C. 55—A.D. 1901.** Containing  
Genealogical Tables, Short Biographical Sketches, and Index. Compiled and  
arranged by GEORGE CARTER, M.A. Twelfth Edition. Crown 8vo, cloth, 1s. 6d.

**Samuel I.** With Introduction, Notes, and Comments on the Autho-  
rized and Revised Versions. By G. CARTER, M.A. 1s. 6d.

**St. Mark.** With Introduction and Notes by G. CARTER, M.A.  
1s. 6d.

"The method adopted by Mr. Carter is at once clear and useful. . . The text of the  
Gospel is divided into paragraphs, with headings in bold type; the notes ex-  
planatory of passages requiring comment complete a most useful manual."—*School  
Guardian.*

**The Church Catechism.** By A. RICHES, F.R.A.S. 9d.  
"Will be found of great service to any teacher . . . concise and satisfactory."—  
*British Mail.*

**Macaulay's Horatius, Ivry, and the Armada.** With Notes, &c.  
By F. GORSE, M.A. Price 8d.

**A First Arithmetic.** By Dr. W. T. KNIGHT, Author of "Algebraic  
Factors," &c. Contains a large number of carefully graduated Examples on the  
different rules. The Exercises on each Rule are followed by Questions and  
Problems from Examination Papers. Crown 8vo, cloth, 8d. Answers  
separately, 6d.

**Relfe Brothers' Easy Intermediate Tests in Arithmetic.**  
Second Edition. Suitable for Third Class College of Preceptors, and the Oxford  
and Cambridge Preliminary. Price, 4d.; Answers, 6d.

**A Modern French Grammar.** By J. U. RANSOM, B.A. Lond.  
Crown 8vo, cloth, price 1s.

"It is well graduated, with useful Tables, Appendices, and Vocabulary. It can  
be relied upon as a sound basis for further study of the language."—*Educational  
News.*

**Illustrated French Grammar.** By LOLY and GOUJON. Second  
Edition. Cloth, 1s. 6d.

**Geographical Questions.** By J. WULFSON. Specially adapted for  
Examinations in Commercial Geography. Crown 8vo, 6d. KEY to same,  
net, 1s.

"We cordially recommend it to the notice of all teachers."—*Educational News.*

**Relfe Brothers' Aldersgate Atlas.** Contains 72 4to Coloured  
Maps, Political, Physical, and Classical Maps, Commercial Chart showing the  
Steamer Routes, Naval and Coaling Stations, Environs of Chief Towns, Manu-  
facturing Districts of Lancashire and Yorkshire, Astronomical Charts, and  
Diagram of the comparative sizes of Mountains, Rivers, &c. Full Index.  
Second Edition Revised. 4to, cloth, 3s.

"A marvel of accuracy and completeness."—*Journal of Education.*

"The book is wonderfully cheap."—*Educational Times.*

**Relfe Brothers' School Geography and Atlas.** Crown 4to.  
32 Maps (mostly coloured). By G. CARTER, M.A. Cloth, 2s. 6d. The main  
features of this book are:—

1. The Maps are on one side, and the Notes on the other.
2. The Maps are so drawn that they can be easily and readily reproduced.
3. The Maps are not overcrowded.
4. All superfluous detail is omitted; necessary facts alone retained.

**Relfe Brothers' New Preparatory Atlas** (quite up to date) con-  
taining 24 very clear and beautifully coloured Maps. 6d.

**Platt's Geographical Terms.** With Notes on Tides, Currents,  
Chief Productions of the Earth, &c. 4d.

**English Grammar.** By A. A. BROCKINGTON, B.A. Second Edition,  
with additional Exercises. Specially suitable for Candidates for Oxford and  
Cambridge Locals, and the College of Preceptors Exams. Crown 8v, price 1s.

"The notes here so ably compiled by Mr. Brockington will be found equally  
valuable for teacher and student. It is with pleasure that we notice the placing  
in the background of such anomalies as the abstract noun and the subjunctive mood.  
He makes a strong point of the function of the word; in fact this is the main  
underlying idea of the book."—*Teachers' Aid.*

**The Principles of Book-keeping.** By the Rev. C. NAGEL and  
A. HALL. Second Edition. Cloth, 1s. 6d. Ruled Books for working the  
Examples in above. Two Parts, 2s.

"Clear and simple . . . valuable in actual office work."—*Journal of Education.*

OXFORD LOCAL EXAMINATIONS, 1902.

## CLOUGH'S STUART PERIOD.

Crown 8vo, 288 pp., well bound in cloth, with Maps and Illustrations. 3s. 6d.

"This is a good little history on the old plan, with biographies, quotations, notes, and summaries. The tale is written without prejudice, and should be found useful in many schools and for private students."  
The Educational Times.

"Clough's 'Periods' have made a name and a place for themselves in the educational world by their practicality and attractiveness. The 'Stuart Period,' with its really illustrative maps and diagrams, its social and literary notes, is admirable, and students will find their work minimised, and at the same time rendered an abiding pleasure, by using this ably designed and written text-book." The Teachers' Review.

"This book of nearly 300 pages covers the whole of the Stuart Period from 1603 to 1714, and at the end of the history proper there are chapters on commerce and industry, social history, literature, and the chief authors of the period. The work is clearly written and the matter carefully arranged. For the student the volume is furnished with summaries, genealogical tables, and maps. The book is well printed, and we cordially commend it to the favourable notice of our readers."  
The Teachers' Aid.

"The arrangement of facts in this history of a most important period in our history is a striking and highly commendable feature. Those students who have profited by Mr. Clough's previous books on English history will find this volume equally full and complete. There are no trivial details of interest simply recorded, but its 280 odd pages are replete with excellent material for their serious and careful attention. The chapters on the social condition of the people and on the literature of the period are admirable."  
The Schoolmistress.

"Students who have to prepare for a competitive examination by acquiring a thorough knowledge of the Stuart Period of English history will find this book a most valuable aid. Not only are its 300 pages packed with the information which it is desirable they should make their own, but the facts are presented in a form that favours their ready assimilation."  
The Schoolmaster.

## HELPS TO THE STUDY OF JULIUS CAESAR.

By R. RUTHERFORD.

Crown 8vo, 120 pages, cloth, and fully interleaved for Students' MS. Notes.  
1s. 6d.

"The introduction has been skilfully arranged, no important part being omitted. It is a model of conciseness, readable from beginning to end, and of the utmost value to a busy student. The book is printed in clear type, on good paper, interleaved for MS. notes, and is undoubtedly the best that has come under our notice. It is indeed a 'help,' and we heartily recommend it."  
The Teachers' Review.

"A better book could not be placed in the hands of students who are making 'Julius Cæsar' a subject of study. The notes are concise and very practical."  
The Schoolmaster.

"The text is clearly printed, the paper is good, the notes full, accurate, and abundant, and, to still further enhance its value to the student, the volume is interleaved throughout. We have nothing but praise for so well-prepared an 'aid.'"  
The Teachers' Aid.

**RALPH'S SCIENCE NOTE-BOOKS.** By J. H. NANCARROW, late Headmaster, Kingston Public School of Science, and Lecturer in Physiography and Hygiene at the Richmond School of Science.

**Elementary Physiography.** Price 1s.

**Advanced Physiography.** Price 1s.

## IMPORTANT NOTICE.

### TEXT-BOOKS FOR HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following books:—

#### ARITHMETIC.

Small amount of Theory, large amount of Practice. Worked-out examples for each step. Prominence given to the Metric System. Laboratory Exercises in a Special Section.

#### GEOGRAPHY.

Physical facts made the basis of Political. Commercial aspects kept constantly in view. British Empire fully treated.

Many Coloured Maps and Diagrams.

#### ENGLISH GRAMMAR.

Examples made the basis of instruction. Analysis introduced early. Aids to correct speaking a prominent feature. Plenty of scope given for "practice."

#### ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. The Growth and Greatness of the Empire specially considered.

PUBLISHED AT ONE SHILLING EACH.

The *Schoolmaster* says: "We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

*Specimens and particulars sent free to Head Teachers.*

**ST. THOMAS'S HOSPITAL  
MEDICAL SCHOOL,**

ALBERT EMBANKMENT, LONDON, S.E.

**A SCHOOL OF THE UNIVERSITY OF LONDON.**

ENTRANCE SCHOLARSHIPS in Natural Science are awarded at the beginning of each Winter Session. Subjects: Chemistry, Physics, and either Botany, Zoology, or Physiology.

The HOSPITAL contains more than 500 beds. The SCHOOL BUILDINGS comprise lecture theatres, laboratories, and class rooms, well adapted for the modern teaching of Students in all the subjects of the medical curriculum.

An Athletic Ground, a Gymnasium, and Club Rooms are provided.

For the Prospectus, containing full particulars as to fees, course of study advised, &c., and for any information as to entering the Medical Profession, apply personally or by letter to Mr. RENDLE, Medical Secretary,

H. G. TURNEY, M.A., M.D. Oxon., Dean.

**THE LONDON HOSPITAL  
MEDICAL COLLEGE.**

The Hospital is the largest general hospital in the kingdom, and contains nearly 800 beds.

Appointments:—Sixty qualified resident appointments are made annually. Dressers, clinical and post-mortem clerks, and maternity assistants are appointed every three months. All appointments are free. Holders of resident appointments are also provided free board.

SCHOLARSHIPS AND PRIZES. Entrance Scholarships, value £120, £60, £35, £30, and £20. Will be offered for competition at the end of September. Numerous Scholarships and Prizes are given annually.

FEES.—120 guineas in one payment, or 130 guineas by instalments. A reduction of 15 guineas is allowed to the sons of members of the profession.

The Students' Clubs Union, embracing all the Scientific, Social, and Athletic Clubs, is available to all Students. The Clubs Union Ground is at Lower Edmonton.

**SPECIAL CLASSES.**

Special Classes are held in the subjects required for the PRELIMINARY SCIENTIFIC M.B. (London) EXAMINATION.

*Botany and Zoology.*—By P. Chalmers Mitchell, M.A. Oxon., F.Z.S.

*Chemistry and Physics.*—By Hugh Candy, B.A., B.Sc. Lond.

Fee for the whole course, 10 guineas.

These Classes are not confined to Students of the Hospital.

Students who have recently passed the Matriculation or other preliminary Examination can enter at once.

For further information apply, personally or by letter, to

Mile End, E. MUNRO SCOTT, Warden.

**KING'S COLLEGE, LONDON, and  
KING'S COLLEGE HOSPITAL.  
SCHOLARSHIPS AND PRIZES.**

At Entrance £500 is awarded annually, of which £150 is for subjects of Divinity, Classics, and Mathematics, £220 is for subjects of Science and Mathematics, £130 is for subjects of Science.

Two Scholarships are exclusively open to University candidates.

In addition to the above Entrance Scholarships, a special feature of the curriculum is the large sum expended annually in Scholarships and Prizes—£300 is thus awarded annually and which are open to those who do not obtain Scholarships at entrance.

Over and above the usual course of instruction, as at other Hospitals, for the Qualifying Diploma of the Conjoint Board and British Universities, special classes have been established for the Matriculation Examination of London University, for the Primary F.R.C.S. (Eng.), and for the Final F.R.C.S. (Eng.), and higher Surgical Degrees of the various Universities. Tutorial Classes in Medicine, Surgery, and Obstetrics supplement the clinical teaching and lectures in these subjects.

At the College special Laboratories of Neuropathology, Bacteriology, and Surgical Pathology are available for study and research.

The Special Departments of the Hospital afford a unique opportunity of instruction in Diseases of the Eye, Ear, Throat, and Skin, in Diseases of Women and of Children, and in Dental Surgery.

The Dean may be interviewed daily during term-time between 12 and 1 p.m. at the College.

The Prospectus and further information may be obtained by letter from the SECRETARY, King's College, Strand, W.C.

**ROYAL COLLEGES OF SURGEONS  
AND PHYSICIANS OF EDINBURGH, AND  
FACULTY OF PHYSICIANS AND SURGEONS  
OF GLASGOW.**

Copies of Regulations for the Triple Qualification of this Board (L.R.C.S.E., L.R.C.P.E., and L.F.P. & S.G.), containing dates of Professional Examinations for year 1901-1902, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 54 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow. In applying for copies, please state the date of commencement of medical study.

**CHARING CROSS HOSPITAL  
MEDICAL SCHOOL.**

The Livingstone Scholarship (100 guineas), the Huxley Scholarship (55 guineas), and six other Entrance Scholarships, total value £550, are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London Universities.

Students who join in Summer have the same privileges as regards Scholarships, &c., as Students joining in October of the same year.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for Hospital Practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments, 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Eltham can be reached within half an hour from Charing Cross.

**THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W.C.**

HERBERT F. WATERHOUSE, Dean.

**THE ROYAL DENTAL HOSPITAL  
OF LONDON MEDICAL SCHOOL.**

LEICESTER SQUARE.

The new Hospital and School are now open.

Students are received for the full Dental portion of the curriculum, including the three years (or any shorter period) of teaching in Dental Mechanics.

The Surgical portion of the curriculum can be received at any General Hospital.

**LECTURES.**

*Dental Anatomy and Physiology* (Human and Comparative)—CHARLES S. TOMES, F.R.S., M.A. Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays at 5.30 p.m. (Summer). (Demonstrator—A. HOPEWELL SMITH, L.R.C.P., M.R.C.S., L.D.S.)

*Dental Surgery and Pathology*—W. B. PATERSON, F.R.C.S., L.D.S., on Tuesdays and Fridays, at 5.30 p.m. (Summer).

*Mechanical Dentistry*—E. LLOYD-WILLIAMS, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays at 5.30 p.m. (Winter). (Demonstrator—Mr. W. F. FLOTE.)

*Metallurgy and its Application to Dental Purposes*—Dr. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Thursdays at 5.30 p.m. (Winter). (Demonstrator—PERCY RICHARDS, F.I.C., F.C.S.)

During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The House Surgeons attend daily while the Hospital is open.

The Saunders and Walker Scholarships, of £20 per annum each, and Prizes are open for competition.

Fee for two years' Hospital Practice required by the curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended *simultaneously*.

The fee for three years' Tuition in Mechanical Dentistry is 150 guineas.

The Calendar and further particulars will be sent on application to

MORTON SMALE, Dean.

**ST. BARTHOLOMEW'S HOSPITAL  
AND COLLEGE.**

THE SUMMER SESSION will begin on May 1st, 1902.

FIVE ENTRANCE SCHOLARSHIPS and EXHIBITIONS are offered for competition on September 22nd and following days, viz.: Two of the value of £75, one of the value of £150, one of the value of £50, and one £20; and Students who enter in May are eligible. Other Scholarships and Prizes, including the Lawrence, Brackenbury, Kirkes, and Matthews Duncan Scholarships in Medicine, Midwifery, and Surgery, are awarded annually. The total value of Scholarships and Prizes awarded is over £800 per annum.

A RESIDENTIAL COLLEGE is provided so as to afford students the advantage of living within the Hospital walls.

All the APPOINTMENTS are open to students without additional fees.

Special Laboratories and other arrangements have been provided to give the necessary additional instruction required by the new regulations, and the courses of study have been so arranged that students may with advantage begin in the Summer Session.

Special Classes are held for the Preliminary Scientific and all the other Examinations for the M.B. and M.D. (London).

For particulars apply to Dr. CALVERT, Warden of the College, St. Bartholomew's Hospital, E.C.

Handbook forwarded on application.

**GUY'S HOSPITAL MEDICAL  
SCHOOL.**

The SUMMER SESSION will begin on May 1st, 1902.

(Students who have recently passed the College of Preceptors Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.)

The Hospital contains 644 Beds, of which 554 are in constant occupation.

ENTRANCE SCHOLARSHIPS.—Five Scholarships will be competed for in September, 1902—Two in Arts of the value of £100 and £50, and Three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.

APPOINTMENTS.—Hospital appointments are made strictly in accordance with the merits of the candidates, and without extra payment.

DENTAL SCHOOL.—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.

PRIZES AND SCHOLARSHIPS are awarded to Students in their various years, amounting in the aggregate to more than £650.

RESIDENTIAL COLLEGE.—The Residential College accommodates about 50 students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.

For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. J. FAWCETT, Guy's Hospital, London Bridge, S.E.

**ST. MARY'S HOSPITAL MEDICAL  
SCHOOL,**

PADDINGTON, W.

The SUMMER SESSION will commence on May 1st, 1902. Students entering at this time are eligible to compete for the Entrance Scholarships in September, 1902.

The MEDICAL SCHOOL is in close proximity to Paddington Station (G.W.R.), Marylebone (G.C.R.), Edgware Road and Praed Street (Metropolitan and District), and Lancaster Gate (C.L.R.).

The HOSPITAL affords every facility for clinical work in all branches of Medicine and Surgery, and in the various Special Departments.

**UNIVERSITY OF LONDON.**

The Medical School, as one of the Schools of the University of London, provides complete courses of instruction for the Preliminary Scientific, Intermediate, and Final M.B. Examinations of the University.

**SCHOLARSHIPS AND PRIZES.**

*Open Scholarships in Natural Science.*—One of £145, two of £78. 15s., and one of £52. 10s. are competed for annually in September.

*University Scholarships.*—Two of £65 (open to students from Oxford and Cambridge) are awarded annually in September, the subjects of the Examination being Physiology and Histology, and either Anatomy or Chemistry, at the option of the candidate.

*General Proficiency Scholarships.*—Four of these, value £20 each, are awarded annually in accordance with the aggregate results of the Sessional Examinations in the several courses.

*Special Scholarships and Prizes.*—Kerslake Scholarship in Pathology and Bacteriology (£25), Gold Medal in Clinical Medicine (£20), Meadows Prize in Obstetrics, Special Prizes in Ophthalmology and Dermatology, in addition to upwards of 30 Sessional Prizes, are awarded annually.

**SPECIAL TUITION.**—Special Tuition is provided for the various Examinations of the Universities of Oxford, Cambridge, and London, and for the Fellowship of the Royal College of Surgeons, without additional fees.

For Calendar of the Medical School and further particulars, apply to the Dean, Dr. H. A. CALEY, or to Mr. B. E. MATTHEWS, School Secretary.

**FRENCH AND GERMAN CON-  
VERSATION** in Home of Family of Swiss Gentle-  
people recommended by English ladies. Comfortable  
Rooms, good Cooking. Beautiful University town and  
good climate.—CLOTIE, La Clairiere, Route de Front-  
enex, Geneva.

**University Tutorial College.**

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**  
(A Constituent College of the University of Wales.)  
*Principal—H. R. REICHEL, M.A.*

The Session began on October 1st, 1901. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the various Prospectuses, apply to

**JOHN EDWARD LLOYD, M.A.,**  
*Secretary and Registrar.*

# THE OXFORD & CAMBRIDGE HISTORY.

BY ROSCOE MONGAN, B.A.

ONE SHILLING.

COLOURED MAPS. ILLUSTRATIONS OF FAMOUS BATTLES.

AN ENTIRELY NEW REPRINT. REVISED TO AUGUST 30, 1901.

Specimen Copies of the above Publications will be sent post free to Head Teachers in most cases.—Specimens of Class Text-Books only will be sent.

LONDON: GEORGE GILL & SONS, LIMITED, 13 WARWICK LANE, E.C.

# MESSRS. LONGMANS & CO.'S LIST.

## Mathematics and Physics.

By J. HAMBLIN SMITH, M.A.

**A Treatise on Arithmetic.** With an Appendix on Approximation, in which a New Method of Decimisation of Money is given with a view to Shortening and Simplifying much of the Work in Commercial Arithmetic. Crown 8vo, 3s. 6d. (Copies may be had without the Answers.)  
A KEY, 9s.

**Exercises in Arithmetic.** Arranged and Adapted to the Sections in Hamblin Smith's "Treatise on Arithmetic." Crown 8vo, 1s. 6d.; with Answers, 2s.  
A KEY, 6s. 6d.

**A Shilling Arithmetic.** For the use of Elementary Classes and Preparatory Schools. Crown 8vo, 1s.; with Answers, 1s. 6d.

**Elementary Algebra.** New Edition, with a large number of Additional Exercises. With or without Answers, crown 8vo, 3s. 6d. Answers separately, 6d.  
A KEY, 9s.

\* \* The Old Edition can still be had.

**Exercises on Algebra.** Small 8vo, 2s. 6d. (Copies may be had without the Answers.)

**Elementary Trigonometry.** Sm. 8vo, 4s. 6d.  
A KEY, 7s. 6d.

**Elementary Statics.** Crown 8vo, 3s.

**Elementary Hydrostatics.** Cr. 8vo, 3s.  
A KEY to Statics and Hydrostatics, 6s.

**Geometrical Conic Sections.** Crown 8vo, 3s. 6d.

**Elements of Geometry.** Containing Books I. to VI., and Portions of Books XI. and XII., of Euclid, with Exercises and Notes, arranged with the Abbreviations admitted in the Cambridge University and Local Examinations. Crown 8vo, 3s. 6d.  
Books I. and II. may be had separately, limp cloth, 1s. 6d.  
A KEY, 8s. 6d.

By Professor GANOT.

Translated and Edited by E. ATKINSON, Ph.D., F.C.S.

**Elementary Treatise on Physics,** Experimental and Applied. With 9 Coloured Plates and 1057 Woodcuts. Crown 8vo, 15s.

**Natural Philosophy for General Readers and Young Persons.** Revised by A. W. REYNOLD, M.A., F.R.S. With 7 Plates, 632 Woodcuts, and an Appendix of Questions. Crown 8vo, 7s. 6d.

## History.

By the Rev. D. MORRIS, B.A.

**A Class-Book History of England,** designed for the Use of Students preparing for the University Local Examinations or for the London University Matriculation. With 4 Historical Maps, 20 Plans of Battles, and 30 other Illustrations. Fcap. 8vo, 3s. 6d.

**Greek Prose Phrase Book.** By H. W. AUDEN, M.A. Interleaved. 3s. 6d.  
**Greek Test Papers.** By JAMES MOIR, Litt.D., LL.D. 2s. 6d.  
**Lower Greek Prose.** By K. P. WILSON, M.A. 2s. 6d. \*.\* Key, 5s. net.  
**Greek Accidence.** By T. C. WEATHERHEAD, M.A. 1s. 6d.

## MODERN LANGUAGES.

- Historical Reader of Early French.** By Prof. H. A. STRONG, and L. D. BARNETT, M.A., Litt.D. 3s.  
**All French Verbs in Twelve Hours** (except Defective Verbs). By A. J. WYATT. 1s.  
**French Test Papers.** For Civil Service and University Students. By EMILE B. LE FRANÇOIS. 2s.  
**The Tutorial Handbook of French Composition.** By ALFRED MERCIER, L. es L. 3s. 6d.  
**The Children's Guide to the French Language.** By ANNIE G. FERRIER. 1s.  
**Progressive German Composition.** With Copious Notes and Idioms, and *FIRST INTRODUCTION TO GERMAN PHILOLOGY.* By LOUIS LEROUVIER, Ph.D. 3s. 6d. Also in Two Parts: **Composition**, 2s. 6d.; **Philology**, 1s. 6d. \*.\* Key to Composition, 5s. net.  
**Lower Grade German.** By the same Author. 2s. 6d.  
**A Compendious German Reader.** By G. B. BEAK, M.A. 2s. 6d.  
**A History of German Literature.** By J. G. ROBERTSON, Ph.D. *[Immediately.]*  
**A Spanish Grammar.** With a Copious General Vocabulary (Spanish-English). By WILLIAM A. KESSEN. 3s. 6d.

**Arithmetic.** By A. V. LOTHIAN, M.A., B.Sc. With Answers, 3s. 6d.

**Modern Geometry of the Point, Straight Line, and Circle.** An Elementary Treatise. By J. A. THIRD, M.A. 3s.

Messrs. RALPH, HOLLAND, & CO.'S Publications.

OXFORD LOCAL EXAMINATIONS, 1902.

## Clough's Stuart Period.

Crown 8vo, 288 pp., well bound in cloth, with Maps and Illustrations. 3s. 6d.

"This is a good little history on the old plan, with biographies, quotations, notes, and summaries. The tale is written without prejudice, and should be found useful in many schools and for private students." **The Educational Times.**

"Clough's 'Periods' have made a name and a place for themselves in the educational world by their practicality and attractiveness. The 'Stuart Period,' with its really illustrative maps and diagrams, its social and literary notes, is admirable, and students will find their work minimised, and at the same time rendered an abiding pleasure, by using this ably designed and written text-book." **The Teachers' Review.**

"This book of nearly 300 pages covers the whole of the Stuart Period from 1603 to 1714, and at the end of the history proper there are chapters on commerce and industry, social history, literature, and the chief authors of the period. The work is clearly written and the matter carefully arranged. For the student the volume is furnished with summaries, genealogical tables, and maps. The book is well printed, and we cordially commend it to the favourable notice of our readers." **The Teachers' Aid.**

"The arrangement of facts in this history of a most important period in our history is a striking and highly commendable feature. Those students who have profited by Mr. Clough's previous books on English history will find this volume equally full and complete. There are no trivial details of interest simply recorded, but its 280 odd pages are replete with excellent material for their serious and careful attention. The chapters on the social condition of the people and on the literature of the period are admirable." **The Schoolmistress.**

"Students who have to prepare for a competitive examination by acquiring a thorough knowledge of the Stuart Period of English history will find this book a most valuable aid. Not only are its 300 pages packed with the information which it is desirable they should make their own, but the facts are presented in a form that favours their ready assimilation." **The Schoolmaster.**

## HELPS TO THE STUDY OF JULIUS CAESAR.

By R. RUTHERFORD.

Crown 8vo, 120 pages, cloth, and fully interleaved for Students' MS. Notes. 1s. 6d.

"The introduction has been skilfully arranged, no important part being omitted. It is a model of conciseness, readable from beginning to end, and of the utmost value to a busy student. The book is printed in clear type, on good paper, interleaved for MS. notes, and is undoubtedly the best that has come under our notice. It is indeed a 'help,' and we heartily recommend it." **The Teachers' Review.**

"A better book could not be placed in the hands of students who are making 'Julius Caesar' a subject of study. The notes are concise and very practical." **The Schoolmaster.**

"The text is clearly printed, the paper is good, the notes full, accurate, and abundant, and, to still further enhance its value to the student, the volume is interleaved throughout. We have nothing but praise for so well-prepared an 'aid.'" **The Teachers' Aid.**

**RALPH'S SCIENCE NOTE-BOOKS.** By J. H. NANCARROW, late Headmaster, Kingston Public School of Science, and Lecturer in Physiography and Hygiene at the Richmond School of Science.

**Elementary Physiography.** Price 1s.

**Advanced Physiography.** Price 1s.

**Elementary Hygiene.** (Section I.) Price 1s.

**Elementary Hygiene.** (Section II.) Price 1s.

**Elementary Hygiene.** (Sections I. and II.) Bound together in One Volume. Price 1s. 6d.

**Advanced Hygiene.** Price 9d.

Economize time, minimize labour, and insure thorough revision. Each book contains Notes on all difficult points. Treats all "likely questions," is fully interleaved for students' MS. notes, is of convenient size for pocket and strongly bound in cloth.

To be obtained through all Booksellers, or post free at published prices from

**RALPH, HOLLAND, & CO.,**  
Educational Publishers, 69 Temple Chambers, London, E.C.

## WORKS BY JOHN CARROLL,

Art Master and Examiner in Drawing.

### FREEHAND DRAWING OF FOLIAGE, FLOWERS, AND FRUIT.

Consisting of 24 Reproductions of Photographs from Nature, by Wm. J. CARROLL. Arranged in graduated order, with Directions to the Student, and Illustrated by 46 Analytical Diagrams of Construction, by JOHN CARROLL. Demy 4to (11 by 8 in.). In stiff wrapper, 1s. 6d.

"The drawings are most beautifully delineated, and the whole work is worthy of its distinguished author."—*Educational News.*

### FREEHAND DRAWING OF ORNAMENT.

## APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced or so much progress made as since we have employed these as our school-books."—*EDUCATIONAL TIMES.*

**A School Geography.** 89th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum.*

**A School Atlas.** Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

**Geography for Beginners.** 68th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull.*

**Allen and Cornwell's School Grammar.** 65th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum.*

**Grammar for Beginners.** An Introduction to Allen and Cornwell's "School Grammar." 88th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator.*

*The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.*

**The Young Composer:** Progressive Exercises in English Composition. 48th Edition, 1s. 6d. **Key,** 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review.*

**Spelling for Beginners.** A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

**Poetry for Beginners:** A Selection of Short and Easy Poems for Reading and Recitation. 13th Edition, 1s.

**A Science of Arithmetic.** A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and Sir JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly.*

**Key to Science of Arithmetic.** With the Method of Solution to every Question. **KEY,** 4s. 6d.

**School Arithmetic.** 18th Edition. 1s. 6d. **KEY,** 4s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly *inductive*, it is pre-eminently the book for general use."—*Journal of Education.*

**Arithmetic for Beginners.** Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

## SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.

Price 2s. 6d. cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly.*  
"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent.*

"The exercises in the use of idioms are especially good."—*Bookman.*  
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education.*

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian.*

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review.*

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

## THE PUBLIC SCHOOL SPELLING CARD.

Thirtieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

## French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education.*

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman.*

[An APPENDIX, embodying the final official changes in the Simplification of French Grammar Rules, will be presented with each copy.]

## RELFE BROTHERS

Confidently recommend the following as the **BEST Books for LOCAL AND COMPETITIVE EXAMINATIONS:**—

## The Educational Times.

*Registration of Teachers.* THERE has just been laid on the table of the House of Commons an Order in Council providing for the establishment of a Register of qualified Teachers in all classes of schools. The registration, in the first instance, is to be carried out by an Authority created for the purpose, to consist of twelve members, six of them nominated by the Board of Education and the other six by professional organizations. The term of office of this purely provisional Authority will be for three years only, during which time the conditions of registration will be of a more inclusive character than after this period of probation has elapsed. At the end of the three years of grace a permanent Registration Authority is to be established by another Order in Council, to whom will be entrusted the keeping of the Register.

The Board of Education Act provided merely for the formation of a Register of persons qualified to teach, in alphabetical order, without any provision for classification or grading, and the minimum qualifications for admission to the Register must necessarily be of such a character as to include all whom the State has already certified as qualified to teach in the public elementary schools. The Consultative Committee were confronted with this difficulty, that a purely permissive registration with so low a minimum qualification could not be expected to command the respect of the scholastic profession, or of the public at large, for whose information and protection the Register is primarily intended. In the absence of any provision for a graded Register—*e.g.*, of persons qualified to teach in elementary schools, secondary schools, schools of art, technical schools, schools of commerce, or as teachers of special subjects—the Consultative Committee have hit upon the idea (which has now received the sanction of the Board of Education) of arranging the names of the teachers in three parallel columns. The first of these columns will contain the entire list in alphabetical order, the second column the names of those teachers only who possess the qualification of a Board of Education certificate, and the third column the names of those teachers who satisfy the other conditions laid down by the Consultative Committee. These conditions include (a) the pos-

session of a University degree or its equivalent, (b) a year's training in a special institution or in a recognized school, and a diploma in the theory and practice of education, and (c) a period of probation in teaching in some recognized school. It will be seen that these conditions are sufficiently stringent, and it is certain that the second qualification is possessed by very few indeed of the heads of our secondary schools, public or private. Hence the necessity of the preliminary three years, during which the registrable qualifications would be more comprehensive, so as to admit a large number of teachers who have passed examinations other than those entitling to a University degree.

Forty years have now elapsed since the question of registration of teachers was first taken actively in hand by the College of Preceptors, and it is more than twenty years since the first Registration Bill was introduced in the House of Commons by Dr. Playfair—a Bill which was "backed" by Mr. Arthur Balfour, the present Leader of the House. This Bill, with modifications, was brought in again and again, until, at last, in the summer of 1890, it was referred (with another Bill for a similar purpose) to a Select Committee, which reported to the House in the following year. Then came the Royal Commission on Secondary Education, whose Report, published in 1895, recommended the registration of teachers as part of a complete scheme for the organization of secondary education in England. Thus, the principle having already been accepted by the legislature, the way was paved for the statutory powers conferred on the Consultative Committee by the Board of Education Act of 1899, the exercise of which has resulted in the Order in Council establishing at last the Teachers' Register. The conditions of registration as set out above can hardly be expected to commend themselves to all the many classes of teachers who will be affected by them; but we reserve any comments as to the details of the scheme till the Order itself has passed the scrutiny of Parliament and is published as a legislative enactment.

### *The Tenure of Assistant-Masterships.*

WHILE the larger questions connected with the organization of secondary education are still undecided, it may not be out of place to consider dispassionately some points of administration which have long exercised the minds of the profession. None of those points, perhaps, is of greater

importance than that of tenure, discussed by Mr. Cripps, K.C., at the recent dinner of the Assistant Masters' Association, and none is beset with greater difficulties. We may, therefore, be pardoned for returning to it even after the able and exhaustive memorandum drawn up for the Council of the Incorporated Association of Head Masters in 1900. One must face the fact that masters must from time to time be compelled to retire; possibly dismissals should be more frequent than they are. Actual misconduct is, happily, very rare in the profession, and so, too, is open insubordination; though the persistent *frondeur* is not unknown, and is by no means easy to deal with. The hard cases are of two kinds. Personal feeling, or marked difference of opinion from a colleague on non-professional questions, does occasionally lead a head master into serious injustice, and the influence of the comparatively rare dismissals that fall under this head is far-reaching. On the other hand, there are numerous cases, and some of them very hard cases, where comparative inefficiency makes the retirement of a master desirable. A head master is generally reluctant to act under such circumstances; and, if he does act, he needs support rather than restraint. If a school falls in number and reduction of staff becomes urgent, or if teachers of new subjects are wanted, it is not necessarily the junior men who can be best spared. Nor are cases of growing inefficiency uncommon. Many a man who makes a first start in the profession loses his first enthusiasm; he never opens a book, and his lessons get duller and duller; he fails a little in physical vigour, and his power both of interesting and of controlling boys diminishes, or he fails to play his part in the general life of the school. Then the school suffers. In many occupations it is enough if a man discharges his routine duties punctually. For a schoolmaster's work more is required: freshness and interest are as essential as strict adherence to routine. These are the really hard cases: if the master is dismissed, his chances of finding other employment are small; if he stays on, a number of boys waste months of precious time, or even get a permanent distaste for study. The power of dismissal, and that on grounds not always easy to formulate, must exist: the question is how that power can be exercised not only with justice, but without the appearance of injustice.

The latter point is by no means unimportant. The efficiency of an individual school—in other words, the discharge of its duty to its pupils—is of course the first object of the authorities controlling it. What is less frequently thought of is the efficiency of all schools, involving the general standard of national education. This depends to a great extent on the inducements held out to young men of force of character and ability to enter the profession. More and more is being required in the way of academic and professional preparation, and salaries do not, at present, show any tendency to increase; indeed, the demand for better buildings and better appliances, and for a liberal proportion of teachers to pupils, tends, at least in the case of day schools, to diminish the amount available for payment of masters. Thus reasonable security of tenure for the efficient teacher is a matter of national importance.

An additional complication is caused by the peculiarities of English secondary education. In Germany the teacher is practically a civil servant, and the English primary-school

master is in a position that, to a certain extent, approximates to that condition. But most English secondary schools have to be conducted on principles approaching more nearly to those which regulate ordinary business. This is obviously the case with private schools. However high the ideals of the head master may be, he must conform to this necessity. He must compete with other schools, often under disadvantageous conditions; he must collect and keep together a *clientèle*; he must do his best to meet the demands, often not altogether reasonable, of the parents on whom he depends, and both he and his staff must make themselves acceptable to them. Nor are the majority of endowed schools in a much better position. They also have to face competition, and to comply with demands not always in conformity with their better judgment. They are even, in many cases, handicapped by the necessity of charging fees which do not cover the real cost of education, and by the influence of governing bodies not always enlightened and often crippled by inadequate means. These conditions have of themselves a tendency to reduce assistant masters to the position of mere *employés* of the head master. Moreover, the smaller the school, the less chance is there of public opinion being brought to bear on his relations with his colleagues. It is to the credit alike of head masters and of assistant masters that those relations are generally satisfactory.

Thus the problem is no easy one. The head master, being in many cases really the manager of a business concern, has some reason to claim complete control over the staff with whom he works; the assistant masters, as members of a learned profession, ought not, especially when they have reached a certain standing, to be compelled to hold office at the discretion of a single person. Solutions have been proposed, both by the Bryce Commission and by the Committee of the Head Masters' Association. The Commission recommended that in the case of "third-grade" schools both appointment and dismissal should rest, as laid down in most of the schemes of the Charity Commissioners for schools of that class, with the governing body; that in the "first-grade" and "second-grade" schools appointment should rest absolutely with the head master, but that for dismissal the approval of the governing body should be required, opportunity being given to the assistant master to make a statement on his own behalf. The memorandum of the Association would leave the power of dismissal in the hands of the head master, subject to a report to the governing body, and, in case of an appeal on the part of the dismissed master, would call in the Board of Education as the final tribunal—the governing body acting as a grand jury to settle whether there were *prima facie* grounds for further investigation. No doubt any form of appeal increases the difficulties of a head master's position, especially with an inferior governing body. A successful appeal might leave him with no alternative but resignation, and the fear of it might easily induce him to acquiesce too readily in the retention of a master of proved inefficiency, but locally popular. Perhaps in this case efficient inspection might help him. But, in spite of all difficulties, some form of appeal is obviously better than the present feeling of insecurity, which tends to lower the standing of the profession.

## NOTES.

THERE still prevails a good deal of uncertainty as to the scope of the Education Bill which is to be introduced into the House of Commons at an early date. In the King's Speech it is referred to as containing "proposals for the co-ordination and improvement of primary and secondary education." The words would seem to imply a large and comprehensive measure, involving the placing of both primary and secondary education under Local Authorities, in which the School Boards and Technical Education Committees of the County Councils would be merged. It has been pointed out that such devolution might be effected by merging the School Boards in the Technical Education Committees of County and Borough Councils, or by creating a new authority elected *ad hoc*, to which the work of the School Boards and of the Technical Education Committees would be assigned, or by extending the powers of the School Boards so as to include the control of secondary education within their respective areas. It is evident that the discussion of a measure involving a transfer of functions and powers from one existing public body to another, or the merging of one authority in another, cannot fail to evoke the keenest opposition; and it is difficult to see how, in a Session which will be occupied so largely with the war and the provision of the sinews of war, to say nothing of reform of procedure and other important matters, time can be found for the thorough discussion of radical changes in our educational machinery.

THE example of Birmingham has roused into activity the imitative faculty of the constituent colleges of Victoria University. Both Manchester and Liverpool have already decided to develop their colleges into separate Universities, and it is apparent that the perfervid local patriotism of Yorkshiremen will be satisfied with nothing less in the case of the Yorkshire College at Leeds. With three Universities, in addition to Durham and the Newcastle College of Science, the North of England will not lack provision for higher education. Some, indeed, suggest that the movement is the outcome of local rivalry rather than the result of a well considered ambition to perfect the educational machinery of the kingdom. In a long letter to the *Leeds Mercury*, Prof. Silvanus Thompson asks: "Have Yorkshiremen lost their grit that they should fear the advent of independence and self-government?" Whether for weal or woe, the days of the Victoria University are numbered. Yet Victoria University has not only justified its existence as a degree-granting body, conscious of its duty to maintain a high standard of attainment in its graduates; it has done more. By its Board of Studies, on which the three affiliated colleges are represented, it has succeeded in co-ordinating educational effort in the interests of both economy and efficiency. It has only existed some twenty years, and has been considered such a success that the framers of the charter of the University of Wales sought their model in its constitution. In its present form the constituent colleges are staffed and equipped with special reference to local needs. When each college becomes a University, extravagant ambitions which

do not lead to efficiency will have a tendency to influence the policy of each. The mediæval notion of a University is not entirely obsolete in England, but it is neither progressive nor economical. St. Andrews and Aberdeen, to which the advocates of the new Universities refer their opponents, have much in their history which ought to serve as a warning. To have established chairs in all the faculties and to triplicate the examining machinery will be of small avail if eminent theologians and philosophers lecture to a sprinkling of students while the more practical, if more humble, departments are starved.

BOTH the Head Masters' and Assistant Masters' Associations devoted a substantial part of their meetings to discussing recommendations as to the form of the Education Bill; and we do not doubt that the Government will desire to profit by them. The Head Masters', as well as the Science Masters' Association provided, in addition, food for reflection by Government Departments other than that devoted to education. The former championed the cause of Naval engineer officers, and the latter found much to criticize in the present syllabus governing the examination in science of candidates for the Army. The special grievance of engineer officers in the Navy is that they do not rank with other executive officers; and head masters maintain that until their status is improved they will not feel justified in recommending their more promising boys to enter the service as engineers. There is certainly a greater reason for giving naval engineers combative rank than there was for a similar change of status granted to Army doctors. If doctors, why not Army schoolmasters and chaplains? The *reductio ad absurdum* was reached the other day when an Army doctor (major) found himself in supreme command of five hundred troops on a transport leaving Southampton, although there were several regimental captains on board.

AT the discussion on inspection at the meeting of the Teachers' Guild, Mr. Buckmaster brought out clearly the difference between the official and the professional view of an inspector's qualifications. The official idea is to catch him young, and imbue him betimes with all the traditions of the office; the professional view is that his training should be in the class-room, that a long period of work as a schoolmaster is essential for any one who is to judge the work of other schoolmasters. Just as for most legal appointments only barristers of ten years' standing are eligible, so, as was pointed out in a recent article in this journal, educational appointments should be limited to schoolmasters who have been ten years at work in their profession. The official theory scarcely conduces to what one speaker described as the first requisite in an inspector—modesty.

THE second Annual Conference of Public-School Science Masters ended with a resolution to form itself into a permanent body, Principal Rücker being chosen President. The tendency towards sectional organization among teachers would seem to be on the increase, and this year the Association of Assistant Masters held its first general meeting after incorporation. The Association of Assistant Mis-

tresses in Secondary Schools also held its annual meeting last month. With the Association of University Women Teachers, the Head Masters' and Head Mistresses' organizations, and the Modern Language Association it cannot be said that the voice of the teaching profession lacks means of utterance. Some consolidation will soon be desirable, or, rather, a conference should be arranged, to be attended by delegates empowered to speak on behalf of their own organizations. By this means resolutions on which a general agreement has been arrived at might be brought to the notice of the Board of Education with irresistible force.

THE intelligent interest of the public in education is to be welcomed; but, unless this is met by an increased power of critical selection on the part of the officials of the Board of Education with regard to new ideas brought to their notice, some harm may result. The curriculum of a school, whether elementary or secondary, is not to be lightly tampered with, and it is an interesting fact that in Germany the curriculum of primary schools has only been very slightly altered during the last forty years. Such is the advantage of basing the organization of education on a ground plan of well considered theory. At the recent meeting of the Agricultural Education Committee of the Kent County Council, under the presidency of Sir W. Hart Dyke, the chairman claimed that they had advanced a considerable distance towards remodelling, in an intelligent form, the present system of rural education. The Committee has undeniably done good in prevailing upon the Board of Education to encourage the masters of rural schools to cultivate the intelligence of their pupils by a study of natural objects and processes. Nor can fault be found with the Committee's suggestion—now adopted by the Board—that the curriculum of training colleges should be modified so as enable theoretical and practical instruction in subjects bearing upon rural life to be given. Now the Committee cries for more: it recommends that training college students who desire it may spend a third year at a recognized agricultural institution. Elementary schools are not institutions for technical instruction, and we hope the Board, in the interest of education, will recognize the fact.

NOR content with providing the means for improving the education of a large part of the globe, Mr. Carnegie has at last found time to attend to his own literary needs, and his method is characteristic of his grand manner of meeting a difficulty. He has retained Lord Acton, the Professor of Modern History at Cambridge, to select the books for the library at his residence in Scotland, and the librarian of one of our public libraries has been chosen to decide upon the best editions. With Lord Acton's known taste and great learning, the result will no doubt satisfy even Mr. Carnegie; but we are sorry he should miss the supreme joy of selecting and buying his own books. The chief charm of a library is the personal note suggestive of the owner's tastes and studies, and, sometimes, even of his life's history. We envy Lord Acton his task, and are awed in contemplating the joy of his coadjutor, who is permitted to choose editions and bindings.

A PAPER contributed to *Secondary Education* in December

last, and entitled "Lessons England may learn from the North," has been reprinted as a leaflet. The writer dwells at some length on the extreme freedom allowed to teachers in Denmark and Sweden, and on the readiness with which State aid is granted to efficient schools, whether under public or private management. It is clear from what he tells us that the driving power—the wind for which the Duke of Devonshire is whistling—exists in those Northern countries, and that there is a widespread enthusiasm for general as well as for technical education. The establishment of eleven hundred co-operative dairies in Denmark since 1882—the year in which the present educational policy was started—is a fact worth a good many arguments.

THE *Pilot* of January 18 has a special supplement of sixteen pages entirely devoted to education. Whilst all the five articles are valuable, three may be singled out as specially interesting—the opening one, by Principal Robertson, of King's College, on "Secondary Education"; another on "Technical Education in Action," which complains that "we are degrading our workers to the level of being workers only, and not thinkers," and so "are paying a big price for technical education"; and a third, from "Our Oxford Correspondent," who sighs for the expansion of Oxford studies so as to include the new learning—the humanities, with only modern languages and literatures for their *media*—which must form the staple of the instruction in so many secondary schools of the time to come. How thoroughly and how exceptionally Dr. Robertson has looked the actual situation full in the face will appear from his contention that "no schools which are giving efficient teaching ought to be the losers by legislative changes"; that "even proprietary schools should, under proper conditions, be freely recognized and aided"; and, again, that "education does not consist in the acquisition of knowledge, but in the acquisition of the power to assimilate it and to make use of knowledge."

THE question of prescribed books in examinations was raised at the meetings both of the Head Masters' Conference and of the Incorporated Association, and the general opinion was that it should be possible to pass all public examinations on unseen papers only. Prof. Sonnenschein, in an interesting letter to the *Times*, points out some of the dangers of dispensing with set books, and quotes the practice of the University of Birmingham at its Matriculation Examination, where, as in Oxford Responsions, set books are required, but the choice is left—presumably within certain limits—to the candidates. Whether the Birmingham plan of examining in the set books *viva voce* will prove satisfactory may be doubted. There is no doubt that, in many cases, set books are an unmitigated evil; any one who has had to prepare candidates for the London Matriculation knows that the books chosen are often not adapted for sixth-form reading, and that a very large number of candidates simply get them up with a crib. Probably in all examinations intended to test the fitness of candidates to enter a profession or a University it would be desirable to dispense with them, and to rely entirely on the test of unseen passages done with or without dictionary, according to the standard desired. If candidates cannot do an average

piece of Latin with a dictionary at seventeen or eighteen, it is pretty clear that the time they have spent on Latin has been wasted, and the examining authority should provide an alternative. The case of examinations like the Higher and Lower Certificate and the Local Examinations, which are intended to test and direct school work, is very different. The thorough study of a good piece of literature—and nothing that is not thoroughly good should be prescribed—is an important part of a liberal education. It means not only accurate translation, but the acquisition of a good deal of miscellaneous information. It encourages the habit of careful reading, and forces both teacher and pupil alike to leave nothing unexplained.

THERE are now 156 students in residence at Newnham College, Cambridge, and 10 out students are attached to the three Halls—viz., Sedgwick, Clough, and Old. The second award of a Fellowship, under the provisional scheme initiated by the Associates, has been made to Miss W. M. L. Hutchinson, who is engaged on a work dealing with myths, history and art of Egina. Permission has been granted to her to reside in London during the two winter terms, in order to study at the British Museum. The first award was made to Miss Jane Harrison. These Fellowships are of the value of £100 a year, and they are tenable for three years. The holders must be in the main engaged in work intended to advance knowledge. The Geoffrey Fellow of the College is Miss G. L. Elles. Sixty-three students entered for the various Tripos Examinations in Easter Term, 1901, of whom eleven obtained First Class, twenty-six Second Class, and twenty-two Third Class Honours. The Marion Kennedy Scholarship has been awarded to Miss H. B. C. Sollas, who gained a First Class in the Mediæval and Modern Languages Tripos in 1900. She is now residing at Heidelberg, and is engaged in research work connected with English and German literature. The number of students, past and present, now amounts to 1,330. On the purchase of the freehold of Newnham, completed at Michaelmas, 1900, there now remains a debt of £2,200, of which £1,000 has been borrowed from the Fellowship Fund, and the remainder from friends of the College.

A PRIZE of 10s. is offered by Professor Church for the best translation into English of the following passage of Cæsar, done by a boy or girl under seventeen years of age. It is *essential* to break up the long Latin sentence. Candidates must send with their translation a certificate from their head master or head mistress, or, if not attending a school, from some person in a responsible position, that the translation has been done without any help beyond a dictionary, grammar, and ordinary notes, and that they are under seventeen years of age.

Cicero, qui omnes superiores dies praeceptis Cæsarum cum summa diligentia milites in castris continisset, ac ne calonem quidem quemquam extra munitionem egredi passurum, quod longius progressum audiebat, neque ulla de redivit eius fama afferebatur; simul eorum per-motus vocibus, qui illius patientiam paene obsessionem appellabant, si quidem ex castris egredi non liceret; nullum eiusmodi casum expectans, quo, novem oppositis legionibus maximoque equitatu, dispersis ac paene deletis hostibus, in milibus passuum tribus offendi posset; quinque cohortes frumentatum in proximas segetes misit, quas inter et castra unus omnino collis intererat.

## SUMMARY.

### THE MONTH.

MR. CHAMBERLAIN, as Chancellor, presided on January 8 over the annual Court of Governors of the Birmingham University. The right hon. gentleman said the *crux* of their situation was finance. Money was the beginning and the end of all they had to do. Give him the money for which he had asked, and in return he would provide a University second to none—an institution calculated to do enormous benefit to the great district in which it was situated. He did not, however, plead for anything in the nature of a large endowment. He held the opinion that in all such institutions each generation should be prepared to do its own work, and that, if an institution was made independent of current opinion, it was liable to get out of touch with, and it might become, which would be very undesirable, independent of public criticism. On the occasion of the last annual meeting he was able to inform them that the fund raised for the purposes of the University amounted to £330,000; at the present time, including the generous gift of land which was made to them by Lord Calthorpe, it amounted to something over £420,000. But a very considerable portion of that sum was appropriated before it was received. In the first place, they had to pay off a very considerable deficit which had arisen in the working of the old Mason College. In the next place—and this accounted for a much larger sum—they had, according to promise, to revise the teaching arrangements and to reconsider the amounts of the salaries of the teaching staff. He called special attention to the appointment in the Faculty of Arts for the first time of a separate lecturer in Greek literature, language, and archaeology. He regarded that appointment with the greatest satisfaction; he thought it supplied a much-needed want, without which they would not have had any pretence to be a University. There was, however, one deficiency which he was almost ashamed to confess. Up to the present time the University of Birmingham had no professor of history. That was a deficiency which he hoped would before long be filled.

MR. CHAMBERLAIN then commented upon the noble example of the Birmingham City Council in voting the University a sum of £5,500 per annum—an example already followed by the County Council, and soon, he believed, to be followed by the Councils of Worcestershire, Warwickshire, and Shropshire. Altogether, he anticipated they might safely count upon a sum of not less than £7,000 per annum from this source. That at once set free a capital sum of £200,000, which, added to the balance that remained, placed at their disposal a total sum of £300,000 for the new buildings. He ventured to urge upon his colleagues great boldness in regard to the plans for those buildings. He had in his mind the action of the builders and founders of those magnificent cathedrals which had come down to us from the middle ages. Not one of them was built at once, but all were built with a view to the greatest possible extension. They had received from their architects the rough plan of their future University, of the University as it might be, perhaps, a generation hence, perhaps to-morrow, if they could only find in this country some individuals ready to follow the munificent example set by American millionaires in similar circumstances, and who might be proud to associate their names with so great and important a work. He reckoned that the buildings of this new University could not be erected and equipped for a less sum than a million sterling. They had £300,000 in hand, and accordingly, out of ten working blocks of which the complete University would ultimately consist, they proposed to begin with the erection of three, and these three blocks would give them the schools of mining, metallurgy, of civil, mechanical, and electrical engineering, together with the great hall of the University.

THE Annual Meeting of the Incorporated Association of Head Masters was held at the Guildhall on January 10 and 11. The coming Education Bill was the subject of the President's inaugural address, a report of which is given in another column. Among other questions dealt with were the inspection of schools and the use of prescribed books in language examinations.

AN Educational Conference of Members of the Teachers' Guild was held, on January 13 and 14, in the Lecture Hall of the College of Preceptors, which was granted for the purpose by the Council. The Rev. Canon Lyttelton presided, and the subjects discussed were of a very varied and interesting character. "Observational

and Field Work as the basis of the Teaching of Geography" was the subject of the first paper, in which Miss J. B. Reynolds urged that children should be trained to observe the actual features and forms of Nature before studying maps or other records of them, and suggested that observational work might also be carried on indoors by means of object-lessons. Mr. L. W. Lyde (of Bolton) said he did not agree with the method recommended, and considered that a better plan was to engage the pupil's interest in the study by appealing to his powers of imagination. He thought that commercial geography opened out better avenues of approach, as more directly related to the environment of the children.—Mrs. Bryant introduced the question of "Inspection of Secondary Schools." She remarked on the different purposes of inspection—administrative, educational, and in relation to the school buildings and appliances, and on the existing agencies for carrying out the work, and recommended some scheme of co-operation between the central, local, and university authorities. She urged, however, that inspection should not be carried too far, as over-inspection would be worse than over-examination. The Rev. R. D. Swallow (Head Masters' Association) read a paper on the same subject, in which he advocated a registration of schools consequent on a general inspection of them by a central, and not by a local authority. The inspectors should be men and women of wide sympathies, unprejudiced minds, and ripe experience. He considered that the inspectors hitherto appointed by the Board of Education did not satisfy these essential conditions. Mr. EVE (Dean of the College of Preceptors) was of opinion that inspectors should be men of high attainments, who had had at least ten years' practical experience as teachers. Mr. C. A. BUCKMASTER (Board of Education Inspector) pointed out that, under the present conditions of the Civil Service, the plan of requiring an inspector to serve as an assistant master for eight or ten years, and as head master for a further term, would result, for financial reasons, in the ranks of the inspectorate being filled with those who had not succeeded as head masters. The profession of an inspector was one which, like other professions, had to be learned, and the average inspector must undergo a certain course of training before he could be let loose to act on his own authority, which meant that they must be caught young. As to the work of inspection, in order to judge of the work of a school it was essential that it should be seen in its ordinary routine condition.—On the second day of the Conference Mr. C. E. RICE opened a discussion on "Nature-Study for Children between the Ages of Seven and Twelve Years." He said that nature-study included much of what used to be called natural science, and embodied drawing as a medium of expression. The study of experimental science involved the creation of an artificial set of conditions not necessarily found in nature. Nature-study, on the other hand, implied the surface knowledge to be gained by observation only and under natural circumstances or conditions removed as little as possible from those found in nature. In a paper on the same subject by Miss J. C. VINTER, the teaching of botany and zoology to children between the ages of seven and ten was recommended; at ten, lessons in elementary physics might be taken up, which would form an introduction to a course of physical geography or of general elementary science to be begun at the age of twelve. With regard to methods, she was of opinion that the instruction was best given in the form of object-lessons.—Dr. WORMELL then opened a discussion on "Essentials in the Teaching of Geometry in School," which was followed by a paper on the same subject by Miss J. S. GILL.—The final subject of discussion, "The Teaching of English Literature in Schools" was opened by Mr. P. A. BARNETT (H.M. Inspector), who observed that it was a notable fact that literature as such had comparatively little recognition in the curriculum of English schools, while it was entirely excluded from the syllabuses of a large class of important schools. The greater part of what was called instruction aimed properly at developing the powers of reason and at storing the mind with facts. The cultivation of literary feeling was undertaken by other agencies besides the school. The school, however, was, in his opinion, better able to do the early work well. It should be done almost solely with plain texts, and the æsthetic and rhetorical qualities of books should be dwelt upon rather than details of a less general character. The feeling for literature, like the feeling for goodness, must be quickened and cultivated. For the English teacher, English literature was the least specialized, the most common instrument of humanization. The first and chief business of the English teacher was to make his pupil a good man and a good Englishman. Mr. H. C. BOWEN read a paper on the

same subject, which was followed by discussion, and the proceedings terminated with a vote of thanks to the chairman.

PRESIDING, on January 9, at the Annual Meeting of the Private Schools' Association at the Westminster Palace Hotel, Mr. G. C. T. Bartley, M.P., in the course of his inaugural address, said they must anticipate that during the coming Session the chief feature of legislation would be secondary education. He deprecated the spirit of utilitarianism in education which was abroad. The object should be to give boys and girls such an education as they would be able to use in a wise and proper manner in whatever line of life they were afterwards placed. The question was whether the State was going practically to take over secondary schools, whether the time had come when these schools should be provided out of the rates or taxes. The first thing to be demanded was that there should be an efficient system of secondary education. Private teachers claimed that in the past they had done a great deal to secure the present system, and they claimed that in the future they should have a large share in carrying on secondary education, and that no legislation should be so framed as to do away with private enterprise. It might be taken for granted that the establishment of some Local Education Authority would be one of the main features of legislation. If such a body provided effective machinery to make secondary education efficient where it was now deficient, private teachers, as a body, would do nothing but hail it with satisfaction; but what seemed to him a possible danger was that such a body might so work as to compete with efficient private schools. Those efficient schools should be protected; and, in his view, the keynote of the situation was that schools started by the Local Authority should be required to be self-supporting. The introduction of free secondary education meant the collapse of the private school. If it were not required that the schools established by the Education Authority should be self-supporting, private schools should receive grants to put them on the same level. He was, however, very much opposed to grants, as tending to produce a stereotyped form of school. With regard to the registration of teachers, he could not think the Association would have any objection to systematic registration; and, as to inspection, the only question was, who was to pay for it. It seemed to him a reasonable and legitimate charge to put on the public. The danger in any scheme was the loss of freedom, elasticity, and individuality. He trusted the Association would do their utmost to maintain the efficiency of secondary schools as well as their individual position.

At the annual general meeting of the Association of Assistant Masters in Secondary Schools, which was held on January 11 at St. Paul's School, Hammersmith, one of the chief subjects of discussion was the question of security of tenure. It was urged by Mr. Page that in all secondary schools every assistant master was dependent upon the head master for promotion, and liable to dismissal without reason assigned, any right of appeal to the governing body being illusory. The conditions of scholastic life were such that dismissal at a time of life when other professional men were in their prime left the assistant master in a hopeless position. Though he freely acknowledged that the great majority of head masters were disinclined to strain their strictly legal powers and endeavoured to execute a public trust with judicial fairness, there had been cases, some of which he mentioned, in smaller schools not under the influence of public opinion involving the greatest hardship without possibility of redress. Claiming that the work of education was public service, he argued that assistant masters should be allowed an appeal to the constituted Education Authority. Resolutions urging the Government to proceed with their promised Education Bill, and expressing the opinion of the meeting that the areas of the local Education Authorities should not be less than a county or county borough and that the Education Committees should include persons who were or had been engaged in teaching in secondary schools, and "that the interests of education and financial economy alike demand that provision should be made for safeguarding the position and efficiency of existing secondary schools," were unanimously adopted.

The annual meeting of the Geographical Association, held at the College of Preceptors on January 14, was enlivened by an interesting lecture by the Right Hon. James Bryce, M.P., on "The Importance of Geography in Education." Few met-

living can compare with Mr. Bryce as travellers; he has, indeed, "seen the manners and cities of many men"—and their mountains too. He was the first to ascend Mount Ararat, where the remains of the Ark are supposed to be resting, but quite failed to convince his host, the Patriarch of Echmiadzin, of the reality of his achievement. "Never," said the venerable prelate, "has Mount Ararat been ascended, and it never will be." In the course of his address Mr. Bryce spoke of geography as the meeting point between the physical sciences and those dealing with human affairs, and pointed out its value if properly taught from a basis of *Heimatkunde*, or the study of one's own neighbourhood, as a discipline alike in observation and in reasoning. He further dwelt on the importance of the subject as a handmaid to history in all its branches, and as an essential element in the training of men of business. Perhaps practical schoolmasters who came expecting suggestions that might bear on their own teaching were somewhat disappointed; but the Association could not but be grateful for so clear an exposition of the value of the quiet work they are doing in the propagation of sound methods of geographical instruction in schools.

MR. L. L. PRICE, Fellow and Treasurer of Oriel, has addressed an open letter to the Vice-Chancellor of the University upon the present condition of economic study in Oxford, in which he urges the importance of according it a place more adequate both to its own intrinsic importance and to the position which it seems likely in the near future to occupy. One Group (or portion of a Group) of the Final Pass School is devoted to political economy, and it occupies by no means the least satisfactory position among the different Groups in kindling interest and assisting the development of the mind. But in the Honour examinations the place of economics is inconsiderable. This unimportant position is, Mr. Price pleads, not commensurate either with the place which economics is now taking in the world outside or with its own intrinsic interest and value. In the University of Cambridge the subject occupies a very prominent position in the Moral Sciences Tripos and also fills a larger place in the Historical Tripos than in the Oxford Modern History School; and he points out that Cambridge is continually producing young economists of capacity and attainment. In the reorganized University of London explicit recognition, as a Faculty of the University, has been given to the London School of Economics and Political Science, which has been working with success for some years and attracted students from this country and abroad. Nor can any observer who watches the drift of English popular opinion on educational matters doubt that the stir roused on "commercial education" is likely to beget an increasing tendency on the part of merchants and other business men to send their sons to places of education where they think, rightly or wrongly, that they will receive a training more useful for the careers for which they are destined. For these and other reasons which he mentions, Mr. Price thinks he is putting forward no unreasonable plea when he asks for earnest attention to the present state of economic study in Oxford.

#### UNIVERSITIES.

(From our Correspondents.)

TERM has started in a somewhat dull fashion, and at Oxford. present we hear of no startling movements among the progressives likely to call the *Non-placet* Society into action. There is a rumour, indeed, that the Hebdomadal Council, who have been taking the opinions of various schoolmasters, have discussed, are discussing, or propose to discuss the question of making a modern language compulsory in Responsions. That the encouragement of modern languages "has come to stay" admits of no question. Balliol—alone, we believe, among colleges—compels those men who do not read for Honours in the First Public Examination to take up the study of a modern language. What, however, would be the result of introducing French or German as a compulsory subject in Responsions is hard to say. If either is to be introduced as additional to Greek, then the burdens of the Pass man, pure and simple, will be enormously increased; if the idea is by the thin end of the wedge to gradually eliminate Greek, then, again, we are face to face with an old heroic struggle. There are many who think now that Greek as a necessary pass subject is bound to go to the wall; even some of

its most ardent supporters are gradually cooling down. The demand for scientific and utilitarian education, and the growth of new Universities, which lay themselves out to meet that demand, is bound in time to have its effect even in stationary Oxford. Certainly in scientific education Oxford has made great advances in the last two decades, with new buildings, larger grants of money, new subjects, a more varied staff of teachers, and a much increased body of students. If one studies the lecture list as marshalled in array in the pages of the *University Gazette* for the term, and compares it with the announcements of the same nature in a *Gazette* of a dozen years back, the remarkable change is evident at the first glance. The increasing study of geography and the now ever-growing demand for modern languages are further evidences of the change. Add to these the fact that many, both inside and outside the University, are agitating for a more systematized preparation of candidates for the India and other Civil Service examinations (which are not University examinations), and the conclusion that Oxford is steadily departing from its independent aloofness is very obvious. There are, of course, those who deplore the change, and find signs of decay and disintegration when they discover that *Inter Humaniores*, the boast of the Oxford system, is now regarded by many, not as an end in itself, but as a means.

All this digression has been suggested by the "modern language" rumour. But, whatever be the result—whether Greek be doomed or no—it is to be hoped that, if modern languages do come in, we shall demand a more satisfactory standard of proficiency than is now demanded in Responsions in classics. A prepared book is really a thing of nought—or, at any rate, of memory—when nothing more is demanded than a mere baldly literal translation. Much Latin prose scrapes through under the embracing title of *via satia* which contains mistakes for which in our infancy *manum ferulæ subducimus*. The grammar standard is that of an ordinary public school middle form, and there is no unseen translation.

The two "Boards" for school examination, the "Certificate" and the "Locals," have recognized by now the futility of mere prepared books. In both (now) prepared books are not necessary; in both a certain standard of accuracy is demanded, both in Latin prose and Latin unseen. The Oxford Locals have been slower in adopting the last clause, but it may now be said to be definitely established.

Among other items of University news, we may record the appointment of Mr. Bryce as Romanes Lecturer for the year, an announcement which, at any rate, frees the University from any charge of political animosity; the promulgation of a scheme for reorganizing the salaries as paid to University examiners, especially in respect of Final History, Pass Moderations, and Smalls (the last named, with its £100 a year for four examinations, lasting at the outside about a week each, was very well paid, as pay goes in Oxford; now, a "Master of the Schools" is to receive £80); the pamphlet, in the form of a "Letter to the Vice-Chancellor," published by Mr. Price, pleading for a more serious and universal study of the subject of political economy—another "sign of the times"; the success at the end of last term in the Ireland and Craven examination, of Mr. Jackson, a close exhibitor, who had come up to Queen's from Appleby Grammar School, and had never "done verses" before coming into residence; and, lastly, the remarkable success of Corpus in securing both the Senior and Junior University Mathematical Scholarships—a success not undue probably to the brilliant mathematical teaching ability of Mr. Jolliffe.

On the river are torpids in abundance, but none of surpassing merit. By the time these lines appear the University Eight will probably be in something like its final form: at present it is undergoing a series of permutations and combinations, especially in the bows.

The football team was well represented in the Rugby match England against Wales, Strand-Jones dropping a goal for Wales and Dobson securing one of the two English tries.

THIS Lent term will probably see a fuller development of the controversy concerning the suggested changes in the Poll Examinations. It may be remembered that a memorial was presented to the Vice-Chancellor last term asking for the appointment of a syndicate to consider the question of making certain changes in the Pass Examinations, more especially by allowing candidates to take two Special Examinations instead of the General Examination and one "Special," as at present. The present scheme, which

has been in force for the past twenty-five years, with alterations and improvements from time to time, is briefly as follows:—The Little-go, divided into two parts—Classics and Mathematics—is an elementary examination on ordinary school subjects. The next test is the General, an advanced examination on similar lines, embracing the following topics:—Statics, Algebra, Hydrostatics and Heat, a Latin subject, Greek subject, Acts of the Apostles in Greek, a period of History, and an English Essay. The whole of this examination can be passed in a man's fourth term. After that the candidate is induced to specialize, a choice being given him from a list of subjects embracing all important branches of learning. The fundamental idea of the whole course is that the "General," as its name implies, is a test of general education, the Specials being on topics of a more or less technical and professional character. It is generally admitted by those whose work lies in that direction that the General Examination is quite as satisfactory a test as could be devised for the ends in view.

The memorial in favour of the new suggestion was largely signed, chiefly by college tutors, but the debate in the Senate on January 23 was decidedly disappointing. The case for the memorialists was stated by Mr. Rouse Ball, the Senior Tutor of Trinity, who was supported by Mr. Tilley, of King's, and Mr. Parry, of Trinity. No cogent reasons were adduced by the memorialists, but the general drift of the argument for their side was that the work of the General was useless, and consisted of "snippets" of work which did not interest the candidates. These contentions were strongly opposed by Mr. W. G. Bell, of Trinity Hall, and Dr. Campbell, of Trinity, who, with Mr. Adam, of Emmanuel, and Mr. Whibley, of Pembroke, urged the educational value of the present examination. It was, in the course of the discussion, pointed out in forcible terms that the proposed changes were merely a new departure in the anti-Greek movement; that the wishes of the schoolmasters should only be regarded when the University could be persuaded that those wishes could be granted without detriment to the interests of education—in other words, that it was the function of the University to lead, and not to follow, the schools. Suggestions were freely thrown out that under the suggested scheme, a boy from the upper fourth passing his Little-go before residence might get his degree after passing two such examinations as the Special in Music and Agricultural Science, the last mentioned being a very conglomeration of veritable "snippets" of knowledge strung together on the slender thread of a presumed connexion with agriculture. The real debate will take place when the Council formulate a definite proposal to appoint a syndicate to consider the question; then the fly-sheets will fall like leaves in autumn. One speaker in the course of the debate incidentally expressed his distrust of syndicates and committees generally, suggesting that, as a rule, the genius of the individual is often obscured by the crassness of the corporate brain; still there is no other course open to the University, if the question is to be discussed at all, than to appoint a syndicate to report.

Two deaths have cast a gloom over Cambridge this term. Mr. Hyde Hills, a well known and respected medical practitioner, was carried off by tetanus during the vacation. Mr. Hills had an active and useful public career; and his acts of generosity and charity were suspected rather than known during his lifetime. The other case was that of Mr. C. Green, of Sydney, a man of considerable promise in the scientific world. He had for years assisted the present Principal of the South Wales University College in his experimental work. As a teacher he was rapidly making his way to the front; and his loss will be felt by his numerous friends who appreciated his simple, unostentatious, and upright character.

The appointment of Mr. T. H. Middleton, of Durham, to the Professorship of Agriculture was not altogether unexpected, though the many friends of Mr. T. B. Wood entertained hopes that the Professorship would go to one who had done such good work for the department in Cambridge.

The University crew is getting somewhat more into shape. The Secretary, H. B. Grylls, has now come into the boat, and considerable improvement has in consequence taken place in the swing and rhythm of the rowing, but it is as yet too early to prophesy as to what the crew will be like in the later stages of its training.

The football team (Rugby) have defeated Kensington with ridiculous ease, and the Association eleven are playing a particularly strong game, giving their supporters grounds to believe they can account for the strong team that Oxford will bring against them.

## ALLMAN & SON, LTD.,

Text-Books for Oxford, Cambridge, and  
College of Preceptors' Examinations, 1902.

### MIDSUMMER NIGHT'S DREAM.

Edited, with Introduction, Notes,  
and Index,  
by J. LEES, B.A.  
Price 1s., crown 8vo. cloth.

### QUESTIONS on "Midsummer Night's Dream."

By J. LEES, B.A.  
Price 2s. 6d.  
Interleaved with Plain  
Paper.

#### Reviews of Mr. Lees' Books.

**Literature.**—"For a critical and detailed study of the play, scene by scene, this book is very useful, not only for examination purposes, but as a guide to teachers."  
**Westminster Review.**—"Mr. Lees' edition does credit to his industry."  
**Practical Teacher.**—"Judiciously and well edited."  
**Schoolmaster.**—"Very helpful and suggestive."  
**School Guardian.**—"The notes are full and good."

### TEXT-BOOK ELEMENTARY BOTANY.

By CHARLOTTE L.  
LAURIE,  
Assistant Mistress at  
Cheltenham Ladies'  
College.  
With Illustrations by W. L.  
BOYS-SMITH,

late Scholar of Girton College, Cambridge, and  
Science Lecturer at Cheltenham Ladies' College.  
Price 2s. 6d., crown 8vo. cloth.

**Journal of Education.**—"Capital little book—well informed, well illustrated."  
**Yorkshire Post.**—"Excellent done."  
**School World.**—"Very good indeed."  
**Practical Teacher.**—"Illustrations exceedingly good."

### THE OLD TESTAMENT HISTORY.

By Rev. C. J. HAMER, Vicar,  
St. Paul's, Newcastle-on-  
Tyne. With a Preface  
by the Lord Bishop of  
RIPON.

Price 1s., crown 8vo. cloth.

**Rev. Principal Henry Palin Gurney, D.C.L., F.G.S., F.Ph.S.L.,  
Durham College of Science.**—"It is a very careful and useful work, and I shall be happy to recommend it to such of our students as may be likely to find it helpful in their own studies or in class teaching."

**Literature.**—"Simply told, and seems well suited to its purpose."  
**Short Extracts from Letters.**—"Very good indeed." "I like the arrangement very much." "It is an excellent book." "In every way admirable." "So pleased with it; shall adopt it as early as possible." "Greatly admired; will be included in my next orders." "I like its style very much."

### NOTES ON ST. MARK.

By Rev. C. J. HAMER,  
Vicar, St. Paul's, New-  
castle-on-Tyne.

Price 9d., cloth.  
Type bold and clear.

London: ALLMAN & SON, Ltd.,  
67 New Oxford Street, W.C.

**THOROUGH PREPARATION FOR EXAMINATION.****TEXT-BOOKS for HIGHER SCHOOLS.**

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following books:—

**ARITHMETIC.**

Small amount of Theory, large amount of Practice. Worked-out examples for each step. Prominence given to the Metric System. Laboratory Exercises in a Special Section.

**GEOGRAPHY.**

Physical facts made the basis of Political. Commercial aspects kept constantly in view. British Empire fully treated. Many Coloured Maps and Diagrams.

**ENGLISH GRAMMAR.**

Examples made the basis of instruction. Analysis introduced early. Aids to correct speaking a prominent feature. Plenty of scope given for "practice."

**ENGLISH HISTORY.**

Contains landmarks of our national history. More than usual attention given to last three centuries. The Growth and Greatness of the Empire specially considered.

PUBLISHED AT ONE SHILLING EACH.

The *Schoolmaster* says: "We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

Specimens and particulars sent free to Head Teachers.

**The Educational Supply Association, Ltd.,**

42 HOLBORN VIADUCT, LONDON, E.C.

A SELECTION FROM  
**CASSELL'S EDUCATIONAL WORKS.**

Just Published. Price 5s.

**Marine Painting in Water-Colour.** By W. L. WYLLIE.

A.R.A. With 24 Coloured Plates.

"For all who would gain efficiency in this division of water-colour drawing, no better text-book than this one could well be imagined."—*Daily Graphic*.

"The plates strikingly show the remarkable range and variety of marine painting. Mr. Wyllie's method is fully described, and the book will appeal in this respect to the student; but, as a most artistic production, it must also delight a very large public."—*Liverpool Post*.

Second Impression. Price 5s.

**Landscape Painting in Water-Colour.** By J. MAC-

WHIRTER, R.A. With 23 Coloured Plates.

"With the sketches to refer to, Mr. MacWhirter's precepts and hints, based upon long and varied practice, will be completely intelligible to the veriest beginner, and the student who follows his directions will find that many apparently formidable difficulties can be easily surmounted."—*Globe*.

Third and Revised Edition.

**A History of England.** By H. O. ARNOLD-FORSTER, M.A.

From the Landing of Julius Caesar to the Present Day. 58 pages, copiously illustrated, cloth, 5s.; or, superior binding with gilt edges, 6s. 6d.

"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student, but for everybody who wishes not merely to be instructed, but to be won to an interest in a study too often made repellent by the dryness of . . . Few popular histories, if any, have been better done."—*The Scotsman*.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, Ltd., Ludgate Hill, London, E.C.

**TWO UP-TO-DATE SERIES OF****WALL MAPS.**

Prepared expressly for School use, and exceptionally well mounted on Cotton, with Rollers, and Varnished.

**THE HOLBORN SERIES.**

Extra **LARGE SIZE** at extra **LOW PRICE.**

Size, **62 ins. by 51 ins.** Published price, **13s. each.**

Printed with colours which do not fade.

Clearness of detail a special point.

The Series comprises—

<b>WORLD (MERCATOR).</b>	<b>IRELAND.</b>	<b>AFRICA.</b>
<b>EUROPE.</b>	<b>SCOTLAND.</b>	<b>NORTH AMERICA.</b>
<b>ENGLAND.</b>	<b>ASIA.</b>	<b>SOUTH AMERICA.</b>

Attention is called to the **TEST MAPS** in this Series, comprising—

<b>EUROPE.</b>	<b>IRELAND.</b>	<b>AFRICA.</b>
<b>ENGLAND.</b>	<b>SCOTLAND.</b>	<b>ASIA.</b>

**THE VIADUCT SERIES.**

To meet the want, long felt, of a **GOOD MAP** at a **LOW PRICE.**

Size, **46 ins. by 39 ins.** Published price, **7s. 6d. each.**

Printed in **permanent colours**, with good **plain lettering** and the **details bold and clear.**

The Series consists of the following Maps—

	<b>WORLD (IN HEMISPHERES).</b>	
<b>EUROPE.</b>	<b>NORTH AMERICA.</b>	<b>ENGLAND.</b>
<b>ASIA.</b>	<b>SOUTH AMERICA.</b>	<b>SCOTLAND.</b>
<b>AFRICA.</b>	<b>UNITED STATES.</b>	<b>IRELAND.</b>

The Map of England has the Railways well marked.

ENTIRELY NEW EDITION. THE ACCESSION EDITION.

**THE HOWARD VINCENT MAP OF THE BRITISH EMPIRE.**

For Schools, Public Libraries, &c.

ADOPTED BY THE LONDON SCHOOL BOARD.

21s., on cloth, rollers, and varnished, accompanied by Handbook gratis.

NEW EDITION. THOROUGHLY REVISED TO PRESENT TIME.

**LARGE SCHOOL WALL MAP OF SOUTH AFRICA.**

Size, 50 by 42 inches. Price, on cloth, rollers, and varnished, with Handbook, **12s.**

21s. NET TO SCHOOLS.

**JOHNSTON'S NEW CENTURY GLOBE.**

JUST ISSUED.

An up-to-date 12-inch Terrestrial Globe, showing the latest change in South Africa and elsewhere. British Possessions coloured in red.

The cover is printed in W. & A. K. JOHNSTON'S best style. It shows Ocean Currents, Isothermal Lines, and Date Line. The Globe has a strong metal semi-meridian marked in degrees; the stand is of heavy metal, and gives design of the Rose, Thistle, and Shamrock.

The best Globe for Schools.

A Packing Case is included in the charge of 21s.

Catalogue of Maps, Atlases, Terrestrial and Celestial Globes, Wall Illustrations, &c., and List of Object Lesson Pictures, post free.

**W. & A. K. JOHNSTON, Limited,**

Edina Works, Easter Road, and 20 South Saint Andrew Street, Edinburgh; 7 Paternoster Square, London, E.C.

## COLLEGE OF PRECEPTORS' EXAMS.

SUITABLE BOOKS IN THE  
University Tutorial Series.

- BOOK-KEEPING, THE PRECEPTORS'.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond., Lecturer in Commerce and Commercial Law at the Hull Technical School. **1s. 6d.**  
"A practical and sensible introduction to the subject."—*Oxford Magazine*.
- ENGLISH GRAMMAR, THE PRECEPTORS'.** With numerous Exercises. By W. H. LOW, M.A. Lond., and ARNOLD WALL, M.A. Lond.  
[In the press.]
- FRENCH COURSE, THE PRECEPTORS'.** By ERNEST WEEKLEY, M.A. Camb. and Lond. With Exercises and Passages for Translation into French. **2s. 6d.**  
"The execution is distinctly an advance on similar courses."—*Journal of Education*.
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. *Second Edition*. **1s. 6d.**  
"A very useful first reader, with good vocabulary and sensible notes."—*Schoolmaster*.
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Camb. and Lond. and Camb. **2s. 6d.**  
"This is certainly better than most grammars that we have seen."—*Secondary Education*.
- LATIN READER, THE PRECEPTORS'.** By EDWARD J. G. FORSE, M.A. Lond. and Camb. **1s. 6d.**  
"It is one of the best books of translation that we have seen."—*School Guardian*.
- MECHANICS, THE PRECEPTORS'.** By FABIAN ROSENBERG, M.A. Camb., B.Sc. Lond. **2s. 6d.**  
"The book possesses all the usual characteristics and good qualities of its fellow."—*Schoolmaster*.
- TRIGONOMETRY, THE PRECEPTORS'.** Edited by WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. **2s. 6d.**  
"The book meets excellently the wants of the student reading for the College of Preceptors' examination."—*Guardian*.

## SOUTH KENSINGTON EXAMS.

SUITABLE BOOKS IN THE  
Organized Science Series.

ELEMENTARY STAGE. — 2s. each volume.

- PRACTICAL PLANE AND SOLID GEOMETRY, FIRST STAGE.**  
By G. F. BURN, Assoc. M. Inst. M.E. [In preparation.]
- MACHINE CONSTRUCTION AND DRAWING, FIRST STAGE.**  
By J. H. DALES, Assoc. M. Inst. C.E. [In preparation.]
- BUILDING CONSTRUCTION, FIRST STAGE.** By BRYSSEN CUNNINGHAM, B.E., Assoc. M. Inst. C.E.  
"The book may be confidently recommended."—*School World*.
- MATHEMATICS, FIRST STAGE.** Containing all the Algebra and Euclid required. Edited by Dr. Wm. BRIGGS, M.A., F.R.A.S. [In preparation.]
- MECHANICS (SOLIDS), FIRST STAGE.** By P. ROSENBERG, M.A., B.Sc. *Third Edition*.  
"Mr. Rosenberg has catered to the wants of South Kensington students with great skill and clearness."—*Educational News*.
- MECHANICS OF FLUIDS, FIRST STAGE.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition*.  
"The book seems to be excellently adapted to its purpose, and to cover just the right amount of ground."—*Educational Times*.
- SOUND, HEAT, AND LIGHT, FIRST STAGE.** By JOHN DON, M.A., B.Sc.  
"A thoroughly practical book for the Elementary Stage."—*Board Teacher*.
- MAGNETISM AND ELECTRICITY, FIRST STAGE.** By R. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition*.  
"Mr. Jude has treated his subject in a more than interesting manner, and his book will be found of great assistance to all students of the subject."—*Civil Service Gazette*.
- INORGANIC CHEMISTRY (THEORETICAL), FIRST STAGE.**  
By G. H. BAILLY, D.Sc. Lond., Ph.D. Heidelberg. Edited by Dr. Wm. BRIGGS, M.A., F.C.S.  
"A good, straightforward, and accurate manual, written in accordance with the requirements of the elementary stage syllabus of the Science and Art Department."—*Schoolmaster*.
- BOTANY, FIRST STAGE.** By A. J. EWART, D.Sc., Ph.D., F.L.S.  
"Although intended to satisfy the requirements of the Science and Art Examinations, the book will also be found suitable for all beginners."—*Secondary Education*.
- PHYSIOGRAPHY, FIRST STAGE.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.  
"This work is thoroughly reliable and up to date, and possesses all the merits of a good elementary text-book."—*Natural Science*.
- HYGIENE, FIRST STAGE.** By R. A. LYSER, B.Sc.  
"We strongly advise teachers to select this book for their elementary classes."—*Finsbury and City Teachers' Journal*.

Price 1s.

**INORGANIC CHEMISTRY (PRACTICAL), FIRST STAGE.** By F. BEDDOW, Ph.D., D.Sc. *Second Edition*.

Price 1s. 6d.

**ORGANIC CHEMISTRY (PRACTICAL).** By GEORGE GEORGE, F.C.S.

## 1902 ANNOUNCEMENTS OF D. C. HEATH & CO. 1902

Messrs. D. C. Heath & Co.'s New Catalogue will contain some twenty-five New Announcements. A copy of this Catalogue will be sent post free to any address when ready, also Prospectuses of the books named below.

Visitors are cordially invited to call and inspect any of the books which interest them. Copies are available for this purpose at any time. Every facility for examination will be given, also, to Teachers who cannot call.

NEARLY READY.

### Heath's Practical French Grammar.

By W. H. FRASER, B.A., and J. SQAIR, B.A., Professors of Modern Languages, Toronto University. With an Introduction by WILLIAM ROBERTSON, M.A., Examiner in Modern Languages for the University of Aberdeen. Crown 8vo. Part I., 2s. Part II., 2s. 6d. And Complete in One Volume. 3s. 6d.

From the Introduction.

"I believe that a full and fair examination of this work will compel every competent judge to pronounce it the best of its kind that has yet appeared. . . . Every exercise is fresh and interesting to a degree that will delight the pupil and impress even those teachers who are acquainted with our newest and best text-books. . . . The treatment of the syntax will undoubtedly command the unqualified admiration of teachers, and render this the favourite manual of every student who has once used it."

### A Primer of Work and Play.

By EDITH GOODYEAR ALGER. 7 $\frac{3}{4}$  × 5 $\frac{7}{8}$ . With Coloured Illustrations. 1s. 6d.

It is confidently claimed that this primer is far in advance of anything of its kind from a pedagogical point of view, and the style of its production similarly distinguishes it from other existing primers for beginners. The lessons are based upon those phases of home, school, and industrial activity which appeal strongly to the little child, and the subject-matter is presented in the diverse forms of action lessons, silent reading tests, picture studies, language exercises, rhymes, word drills, story reviews, and related seat-work. The illustrations, coloured and otherwise, are a specially attractive feature of this primer.

### Lessons in the Use of English.

By MARY F. HYDE. Three Years' Work. In Three Parts, Price 9d. each; or, Complete in One Volume, crown 8vo, 2s.

Some Early Opinions of Teachers.

"The use of English can be taught only by practice. The way to begin is to ask the child to 'tell something'—which this book does. The way to end is to teach the child to understand that there is a reason for the form in which good writers have told things—which this book does also."

"It takes up the study of grammar in a simple way and at an early age, instead of wasting time on so-called Language."

"From a careful study, I am convinced that there is more and better material in Miss Hyde's book than in any I have seen, and I believe a teacher will do more with a class using this book than with one using any other that I know of."

"The points which appeal to me especially are the logical arrangement of the parts, and the number and quality of the illustrative sentences and selections."

"The picture studies are particularly good, and I like the arrangement of the material."

### Introduction to the Study of the Dependent, Defective, and Delinquent Classes, and of their Social Treatment.

First English Edition, Second American Edition, Enlarged and Rewritten. By CHARLES RICHMOND HENDERSON, D.D., Professor of Sociology in the University of Chicago. Demy 8vo, 7s. 6d.

This is an extremely important contribution to the study of some of the most grave problems of society. The first edition has been out of print for some time, and copies can only be obtained at a considerable premium. The edition now introduced is practically a new book, having been almost entirely rewritten in the light of criticism and further experience in teaching and in charity organization work.

D. C. HEATH & CO.,  
15 YORK STREET, COVENT GARDEN, LONDON.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, 1902.

## FIRST CLASS (or SENIOR).

### CAESAR.—GALLIC WAR, BOOKS I., II., III. By A. H.

ALLCROFT, M.A. Oxon., in collaboration with F. G. PLAISTOWE, M.A. Lond. and Camb., and others. TEXT AND NOTES, 1s. 6d. each. VOCABULARY, 1s. each.

### CICERO.—DE SENECTUTE. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. and Camb. TEXT AND NOTES, 1s. 6d. VOCABULARY, 1s.

### EURIPIDES.—ALCESTIS. By J. H. HAYDON, M.A. Lond. and Camb., Gold Medallist in Classics. TEXT AND NOTES, 3s. 6d.

## FORECASTS AND COMMENTS.

February 1, 1902.

THE first of a course of twelve lectures on Fixtures. "Intellectual Education," by Prof. James Sully, will be given at the College of Preceptors on Thursday, February 20, at 7 p.m.

THE next monthly meeting of members of the College of Preceptors will take place on February 19, when Mr. H. Courthope Bowen will read a paper on "Histories of Literature and their use in the earlier stages of Literary Study."

ON Friday, February 14, Dr. Shuttleworth will address the members of the London Branch of the British Child-Study Association on "What can be done for the Morally Defective Child?" The Chair will be taken by Dr. Fletcher Beach at 8 p.m., and a discussion will follow.

THE Technical Education Board of the Education Gossip. London County Council have lately founded six scholarships for crippled boys between the ages of fourteen and seventeen, to be held for two or three years if the scholars make satisfactory progress. They will grant free maintenance at a recognized institute or polytechnic, with £10 as a maintenance grant for boys below sixteen and £20 above sixteen, provided the parents' income is not over £150 and the medical officer pronounces the candidate fit to follow a sedentary employment. The first general award will be made next July, and applications are to be sent in to the Technical Education Board by June 30. Meanwhile, two scholarships of the kind have been conferred, by special recommendation, on two boys now at the Tavistock Place School, W.C.

It is authoritatively stated that his Royal Highness the Prince of Wales will be present at his installation as Chancellor of the Welsh University. The time and place have not been fixed.

THE governing body of the University of Dublin has appointed a committee to consider and report to it on the subject of admitting women to University degrees, a course which is regarded as indicating a less uncompromising attitude on the question than that previously adopted by the Board.

MR. R. J. PARANJPE, who was bracketed Senior Wrangler at Cambridge in 1900, has now returned to his native country, having accepted a professorship at the Fergusson College at Poona.

A HOSTEL has just been opened for Church of England students attending the Exeter Day Training College for Teachers. It is situated at St. David's Hill. The Lady Superintendent is Miss A. Weston.

DURING the past year 272 women matriculated at the University of Edinburgh. Twenty-nine women graduated in Arts, and 8 in Medicine and Surgery.

THE number of entrance scholarships tenable at Merchant Taylors' School has been considerably increased, and in future ten will be offered for competition every year. This year eighteen scholarships and five exhibitions will be offered in all. There are numerous scholarships tenable by boys already in the school, which make it easy for the parents of boys of ability to carry on their education until the time comes when they are ready to hold the valuable close scholarships from the school to Oxford and Cambridge.

MR. CARNEGIE'S gift to the Scottish Universities has been eclipsed by the munificence of Mr. J. D. Rockefeller, who proposes to hand over £5,400,000 to the University of Chicago, an institution which he has already endowed to the extent of three millions sterling or more.

MR. MYERS, of Birmingham, has founded and endowed a travelling studentship in the University of Birmingham in memory of his son, Dr. Walter Myers, who died of yellow fever when making an investigation of that disease for the Liverpool School of Tropical Medicine. Holders of this studentship, which will be awarded early in October in each year, must possess the degrees in medicine and surgery of the University of Birmingham. They must also possess the degree of B.Sc., which must have been obtained either at the University of Birmingham or London, or at either of the Universities of Oxford or Cambridge, should such degree be obtainable at either of those Universities. They must study for a year at one of certain Universities in Germany, and any papers that they may publish must appear under the name of the Walter Myers Studentship. The studentship, which will be of the value of £150, will not be awarded as the result of an examination, but by the vote of a committee consisting of the Dean of the Medical Faculty, the Professor of Pathology, the Professor of Chemistry, and the External Examiner in Pathology, the last-named to be the Chairman of the Committee.

**Appointments and Vacancies.** W. H. WILCOX, M.D., D.P.H., of St. Mary's Hospital, has been appointed Deputy-Lecturer in Hygiene at Bedford College for Women, owing to the resignation of Mr. W. C. C. Parkes on his appointment as Bacteriologist under the Transvaal Government.

THE REV. C. EDWARD COOPER, M.A., is giving up his work as Head Master of St. John's College, Hurstpierpoint, at Easter. Mr. Cooper was appointed in 1880.

THE REV. DR. JOHN BIRRELL, Professor of Hebrew at St. Andrews University, died recently after a long illness. He had occupied the Chair for thirty years. Dr. Birrell was a member of the Old Testament Revision Committee.

THE REV. J. R. WYNNE EDWARD, M.A., of Cheltenham College, has been appointed Head Master of Leeds Grammar School.

MR. L. H. LEADLEY, B.A., B.Sc., of the Congregational School, Caterham, has been appointed Head Master of Wolverton Institute.

THE Head Mastership of St. Edmund's College, Canterbury, is vacant, owing to the appointment of the Rev. A. W. Upcott, M.A., to the Head Mastership of Christ's Hospital.

MR. W. DARNLEY STUART, modern language master at King Edward's School, Birmingham, has been appointed Vice-Principal of the Middle School at Liverpool College.

MR. R. G. MCKINLAY, B.A., of Bootle Intermediate School, has been appointed Head Master of Stevenage School.

OWING to the retirement of the Rev. J. H. Smith, B.A., the Head Mastership of Alleyn's School, Dulwich, is vacant.

TWO schools belonging to the Girls' Public Day School Company opened this term under new head mistresses. Miss Leahy, late Head Mistress of the Oxford High School, succeeds Miss Neligan at Croydon; and Miss Haig-Brown has been appointed to Oxford in succession to Miss Leahy.

### COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the members of the Corporation was held at the College, Bloomsbury Square, on Saturday, January 25.

The Secretary having read the notice convening the Meeting, Dr. WORMELL was appointed Chairman.

The Report of the Council was laid before the Meeting, and was taken as read, a copy having previously been sent to every member of the College. It was as follows:—

#### REPORT OF THE COUNCIL.

THE Council beg to lay the following Report of their proceedings for the past half-year before the members of the College:—

1. They have to report that the number of candidates entered for the Christmas Certificate and Lower Forms Examinations is about 7,800. At the Midsummer Examination the total number of entries was 5,160; thus the total for the year 1901 is about 13,000.

2. The Professional Preliminary Examination for intending medical students and others was held in the first week in September, and was attended by 154 candidates. The Medical Council at their meeting in November last approved the Scheme submitted by the Council for a Preliminary Examination for intending Medical Students, and placed it on their list of recognized examinations. The papers will be the same as those set for the College Second Class (or Junior) Examination, with an additional "unseen" Latin paper and a paper in Euclid I.-III., and a higher minimum percentage for passing in individual subjects, or groups of subjects, will be required.

3. For the Christmas Examination of Teachers for the College Diplomas 450 candidates have entered. At the Midsummer Examination the number examined was over 300, making the total number of Diploma candidates for the year more than 750. The examination will be held in London and at the following local centres:—Birmingham, Bristol, Leeds, Manchester, Scarborough, Cologne, Hong Kong, Graaf Reinet (S. Africa), and Buenos Ayres.

4. The Twenty-ninth Annual Series of Lectures to Teachers on "The Science and Art of Education," which began in February last with a course of twelve lectures on "Moral Education" by Prof. James Sully, M.A., LL.D., was completed by a course of twelve lectures on "The Practice of Education" by Mr. P. A. Barnett, M.A. The Winter Meeting for Teachers, which was held in the first fortnight of January, was equally successful with those which were held in 1898 and 1899. It was deemed advisable not to hold a similar meeting last year, and the Council have decided for the present to hold these gatherings every other year. The next Winter Meeting will take place in the early part of January, 1903.

5. Members' Meetings have been held during the past half-year, at which the following papers have been read:—On October 16, by the Rev. J. O. Bevan, M.A., "On Hygiene of the School and of the Scholar"; and, on November 16, by Prof. H. L. Withers, M.A., "On the Teaching of Geography in connexion with History." On December 13 there was a joint meeting of the members of the College and of the Teachers' Guild (Metropolitan Section), at which the subject of "The Present Position and Future Prospects of Training Institutions for Teachers in Secondary Schools" was discussed. The substance of the papers and discussions has been reported, as usual, in the *Educational Times*.

6. Although there can be no doubt that it is the intention of the Government to introduce an Education Bill in the coming Session of Parliament, very little information with regard to the character and scope of the measure is to be derived from the public pronouncements of Cabinet Ministers who have referred to the subject. The Duke of Devonshire, in a recent address, took occasion to enlarge on the special difficulties attending attempts at legislation for the better organization of secondary education. At the same time he deplored the lack of

interest in the question exhibited by the public at large, which gave but small encouragement to the Government in bringing forward any wide and comprehensive scheme of educational reform. With regard to registration, it is currently reported that the Consultative Committee submitted their recommendations to the Board of Education some considerable time back, but the Council regret that no official announcement on the subject has yet appeared.

7. Out of the funds that have accrued from the regular operations of the College the Council have provided for the outlay on scholarships for intending teachers, but they have not been able to make any addition to the Benevolent Fund or to the Teachers' Training Fund.

8. During the past half-year the Diploma of Fellow has been conferred on two candidates, that of Licentiate on six, and that of Associate on seventy-five, who had passed the required examinations. Twenty-seven new members have been elected, and notice has been received of the withdrawal of six. The Council regret to have to report the death of the following members of the College:—Mr. A. R. Andrews, A.C.P., Sir Walter Besant, Mr. W. S. Binns, Miss E. Creed, A.C.P., Mr. J. Lockey, F.C.P., Mr. E. Long, L.C.P., Mr. W. Machell, A.C.P., Mr. W. Mandell, Mr. F. W. Morris, Mr. J. H. Smith, Mr. J. N. Smith, L.C.P., Mr. A. Stoppard, L.C.P.

In reference to paragraph 6, Mr. PINCHES said that with regard to the first part of that paragraph the Council had no further knowledge than when it was signed by the President on December 21; but with regard to the latter part important action had been taken since that date, for an Order in Council had been laid on the table of the House of Commons, and many members, no doubt, had some idea as to what it contained. But the order for publication had not yet been made, and there was, therefore, some difficulty in saying anything definite about it. As a member of the Consultative Committee was present, perhaps she would kindly give some information if her position did not prevent her from doing so.

Mrs. BRYANT said that, as the Order was on the table of the House of Commons and in the hands of members of Parliament, there could be no harm in giving a brief account of the main lines of the regulations for the formation of the register. The most interesting point was the way in which the names of the registered teachers would be arranged. The Board of Education Act required that there should be a Register in alphabetical order, and that would be made. In addition to this general Register of all qualified teachers, there would be a Register of those teachers in two parallel columns, A and B. Column A would contain the names of all those who possessed a certificate of the Board of Education. In column B would be placed the names of all those who possessed one or other of the qualifications prescribed by the Consultative Committee. Of course it would be possible for a name to appear in both columns, or to be transferred from one column to the other. The first qualification for a place in column B was a University degree, or something equivalent to it. In addition to this academic qualification there would be required a year's training in some institution recognized for the purpose, and a certificate of having passed an examination in the theory and practice of teaching granted by a University or other institution, such as the College of Preceptors, similarly recognized; and, thirdly, a period of probation in a school recognized for the purpose. She had not seen the report in the *Times*, but she understood it was there said that "a school recognized for the purpose" meant a school inspected by the Board of Education. It was obvious there were a large number of public endowed schools which would be recognized without question by the Board of Education as being places in which the charities of their foundation were properly administered. That was, in brief summary, the first part of the regulations for admission to the Register, and referred, of course, to future teachers. During a period of three years it would be possible to get on the Register on easier terms than those mentioned. It was obvious that the qualification of training would not be available for a large number of the existing generation of teachers. In their case the conditions for registration were somewhat altered. In the first place, the academic qualification was somewhat below that of a University degree; secondly, the training requirement did not appear at all, and teachers who could show that they had served for a certain period in a school which was recognized as an efficient school would be able to come on the Register. That was the general nature of the regulations. Much of what had been outlined would be familiar to those who had followed previous proposals for legislation. What was novel in the work was the three columns, and she hoped this arrangement would meet the wishes of all concerned. One important class of teachers would for the present be left out, namely, those who were

not qualified to be placed in Column B and who were not included in Column A—teachers who would for a long time to come be required for the lower forms of secondary schools. It was a question which would have to be considered in the future, as to how that class of teachers should be dealt with. A supplementary register might be devised when it was necessary to do so, though it might not be necessary during the next three years. Another important point was the Registration Authority, to whom the keeping of the Register was to be entrusted. The Order in Council revived the idea of the Registration Council; it provided such a Council for three years, and left the rest open. There was no conclusive legislation by Order in Council on this point; but for a period of three years there was to be a Registration Authority consisting of twelve members: six to be appointed by the bodies mentioned in the Order—namely, one by the College of Preceptors, one by the Teachers' Guild, one by the Head Masters' Conference, one by the Head Masters' Association, one by the Head Mistresses' Association, and one by the National Union of Teachers. The other six members would be appointed by the Lord-President of the Council. The Registration Authority would report annually to the Board of Education. This was the constitution for the next three years. Its future constitution was a matter which might well be discussed by teachers during the next three years, so that, when there was another Order in Council to reconstitute the Registration Committee, there might be some clear consensus of opinion from teachers as to what they thought best. The registration was to be permissive, and those who did not want to be registered need not be; but there would probably be some pressure brought to bear on schools by the Local Authorities in the future so as to induce the teachers in these schools to register.

Rev. J. O. BEVAN said it was not quite clear, from the statement which they had listened to, whether the Government would undertake the registration of certificated teachers under column A. He understood there was a difference with regard to the fee to be paid; for those registered in column B it would be one guinea, while for registration in column A there would be no charge. Did the Government undertake the registration of those who held their teachers' certificates, or was it optional for Government teachers to come on the Register?

Mrs. BRYANT said the Government would not undertake the registration; that would be done by the Registration Council. There were a great number of teachers to whom the fee was a consideration. It should also be considered that there was more work to be done as to registration in one column than there was in the other.

Dr. SCOTT asked what inducement there would be, with a Register in that form, for assistant masters in secondary schools to register. If the Register of Teachers was divided into two sections only—those who had degrees and those who had not—they were really only providing for the efficiency of one particular branch. There was nothing in this to give a stimulus towards increased efficiency as to teaching in secondary schools. He did not agree with those who desired that the Register should be entirely in the hands of teachers. Such an arrangement would produce many administrative difficulties. All the acts of the Consultative Committee were, in his opinion, rightly subject to the approval of the Board of Education. The value of an elementary teacher's certificate varied from year to year; it depended on how many candidates came in, and how many vacancies had to be filled up. He was quite sure the Consultative Committee would not commit itself to such a standard, and, unless there was only one body concerned, they would have at once two bodies at loggerheads with one another. With regard to the Registration Council, the proposal made by the Consultative Committee merely followed the lines of the Registration Bill, which adopted for six years the arrangement of nominating bodies, and afterwards election by the votes of the registered teachers. He hoped that, if in the future members of the Council were elected by the registered teachers, some better mode of election would be invented than virtually graduate and non-graduate voting, as seemed to be suggested by the proposed arrangement of the Register. The minor and major classifications of secondary schools were ignored by this arrangement, and he had no belief in the utility of the Register, because its framers, in not setting before themselves the aim of promoting the efficiency of secondary teachers, had not faced the facts of the present situation.

Mr. RADFORD, in reference to the abstract of accounts, called

attention to discrepancies between the figures on the two sides with regard to certain items—in particular he would like to know why the expenditure on the *Educational Times* and the Calendar invariably exceeded the receipts.

Mr. PINCHES said the difference was accounted for by the fact that the *Educational Times* was sent free to every member of the College, and, therefore, it was not surprising that the expenditure exceeded the receipts. As to the Calendar, when they considered the price at which it was supplied to members it was easy to understand why it did not pay its way. If the price were doubled, it would pay, but while the College was in a satisfactory financial position he thought it was right to allow the members to benefit in this way.

Mr. EVE pointed out that every Society which had its own organ sent a copy to each member, and, as a rule, the cost was entirely defrayed from the funds of the Society.

The Report of the Council and the accompanying abstract of accounts were then adopted.

The Dean then presented his Report, which had been printed and distributed to those present. It was as follows:—

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 10th to the 13th of December at 230 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Anerley, Ashbourne, Attleborough, Aylesbury, Balham, Banford, Banbury, Barnstaple, Bath, Beckenham, Bedford, Berwick-on-Tweed, Bexhill, Biggleswade, Birkdale, Birmingham, Blackheath, Blackpool, Blandford, Bodmin, Bognor, Bolton, Bournemouth, Boxmoor, Brentwood, Bridport, Brighton, Bristol, Budleigh Salterton, Burnham (Som.), Cardiff, Carlisle, Carnarvon, Castle-town, Cheltenham, Chepstow, Chertsey, Chiswick, Clacton-on-Sea, Clevedon, Cowes, Cowley, Crewe, Croydon, Derby, Devizes, Devonport, Doncaster, Dover, Drax, Durham, Ealing, Earl's Colne, Eastbourne, Evesham, Exeter, Faversham, Frome, Glasgow, Gosberton, Grantham, Gravesend, Great Ayton, Greenwich, Haleowen, Halifax, Harleston, Harrogate, Hartlepool, Hastings, Hatfield, Hereford, Herne Bay, Hornsea, Hull, Hulme, Ilfracombe, Ilkley, Jersey, Kingsland R.S.O., King's Lynn, Leamington, Leeds, Lewes, Lincoln, Liskeard, Littlehampton, Liverpool, Llandudno, London, Long Sutton, Longton (Staffs.), Loughton, Luton, Lydney, Lytham, Maidenhead, Maidstone, Malmesbury, Manchester, Margate, Marlborough, Matlock, Midhurst, Mileham, Minehead, Morecambe, Newcastle-on-Tyne, Newmarket, Newport (Mon.), Northampton, Norwich, Nottingham, Ongar, Penketh, Penzance, Pinner, Plymouth, Portsea, Portsmouth, Poulton-le-Fylde, Putney, Ramsey (Hunts.), Ramsgate, Reading, Richmond-on-Thames, Rochdale, Romford, Ryde, Saffron Walden, Saham, St. Anne's, St. Austell, St. Ives (Cornwall), St. Leonards-on-Sea, St. Neots, Sale, Sandwich, Scarborough, Selby, Shirley, Shoreham, Sittingbourne, Southampton, Southend, Southport, Spalding, Stanford-le-Hope, Sudbury (Suffolk), Sunderland, Swindon, Tamworth, Taunton, Teignmouth, Thorne, Torquay, Totland Bay, Totnes, Trowbridge, Tunbridge Wells, Ventnor, Waltham Cross, Walton (Liverpool), Wanstead, Warminster, Waterford, Wellington (Salop), Wells (Som.), Weston-super-Mare, Wigton, Winchester, Wisbech, Woking, Wolverhampton, Worcester, Workop, Worthing, Yarmouth, and York. The Examination was also held at Colombo (Ceylon), Nassau (Bahamas), Georgetown (British Guiana), St. George's (Grenada), Kingston (Jamaica), St. Lucia (B.W.I.), Buenos Ayres, Port of Spain (Trinidad), Lagos, Freetown (Sierra Leone), Cape Coast, and Chefoo (N. China).

The total number of candidates examined (not including 165 examined at Colonial Centres) was 5,403, of whom 3,122 were boys and 2,281 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the supplementary examinations in March and September) was 9,332.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class (or Senior) ...	512	274	54
Second Class (or Junior) ...	1,693	947	56
Third Class .....	3,198	2,434	76

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (139 in number) who entered only for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 60 examined at Colonial Centres) was 1,864—1,049 boys and 815 girls. Of these, 1,513 passed, or 81 per cent.

At the supplementary Examination for First and Second Class Certificates, which was held on the 3rd to 5th of September, in London and at the following Provincial Centres, viz., Birmingham, Bristol, Glasgow, Leeds, and Liverpool, 154 candidates presented themselves. The number of candidates examined at these supplementary examinations during the year was 327.

The Christmas Examination of Teachers for the College Diplomas took place on the 7th of January and four following days, in London and at the following Local Centres:—Abergavenny, Birmingham, Bristol, Devonport, Exeter, Falmouth, Hexham, Kingscliffe, Leeds, Manchester, Nottingham, Scarborough, Worcester, Buenos Ayres, Cologne, Grahams-town (Cape Colony), and Hong Kong. It was attended by 437 candidates, of whom 297 were men and 140 women. On the results of this Examination, 1 candidate obtained the Diploma of Fellow, 4 that of Licentiate, and 107 that of Associate.

The number of schools examined during the year under the Visiting Examination Schemes (A), (B), and (C) was 14.

The College has also conducted certain Scholarship Examinations for other bodies.

The DEAN, in moving the adoption of the Report, remarked that the comparatively small proportion of those who obtained diplomas showed that the examination was a pretty severe test. The percentages of passes in the different classes of the Certificate Examination differed very little from those of the preceding examination.

The Dean's Report was then adopted.

The Meeting then proceeded to the election of twelve members of the Council, to supply the places of the twelve retiring by rotation, and three Auditors.

The Chairman having appointed Mr. KING and Mr. CHANDLER to act as Scrutators,

Mr. GUTTERIDGE requested to have the number of attendances of the members proposed for election read before the vote was taken, and, the list having been read by the Secretary, he moved that it should be printed in the *Educational Times*.

The CHAIRMAN explained that only resolutions of which due notice had been given could be discussed by the Meeting; but that the suggestion to have the information as to the attendances published would be considered by the Council at their next Meeting.

On the Scrutators presenting their report, the Chairman announced that the following had been duly elected:—

#### MEMBERS OF THE COUNCIL.

- Rev. J. O. Bevan, M.A., F.C.P., 55 Gunterstone Road, W.  
 H. C. Bowen, M.A., 3 York Street, W.  
 K. Brel, M.A., Litt.D., Ph.D., 10 Cranmer Road, Cambridge.  
 G. Brown, Cavendish School, Redhill.  
 Rev. Canon Daniel, M.A., F.C.P., The Vicarage, Horsham.  
 Miss E. A. S. Dawes, D.Lit., Weybridge Ladies' School.  
 A. Millar Inglis, Maidenhead College.  
 H. R. Ladell, M.A., Ivy Cottage, North Walsham.  
 J. Montgomery, B.A., L.C.P., The Grammar School, Uckfield.  
 Rev. J. H. Robson, M.A., LL.D., F.C.P., Fernery House, Guildford.  
 Rev. D. L. Scott, M.A., LL.D., Mercers' School, Holborn, E.C.  
 G. Armitage Smith, M.A., 3 Albert Terrace, N.W.

#### AUDITORS.

- J. Bell, M.A., LL.D., Ingleside, Farnborough.  
 W. C. Brown, M.A., F.C.P., Tollington Schools, Muswell Hill, N.  
 A. E. C. Dickinson, B.A., LL.B., L.C.P., Grove House, Highgate.

A vote of thanks to the Chairman concluded the proceedings.

After the meeting a number of members and friends dined together at the Trocadero Restaurant, under the presidency of the Rev. R. Lee, Head Master of Christ's Hospital. Among those present were Mr. Armitage Smith, Mr. Atkinson, Mr. Bain, Mr. Baker, Mr. Baumann, Mr. Beckton, Rev. J. T. Bell, Mr. Bruce, Mr. and Mrs. Charles, Rev. A. J. Church, Mr. and Mrs. Dickinson, Mr. Eve, Dr. Fout, Mr. Howe, Mr. and Mrs. Hodgson, Mr. Kennard, Mr. Langler, Mr. Longsdon, Mr. Marvin, Mr. Musson, Dr. Moody, Mr. Pinches, Rev. Dr. Poole, Mr. W. M. Poole, Dr. R. P. Scott, Dr. Turpin, Mr. Jas. Wilson, Miss Yeend. During the evening some excellent music was played by Dr. Turpin, alternating with the toasts which were given and responded to.

### CO-OPERATIVE SECONDARY SCHOOLS.

PERHAPS no capital in Europe can present to Englishmen secondary schools which are more advanced in the work of organization than Copenhagen; and a new and striking development upon which the higher portion of them entered at the beginning of the autumn term makes them still more valuable for study and comparison.

These secondary schools may be divided into three kinds, the first two of which are under the control of the State, and the third licensed by the municipality.

Of the first kind there are thirteen schools, twelve for boys and one for girls—schools which have acquired the right to conduct within their walls the final leaving examination of the State, the only passport in these Northern countries, as well as in Germany, to the University. Twelve of these schools have also modern sides, and are qualified to hold an intermediate leaving examination, suitable for business and those entering what may be called the minor professions. In these thirteen schools there were last year in the various classes 4,378 boys and girls.

Next come twenty *real* or modern schools—seven for boys, thirteen for girls. These have the right to hold the intermediate leaving examination. They do not, as a rule, receive pupils beyond sixteen years of age, and lack the two higher classes of the first kind of school. In these twenty schools there were in 1900 3,736 boys and girls.

Schools of the third kind are somewhat miscellaneous in their nature. Many of them are more or less preparatory; if these are called secondary schools, it is only because they lie outside the provision made by the municipality for primary instruction. But some of the higher girls' schools that fall into this third class are as good as any in the city; if they wished, they could at once have the examination right, and so obtain State recognition. And none of the schools are so worthless as some private schools in England may easily be, inasmuch as no school in Copenhagen may be opened without the consent of the municipality; and that consent is not given unless teacher and school reach a certain minimum standard. There are fifty-three of these miscellaneous schools, with 4,463 children in them.

Manchester is a much larger city than Copenhagen, and possesses many good secondary schools, both public and private; but in the provision made for such instruction and the use made of it, it falls far behind Copenhagen. Birmingham, with its two central high schools and its seven grammar schools for boys and girls in the suburbs, all worked in connexion one with another under the same governing body, is often regarded in England as a model city in the provision made for secondary education. But, whether we regard the number and fitness of the schools, the number of children in attendance, the capability of the teachers engaged, or the accessibility of the schools to pupils of moderate means, Copenhagen, though less than four-fifths the size of Birmingham, is no whit behind it in the matter of secondary schools, and in some respects is far ahead. The figures for Birmingham, as given in the somewhat incomplete Education Department Return of 1897, are 3,850 boys and girls in schools other than public elementary,\* as against 12,500 in Copenhagen. And yet these schools in Copenhagen owe very little to private benefactions or bequests, or to money help from State or commune. One of them—the building fronting the quadrangle of which the Frue Kirke, the University, and the Bishop's Palace form the other three sides—is a State school, a classical school of two hundred boys. All the other newer, larger secondary schools in the city—those that have adapted themselves most readily to the wants of the times—are private schools, one of them in the hands of trustees, but the rest the property of individuals. They are the product of private initiative and the State's fostering care. In what manner the State has helped them without giving them direct money grants will appear more clearly from the novel development upon which the higher secondary schools of Copenhagen entered a few weeks ago.

\* The amount of secondary school attendance in Birmingham is by no means easy to ascertain. It has been discussed by Prof. John Massie at pages 52, 53 of Vol. vii. of the "Report of the Royal Commission on Secondary Education (1895)." He came to the conclusion that secondary schools in Birmingham "are attended by about 5,000 children out of a population (in round numbers) of 530,000, i.e. by less than 10 per 1000." He does not include in the 5,000 those sent away to boarding schools.

These schools, twelve in number—if for the moment we exclude the one State school—all prepare for the higher leaving-examination; and, through this common aim of all their work, have been brought together in sympathy and co-operation much more than has ever been the case amongst private schools in this country. That was the first service which the State rendered them: to set up a standard of attainment by reaching which worthy schools could show they were doing work that could compare with that of the best State schools. The head masters of most of these Latin schools—so they are called—through a voluntary union which they had formed, presented a united front to the public and made it impossible to play off one school against another. At all these associated schools the fees were on the same scale, the holidays of the same length, and the rules for promotion were the same. We shall see in a moment how much further this method of association has lately been carried.

The buildings of these twelve schools are all more or less new, having been erected during the last twenty years; and the burden has of course been a very serious one to the head masters. Although the State has never seen its way to give to these City schools the modest money grants which it makes to corresponding schools in the thinly populated country districts, it has, nevertheless, shown its good will to schools that have such a good record. Besides giving slight occasional grants for science apparatus and the like, it has guaranteed the interest for loans which were necessary in order to complete handsome and expensive school buildings. The weakest point in the organization of these schools remains to be mentioned, and it is to the dissatisfaction thereby caused that their latest development is directly due. Whilst the head masters are receiving but a modest return for their skill as teachers and for the employment of their capital (between £300 and £400 a year), the assistants receive a sum lamentably inadequate for men who have received a University training and are devoting their lives to the profession of teaching. The feeling at last became so strong that, in 1899, a powerful association of assistant masters was formed, which with the help of the head masters ascertained the precise facts of the case. It was found that the 264 men teachers, more than half of whom were University graduates, received not more than 1s. 3d. an hour for their school work, i.e., somewhat less than £100 a year, if they were in full employment; whilst the 142 women teachers, one-tenth of whom were University graduates, received, on an average, two-thirds of this amount. The feeling aroused is so strong that an appropriate remedy is only a question of time. It is felt that an increase all round of 50 per cent. is imperatively necessary. But when it is asked from what quarter this increase shall come the question is not easy to answer. The emoluments of the head masters are so moderate that it is calculated an increase of salary to assistants to the extent of 10 per cent. would bring the schools to "the verge of insolvency, and an increase of 20 per cent. would ruin them."

Nor could any help be obtained from the State, although for many years it has helped corresponding schools in the country. It was feared on the part of the State that, as long as there was unlimited competition, and the possibility of new schools arising in excess of the demand, any increase in the receipts of the schools might only be shared among a larger number of schools and leave the assistant master as poorly paid as before. After more than one application for State help had been refused, a representative commission was appointed in December, 1899, to take the whole facts into earnest consideration. Departementschef Asmussen was the Chairman; and the other members were four of the head masters, two of the assistant masters, and two merchants chosen for their skill in finance. Their report was issued in February, 1900; and, after being for many months considered a confidential document, was published last spring in pages 194-204 of Departementschef A. F. Asmussen's *Meddelelser angaaende de laerde-Skoler* for the school-year 1899-1900. The proposal set forth in this report is that eight of the boys' schools (the number has since been increased to nine) should form themselves into a "self-owning institution" under the control of the State, i.e., that the school-sites, buildings, and furniture should be purchased from their owners and devoted in perpetuity to public objects; that the schools should hereafter be conducted as one school in nine buildings with the present head masters continued in their office at a salary, with a governing body possessed of full powers and consisting of the nine head masters with three of the assistants chosen by their colleagues for a period of three years at a time. Directly this governing body is fully constituted, it shall have for its first duty to elect a business director, and then to choose out of its own body three principals, who shall in con-

junction with the business director and one non-scholastic outsider (chosen every three years to represent the general public) form an executive. The executive must every year choose a Finance Committee from the governing body, two of whom must be principals and the other two assistants. Though this Committee cannot form any final decision, it has the right reserved to it of laying its decisions in writing before the Ministry.

There are various reasons why the four remaining schools of the same rank have not been merged in the new institution. One is a State school; another is the property of a trust and not of a single individual; the third is a girls' school only; a fourth is conducted along with a girls' school, and for that and other reasons prefers its independent position. But the schools that remain outside preserve a friendly attitude—will not, for the most part, seek to undersell the rest.

Before the amalgamation could become an accomplished fact it was necessary to buy off the previous proprietors of the schools; the question arose how the purchase money was to be obtained. The sites, buildings, and their contents were valued at 1,414,446 kroner (18 kr. = £1). They were already mortgaged to the extent of 714,814 kroner, and a proposal was made in the Budget of last Session that the State should guarantee the interest for a loan that would cover the difference. The question was debated last January in the Folketing, and again in March. One member expressed his fear that the freedom and elasticity of the schools would be impaired by the proposed arrangement, and voted against the guarantee. But no member expected that the State would ever be called upon to fulfil its guarantee, and so the motion was passed by fifty-six votes to nine, the total number of members of the Folketing being a hundred and fourteen.

With the beginning of the present Session each of the nine schools heads its prospectus "The United Latin- and Realskoler"; and the first four pages are taken up with an interesting account of the steps which have led to the change in the constitution of the schools. In this is included an announcement of the necessity of some slight rise in fees—amounting to an increase of about 2s. a month for each pupil—in order that the salaries of the teachers may become more commensurate with their work. It remains to be seen whether these measures will have the desired result. It may be that parents may use the schools somewhat less than before—may, for instance, during the preparatory years, make greater use of the higher-class Board schools, which are as good in Copenhagen as in our own larger cities; or may, during the later years, attempt to do in two years, by means of a crammer, what the school can only do in three. The increase of fees is so small, and the evil to be remedied so great and so widely acknowledged, that it is to be hoped this will not take place, and that the assistants will soon receive a more worthy reward for their toil. As the head masters say, in their address to the parents, "the securer financial outlook will enable principals and assistants to set about the tasks of the school with less distraction, and thereby induce them to make more earnest and mature contributions to the solution of the numerous problems our times require the higher school to take up. Besides, the closer union between school and school, which we may expect, will assuredly contribute in a marked way to the accomplishment of our tasks as teachers. And, lastly, we add the most important point of all. The teachers, as above mentioned, have obtained a share in the conduct of the Institution and a substantial influence in the ordering of its financial affairs."

It would seem, then, that the State—in which we may surely include the parents—the head masters, and the assistants have each good reason to be pleased with the new arrangement. The State cannot but be pleased, for, without the expenditure of a single penny, it has secured in perpetuity nine good schools, arranged to its own liking, in whose government it has reserved to itself the power of saying the last decisive word. But, for all the ordinary, and most of the extraordinary, concerns of school management, the Institution is free to adapt itself to the changing needs of the time, as no purely State school can be. The head masters are pleased, for henceforth they are free from ordinary risk. They have disposed of their schools as going concerns; they are continued in their previous offices at a salary equal to their average profits; and when they retire they may expect a pension. The assistants are pleased, for the situation is of their own making. An improvement in their financial position is sure to come—if not in one way, then in another, though it can hardly be said to be yet in sight. Their position is much more secure than heretofore; no teacher on the staff can be dismissed until the matter has been brought before the governing body, on which, it will be remembered, sit three

of the assistants themselves, representing their colleagues. The share which the assistants thus take in the government of the Institution is more likely to be increased than diminished, and makes the Institution an experiment in co-operative school-keeping. Moreover, whenever any one of the present head masters retires, it will no longer be necessary for his successor to have capital; the career will be open to talent to a degree that has not been possible before in Copenhagen. All these arrangements—more than we can here detail—must give an added zest to the teacher's work, and tend to a more economical working of the Institution.

The whole task of increasing the assistants' salaries depends partly on the slight rise in fees, partly on the economies that may be effected through working the nine schools together, partly also on the possibility of limiting the number of schools—of keeping the supply from greatly exceeding the demand. In Denmark no new Latin school may be erected without Government permission; nor can any new boys' school greatly prosper, unless on attaining its full complement of classes it can acquire the right to hold the leaving examination which carries State recognition with it. The Government has thus at two distinct stages the power to limit the number of schools. This power the promoters of the new Institution, in their desire to secure themselves from ruinous competition, at first asked the Government to transfer to themselves, at any rate for a term of years. This was a serious request; and, as it might, if persevered in, have wrecked the whole undertaking, it was after a while explicitly dropped. And so strong, so unanimous, has the feeling of the entire body of teachers since become in favour of the Institution that such a power is no longer needed. For private representations have during the last year or two been as effective as a Government veto. Last year and the year before, two distinct efforts were made to add to the number of Latin schools in Copenhagen, one by an assistant teacher and the other by the active and earnest Low Church Party. But, in view of the fact that two new higher schools had recently by Government permission attained half their complement of classes and would soon be in full activity, the promoters of these two further schools were dissuaded from their purpose and have fixed their schools in places remote from the capital.

Danes themselves are by no means agreed in their criticism of this new and interesting departure in Copenhagen; and it would not, therefore, become foreigners to prophesy as to the chances of success or failure; but enough has been said to give English workers in education the information necessary to watch the experiment for themselves. We need only add that Mr. Niels Hjort, the business director of the Institution, may be seen daily at his office in Copenhagen (Frederiksberggade No. 2); and that for those who do not understand Danish, German is the best means of communication.

J. S. THORNTON.

[For the accuracy of this brief description I am greatly indebted to Departementschef Asmussen, to Fuldmagtig Hage, and to many other friends, who have patiently discussed with me some of the more difficult points.]

### OUR NEED FOR COMMERCIAL LINGUISTS.

THE subject of our commercial position is occupying much public attention, and our deficiency in practical knowledge of foreign languages is often dilated on. May I venture to offer a few suggestions towards a possible solution of the difficulty?

In the first place to banish, as far as possible, the literary study of languages from the educational curriculum of our industrial classes. Many years and much experience are required to gain elegance of style: and *cui bono* for commercial purposes? The ordinary English child's mind is already somewhat overloaded—the Italian word *caricatura* expresses it well—with scraps of solids; and the additional weight of two foreign languages from such different branches of the Aryan group as the Italic and Teutonic may naturally, in some cases, result in failure.

In the second, to give more scope to *viva voce* teaching, especially with French from the first. Speaking and repetition from dictation are wanted rather than much writing and copying. The French are a lively people given to pleasant and frequent rejoinders, like the twitter of birds and chirp of insects, which add such a charm to country life. Due attention to this view of the subject might have far-reaching effects by causing some o

the exuberance in our midst—if led by higher influences—to seek channels of intercourse with other lands and aim at rising harmoniously in the chorus of the “Voices of the Nations.” The voice is of great assistance in teaching. This should be borne in mind throughout, and the help it gives in marking the difference between direct and indirect speech. I believe women would answer better for *viva voce* teaching than men, and English people better than foreigners on account of their ability to teach from the English point of view—a fact sometimes lost sight of. The characteristics wanted are brightness, patience, and, if possible, versatility. Age should be no bar, and the experience it brings would in many ways be an advantage. Of course, in judging of the suitability of teachers, clear utterance, good knowledge of the language required, and fair ability in pronouncing it are taken for granted.

There can be no better foundation for the study of English and all languages than Latin, even though only moderately acquired, and French may soon follow it; but, as a general rule, one language should be kept to until well grasped, and a different teacher provided for every language taught, and no language begun at too early an age. The Continental pronunciation of Latin is in many respects a help for modern languages. Fluency leads on surprisingly to improvement in pronunciation; however small the vocabulary, let it be kept to without change until safely committed to memory. For beginners in French, one tense of the auxiliary verbs taken simply and interrogatively and a dozen or so easy words will amply suffice for learning by degrees, with change of posture now and then, such as a little marching. Attempts at pronouncing the letter *u* can then be pleasantly made at intervals, with the head slightly thrown back and the lips just apart. For practice, let two or three (not more) short, gentle sounds, something like the mew of a very young kitten, be made singly. As a next step, take the word *du* followed by an easy one like *sel*, avoiding *dé* (“thimble”) and words likely to confuse and difficult to pronounce. The sound of *qu'est ce que c'est?* should be understood, and that it means “what,” and replies elicited by its help from the class, while the teacher pronounces, any fresh word being taught and shown on the blackboard.

The numerals up to twenty also form appropriate drill, and, later on, very short sentences, in answer to short questions, so that the sound of their own voices, properly controlled, becomes natural to the children, as the rule of that particular course of instruction. Thus, without worry, by the end of a month real progress will have been made, which should be tested and noted from dictation before proceeding further by easy stages, each in turn to be treated in the same way. Verbs fix better on the memory learned in their entirety; and learning by rote is easy for the young. Nothing beyond simple verbs should be attempted for a considerable time; negative and interrogative verbs are apt to be confusing, and acquaintance with them is better made gradually, as with other new words, when they occur in phrases and stories.

From the first the teacher should frequently let short words of command and encouragement be heard in French—*e.g.*, *n'est ce pas*, &c.—and avoid speaking English, at least for a certain time, continuously. As advance is made, another person would be of service occasionally for giving necessary explanations and taking part in dialogue in English with the teacher, so that the latter might only open her lips for French. Changing from one language to the other while teaching is very disturbing, and a greater hindrance to success than imperfections in accent.

Pronunciation never can be perfect, and too much time and trouble may be spent in efforts to attain perfection only to end in provoking a smile, as with the town of Marseille, to which we English have actually given a final *s* which never belonged to it! Difficulties of pronunciation should be treated lightly, and ability to speak tolerably insisted on. No doubt a few graduated prizes offered for fair speaking would soon have effect in the desired direction—supply follows demand.

French has special difficulties for English people in its pronunciation, modes of expression, and exactness, so unlike the careless English now in vogue. Attempts at speaking must be encouraged from the first, and mistakes, which will naturally occur, never ridiculed nor repeated, but the correct phrase given out, repeated by the class, and finally noted. With advanced classes two teachers—one a foreigner—would the better give the spirit of dialogue and recitation generally, and the students more or less collectively should repeat the performance, facing each other, not their note-books. Some choice of passages for recitation or composition might occasionally be given them, with the advantage of

bringing out their bent of character individually. Coils of examples and idioms are undesirable, and derivatives, cognates, and whatnot are best left for the enjoyment of philologists—with whom I sympathize—but not added to the commercial traveller's burdens. He is often in a hurry (*eilfertig*), and should always be ready to set out (*reisefertig*), both mentally and physically—in fact, a man of action with arms at hand.

In the third place, to let Nature be left more to do her own work than under the present system of hurry and forcing, so that the observing and receptive faculties in young minds may be gaining strength for expanding later on. The advanced study of a language brings a variety of interesting subjects under notice. In sunnier climates than ours, for instance, appreciation of effects of Nature in form and colour is called for, and expressions have to be adapted accordingly—all a demand on the intellectual powers. Again, consideration must be given to physical facts of the country in question, as well as to the aspects in which some things are viewed by our Continental neighbours, which, by-the-by, often help to explain an otherwise unmeaning word; history and literature have at times to be referred to, and, in all countries, habits and customs bring with them a train of more or less important consequences and facts each with special designation, and it may be with other facts bearing on some of them, a knowledge of which might be useful for the opening up of fresh sources of trade.

German should not be attempted at too early an age, nor until the elementary paths of general knowledge have been left behind, especially encumbered, as the latter are, by our difficult and antiquated system of arithmetic. I cannot now enter on detailed suggestions for its teaching beyond observing that, taken gradually and, to a considerable extent, orally, and pursued steadily for some three years before going into business, it cannot fail of success for practical purposes. Recitations, &c., are, of course, desirable from the first, such as Schiller's few lines so grandly describing the lion's entrance into the arena, which occur to me as likely to stir the pulses and stimulate the imagination of the young.

As to comparing an English child with a German child of the same age, it is not fair, unless account be taken of the difficult nature of the English language, with derivations from almost every quarter of the globe, and the need of initiation into the meaning of scientific terms before any science can be entered on. German, on the contrary, is mainly a self-derived language, and it abounds, moreover, in recognized colloquialisms, so that the people, from their earliest years, are familiar with terms for forms of plant growth, parts of flowers, and so forth; whereas we have no option but to use scientific nomenclature. German compounds seem difficult to foreigners, but really often help to elucidate scientific subjects—*e.g.*, *Erdkunde*; and, among current colloquialisms, “the ambassador” becomes “the messenger.”

I must now conclude my suggestions offered in the interests of our industrial classes, who have to begin the battle of life early; for others who can carry on their studies further seriously there are ample opportunities and excellent books.

### THE COMING EDUCATION BILL.

THE REV. JAMES GOW, Litt.D., Head Master of Westminster School, President of the Incorporated Association of Head Masters, took the chair on January 9 at the Annual General Meeting of the Association, held at the Guildhall, and commenced the proceedings by delivering an inaugural address. He said he had not been surprised that the Duke of Devonshire, at Liverpool, confessed himself bewildered by the utterances of so-called educational experts, and could not make out what they were driving at. He himself (the Chairman) would, under those circumstances, have consulted the politicians, the schoolmasters, the educational theorists, and the men of business, each on their special topic, and then he would have made up his mind what Bill to introduce. It was plain, from the Duke's letter to Sir John Hibbert, that the Bill would have only a reflex action on the existing endowed schools, but it would be idle to discuss the reflex action when they had no information at all about what the direct action was going to be. He did not believe that any Education Bill could have the desired effect—which was to produce a well educated, industrious, and intelligent people. The people of this country were notoriously not docile, but that was of little importance. The Scotch were even more indocile, but they loved learning and taught themselves. The English, on the other hand, or a great part of them, and especially those who set

the fashion, did not love learning at all, and would neither learn nor teach themselves. It was as impossible to make such a people intelligent and industrious by Act of Parliament as it was to make them sober by the same means. What was lacking was a general pleasure in the exercise of mental energy, a desire to learn, and an interest in processes of learning. This had been produced in Germany by means which we were determined not to try—namely, by the extreme simplicity of the apparatus of teaching. It was obvious that where there were only a few types of school, everybody could understand them and take an interest in them, and choose deliberately what sort of school he preferred. This simplicity was an aid to intellectual intercourse, for Germans had nearly the same fund of learning as a basis of conversation. But in England schools had nothing in common but their games, and the conversation of two Englishmen naturally gravitated to cricket and football, and the weather. He thought the demand for an Education Bill was mainly a demand for commodities, and not really a demand for education. The people whose children were the subjects of education were profoundly indifferent to the whole movement, and, if they deliberately chose a school at all, they did so for social reasons, and did not inquire into the education given there. Dr. Gow went on to complain of the amateur being frightened away and got rid of in music, art, literary and debating societies, and all intellectual hobbies, and even in charitable work. Much of the best work in every branch of education had been done by amateurs. It would seem that, as in athletics the tendency was for a few men to be professional and all the rest lookers-on, so also in education everybody would drop his books so soon as he found that he could not be a professor and make his living by them. That would be a great and irretrievable national disaster. It could not be too strongly urged that the main purpose of education was to give a man some pure and salutary occupation for his leisure, because it was in his leisure that he fell into the mischief which sapped his working energies. There was grave danger that the education which we were going to give our youth might be such as to turn them out superficially finished and competent for a time, but rotten at the core, unwilling to learn anything that did not pay, and unable to learn that because they had not kept their intelligence lively and in working order. Therefore, because the character of the nation appeared to be such that most of us would not learn, and the few that would were easily abashed in the presence of a professor, he hoped that the new Education Bill would not be a very drastic affair. The adjustment of administrative difficulties, the support of institutions that were languishing for lack of funds, and the starting of a few experiments were, in his judgment, sufficient for the moment. The disease was not to be cured in a hurry. A little Bill every year, and a vigilant Education Department, would do more good than a big Bill that would go through the country like an earthquake. A series of small Bills would alarm nobody, would maintain the public interest in education, and would keep the Department on the *qui vive*.

On the motion of the Rev. A. F. Ruttly (Leatherhead) it was resolved: "That the next Education Bill provide (1) for the efficient control of all secondary schools; (2) that every school under the supervision of a Local Authority should have a right of appeal from the Local Authority to the Board of Education in matters of curriculum and administration as well as of finance." In proposing this resolution, Mr. Ruttly said that all inefficient schools should be ruthlessly swept away. He trusted they would never yield to an agitation to model their schools on the German plan. They did not want English boys to be like German boys; what they wanted was to retain the English type of schoolboy and school, but at the same time to beat the foreigners where they were apparently gaining the superiority. He thought that that was perfectly simple—our students must work as hard as the German students. So long as we regarded our work as subsidiary to our games, so long must we expect the German to prevail in those fields in which the trained intellect must secure an ascendancy.

## CORRESPONDENCE.

### "THE MIND OF A CHILD."

To the Editor of the Educational Times.

SIR,—In a kind notice of my book, "The Mind of a Child," your reviewer says that my description of Wordsworth's "Anecdote for Fathers" is not quite correct, and that therefore I have missed the subtlety of the little poem. I am ashamed to say that I have not had a Wordsworth in my hand for years. I have one now, and I see that

your reviewer says truly when he points out that my description of the story is not quite correct; but I do not allow that by my mistake—one of narration—I have misread the moral, or, as your reviewer would say, "missed the subtlety of the little poem." If he has a different reading to mine of the lesson to be drawn from the little story, I should be much interested to hear it—I am, faithfully yours,

St. Edmund's Lodge, Hindhead, Surrey,  
December 7, 1902.

ENNIS RICHMOND.

[REVIEWER'S NOTE.—No fault was found in the review with the moral drawn by Mrs. Richmond, which is beyond question, Wordsworth's sub-title to his poem being: "How the Practice of Lying may be Taught." The subtlety, however, was missed. Wordsworth's child, when pestered for a reason, said he preferred his old home of a year ago because it had *no weathercock*. The persistence of the father has driven the child to this extraordinary ingenuity; whereas, in Mrs. Richmond's form of the story, the child gives a natural reason, which might be the true one.]

## ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

An Adjourned Meeting of the Council was held at the College on January 25. Present: Mr. Eve (in the Chair), Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Mrs. Bryant, Mr. Charles, Miss Day, Mr. Harris, Mr. Leatham, Mr. Pinches, Dr. R. P. Scott, Rev. T. W. Sharpe, Mr. Storr, and Dr. Wormell.

Diplomas were awarded to the successful candidates at the Christmas Examination of Teachers, as follows:—

### Fellowship:

Morris, W. R.

### Licentiate-ship:

Simmons, F.

Yates, H. R.

### Associateship:

Bailey, P. D.  
Michell, S. H.

Fincher, Miss G. V.  
Fox, S. T.  
Frost, T. J.  
Gandy, Miss E. S.  
Garside, W.  
Gliddon, Miss M. A.  
Glover, H.  
Goldsmith, W. R.  
Goodyear, A. S.  
Gover, Miss L.  
Graham, A. E.  
Harnden, Miss E.  
Hartridge, A. R.  
Harvey, Miss E. H.  
Henshall, A. E.  
Hibell, Miss M. J.  
Horn, Miss E. E.  
Hughes, C. B.  
Hugo, Miss C.  
Jackson, G.  
Jefferson, S. C.  
Jones, Miss M.  
Judges, A. P.  
Jupe, C. W. C.  
Kenney, J. P.  
Keeler, Miss E. C. J.  
Kerby, W. G.

The prize of £10 for Theory and Practice of Education was awarded to Mr. B. C. Wallis, and the prize of £5 for Natural Sciences to Mr. F. J. Wyeth.

THE CHILD STUDY ASSOCIATION.—On Friday, Jan. 10, Mr. Holman lectured to the members of this association, at the Sesame Club, on "Abstract Reasoning in Children." The lecturer observed that in children there could be traced well marked periods of mental development which broadly characterized certain ages. About the age of seven concrete thinking began; about the age of ten abstract thinking might be said to commence. But it was necessary to substantiate these ideas by investigation. He had compiled his results from answers written by over five hundred children to three test questions. There was a strange irrelevancy in some of these answers, and amusing examples of some of these blundering answers were given. The greatest percentage of good-thought answers were given by children of ten years. Strangely enough, the poor-thought answers increased after that age. Ten was the critical age when the child began to develop abstract thinking. In a year or two that might be drilled out of it. Ordinary school work afforded better opportunities for child study than special taste.

TEACHERS' DIPLOMA EXAMINATION—PASS LIST, JANUARY, 1902.

## REVIEWS.

### HISTORY TEACHING AGAIN.

*Essays on the Teaching of History.* By Messrs. Maitland, Gwatkin, Poole, Heitland, Cunningham, Tanner, Woodward, Marten, and Ashley. (Cambridge University Press.)

These essays must needs be welcome to teachers of history and intending teachers of history. It is well when those who are preparing for the work of teaching can answer at the same time the two questions: What shall we teach? and How shall we teach it? Herein lies the difference between the methods of study in a training college for teachers and those of an ordinary University college. In the former, no sooner is a portion of knowledge examined and acquired than the question of how to teach it is dealt with. Because the two acquisitions are closely interwoven in nearly all these essays the book is eminently one for teachers. They were to have been edited jointly by Lord Acton and Mr. W. A. J. Archbold, but the former has been unable to take the part intended for him.

The introduction by the remaining editor is a history of the teaching of history in the English Universities. He shows that the attempt to teach history, if thereby be meant a serious endeavour to make historical study one of the main studies of the Universities, is very new. It has attained the manly estate of one-and-twenty years and a little more. But not much more.

It is true that the William Camden Professorship at Oxford was established in 1622; but the academical interest in the subject has fluctuated much in the three centuries. During the seventeenth century the professors were men who left their mark behind them; then, however, there was a fall. Strange to say the rekindling of interest came from an unexpected quarter. George I. had "observed that no encouragement or provision had been made in either of the Universities for the study of modern history or modern languages." Also he had "seriously weighed the prejudice that had accrued to the said Universities from this defect, persons of foreign nations being often employed in the education and tuition of youth both at home and in their travels." It may well have struck His Majesty that, if it was a defect on his part to speak no English, it was a defect on the part of his Ministers to speak no German. The masters and scholars of Cambridge accepted the royal view, and joined in the complaint that "foreign tutors had so large a share in the education of our youth both at home and in their travels." They even dared to foresee a glad day when "there should be a sufficient number of academical persons well versed in the knowledge of foreign courts, and well instructed in their respective languages, when a familiarity with the living tongues should be superadded to that with the dead ones." A little—very little—resulted from the movement, and the conclusion of the editor is that even now "more co-operation, more organization, more and better criticism, more advice for beginners are needed. The need, if not met, will increase. History is lengthening, widening, and deepening. There is much to be done by schools of history; there will be more to be done each year."

The first of the essays is on "The Teaching of Ecclesiastical History," and it opens with the following statement:—

He that will be a teacher of ecclesiastical history must lay it to heart

that there is neither art nor mystery in the matter beyond the art and mystery of teaching history in general.

Thus under the special heading the discussion immediately becomes general:

Our chief aims in the practical teaching of history are three—to rouse interest, to give the guiding facts, and to teach the principles of research and criticism which enable men not only to become their own teachers, but to return and see for themselves how far we rightly gave them the guiding facts.

The degree of relative importance of these aims from childhood upwards is discussed. The characteristics of the ideal lecture and the ideal lesson are discussed, and many, if not most, of the recommendations apply equally well to the teaching of other subjects. For instance: "The teacher can commit no more crying sin than in thinking that inferior work is good enough for backward students." The same remark applies to an examination of the mutual helpfulness of lectures and teaching by papers. The conclusion of the essay reminds one of a question on the geography of Germany once submitted to candidates for matriculation at London. A candidate wrote out the geography of Europe, and added that, respecting the geography of Germany, he had nothing further to say. The essayist says: "As regards the teaching of ecclesiastical as distinct from that of general history, I really have nothing to say."

The next essay, on "Teaching of Palaeography and Diplomatic," by R. L. Poole, M.A., the Reader in Diplomatic in the University of Oxford, is a little more special. Diplomatic, it seems, is a substantive, and means "the science of documents." The science which deals with the rules of writing is Palaeography. These sciences are described and limited by the essayist.

The third essay is on "The Teaching of Ancient History," by W. E. Heitland, M.A. It opens out again, and the student is told that "history starts by looking backward, but it must go forward that it may look backward." It concludes, however, with a modest statement, reminding one of a remark of the late Serjeant Ballantine when he had before him in the witness-box a high personage. He said: "I decline the honour of cross-examining a Prince of the Blood." Our author says: "I shall decline the impertinence of offering general advice to teachers. Let me conclude with the harmless commonplace that, as the teacher cannot do without books, so books cannot do without the man."

After "Economic History," by Rev. W. Cunningham, D.D., Lecturer at Trinity College, Cambridge, comes "Constitutional History," by J. R. Tanner, M.A. of St. John's, Cambridge. It begins, as usually, by removing its enclosures. "To those who hold that history is one and indivisible to speak of constitutional history is an offence." This position is well argued, and, on the ground that, "though the historian can sometimes afford to be a philosopher, the teacher of history must be a man of business," the treatment of constitutional history as a subject by itself is justified. The methods recommended for the teacher and also those recommended to the student are unobjectionable.

The essays on "The Teaching of History in Schools," by W. H. Woodward, of Christ Church, Oxford, and C. H. K. Marten, M.A. of Balliol, clearly demonstrate the right of history to rank as a school subject. "It not only increases knowledge and exercises mental faculty, but it stimulates interest in larger views of life

and action, and provides the continuance of that interest when the initiative of the teacher is withdrawn." The first of these two essays deals with "aims," the second with "practice." Conscious of the danger of pitching the aims so high as to make the teacher dissatisfied with himself and his methods, he concludes that "some satisfaction may be obtained if one succeeds in preparing a boy to read history for himself and to appreciate its lessons in life." This conclusion might also be applied to other subjects."

*The Coephori of Æschylus.* With Critical Notes, Commentary, Translation and a Recension of the *Scholia*. By T. G. Tucker, Litt.D. (Cambridge University Press.)

Groping our way once more through the "Libation-bearers," we are deeply impressed with the ingenuity, resourcefulness, and insight displayed by the latest interpreter of this excessively difficult play. Nor are these his only merits. Prof. Tucker combines besides ripe scholarship with fine taste. His translation is less impressive, less *Æschylean*, if we may say so, than Dr. Verrall's, but it is none the less helpful for the understanding of the text, and it contains many meritorious passages. But the chief interest of the work centres in the introduction and the commentary; and it may at once be said that both are richly stocked with new and valuable contributions to the understanding of the wonderful drama of Orestes the Avenger.

Naturally a large part of the introduction is occupied with a comparison of the "Coephori" with the two "Electras" of Sophocles and Euripides. And in that comparison no point has taxed the commentators more than the famous "Recognition" scene. For practical purposes we may leave Sophocles aside in this matter; for, though the dedication of the lock of his hair by Orestes is a feature of the scene in all three plays, and may well have been, as Prof. Tucker suggests, one of the fixed elements in the story, yet in Sophocles the recognition of Orestes by Electra is a mere incident, and is, says Dr. Verrall, "of no importance at all to the mere mechanism of the plot." But the contrivance of Euripides is such that the union of Orestes and Electra is a first necessity of the action; for Orestes, until he has met his sister, will not even venture near Argos. In a notorious passage of the play, the "Recognition" scene, as treated by Æschylus, is sharply criticized. So fully has that criticism been refuted that the credit of Euripides can only be saved in the event of the passage in question being spurious. And this is what Prof. Tucker believes to be the case. Of course, even if Euripides did not write this carping and inaccurate attack on a brother dramatist, it by no means follows that the recognition by means of the lock of hair and the footprints, which Æschylus intended to make convincing to his audience, is, in point of fact, likely to have carried conviction. Is the evidence accepted by Electra inconclusive, and her reasoning absurd? To older critics the question appeared a matter of indifference, and even Conington and Paley affected to feel no interest in it. But both Dr. Verrall and Prof. Tucker have discussed it at length, and they agree in accepting the scene as satisfactory. There is, however, this important difference between them, that, whereas Dr. Verrall laid all the stress on the objective value of hair and feet as evidence, and attempted to show that in this case at least the two points of resemblance were certainly sufficient to support the conclusion that the marks were the marks of Orestes' feet, and the hair was the hair of none other than Orestes, Prof. Tucker, while pointing out the importance attached even in Homer to resemblance of feet and hair, lays much stress on the various circumstances that greatly enhance the persuasiveness of Electra's reasoning and may well have served to carry the audience with her. These circumstances are—(1) scenic aids; (2) the probability that the lock of hair figured prominently in the traditional form of the story. Above all—and this is certain—the frame of mind in which Electra was at the time counts for much.

But we must not dwell upon the details of the introduction—the instructive comparison of the three plays in the light of Aristotle's "Poetics," the history of the Orestes legend, and the valuable study of the Medicean manuscript. Dismissing these matters, which occupy a hundred pages, and coming to the text, we must pause a moment to notice the numerous conjectures of his own that the editor has introduced into the text. That he is particularly skilful in this kind of patchwork is already well known from his edition of the "Supplikes." Whether we agree with him or not, we can never withhold our admiration. His emendations are remarkably neat, and he never alters, except where alteration is clearly necessary. He does not, as

some German scholars do, exercise his ingenuity for the amusement of the thing or on mere subjective grounds. Considering the state of the manuscript evidence, he must be pronounced moderate and conservative. In the commentary the two most conspicuous merits are the clear insight Prof. Tucker always shows and his minute acquaintance with the usage of classical authors. However obscure the text may be in its present state, he always seizes and brings out the essential points, and within these, as it were, he draws out his figure of the whole meaning. Of course, the result cannot always be certain. The picture he gives of it, always vivid, is by no means always convincing. But where his interpretation is not justified by the text it is probable that the meaning in the details is beyond recovery. The illustrations, freely drawn from prose and verse, are unusually valuable. Not only are they always apposite, but they never fail. Every word, construction, particle is justified and exemplified, and no detail, however minute, escapes the editor's notice.

In the critical notes and the recension of the *scholia* we have important *subsidia*, and much information is brought together that is not elsewhere collected in a convenient compass. In these parts of his work, Prof. Tucker has, of course, worked on the critical apparatus of Wecklein and Vitelli.

It is greatly to be hoped that Prof. Tucker will ultimately complete an edition of the whole trilogy. If he does, it may be confidently predicted that he will "throw three sixes," and, besides, will have reason to be much better satisfied with his third libation than Electra was with her second.

#### OUR WIDENING REALM.

*The Growth of the Empire.* By A. W. Jose. (Murray).

This is not entirely a new book. The first six chapters and part of the seventh have already gone through two editions in Australia. The remainder of the work, bringing it down to the end of the last century, is new. The introductory chapter contrasts the British Empire with other empires, ancient and modern, and enumerates the qualities essential to successful colonization—physical strength, adventurousness, the trading spirit, the settling spirit, the fighting spirit, adaptability to the native element, and the power of mastering it in such a way as to secure cheerful obedience. Next we have a brief sketch of the early stages of colonization and conquest, illustrated by a useful map of the early partition of America up to the middle of the seventeenth century.

The difficulty in writing a book of this kind is to observe a due sense of proportion, and in this the author seems to have been successful. A good example is to be found in his treatment of North America. The long struggle between England and France in the eighteenth century, the conflict of the doctrine of "hinterland" and river-mouths, England working inwards from the coast, and France resting her claims on the possession of the mouths of the St. Lawrence and the Mississippi, is briefly and clearly described. There is a good inset map of the triangle of which the apex is at Oswego on Lake Ontario, and of which the St. Lawrence and the sea form two sides, showing how the line of the Richelieu and the Upper Hudson formed the natural scene of combat. From the War of Independence the interest centres in Canada, the history of which is carried on through the period of partial self-government, the war of 1812 to 1814, which the writer considers to have done much to create the sense of Canadian nationality, and the revolt of 1837, to the Act of 1841 and the subsequent legislation based on Lord Durham's famous report, the result, it should be remembered, of only five months' tenure of office as Governor-General. A subsequent chapter carries on the story to our time, including the formation of the Dominion and the two rebellions under Louis Riel. It concludes with the still unsettled boundary dispute with the United States, which is illustrated by an excellent map.

In the chapter on India the land settlement of Cornwallis, which, carrying English ideas into the East, converted the *zamindars* into landlords, is discussed in all its bearings. Great stress is laid on the work of the Marquis Wellesley, placing the allied native States in the same position towards England as that which the members of the Confederacy of Delos occupied towards Athens, and surrounding them with a ring fence of British territory. Of the subsequent administration of Lord Dalhousie the writer says:

Hastings had made us secure in India, Wellesley had made us paramount; for Dalhousie it was reserved to round off our territory, to make us protectors of the people as well as their rulers, and to settle

not only the administrative, but the industrial, development of India, along lines which it follows steadily at the present moment. If British India now reaches from Chitral to the Mekong, it is because Dalhousie of set policy extended it from Peshawur to Pegu. If the peoples of India seem within measurable distance of becoming the Indian people, it is because, with roads and canals and railways and telegraphs, he bound firmly together the cumbrous, ill-cohering mass, and by sharp lessons in Oudh and Berar and Nagpur taught princes and subjects alike that under British protection only wise and benevolent systems of government can dare to hope for existence.

Perhaps a little more space might have been given to the history of India since the Mutiny, and, in particular, to the pros and cons of the policy of "masterly inactivity."

The story of Australasia is, perhaps, the least interesting portion of the book; the contrast between the achievements of the present and the small, and in some respects sordid, beginnings of the great Australian colony is hardly brought out with sufficient clearness. The reader hardly rises from its perusal with an adequate conception of what Australia is. We should have liked, too, some notice of recent legislation in New Zealand, grappling, as it does, with problems that have, from time immemorial, exercised the minds of thoughtful statesmen. Africa is dealt with at considerable length; and the chapter on that subject has been re-written after the study of original authorities on the southern part of the Continent, and is not uninfluenced by the emotions of the present time. The book is brightly written, and is well illustrated by suggestive maps.

#### COMPARISONS FROM ABROAD.

##### *Schools at Home and Abroad.* By R. E. Hughes, M.A.

This book is a collection of essays and addresses on subjects connected with primary and secondary education, and is chiefly valuable for the wide knowledge shown of the present condition of education in Germany and the United States. The author is an Inspector of Elementary Schools under the Board of Education, which accounts probably for the sympathetic and sanguine view taken of the present state of elementary education in this country. A somewhat unpleasing view of the American primary teacher is presented. He is wedded to the prescribed text-book, and is seldom properly trained for the practice of his profession, and only a very small percentage of elementary teachers are male. In fact, Mr. Hughes says, the American male teacher will soon be as extinct as the bison—a forecast entirely justified by some of the statistics presented in his essay, "The Half-Way House." The small confidence placed in the American teacher by his educational superiors is shown by the fact that he is closely supervised; while in Germany the teacher is first carefully trained and then left largely alone. "The Government inspector sees him once in about four or five years." Of course he is not entirely without criticism, because the local pastor—or priest in a Catholic district—acts as both school correspondent and inspector, but he has an assured position and a professional status which leaves him no substantial grievance. Mr. Hughes is at his best when he confines himself to noting facts and distinctions between foreign methods and our own. He has a power of clear observation; but when he dives into problems of educational theory, as in his paper on "The Fundamentals of Training," the result is hardly more than attenuated generalities upon a substratum of Rousseau's views. To maintain, as he does, that character is neither moulded by nor proportioned to proficiency in formal studies is not in accordance with the experience of many teachers. A thorough knowledge of any formal study gives a mental standard of exactness which has a deep influence upon character. We wish it were true that the development of character were the primary aim of English public-school teachers, as he maintains it to be. Most critics of public-school education deplore the absence of any such aim in a definite form. The mode in which a play of Shakespeare is studied is sufficient proof of this.

We heartily approve of Mr. Hughes's views as to the utter futility of introducing commercial subjects in either the primary or secondary school curriculum. And the establishment of "modern sides" does not solve the difficulty. In Germany the commercial school is a secondary school with the study of modern languages and science as the basis of its curriculum. Such an arrangement as our "modern sides," existing for the sole purpose of feeding the Civil Service Commissioners' net, is an unknown complication of the educational organism. As sensible curricula we commend to the notice of our readers those given in the chapter on "Commercial Education" from existing schools in Germany and Austria. In order to provide a relaxa-

tion from the severer problems of his subject the author includes an address on "Characteristics of Childhood," which is only a collection of *facetiæ* from school life, some of which are fresh.

##### *Commercial Correspondence.* By E. H. Coumbe, B.A. (Edinburgh Wilson.)

This book consists of definitions of commercial terms and explanations of commercial documents, together with specimen letters, "couched," says the preface, "in the terse, almost abrupt, style of a modern business man." The explanatory portions will be useful to candidates for business, but we cannot commend the model correspondence, and are of opinion that a good training in general composition would be preferable.

Commercial correspondence should be clear and unmistakable in its meaning. The following are not good models in this respect:—

We are informed that the following parcel which we handed over to you on the — has not yet arrived. We request you to make inquiries, and to let us have your answer as soon as possible. (Page 136.)

Arrived where? No doubt the parcel has arrived somewhere. What is the query that has to be answered? Again:—

With reference to our memo respecting the parcel —, we beg to say that we are still without your final reply, and therefore bring this matter again before you. Expecting your answer —.

Why "final reply"? What was the query? It should be repeated. It is too frequently assumed that commercial correspondence may, and, indeed, ought to, violate ordinary rules or customs, particularly in an ungrammatical use of participles:—

Confirming our phone message to-day, the shirtings will be ready for despatch on Monday. (Page 137.)

Why not say: "We write to confirm, &c."? The answer is probably that the use of the participle marks the sentence as commercial. Again:—

The two pieces of cloth — are bad in quality. Would you kindly let me know if you will take them back, or allow me to sell them at a discount of 50 per cent.?

Of course, in the alternative, the *if* should be *whether*. The model letters for commercial travellers are full of solecisms and discords. A seller is supposed to write to his firm as follows:—

Trade in general is very quiet and nobody wants to buy more than they require. Next week I shall go to Scotland.

Buyer and seller it seems are examples of "diamond cut diamond."

I am sorry to have to report another grievance [the traveller is taught to write]. Mr. Stowe sent you a remittance and took off 2 per cent. As you only granted him 1½ per cent, he wants the difference of £8. 8s. allowed. If not, he refuses to see my samples. As I got 1s. 3d. per lb. for ten bags R. 2. from him instead of the usual price of 1s. 2½d., I presume you will fall in with his wish.

A good general education, with special attention to English composition, is certainly a better preparation for business than the copying of acres of these models. Brevity may be a feature of business letters, but this is no excuse for want of clear and explicit statement. The briefest correspondence may, however, be unambiguous. A merchant wishing his agent to report progress sent him a sheet of paper with only a note of interrogation on it. The agent replied by a zero. The fact is, in commercial matters as well as in matters of general correspondence, there are times when brevity is not the soul of business.

##### *The Stars: a Study of the Universe.* By Simon Newcomb. (John Murray.)

Astronomy, the first and most ancient of the sciences of observation, has progressed by leaps and bounds made at long intervals. Thales wrote on astronomy, and his prediction that a solar eclipse would occur on May 28, 585 B.C., gave prestige to his teaching and secured for him the title of one of the Seven Sages of Greece. Yet he was not understood of the multitude. When, while gazing at the stars, he fell into a ditch, an old woman sneeringly said to him: "How can you tell what is going on in the sky when you can't see what is lying at your feet?" And from that day almost to the present the multitude has looked on the "star gazers" as dreamers of dreams, to be sought after only when a forecast of the future is desired. But education is now all but universal, and popular expositions of the most advanced knowledge are in demand. The microscope *plus* photography has come to the aid of the telescope, and the increase of knowledge of the universe has become doubly accelerated. Hence

The subject is one specially suitable for treatment in Mr. Murray's "Science Series." We have Sir Robert S. Ball's fascinating works on "The Story of the Heavens" and "Star Land," but there is a place for such a work as this, which goes just a shade deeper into the subject and assumes the knowledge on the part of the reader of a little elementary geometry. For example, the exposition of Lane's law of gaseous attraction, that "when a spherical mass of incandescent gas contracts through loss of heat by radiation into space its temperature rises," is accompanied by a simple and convincing demonstration involving elementary mathematical notions. The first chapter plunges at once into an account of recent research, and exposes the marvellous revelations of the spectroscope. After this the various points in the constitution of the heavens are separately discussed, and the discussions are followed by such reasoning on the observations as can be made by "the man in the street," who is usually credited with an elementary education and common sense. So interesting is the work in every part that we venture to think few who take it up for serious reading will wish to cast it aside.

## GENERAL NOTICES.

### CLASSICS.

*The Metamorphoses of Ovid, Book I.* Edited by E. Ensor. (Blackie.)

Any attempt to popularize the "Metamorphoses" deserves commendation; they are hardly enough read in schools. The editor tells us in his preface that he has not consulted any previous edition. This is rather a mistake; the old edition of Burmann and a German school edition by Siebelis and Polle, among others, are well worth studying. He has, however, used the old metrical versions of Golding (1567) and Sandys (1632), but does not appear to have seen the excellent verse translation by Mr. Henry King. The notes are likely to be tolerably useful to schoolboys, but they do not reach a high level of scholarship, nor do they suggest many felicitous renderings. There are some suggestive references to English poetry. One or two obvious blunders may be quoted. For the passage describing the indignation of the gods at Lycaon's crime,

"Confremuere omnes, studiisque ardentibus ausum  
Talia deprecant,"

we have the rendering, "demand who has dared such deeds." This is wrong every way. *deprecant* means "demand for vengeance"; *ausum* could not possibly be the equivalent of a dependent question; and in the previous line Jupiter is told them the name of the culprit. Again, to

"Crudele, suos addicere amoris,  
Non dare, suspectum est,"

we find the note: "*Crudele* and *suspectum* are neuter, agreeing with the object-clause." The words *suos addicere amoris* are the subject of the sentence, and ought hardly to be called a clause; they are simply the equivalent of a noun. The introduction is commendably brief, and is written with spirit. The full-page illustrations are good; those printed in the text are often wanting in sharpness of outline.

*Virgil, Georgics I.* Edited by John Sargeant. (Blackwood.)

Mr. Sargeant's intimate acquaintance with Italy and his wide knowledge of botany render him peculiarly fitted to edit the "Georgics." And not only is he able to give plenty of local colour to his notes, but in all matters of interpretation he shows sound sense and independence of judgment. With its pictures, well written notes, and clear text, this is a most attractive edition, affording evidence everywhere of fine scholarship and close observation.

*Virgil, Æneid II.* Edited by M. T. Tatham. (Arnold.)

Mr. Tatham has had long experience in a sort of teaching that is always difficult and at times depressing. For pupils whose aspirations do not extend beyond the pass examinations he is a helpful guide. Perhaps some of the work he puts into his editions is rather too good for the purpose for which they are mainly intended. It is evident that he is himself far more interested in Virgil than his readers are likely to be; and the best of his notes are likely to be the least regarded. The introduction is substantially the same as has already appeared in his edition of the First Book; and it is very full of information. The vocabulary—which is surely justified here, if anywhere—would be better if the quantities were marked on some system; at present they are thinly scattered about, apparently at random.

*Virgil, Æneid V.* Edited by J. T. Phillipson. (Bell & Sons.)

Mr. Phillipson gives all that is required in an elementary edition—a short introduction, simple comments, without parallel passages or discussion. The book is well planned for those who have not advanced beyond Cæsar. In the vocabulary we have noticed a few minor misprints, and in the text (line 823) *te* is an unfortunate error for *et*. The scheme of conditional sentences, of which much use is made in the notes, is vitiated by the strange assumption that, *si vales, letus sum*

implies: "I am certain you are well." It is surprising that so good a teacher as Mr. Phillipson should lend countenance to this old-fashioned error. This is altogether the most elementary edition of Virgil that we have seen.

*Cicero, De Amicitia.* Edited by H. J. L. J. Massé. (Bell & Sons.)

Mr. Massé gives very short notes, but plenty of them. His introduction is confined to what is absolutely necessary. Several illustrative quotations are given in the text; some of those in Greek and Latin are so printed that it is possible to mistake them for part of the text. There are exercises for retranslation, an index of proper names, and a vocabulary. Junior students will find here all the help that they require in preparing for the class lesson. Mr. Massé would do well to add some long marks omitted in the vocabulary, and to number the sentences of the exercises.

*Latin Composition based upon Selections from Cæsar.*

By B. L. D'Ooge, Ph.D. (Ginn & Co.)

This is an exercise-book on Latin syntax, systematically arranged and based on selections from Cæsar. Each lesson consists of an easy oral exercise and a harder written one, the materials for which are to be found in a specified chapter of Cæsar. It differs from the exercises appended to Macmillan's "Blue Series" in being arranged so as to bring out definite points of syntax, and does for elementary teaching what one of the best composition books ever written—Simpson's "Cæsarian Prose"—does for higher composition. The principle is an excellent one.

### SCIENCE.

*An Elementary Physics.* By Charles Burton Thwing, Ph.D. Bonn. (American School and College Text-Book Agency.)

This volume is intended to form the basis of a thorough course of elementary physics suitable for secondary schools. The book is divided into two parts, of which the former treats of the first principles of matter, motion, and force, of heat, electricity, magnetism, sound, and light. The illustrations of the principles are drawn as far as possible from sources of observation within the reach of all. There is a most interesting section on work and energy, and the natural sequel to this is a discussion of the importance of *machines* and a description of several of them. Part I. includes also many sets of exercises suitable for the class-room. Part II. is devoted entirely to laboratory practice. Various instruments and their uses are described, and the author gives the details of a large number of practical exercises intended to be worked out by students themselves. In the selection of experiments for purposes of illustration the writer has borne in mind the limited apparatus at the disposal of many schools. An important feature of the book is the large number of diagrams, all of which are excellent.

### MODERN LANGUAGES.

*F. Goebel's Hermann der Cherusker.* Edited by J. Esser. (Macmillan.)

This is a volume of Dr. Siepmann's series, with the usual apparatus of practical exercises which has proved so useful. The story deals with the battle of the Teutoburger Wald and the destruction of the legions under Varus, which is historical, and with the early life of Arminius (Hermann), which is built up out of such materials of *Kulturgeschichte* as furnish the basis of Freytag's "Ingo und Ingraban." Arminius has become one of the national heroes of Germany, and has his monument on the Teutoburger Wald; probably he owes it to "Die Hermannschlacht" of Heinrich von Kleist, associated with the national uprising against Napoleon. The notes are very fair, though one sometimes misses the careful explanations required by phrases like "an sich halten," "er liess es dabei bewenden." On the other hand, notes on Rome, the Forum, the toga, and so on, might have been spared.

*Glück auf! a First Grammar Reader.* By Margarete Müller and Carl Wenckelbach. (Ginn & Co.)

This is a well arranged German reader by the two lady professors of Columbia College whose edition of "Maria Stuart" was noticed about a year ago in these columns. The introduction gives a good number of specimens of German and English cognates, including examples of Grimm's Law. After a few preliminary reading-lessons there is a section entitled "Aus dem deutschen Dichterland," in which the stories of a few familiar poems, such as "Lorelei" and "Das Schloss am Meer," are simply told, and the poems themselves are added. The rest of the book is made up of German legends, such as those of Balder and Siegfried, a few episodes of German history, and some anecdotes. The apparatus includes notes, a vocabulary, and questions for conversational practice. It seems to be one of the best German readers for beginners that we have met with.

From Messrs. Hachette we have a further supply of their well bound, well written, and well illustrated gift-books. *Le Secret des Tilleuls*, by Mme. Chéron de la Bruyère, and *Tante Picot*, by G. du Planty, are both in the "Bibliothèque Rose Series." The "secret" is not a very big one, being but the concealment of the accidental breakage of a valuable chronometer by a nervous boy, and the consequent trouble to innocent people while he has gone on a visit to England. His host is an English banker with the proverbial British family and British appetite, and he rejoices in the character-

istic name of Beaster; but he has seven nice little daughters, who, when the French boy gets ill in their father's house, send to his sisters at Tilleuls a Christmas pudding as an expression of their sympathy. Tante Picot is an old lady who pays a visit to Paris, accompanied by a little grand niece and nephew, an old country servant, a cat, a dog, and a parrot. She met with various adventures, as might be expected, of which we are told in an amusing way.

*Le Rubis de la Pérouse*, by G. de Beauregard, is a larger book than the two last mentioned, and is well and profusely illustrated. In it we have the adventures of two patriotic Frenchmen who are fired with a desire to find the tomb of the illustrious navigator La Pérouse, and bring his bones to rest in French soil. But the English Government hears of the project, and "Lord Salisbury sends orders to an old and noble sailor," Sir Richard Cardigan, "to start off at once and see what it means." He has just settled down to a well earned rest with his daughter in London, and "Miss Edwige" determines that where her father goes she goes too. Told in outline the incidents would seem improbable and even absurd; so, in justice to M. Beauregard's very interesting and well told story, we will not give a skeleton of the plot. Our author gives all credit to English bravery and patriotism, but does not allow his countrymen to suffer by comparison. The story ends in the betrothal of the fair Edwige to the patriotic Count. Roger de Fleurines, and the ruby ring of La Pérouse is placed on her finger.

#### MATHEMATICS.

*The Elements of Euclid, Book XI.* By R. Lachlan, Sc.D.  
(Edward Arnold.)

Dr. Lachlan has now added Book XI. to his edition of Euclid's 'Elements.' The author has not departed widely from the recognized demonstrations of the propositions, but he has succeeded in rendering these far more concise; and, where it has been possible, he has given to students the advantages of a direct, instead of an indirect, method of proof. The collection of definitions at the opening of the book is excellent. The propositions of the Eleventh Book, as usually studied, are followed by a very useful appendix, including some of the well known theorems which arise naturally out of the subject, and which illustrate the methods of modern geometry. The author has, moreover, added a large number of exercises.

*Summation of Series.* By G. H. Bateson Wright, D.D. (Relfe Brothers.)

In the preface to the present publication the author draws attention to the fact that students are apt to over-estimate the difficulty of the subject of series. He also suggests that there is a decided advantage to be derived from studying in a connected form the methods of dealing with the various typical series, which are generally discussed in treatises on higher algebra, but are usually more or less scattered as regards position. The present volume is, therefore, devoted to the treatment of the several classes of series that are of frequent occurrence and are included in the study of algebra. Attempts have been made in some cases to introduce methods of greater simplicity than those generally adopted, and the author believes some of these to be original. In an appendix to the volume the solution of indeterminate equations also receives attention. Both worked illustrative examples and a large collection of unworked exercises find place in the book. The form in which the volume has been brought out cannot be called a happily chosen one. In order to gain additional length of line and a large type without increasing the size of the pages, the text is not printed in the ordinary way; the lines run, instead, in a direction perpendicular to that usually adopted. And the result is far from convenient for readers, many of whom will certainly find that effort is necessary in order to become accustomed to the change.

*British Association Meeting at Glasgow, 1901. Discussion on the Teaching of Mathematics.* Edited by Prof. John Perry. (Macmillan.)

This little volume is within the reach of all, and should prove most interesting and valuable reading for the many who are engaged in mathematical and educational work, and who had, perhaps, neither the privilege of attending the discussion nor the opportunity of closely following, at the time, the proceedings of the British Association. Prof. Perry's opening address and proposed syllabus, together with the various speeches, are reproduced in full. The book, moreover, includes further comments by several of the speakers, the written views of some authorities who did not take part in the actual discussion, and, finally, Prof. Perry's "Reply." The primary motive for publishing the volume seems to have been the hope of its proving serviceable to the Committee appointed by the British Association to inquire into the question under consideration, viz., that of possible improvements in the teaching of mathematics and of the best means of securing them. It is, however, to be anticipated that very many beyond the limits of the Committee will avail themselves of the opportunity now afforded them of becoming acquainted with the views held on so important a subject by some of the leading authorities of the day. Naturally many will feel unable to accept, without reservation, the tenets of those even with whom they find themselves most in accord; but there will be encouragement for all who have systematically endeavoured to bring out in their methods of teaching the life inherent in each subject, and who have sought to inspire their pupils with a desire for further knowledge,

and not merely to produce a certain number of more or less capable machines.

*Plane Geometrical Drawing.* By R. C. Fawdry, M.A. (E. & F. N. Spon.)

This treatise is especially intended to meet the requirements of Army students preparing for examination, but there is no reason why others should not also use it. It assumes that the reader has already studied Euclid; and, as regards the text, the book is on the whole excellent, for it briefly indicates the basis of proof for every construction when this is possible, and does not simply give a rule to be learnt in a purely mechanical way. Some of the problems are not worded with sufficient care, but the defect is chiefly noticeable in the constructions given in a few of the earlier pages, and a very little revision would remove this. The summary of contents which heads each chapter will undoubtedly be of great service. In its diagrams, when considered in connexion with the text, the book is imperfect. Where dimensions are given at all in a problem, it is essential that the student should construct the figure on some selected and stated scale, to which he should throughout strictly adhere. The text-book which rigidly follows a similar course considerably enhances its educational value. It has often been clearly shown in the answers of candidates to examination questions that the majority have not in the least appreciated the special properties, say, of a triangle, which they have been asked to construct from given dimensions. Mr. Fawdry's work includes a large number of exercises and also a selection of recent Militia, Woolwich, and Sandhurst papers.

#### MISCELLANEOUS.

*The Earth's Beginning.* By Sir Robert Stawell Ball, LL.D., F.R.S.  
(Cassell.)

This book is a development of the Christmas lectures to juvenile audiences given at the Royal Institution twelve months ago. It is, therefore, "a popular exposition of that splendid branch of astronomy which treats of the evolution of the earth, the planets, and the sun from the fire-mist." The first chapter enunciates what is called in one place "the sublime theory," and in another "the immortal principle of the nebular theory." With the perfect art of a popular lecturer, Sir R. S. Ball leads his hearers and readers both to understand and accept the theory by gradually unfolding the contributions to it of Kunt, La Place, and William Herschel. "It is not a little remarkable," he says in opening the subject, "that the great philosopher from his profound meditation, the great mathematician from a life devoted to calculations about the laws of Nature, the great observer from sounding the depths of the firmament, should each, in the pursuit of his own line of work, have been led to believe that the grand course of Nature is essentially expressed by the nebular theory." The method illustrated in this case is adopted throughout the lectures—that is to say, each principle is so introduced that we are convinced of its high degree of probability, and our minds naturally seek for the physical cause that accounts for it. The method is carried out to perfection in chapters xiv., xv., and xvi., on the Three Concords—(1) that of the planes of the planets' orbits; (2) that of the direction of revolution of the planets and of the sun's rotation; (3) that of the rotations of the planets on their axes. In each case the notion of chance is first carefully eliminated, and then the physical explanation is sought for and discussed. In fact this interesting work, which may be described and read with pleasure, but which cannot be criticized, is, at the same time, a clear exposition of known facts, a model of method for lecturers and teachers, and a discipline in reasoning on natural phenomena.

*A Short History of England for School Use.* By Katharine Coman, Ph.B., and Elizabeth Kendall, M.A. (Macmillan.)

This is a simple and direct story of England from prehistoric times to the present. The proportion given to the matters recorded differs, in some respects, from that of the ordinary English text-book, but the work gains in interest by this feature. The life of the people in its homely detail in each period is described and illustrated by interesting pictures. Of these there are about two hundred in the book, and there are also thirty clear and coloured maps.

*The Student's Synopsis of English History.* Based chiefly upon Prof. Oman's "History of England." Compiled by C. H. Eastwood. (Edward Arnold.)

This is a useful note-book of condensed and tabulated facts and dates.

*Roman Political Institutions.* By F. F. Abbott. (Ginn.)

We have become accustomed to expect clearness combined with abundance of knowledge in the works of American scholars; and we do not look in vain for these qualities in Prof. Abbott's account of Roman institutions. His book is modest in compass, but it is a storehouse of references to the original authorities and to modern writers. The narrative is divided throughout into two sections—the one historical, the other descriptive—so that the book fulfils the functions of both a brief history and a manual of Roman political antiquities. In two appendices a few of the most important passages are given in full, but for the most part Prof. Abbott is content with marginal references and bibliographies. It is a misfortune that there is no room for the discussion of difficulties. Such important and controversial matters as the origin

of the *clientela*, the *lex Villia annalis*, and the bases of the Emperor's power are passed over with only a cursory reference to the many uncertainties by which the problems are complicated. The author thinks that the references given compensate for the lack of detail; but we could wish that at least a summary of the doubtful points were always given. However, the bibliography of modern works is very full, and will abundantly provide all that is needed by those who wish to carry their investigations further. On the growth of plebeian privilege, as shown by the Valerio-Horatian Laws, the Publilian Law of Philo, and the Hortensian Law, we miss a reference to Mr. Strachan-Davidson's article in the *Historical Review*; and for the Early Principate in general Prof. Bury's book certainly deserved to be mentioned. But, within its limits, this is an admirable book; and, despite the existence of Mr. Taylor's work on the same subject, it merits the attention of English historical students.

*The English Language: its History and Structure.* By W. H. Low, M.A. (W. B. Clive.)

The sixth edition of this now well known text-book has received several improvements on its predecessors. It has been revised and reset throughout, and important laws—as, for instance, Verner's law that spirants which were originally hard became soft in the first part of the Teutonic period—have acquired fuller treatment.

"Eyes and No Eyes Series," IV.—*Birds of the Air.* By Arabella B. Buckley. (Cassell.)

A charming little book on the habits and characteristics of birds, so written that children will read it with great pleasure and become enthusiastic scholars in this direction. The illustrations are a considerable help, and add another attraction.

(1) *Photographic Cameras*; (2) *Optical Lanterns.* Edited by Paul N. Haaluck. (Cassell.)

These are convenient and well illustrated handbooks, compiled by the editor of *Work* from the columns of that weekly journal. The information given would seem ample for those desirous of constructing their own apparatus or of being able to thoroughly understand and manipulate those in general use.

*The World of Animal Life.* Edited by Fred Smith. (Blackie.)

This is a systematic treatment of the animal world from apes to sponges. We have the main classification into vertebrates and invertebrates; then the subdivisions of mammals, birds, &c.; and, again, the division into carnivores, ungulates, rodents, and so on. The general characteristics of each class are stated first; then follows a description of some leading individual animals under the class, their structure and modes of life, written in a simple and chaty style. Some animals are treated at considerable length, others, again, somewhat too meagrely. From the point of view of completeness, it would have been better to have described a few at greater length and appended a list of the more important members of each class. But, for a prize or gift-book, intended to be read and enjoyed by children unassisted, it would be difficult to improve on this book as it is. It is certain to fascinate a child of any age. The illustrations, over two hundred in number, are good and lively, and form a special feature of the volume. We could only wish a pleasanter one had been chosen for the cover.

*Brush-Drawing.* By J. W. Nicol. (Blackie.)

This handbook is admirably suited to teachers who know nothing of brush-work and wish to enable themselves to teach it, and also to those teachers who are merely in need of copious exercises. The former will find that "brush-work" is no peculiar nostrum to be undertaken in fear and trembling, but only the simplest method for children to represent an object before them. Full directions are given, and broad principles very clearly laid down. The second part of the book is devoted to the main principles governing the construction of designs, and is excellently written and illustrated. Perhaps the most pleasing feature of the book is a negative one. The writer insists that it is in no sense intended to take the place of drawing from Nature, or, indeed, to encroach on the domain of the art teacher, but, rather, to help elementary teachers to the attainment of accuracy in their pupils, and to give suggestions for original work. At the same time, we cannot help thinking that some advanced teachers will find the book very useful as a change from ordinary work. The reaction from the old-fashioned freehand South Kensington copies has been an incalculable good; but Mr. Nicol wisely remarks that continual drawing from Nature—say, flowers—with all the irregularities of growth—is apt to produce inexactness and, perhaps, slovenliness. As a corrective to this, the occasional exercise in symmetrical drawing, especially in young pupils, must not be under-rated. We heartily welcome a book which treats in an eminently sane manner a subject which was threatening to become a fad.

(1) *Beasts of the Field.* (2) *Fowls of the Air.* By William J. Long. Illustrated by Charles Copeland. (Ginn.)

To the teachers of America these two volumes of natural history are addressed. They certainly should be heartily welcomed, for Mr. Long has done what it is impossible for every teacher to do for himself—closely observed the lives and habits of the wild creatures he so tellingly describes. It is just this first-hand personal acquaintance with

the individual beast or bird that a child delights to hear about. The illustrations are very clever, causing the pages to seem almost alive. The plan of using a tiny illustration repeatedly as a heading to the page is original, but not very pleasing, the repetition being somewhat tedious. The books are handsomely got up in every way.

*Fathers in the Faith.* By Mary Christabel Danson and F. Gwendolyn Crawford. (Methuen.)

To many people the early Fathers—Ignatius, Tertullian, Origen, and so on—are little more than names, with a vague legend attached here and there. It is a pity that so much zeal and heroism should be neglected as a means of education; and we welcome this little book as an aid to teachers who, either in Sunday schools or in an occasional history course in day schools, may be able to give their pupils some idea of how the work of the early Church was actually carried on after the Bible story ceases. The life and work of each of the twelve Churchmen selected are given in a simple and interesting way. The only improvement to suggest, from a teacher's point of view, is that indication might be given as to where further information can be found as to the life of each Father, the views of the Gnostics, the Arian heresy, and other matters, only touched incidentally.

*Sedburgh School Sermons.* By H. G. Hart, M.A. (Rivingtons.)

Twenty-five short sermons preached from 1833 to 1930 are here collected, with the topical allusions just as they were spoken. The subjects and the treatment of them are well calculated to interest boys, each one being intimately connected with their actual life and thought. They will be found most useful and suggestive to school chaplains and head masters, who can enrich them with expansion and illustration to meet their special requirements. Doctrinal points are not pressed, and a sound discretion is exercised in the advocacy of religious observances. One of the features of the sermons is the manner in which current events are utilized to point out their moral significance.

*Legends of King Arthur and His Court.* By Frances Nimmo Greene.

A few of the Arthurian legends are here told simply, for children to understand. The language employed is dignified and poetical, without being stilted or antique. The author has closely followed Tennyson in his version of the tales. The illustrations by Edmund H. Garrett are a little weak, but may prove helpful to young readers.

*Quain's Dictionary of Medicine.* Edited by H. Montague Murray, M.D., F.R.C.P.; assisted by John Harold, M.B., and W. Cecil Bosanquet, M.A., M.D. (Longmans.)

This is a largely rewritten and revised edition of Quain's well known Dictionary. In the list of contributors will be found nearly every name of professional eminence in medicine and surgery. It is a work which every practitioner should have on his shelves, because he may count upon finding the most modern and reliable treatment given with reference to most diseases likely to be met with in his experience. Written principally with reference to diagnosis and treatment, nevertheless, both pathology and aetiology receive substantial recognition. The ordinary doctor who seldom has access to the works of specialists may feel confident of finding what he wants within its two thousand pages.

*The Pope Anthology.* Edited by Prof. Edward Arber, F.S.A. (Frowde.)

It is not to be expected that this volume should be as interesting, from the point of view of poetry, as some of its companions in the series. The age of Pope is marked by a sentimentality and artificiality generally distasteful to the modern reader; but to the student of literature the collection is full of interest. It is just with such a selection as this that a reader can get a good view of the poetic feeling of the time, and can readily compare the period as a whole with preceding and succeeding ones. Readers of every type will be glad to read the original form of "God Save the King" and "Rule, Britannia"; but, in the case of some of the authors—more especially Pope—a happier selection might have been made. The book would have been more useful with an introduction, however short, on the characteristics of the period. We note two slips in the glossary: "Bannocks" are oatcakes, not bread; and "springs" are not shares.

*Old Indian Legends.* Retold by Zitkala-Sa. (Ginn.)

A collection of tales from the folk-lore of the North-American Indian. We doubt whether children really care for tales of this description so much as they are generally supposed to; and it is probable that the present volume will appeal more to grown-up people who are acquainted with the Indians and their country. The illustrations by Angel de Cora are sympathetic, but not always clearly defined.

*Lectures and Essays by the late William Kingdon Clifford, F.R.S.* Edited by Leslie Stephen and Sir Frederick Pollock. 2 vols. (Macmillan.)

The growing custom of reprinting good books of twenty or thirty years ago—a custom which would not grow, at any rate so steadily, if the new and original books, novels excepted, sold a little better than they do—is embarrassing to the reviewer. He cannot notice them as if they were new, and he does not want to be always drawing invidious comparisons between the present and the past. Messrs. Macmillan are scrupulous to tell us the antecedents of their reprints. The lectures and short biography of Prof. Clifford were originally published in 1870,

and a second edition was called for in 1886. We welcome the inclusion of a third in the well selected "Eversley Series" of notable works and lives.

*The Middle Temple Reader*, edited by E. E. Speight, B.A. (Horace Marshall), has no smack of law about it, as the title seems to suggest, but is merely a "Middle Reader" between the "Junior" and "Temple Readers." It aims at giving children a fund of fresh matter of purely literary origin. Of course it is good to have freshness and variety, but we hardly think "children" will be able to read intelligently such poems as Browning's "Patriot" and Walt Whitman's "Pioneers," not to mention several Scottish ballads and an ode from the Irish. It seems, indeed, a little too much to attempt, especially when English literature abounds in easier pieces not yet hackneyed. The illustrations do not add much to the value of the book.

*North America*. By F. D. and A. J. Herbertson. (A. & C. Black.)

This series of descriptive geographies from original sources will be a great help to all teachers who are endeavouring to make their geography lessons a real educative force. The ordinary form teacher, who, as a rule, has not specialized in this subject, finds little time to search books for travel for vivid descriptions of the countries to be studied. In this little handbook he will find just what he needs, both in preparing his lessons and for reading to the class. It consists of a series of short extracts from various writers (of unequal merit, it must be admitted), with references to the original works, and is purely supplemental to the ordinary geography. The so-called "introduction" of dry topographical facts is, therefore, not necessary, and would be better omitted. The illustrations are well chosen.

*More Animal Stories*. Selected and edited by Robert Cochrane. (Chambers.)

We have in this volume a mine of anecdotes about animals—dogs, monkeys, birds, elephants, and turtles. Variety, indeed! Dr. John Brown's famous sketch, "Rab and His Friends," opens the book, and the stories that follow are mainly reprinted from *Chambers's Journal*. They are brightly and tellingly written, and will be of great interest to children of almost any age. The illustrations might be a great deal better.

Mr. John Murray sends us a reprint of Darwin's *Origin of Species*, a popular impression of the corrected copyright edition—which we prefer to another copy of the same work reaching us from another firm at double the price. Mr. Murray's publication is, however, in paper covers, while the other is in cloth and boasts a few photographic illustrations. In the "Athenæum Press Series" (Messrs. Ginn & Co., Boston, U.S.A.), we have Carlyle's *Heroes and Hero Worship*, and the *Heroic in History*, edited by Archibald Macmeham. The book is well printed and neatly bound. From the same firm comes *Secrets of the Woods*, which is Book III. of the "Wood-Folk Series," and is specially noteworthy for its really charming little illustrations. The personal note in the book is strong, and it seems to be written for children, though there is no hint to that effect in the preface. As a child's book we honestly recommend it, and, as with many of its kind, there may be plenty of grown-up readers who will find it to their taste.

We can recommend *King Edward's Cookery Book*, by Florence A. George, Mistress of Cookery in King Edward's High School for Girls, Birmingham (Edward Arnold), as one of the best and cheapest books of its kind we have yet seen. Miss George, in her preface, says that her aim has been "to write a clear, concise, and methodical manual which will contain everything that the ordinary Englishwoman of the middle class need know about cookery," and in this she has certainly succeeded. With such a book at hand no servant girl of average intelligence should fail to become a fair cook, and to the young mistress of a household it will be of inestimable use. It is not merely a collection of good recipes for an infinite variety of dishes, written so clearly and simply that a child could understand them, but all necessary information as to the different kinds of cooking, the different heats, methods, &c., is given in the same clear, sensible way.

Another cheap and useful little book comes from Messrs. McDougall & Co., *Lessons in Cookery for use in Elementary Schools and Technical Classes*, by Annie Graham, Teacher of Cookery under the Edinburgh School Board. It is intended by its author as a handy text-book for pupils attending cookery classes, and should serve that purpose exceedingly well.

MESSRS. Cassell & Co., on behalf of the Letts's Diaries Company, send us a collection of their useful Bound, Rough and Scribbling Diaries—a *Medical Diary*, nicely bound, a *Clerical Diary*, and one or two smaller ones—all got up and finished, as usual, with a view to utility and durability, combined with moderate price.

From *Knowledge Office* we have their *Knowledge Diary and Scientific Handbook*, containing a large amount of scientific information. There is an index to the diary, as well as a full page apportioned to each day in the year. A very convenient and useful book for a scientific person.

From Messrs. George Newnes & Co. we have *The First Men in the Moon*, one of the best imaginative tales which Mr. H. G. Wells has written. Though it is too late to be included in our general notice of "Gift-Books and Prizes," we are bound to say that this is an excellent story for boys and girls on the familiar lines of scientific illusion.

## COLLEGE OF PRECEPTORS.

### Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

### INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D.,

Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (Thirtieth Annual Series) will commence on Thursday, February 20th, at 7 p.m.

The course, consisting of Twelve Lectures, will deal with the laws of development of the child's intelligence, with the ideal aims of intellectual training, and with the conditions which the teacher has to satisfy in order to further a complete and many-sided type of intelligence. An effort will be made to bring the principles to bear on the practical problems of school instruction.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

#### SYLLABUS.

LECTURE I.—Education as viewed by science. Different directions of education. Intellectual education in relation to education as a whole. Historical evolution of idea of intellectual education. Opposition of theoretical and practical tendency. Training of faculty and useful information. Relation of formation of intelligence to acquisition of knowledge.

LECTURE II.—Idea of mental development and of education, how connected. Laws of intellectual development. Idea of infant mind as a clean slate and as a group of congenital tendencies. Reception and assimilation of material from without. Elaboration of intellectual products as work of the child's mind. Part of human surroundings and of education in child's mental development.

LECTURE III.—The function of the senses in intellectual development. Spontaneous exploration of its world by child. Importance of the finer use of sense-organs. New methods of testing the senses. Methodical exercise of attention and the development of the observing faculty. Common defects in the teacher's appeals to the senses.

LECTURE IV.—Early development of ideas. How clear images of things are formed and retained. The laws of association and the orderly arrangement of ideas. General and special characteristics of children's memories. Value and proper use by teacher of verbal memory. Is the cultivation of the memory a special aim in education?

LECTURE V.—Early forms of productive imagination in the race and in the child. How the materials of experience are transformed in imaginative processes. Value of the imagination. The disciplined activity of imagination in methodical construction of ideal products. The teacher's control of the imagination. Common errors in children's efforts to imagine things.

LECTURE VI.—The relation of imagination to general thinking. The organic connexion of thought and language. First generalizations of the child. The development of general ideas in fullness and precision. Methodical exercises in generalization by the teacher. The relation of the observation to the classification of things.

LECTURE VII.—Thinking as apprehension of relations. Articulation of thought in the sentence. Judgment as means of rendering vague knowledge clear. The early forms of inference. The logical forms of the reasoning process. Educational problems growing out of the early exercise of the reasoning powers.

LECTURE VIII.—Interactions between observation, imagination, and thought. Intelligence as a trained capacity to understand. The process of assimilating knowledge and the doctrine of apperception. Early forms of apperception. Methodical apperception by way of clear general ideas and systems of ideas. The action of the teacher on child's apperceptive tendencies.

LECTURE IX.—The fiction of an isolated intellectual activity. The development of intelligence as including that of feeling and volition. The attitude of interest and attention. Different estimates of children's curiosity. The development of interests. The desire for knowledge and the higher control of the attention.

LECTURE X.—The concrete process of learning. The inquisitive attitude and its development by the teacher. The management of the material of instruction so as to promote the process of learning. The use by the teacher of the child's ideas and the art of questioning. Teaching as a progressive and systematic control of the learning process. Instruction by the teacher and self-instruction.

LECTURE XI.—Bearing of psychology and logic on methods of instruction. Adaptation of subject-matter and mode of treatment to stage of intellectual development. Method as involving advance from known to unknown and from vague to clear knowledge. Method as orderly presentation of connected parts of knowledge. Logical distinctions of method and their value for the teacher. Principles which help us in selecting and co-ordinating subjects of the curriculum.

LECTURE XII.—Intellectual idiosyncrasy. The reasons for studying the limits of individual capacity and taste. Attempts to discover the contents of children's minds and their value. Problem of adapting the process of instruction to individual capabilities and inclinations. The problem of satisfying at once the conditions of many-sidedness and individual development. Questions relating to the specialization of study.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\*\* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

C. R. HODGSON, B.A., Secretary.

**OXFORD UNIVERSITY PRESS.**

**ARITHMETIC.** With or without Answers to the Exercises. By R. HARGREAVES, M.A. Crown 8vo, cloth, 4s. 6d.

**EUCLID REVISED.** Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his first Six Books. Edited by R. C. J. NIXON, M.A. Third Edition. Crown 8vo, cloth, 6s. Sold separately as follows:—Book I, 1s. Books I, II, 1s. 6d. Books I-IV, 3s. Books V, VI, 3s. 6d.

**GEOMETRICAL EXERCISES FROM NIXON'S "EUCLID REVISED."** With Solutions. By ALEXANDER LARMOR, M.A. Crown 8vo, cloth, 3s. 6d.

**BOOK-KEEPING.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and JOHN BALL. Extra fcap. 8vo, cloth, 2s.

**CHART OF THE RULES OF HARMONY.** For Form use by Students. By A. SOMERVELL. 4to, printed on thick Card, 1s. net.

**MANUAL OF THE FOUR GOSPELS.** By the Rev. T. H. STOKOE, D.D. PART I: *The Gospel Narrative.* PART II: *The Gospel Teaching.* Crown 8vo, cloth, 3s. 6d.; or separately, Parts I and II, 2s. each.

**OUTLINES OF TEXTUAL CRITICISM APPLIED TO THE NEW TESTAMENT.** By C. E. HAMMOND, M.A. Sixth Edition, Revised. Crown 8vo, cloth, 4s. 6d.

**A SCHOOL HISTORY OF ENGLAND.** With Maps, Plans, and Bibliographies. By OWEN M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON, A. J. CARLYLE, and W. G. POGGSON-SMITH. Crown 8vo, cloth, 3s. 6d.

**ADDISON.—SELECTIONS FROM PAPERS IN "THE SPECTATOR."** With Notes. By T. ARNOLD, M.A. Extra fcap. 8vo, cloth, 4s. 6d.; and on India paper, from 6s.

**THE PILGRIM'S PROGRESS, GRACE ABOUNDING, RELATION OF THE IMPRISONMENT OF MR. JOHN BUNYAN.** Edited, with Biographical Introduction and Notes, by E. VENABLES, M.A. Extra fcap. 8vo, cloth, 3s. 6d.; in Parchment, 4s. 6d.

**A FRENCH PRIMER,** consisting of Accidence and Syntax, 'or use in Middle and Lower Forms. By ARTHUR H. WALL, M.A. Crown 8vo, cloth, 2s.

*Guardian.*—"Mr. Wall has selected his syntax with a clear view of the most important points that beginners should not fail to master, and we do not remember to have seen the rules more concisely or intelligently put."

**A CONCISE FRENCH GRAMMAR.** Including Phonology, Accidence, and Syntax, with Historical Notes. For use in Upper and Middle Forms. By the same Author. Crown 8vo, cloth, 4s. 6d.

**A GUIDE TO ADVANCED GERMAN PROSE COMPOSITION.** Containing Selections from Modern English Authors, from the Sandhurst Papers, and from Magazines and Newspapers; with copious Notes and Idiomatic Renderings of some of the more difficult Phrases and Sentences; the whole being preceded by an exhaustive Grammatical Introduction. By EDUARD EHRLKE. Extra fcap. 8vo, cloth, 3s.

**GOETHE.—HERMANN AND DOROTHEA.** Edited, with Notes, by the late C. A. BUCHHEIM, Ph.D., and EMMA S. BUCHHEIM. With an Introduction dealing with the literary qualities of the poem by EDWARD DOWDEN, LL.D., and a Biographical Sketch by E. S. BUCHHEIM. Extra fcap. 8vo, cloth, 3s.

**T. MACCI PLAUTI EUDENS.** Editio Minor, with an Appendix on Scansion. For the use of Schools. By EDWARD A. SONNENSCHNEIN, D.Litt. Extra fcap. 8vo, cloth, 4s. 6d.

**TALES OF THE ROMAN REPUBLIC.** Parts I and II. Adapted from the Text of Livy. With Notes, Maps, Vocabularies, and English Exercises. By J. B. ALLEN, M.A. Extra fcap. 8vo, stiff covers, 1s. 6d. each.

**SCENES FROM SOPHOCLES, ANTIGONE.** Edited, with Introduction and Notes, by C. E. LAURENCE, M.A. Extra fcap. 8vo, cloth, 1s. 6d.

**SCENES FROM SOPHOCLES, AJAX.** With Introduction and Notes. By the same Editor. Extra fcap. 8vo, cloth, 1s. 6d.

**Oxford Classical Texts.**

JUST PUBLISHED.

**M. TULLI CICERONIS RHETORICA.** Edited by A. S. WILKINS. Tomvs I. Crown 8vo, paper covers, 2s. 6d.; cloth, 3s.

**EURIPIDIS FABVLAE.** Edited by G. G. A. MURRAY. Tomvs I. Crown 8vo, paper covers, 3s.; cloth, 3s. 6d.

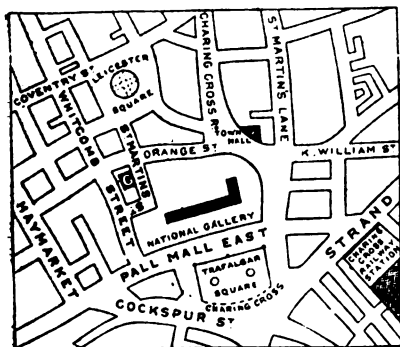

New 24-page Educational Catalogue and List of Books suitable for Oxford Local Exams., post free on application.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

**GINN & COMPANY,**

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

Ginn & Company 9, St. Martin's Street w.c.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED. J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

**INVITATION TO TEACHERS.**

All interested in teaching are cordially invited to call at No 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American education.

**SOME SPECIAL FEATURES.**

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; Latin and Greek School Classics; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

**GENERAL HISTORY.**

As covering ground not traversed in any British publication, Myers' "General History" is meeting with especial favor in England. Designed for the use of High Schools and Colleges in the United States of America, this duodecimo volume of 750 pages by Philip Van Ness Myers, is accepted and recommended by all the leading Colleges and Universities in America as the best brief course in General History. The book is liberally illustrated, and contains many useful maps. It is published at 6s. 6d., bound in half-leather.

A NEW

## Geography of South Africa

By the Rev. J. WHITESIDE.

Crown 8vo, cloth. Price 2s.

"We all know now a great deal more about the geography of South Africa than we did when the war broke out, but we still have a good deal to learn on the subject. It is certainly doubtful whether any of the books now in use in English schools go into details sufficiently to properly inform the rising generation of the vast extent of country which we now rule there. No doubt works to do this will come, but meantime attention may be directed to the geography in use in the Government schools in South Africa—'A New Geography of South Africa,' by the Rev. J. E. Whiteside. It treats not only of Cape Colony, but of the Orange River and Transvaal districts, as well as of Bechuanaland, the Khabahari Desert, Zululand, Swaziland, and Rhodesia, and the other geographical divisions of the country. The little book might be introduced into some of our schools and colleges with advantage."—*Westminster Gazette*.

HUGH REES, Ltd., 124 Pall Mall, London, S.W.

## CASEY'S EUCLID.

### THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises. By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c. Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

### A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID." By JOSEPH B. CASEY, Tutor, University College, Dublin. Second Edition. Small 8vo, price 6s.

### A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID." Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

### A TREATISE ON THE

### ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS. Containing an account of its most recent Extensions, with numerous Examples. New Edition. Crown 8vo.

### A TREATISE ON

### ELEMENTARY TRIGONOMETRY.

**MATHEMATICS.**

**14055.** (G. H. HARDY.)—Express

$$\int_0^{\frac{1}{2}\pi} \log \sin x \sqrt{(\sin x)} dx, \int_0^{\frac{1}{2}\pi} \frac{\log \sin x}{\sqrt{(\sin x)}} dx, \int_0^{\frac{1}{2}\pi} \frac{\log \sin x}{\sqrt{(1+\sin^2 x)}} dx,$$

$$\int_0^{\frac{1}{2}\pi} \frac{dx}{(\sec \frac{1}{2}x + \tan \frac{1}{2}x)^m \sqrt{(\sin x)}} \quad (m \text{ a positive integer}),$$

$$\int_0^x \frac{\log(\sec \frac{1}{2}x + \tan \frac{1}{2}x)}{\sqrt{(\sin x)}} dx, \text{ and } \int_0^x \frac{x}{\sqrt{(\sinh x)}} dx$$

as multiples of  $[\Gamma(\frac{1}{2})]^{\pm 2}$ ; and prove that

$$\int_0^{\frac{1}{2}\pi} \sin x (\log \sin x)^2 dx = (\log 2 - 1)^2 + 1 - \frac{1}{2}\pi^2.$$

[The last integral is given in Quest. 8423 (D. EDWARDS); another proof is asked for.]

*Solution by the PROPOSER.*

(a) Let  $f(n, p) = \int_0^{\frac{1}{2}\pi} \sin^n x (\log \sin x)^p dx \quad (-1 < n, -1 < p).$

Then it is easy to prove that (WOLSTENHOLME'S *Problems*, 1918, 51), if  $-1 < n < 1$ ,  $f(n, 0) f(-n, 0) = (2\pi/n) \tan \frac{1}{2}n\pi \dots \dots \dots (1)$ , and, if  $0 < n$ ,  $f(n, 0) f(n-1, 0) = 2\pi^n/n \dots \dots \dots (2)$ .

Differentiating these equations with respect to  $n$ ,  
 $f'(n, 1) f(-n, 0) - f(n, 0) f'(-n, 1) = -(2\pi/n^2) \tan \frac{1}{2}n\pi + (\pi^2/n) \sec^2 \frac{1}{2}n\pi$ ,  
 $f'(n, 1) f(n-1, 0) + f(n, 0) f'(n-1, 1) = -(2\pi/n^2)$ .  
 If  $n = \frac{1}{2}$ ,  $f'(\frac{1}{2}, 1) f(-\frac{1}{2}, 0) - f(\frac{1}{2}, 0) f'(-\frac{1}{2}, 1) = -8\pi + 4\pi^2$   
 $f'(\frac{1}{2}, 1) f(\frac{1}{2}, 0) + f(\frac{1}{2}, 0) f'(\frac{1}{2}, 1) = -8\pi$ .  
 Therefore  $f'(\frac{1}{2}, 1) = \frac{2\pi(\pi-4)}{f(\frac{1}{2}, 0)^2}$ ,  $f'(-\frac{1}{2}, 1) = -\frac{2\pi^2}{f(\frac{1}{2}, 0)}$ .

Now  $f(-\frac{1}{2}, 0) = \sqrt{\pi} \frac{\Gamma(\frac{1}{2})}{\Gamma(\frac{3}{2})} = \frac{[\Gamma(\frac{1}{2})]^2}{\sqrt{(2\pi)}}$ ,  
 $f(\frac{1}{2}, 0) = \sqrt{\pi} \frac{\Gamma(\frac{3}{2})}{\Gamma(\frac{1}{2})} = \frac{4\pi \sqrt{(2\pi)}}{[\Gamma(\frac{1}{2})]^2}$ .

Hence  $\int_0^{\frac{1}{2}\pi} \sqrt{(\sin x)} \log \sin x dx = \frac{(\pi-4)(2\pi)}{[\Gamma(\frac{1}{2})]^2}$ ,  
 $\int_0^{\frac{1}{2}\pi} \frac{\log \sin x}{\sqrt{(\sin x)}} dx = -2^{-\frac{1}{2}} \sqrt{\pi} [\Gamma(\frac{1}{2})]^2$ .

(b) Suppose  $\operatorname{cosec} x = \sec \frac{1}{2}\theta + \tan \frac{1}{2}\theta$ .  
 Then  $\frac{dx}{\sqrt{(\sin x)}} = -\frac{(\sin x)^{\frac{1}{2}} \frac{1}{2} + \sin \frac{1}{2}\theta}{\cos x \cdot 2 \cos^2 \frac{1}{2}\theta} d\theta = -\frac{1}{2} \frac{\sqrt{(\sin x)}}{\cos x \cos \frac{1}{2}\theta} d\theta$   
 $= -\frac{1}{2} \sec \frac{1}{2}\theta \sqrt{\left(\frac{\sec \frac{1}{2}\theta + \tan \frac{1}{2}\theta}{\sec \frac{1}{2}\theta + \tan \frac{1}{2}\theta}\right)^2 - 1} d\theta = -\frac{1}{2} \sqrt{(\sin \theta)}$

As  $x$  goes from 0 to  $\frac{1}{2}\pi$ ,  $\theta$  goes from  $\pi$  to 0. Hence  
 $\int_0^{\frac{1}{2}\pi} \phi(\sec \frac{1}{2}\theta + \tan \frac{1}{2}\theta) \frac{d\theta}{\sqrt{(\sin \theta)}} = 2 \int_0^{\pi} \phi(\operatorname{cosec} x) \frac{dx}{\sqrt{(\sin x)}}$ .

This formula gives  
 $\int_0^{\frac{1}{2}\pi} \frac{\log(\sec \frac{1}{2}x + \tan \frac{1}{2}x)}{\sqrt{(\sin x)}} dx = -2 \int_0^{\frac{1}{2}\pi} \frac{\log \sin x}{\sqrt{(\sin x)}} dx = 2^{\frac{1}{2}} \sqrt{\pi} [\Gamma(\frac{1}{2})]^2$ .

And  $\int_0^{\frac{1}{2}\pi} \frac{(\sec \frac{1}{2}x + \tan \frac{1}{2}x)^{-m}}{\sqrt{(\sin x)}} dx = -2 \int_0^{\frac{1}{2}\pi} (\sin x)^{m-\frac{1}{2}} dx$ ;  
 which is easily expressed in terms of  $[\Gamma(\frac{1}{2})]^2$  when  $m$  is an integer.  
 [The rest in Volume.]

**14776.** (J. BLAIKIE, M.A.)—Show that any number  $10a+b$  is a multiple of  $10n-1$ , if  $a+nb$  be a multiple of  $10n-1$ . *E.g.*,  
 63 is a multiple of 9, since  $6+3$  is a multiple of 9;  
 351 " " 39, "  $35+4$  " " 39;  
 1157 " " 89, "  $115+63$  " " 89.

[Solutions so numerous that only a few typical ones can be published.—EDITOR.]

*Solutions* (I.) by ROBERT W. D. CHRISTIE and Lt.-Col. ALLAN CUNNINGHAM, R.E.; (II.) by the PROPOSER; (III.) by QUERO; (IV.) by ALETROP.

(I.) We have, by hypothesis,  
 $a+nb = 10(a+nb) = b(10n\pm 1) = 0 \pmod{10n\pm 1}$ ;  
 therefore  $10a \mp b = 0 \pmod{10n\pm 1}$ .  
 Similarly, if  $a-nb = 0 \pmod{10n\pm 1}$ ,  $10a \pm b = 0 \pmod{10n\pm 1}$ ,  
 due regard being had to the signs.

This theorem, useful for factorization, may be extended thus:—  
 If  $10a-b = 0 \pmod{10n+m}$ ,  $n(10a-b) = 0 \pmod{10n+m}$ ;  
 also  $a(10n+m) = 0 \pmod{10n+m}$ ;  
 therefore  $ma \pm nb = 0 \pmod{10n+m} = \text{any integer whatever}$ .  
 (II.) Let  $a+nb = (10n-1)n$ .  
 Then  $10a+b = 10(a+nb) - (10n-1)b = (10n-1)(10m-b)$   
 $= \text{a multiple of } 10n-1$ .  
 (III.) Let  $(a+nb)/(10n-1) = q$ . We get  $a = 10qn - q - nb$ . Substituting this value of  $a$  in the fraction  $(10a+b)/(10n-1)$ , it becomes  $10q-b$ , which is evidently an integer, provided  $q$  and  $b$  are integers. This result holds good whatever the values (integral or fractional) of  $a$  and  $n$ .  
 (IV.) Soit  $\beta$  la base du système de numération. De la double identité  $\beta a + b = \beta(a \pm nb) \mp b$  ( $\beta n \mp 1$ ) (les signes supérieures et inférieures étant pris ensemble), on conclut, puisque les deux nombres  $\beta n \mp 1$  sont premiers avec  $\beta$ , que la condition nécessaire et suffisante pour que  $\beta a + b$  soit un multiple de  $\beta n \mp 1$ , c'est que  $a \pm nb$  le soit aussi, respectivement.

**7903.** (Rev. T. C. SIMMONS, M.A.)—Prove that the mean value of the  $n$ th power of the distance between two points taken at random within any convex area  $\Omega$  is equal to  $\frac{2}{(n+2)(n+3)} \Omega^2 \iint C^{n+3} dp d\omega$ , where  $C$  is the length of a chord whose coordinates are  $p, \omega$ , and  $n$  any quantity not less than  $-1$ , the integration extending throughout the area.

*Solutions* (I.) by R. CHARTRES; (II.) by J. W. CARSE, B.A.  
 (I.) The mean value of  $PQ^n$ , if  $Q$  moves in the element  $PBC$ , is evidently  $\frac{2r^n}{n+2}$ .

Therefore the required mean  
 $= \frac{2}{n+2} \iint \left\{ \int_0^C 2r^n (\frac{1}{2}r^2) dr \right\} dp d\theta + (\text{area})^2$   
 $= \frac{2}{(n+2)(n+3)} \Omega^2 \iint C^{n+3} dp d\theta$ .  
 This is a most valuable theorem.  
 If  $n = 0$ , we get the remarkable result  $\iint C^3 dp d\theta = 3\Omega^2$ ,  $AB = C$ .

given in WILLIAMSON'S *Integral Calculus*, p. 386.  
 For the circle, if  $n = 1, -1, \&c.$ , we get at once the well-known values  $128r/45\pi, 16/3\pi r$ , &c.

(II.) Let one of the points A be fixed; draw through it the chord  $PQ = C$  at an inclination  $\omega$  to some fixed line; put  $AP = r, AQ = r'$ ; then (cf. WILLIAMSON, *Integral Calculus*, § 255) the number of cases for which the direction of the line joining A and B lies between  $\omega$  and  $\omega + d\omega$   
 $= \int_0^r \rho^n \cdot \rho d\rho d\theta + \int_0^{r'} \rho^n \cdot \rho d\rho d\theta$ , where  $\rho = AB$ .

The sum of these integrals =  $[1/(n+2)](r^{n+2} + r'^{n+2})$ ,  $n \neq -1$ . Now let A range over the space between PQ and a parallel chord distant  $dp$  from it, and the direction of AB from  $\omega$  to  $\omega + d\omega$ ; then the number of cases is  
 $\left\{ \frac{1}{n+2} \int_0^C r^{n+2} dr + \frac{1}{n+2} \int_0^C r'^{n+2} dr' \right\} dp d\omega = \frac{2}{(n+2)(n+3)} C^{n+3} dp d\omega$ .

Integrating over the whole area, we have the total number of cases  
 $= \frac{2}{(n+2)(n+3)} \iint C^{n+3} dp d\omega$ ;  
 and the number of pairs of points is  $\Omega^2$ . Hence the above expression for the mean value.

**8139.** (A. GORDON, M.A.)—Show geometrically, by the properties of circles, that the three middle points of the diagonals of a complete quadrilateral lie in a straight line.

*Solution by S. CONSTABLE.*  
 Let  $XYX'Y'$  be our quadrilateral,  $ZZ'$  being third diagonal:  $YY', ZZ'$  meeting in A, &c. With centre A describe any circle with radius  $r'$  and, for convenience, less than  $AY'$ . With centre C describe circle of radius  $r''$ , where  $r'/r'' = AY'/CY = AY'/CY'$ ; and with centre B describe circle  $r'''$ , where  $r'/r''' = AZ'/BZ' = AZ'/BZ$ . Hence  
 $r''/r''' = AY'/CY \cdot BZ'/AZ = BX/CX$ ,  
 for  $BX/CX \cdot CY'/AY \cdot AZ/BZ = 1$ .  
 Hence X, X' are centres of similitude of circles (B), (C); and Y, Y'; Z, Z' are centres for (A), (C); (A), (B) respectively.  
 But the circles on  $XX_1, YY_1, ZZ_1$  as diameters are the three circles of similitude of (A), (B), (C); and we know from the properties of these

circles that they are coaxial, and that their centres  $O_1, O_2, O_3$  are consequently collinear.

Note.—Without using these circles, we can prove that  $O_1, O_2, O_3$  are collinear, thus giving another very short solution of this interesting problem.

Since  $ZZ', XX_1, YY_1$  are divided harmonically at  $B, A; C, B;$  and  $A, C$  respectively, we have

$$BO_1/CO_1 = BX^2/CX^2, \quad CO_2/AO_2 = CY^2/AY^2, \quad AO_3/BO_3 = AZ^2/BZ^2;$$

therefore

$$BO_1/CO_1 \cdot CO_2/AO_2 \cdot AO_3/BO_3 = BX^2/CX^2 \cdot CY^2/AY^2 \cdot AZ^2/BZ^2 = 1,$$

for  $X, Y, Z$  being collinear,

$$BX/CX \cdot CY/AY \cdot AZ/BZ = 1.$$

Note on Quest. 14945. By the EDITOR.

A very interesting solution to Mr. STANHAM'S Problem bearing this number has already been published. The PROPOSER also communicated for solution, in positive integers, the equation  $x^3 + y^3 = 17z^3$ . Both  $x^3 + y^3 = 17z^3$  and  $x^3 - y^3 = 17z^3$  have been solved in integers, as under, by Mr. BIDDLE, but the solution of the former in positive integers is still undiscovered.

Solution by D. BIDDLE.

Since  $x^3 - y^3 = (x - y)(x^2 + xy + y^2)$ , we can take  $x - y = 17$ , and find values of  $x$  and  $y$  such that  $x^2 + xy + y^2$  is a cube. This is satisfied by  $x = 18, y = 1$ , giving  $z = 7$ . Similarly, since  $x^3 + y^3 = (x + y)(x^2 - xy + y^2)$ ,  $x^3 + y^3 = 17z^3$  is satisfied by  $x = 18, y = -1, z = 7$ . But here  $y$  is negative.

7753. (LANIVIC).—Find whether there exist even integer numbers which cannot be decomposed into a sum of two primes.

Note by Lt.-Col. ALLAN CUNNINGHAM, R.E.

The proof of this problem (known as GOLDBACH'S theorem) is one of the desiderata of modern mathematics. Tables giving all the actual solutions of  $p + q = N$  (an even number  $\geq 3000$ ), and also the number of solutions of the same up to  $N = 5000$ , have been published under the title "Tafeln für das Goldbach'sche Gesetz" in *Abh. d. Kaiserl. Leop. Carol. Deutschen Akad. d. Naturforscher*, Bd. LXXII., Halle, 1897; so that the (numerical) proof is established up to  $N = 5000$ .

A simple mechanical method of solution of  $p + q = N$  is described at p. 9 of the introduction to above. A long strip of paper graduated into equal divisions  $> N$  in number is taken, the division marks are numbered where convenient—say every tenth—and the division marks corresponding to primes are marked conspicuously. If the strip be doubled so as to bring any even number  $N$  opposite to zero, the coincidence of any two prime division marks will give a solution of  $p + q = N$ .

When  $N$  exceeds a few thousand there are practical difficulties in the way of handling the long strip required, and keeping it at proper tension.

14660. (R. TUCKER, M.A.)—PQ is a focal chord of a parabola (focus S), and is also the major axis of an ellipse. Find the locus of the other focus and the equation to the ellipse. If this ellipse cuts the axis in  $K, K'$ , then  $1/SK + 1/SK' = 1/a$ , where  $4a$  is the latus rectum of the parabola (and also of the ellipse). Show also that the envelope of the ellipse is a confocal parabola of latus rectum  $8a$ , and that of the auxiliary circle is (beside the directrix) the circle  $x^2 + y^2 - ax = 2a^2$ . If  $\lambda = \cot \phi$  ( $\phi$  angle made by chord with axis), then the point of contact is  $x/a = -2(2\lambda^2 - 1)/(4\lambda^2 + 1), y/a = -6\lambda/(4\lambda^2 + 1)$ .

Solutions (I.) by the PROPOSER; (II.) by Professor SANJANA, M.A.

(I.)  $\angle PSX = \phi$ :

equation to the ellipse, is of form

$$1/r = [1 - \epsilon \cos(\theta - \phi)]/[a(1 - \epsilon^2)] \dots (i.);$$

$$PQ = 4a \operatorname{cosec}^2 \phi, \quad \therefore a = 2a \operatorname{cosec}^2 \phi,$$

$$2a\epsilon = SH = 4a \cos \phi \operatorname{cosec}^2 \phi,$$

$$a\epsilon = 2a \operatorname{cosec}^2 \phi \cos \phi;$$

therefore  $\epsilon = \cos \phi$ ;

$$\text{latus rectum} = 2a(1 - \epsilon^2) = 4a;$$

therefore equation is

$$2a/r = 1 - \epsilon \cos(\theta - \phi)$$

$$= 1 - \cos \phi \cos(\theta - \phi) \dots (ii.);$$

$$0 = \sin \phi \cos(\theta - \phi) - \cos \phi \sin(\theta - \phi)$$

$$= \sin(2\phi - \theta),$$

envelope of ellipse is therefore

$$2a/r = 1 - \cos^2 \frac{1}{2}\theta = \sin^2 \frac{1}{2}\theta;$$

that is

$$r = 4a(1 - \cos \theta), \text{ a parabola};$$

locus of H,  $r = 4a \cos \phi \operatorname{cosec}^2 \phi$ , i.e.,  $y^2 = 4ax$  (S the vertex),

$$\theta = 0, r_1 = 2a/\sin^2 \phi, \quad \theta = \pi, r_2 = 2a(1 + \cos^2 \phi);$$

therefore  $1/r_1 + 1/r_2 = 1/2a[\sin^2 \phi + (1 + \cos^2 \phi)] = 1/a,$

$$\beta^2/a^2 = 1 - \epsilon^2 = \sin^2 \phi; \quad \text{therefore } \beta = a \sin \phi = 2a \operatorname{cosec} \phi;$$

Equation to auxiliary circle is

$$x^2 + y^2 - 4ax \cos^2 \phi - 4ay \cot \phi = 4a^2 \operatorname{cosec}^2 \phi,$$

$$4a \cot^2 \phi (x + a) + 4a \cot \phi y + 4a^2 - (x^2 + y^2) = 0;$$

for envelope  $16a^2y^2 = 16a(x + a)[4a^2 - (x^2 + y^2)],$

therefore  $y^2(x + 2a) = (x + a)(4a^2 - x^2), y^2 = (x + a)(2a - x);$

$$x^2 + y^2 - ax = 2a^2, \quad (x - \frac{1}{2}a)^2 + y^2 = \frac{3}{4}a^2, \quad \text{and } x + 2a = 0, \text{ the}$$

directrix. If  $\cot \phi = \lambda$ , the circular point of contact is

$$x/a = -2(2\lambda^2 - 1)/(4\lambda^2 + 1), \quad y/a = -6\lambda/(4\lambda^2 + 1).$$

[The rest in Volume.]

14925. (SALUTATION).—Through a particular vertex of an irregular but convex  $n$ -gon draw a straight line bisecting the figure.

Solution by JOHN P'NEESCOTT, B.A.

Let us take a five-sided figure for simplicity, but the method is perfectly general.

Let ABCDE be the figure, and let A be the angular point through which the bisector has to be drawn. From A draw the diagonals AC, AD.

Draw  $BC_1$  parallel to AC to meet DC produced in  $C_1$ .

Draw  $C_1D_1$  parallel to AD to meet ED produced in  $D_1$ .

Go the opposite direction round the figure in the same manner and call the points we get  $D_2, C_2$ .

Bisect  $BC_2, C_1D_1, D_1E$  in  $b, c, d$  respectively. Join A to whichever of the points  $b, c, d$  falls on a side of the original polygon; i.e., suppose  $c$  falls between C and D; join Ac. Then Ac bisects the polygon.

For, if we join  $AC_1, AD_2, \Delta AC_1C = \Delta ABC; \therefore \Delta AC_1c = \text{figure } ABCc$ . Also, in the same way,  $\Delta AD_2c = \text{figure } AEDc$ . But  $\Delta AC_1c = \Delta AD_2c$ . Therefore figure  $ABCc = AEDc$ .

14710. (Professor N. BHATTACHARYYA).—From the centre of curvature at any point on the ellipse  $(x^2/a^2) + (y^2/b^2) = 1$  two other normals are drawn. Show that the envelope of the line joining their feet is the curve  $(x/a)^{\frac{2}{3}} + (y/b)^{\frac{2}{3}} = 1$ .

Solutions (I.) by Professor JAN DE VRIES; (II.) by F. H. PEACHELL, B.A.; (III.) by Rev. J. CULLEN.

(I.) The feet of four concurrent normals are the intersections of the ellipse and an orthogonal hyperbola which contains the centre of the ellipse, the asymptotes being parallel to the axes of the ellipse. If  $px + qy + r = 0$  represents the line joining the feet of the two normals from the centre of curvature at the point  $(x_1, y_1)$ , there is an identity of the form

$$(x^2/a^2 + y^2/b^2 - 1) + \lambda(xy + Ax + By) \equiv (x_1x/a^2 + y_1y/b^2 - 1)(px + qy + r).$$

Hence

$$px + qy + r \equiv x/x_1 + y/y_1 + 1.$$

Putting  $x = a \cos \theta, y = b \sin \theta$ , a point of the envelope of this line is determined by  $bx \sin \theta + ay \cos \theta + ab \sin \theta \cos \theta = 0,$

and  $bx \cos \theta - ay \sin \theta + ab(\cos^2 \theta - \sin^2 \theta) = 0$ ,  
whence  $x = -a \cos^3 \theta$ ,  $y = -b \sin^3 \theta$ .

Therefore the envelope is the curve  $(x/a)^3 + (y/b)^3 = 1$ .  
[The rest in Volume.]

**830.** (M. COLLINS, B.A.)—From a point in a line of the third order that has a double point, only two tangents can be drawn to the curve; prove that the lines drawn from the double point to the points of contact, together with the two tangents at the double point, form a harmonic pencil.

*Solution by Professor NANSON.*

Any cubic circumscribing the triangle of reference is

$$ux^2 + vy^2 + wz^2 = kxyz,$$

where  $u, v, w$  are the tangents at the vertices. Take now as vertices the node and the points of contact of the two tangents. Then  $w \equiv 0$  and the tangents at the node are of the form  $ax^2 + by^2 = kxy$ , whilst the condition that the two tangents meet on the curve is  $k = 0$ , which is also the condition that the tangents at the node form a harmonic pencil with the lines  $xy = 0$  joining the node to the points of contact of the two tangents.

**14906.** (Professor NEUBERG.)—A', B', C' étant les pieds des hauteurs du triangle ABC, soient A<sub>1</sub>, B<sub>1</sub>, C<sub>1</sub> les symétriques des sommets A, B, C respectivement par rapport aux points A', B', C'. Calculer le rapport des aires des triangles A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>, ABC.

*Solution by Professor SANJANA, M.A.*

If the perpendiculars meet in O, the area of the triangle OB<sub>1</sub>C<sub>1</sub> =  $\frac{1}{2}OB_1 \cdot OC_1 \sin B_1OC_1 = \frac{1}{2}(OB' + BB')(OC' + CC') \sin A = \frac{1}{2}(BO + 2OB') \cdot (CO + 2OC') \sin A = 2R^2(\cos B + 2 \cos C \cos A)(\cos C + 2 \cos B \cos A) \sin A$ . The areas of OC<sub>1</sub>A<sub>1</sub>, OA<sub>1</sub>B<sub>1</sub> can be similarly expressed. Hence the area of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> =  $2R^2 \{ \sum \cos B \cos C \sin A + \sum (\cos^2 B + \cos^2 C) \sin 2A + 2 \cos A \cos B \cos C \sum \sin 2A \}$  =  $2R^2 \{ \sin A \sin B \sin C + 2 \sin A \sin B \sin C + 8 \cos A \cos B \cos C \sin A \sin B \sin C \}$  =  $\Delta \{ 3 + 8 \cos A \cos B \cos C \}$ .

Thus the required ratio is  $3 + 8 \cos A \cos B \cos C : 1$ .

[N.B.—In the third line of the question, as printed originally, the order of the points is C', A', B'; this does not lead to any elegant result.]

QUESTIONS FOR SOLUTION.

**15044.** (Professor HUDSON, M.A.)—A uniform beam is fixed at both ends and loaded so as to be in the form of a catenary; prove that when the tension at the lowest point is zero the rate of load varies as  $3 \cos^2 \phi - 2 \cos^3 \phi$ , where  $\phi$  is the inclination of the tangent at any point to the horizon.

**15045.** (E. V. HUNTINGTON, Ph.D.)—The centre of gravity of the equally weighted vertices and ortho-centre of any triangle is the centre of the nine-point circle of that triangle.

**15046.** (Professor S. STRONG.)—Show that the stream function for a cylinder whose right section is the Cassinian oval

$$(x^2 + y^2)^2 - 2c^2(x^2 - y^2) + c^4 = \lambda^4 r^4 \quad (\lambda > 1),$$

moving in an infinite liquid under no forces, is

$$\psi_x = -2U\lambda c \sinh \xi \sin \eta + Uy \text{ along } OX$$

and  $\psi_y = 2V\lambda c \sinh \xi \cos \eta - Vx \text{ along } OY$ ,

where  $x + iy = c(1 + \lambda^2 e^{2\xi + 2i\eta})^{\frac{1}{2}}$ .

**15047.** (Rev. Prebendary W. A. WHITWORTH, M.A.)—[The Proposer desires to withdraw Quest. 14998, as the statement made is true only in a restricted sense.—EDITOR.] Prove that the lowest value of N for which the equation  $x^2 + 3y^2 = N$  has 24 solutions in positive integers, zero excluded, is  $N = 214396$ .

**15048.** (ROBERT W. D. CHRISTIE.)—Show that there is an infinite catena of equations of the type  $x_n^2 - 2y_n^2 = 1$ , and give a few of the first links. E.g.,  $x_1 = 4y_1 + 1$ ,  $x_4 = 16x_2y_2 + 1$ ,  $y_1 = 2x_2$ ,  $y_4 = 8x_2y_2 - 4x_2$ .

**15049.** (Professor SANJANA, M.A.)—Three whole positive numbers,  $a, b, c$ , which are not all divisible by the same number, and every two of which are together greater than the third, satisfy the relation

$$5(a^2 + b^2 + c^2) = 6(bc + ca + ab);$$

prove that the excess of every two over the third is of the form  $2p^2$ .

**15050.** (L. ISSERLIS.)— $c, a_1, a_2, \dots, a_r, \dots, a_n$  are positive integers, such that there is no factor common to  $a_1, a_2, \dots, a_n$  which is not also a factor of  $c$ . Let  $\{c|a_1a_2\dots a_n\}$  denote the number of positive integral (not zero) solutions of the equation

$$a_1x_1 + a_2x_2 + \dots + a_nx_n = c.$$

Show that  $\{c|a_1a_2\dots a_n\} = \sum \{(c - pa_n) | a_1a_2\dots a_{n-1}\}$ , where the summation extends to all positive integral values of  $p$  such that  $c - pa_n > 0$ .

The number of positive integral (not zero) solutions of

$$(i.) \quad 3x + 5y + 7z = 73, \quad (ii.) \quad 3x + 5y + 7z + 30u = 103$$

is (i.) 20, and (ii.) 26.

**15051.** (R. KNOWLES.)—Prove that the sum to  $r$  terms of the series

$1 - 6 + 15 - 28 \dots \pm r(2r - 1)$ , when  $r$  is an even number,  $= -\frac{1}{3}r(2r + 1)$ , and, when  $r$  is an odd number,  $= \frac{1}{3}(r + 1)(2r - 1)$ .

**15052.** (R. TUCKER, M.A.)—P, Q, L ( $m_1, m_2, m_3$ ) are co-normal points on a parabola, as also are R, T, L' ( $\mu_1, \mu_2, \mu_3$ ), for which O, O' are the respective co-normal points. PQ, RT are also orthogonal focal chords. Prove that OO' and LL' pass through fixed points on the axis and intersect on a fixed perpendicular to the axis. The points O, O' lie on a parabola.

**15053.** (A. M. NESBITT, M.A.)—If the conic  $S \equiv (abcfgh)(xy - 1)^2 = 0$  passes through the vertices of a triangle whose sides touch  $y^2 = 4px$ , the point whose coordinates are  $x = p - [k(a - b)]/N^2p$ ,  $y = -2kh/N^2p$  lies on S, where  $k = ap^2 + 2gp + c$ ,  $N^2 = (a - b)^2 + 4h^2$ . Discuss the case when  $a = b$  and  $h = 0$ .

**15054.** (S. F. S. HILL.)—There are six confocals to  $x^2/a^2 + y^2/b^2 = 1$ , such that quadrilaterals circumscribed to this ellipse are inscribed in the confocal, and the six values of  $\lambda$  [ $x^2/(a^2 + \lambda) + y^2/(b^2 + \lambda) = 1$ ] are given by  $(\lambda^2 - a^2b^2)(\lambda^2 + 2b^2\lambda + a^2b^2)(\lambda^2 + 2a^2\lambda + a^2b^2) = 0$ .

**15055.** (Rev. T. ROACH, M.A.)—If two ellipses have equal major axes and a common vertex, show that they meet in only one other point.

**15056.** (Professor NEUBERG.)—Trouver le lieu du sommet d'un angle circonscrit à une parabole, les côtés de cet angle étant parallèles à deux diamètres conjugués quelconques d'une conique donnée.

**15057.** (H. BATEMAN.)—Prove the following construction for the asymptotes of a conic, given four points, the centre, and the centre locus:—Let O be the centre of the conic, P any point on the centre locus. Draw a line through O parallel to the polar of P with respect to any conic through the four points, and let it meet the centre locus in Q. Let CRR' be the diameter of the centre locus bisecting PQ. Then OR, OR' are the asymptotes of the conic.

**15058.** (Professor NANSON.)—If OP, OQ are small equal arcs of a curve and its circle of curvature at O, show that the difference of the chords of these arcs is  $\frac{1}{2}\kappa\kappa'OP^4$ , where  $\kappa$  is the curvature and  $\kappa' = d\kappa/ds$ .

**15059.** (Professor COCHEZ.)—On donne trois droites Ox, Oy, Oz. Trouver dans leur plan un point M tel qu'abaissant les perpendiculaires MA, MB, MC sur ces droites, on ait la relation

$$pMA + qMB + mMC = k^2,$$

$m, p, q$  étant des longueurs données.

**15060.** (Professor MORLEY.)—Prove that the circum-circle and nine-point circle of a triangle are inverse as to the director circle of the maximum inscribed ellipse.

**15061.** (J. PRESCOTT.)—From the fact that the inverse of a plane is a sphere through the centre of inversion, deduce that the inverse of a circle, with respect to a point not in its plane, is a circle.

**15062.** (Professor SANJANA, M.A.)—On the circum-circle of a triangle ABC a fixed point P is taken, and QR is a chord of the circle parallel to the SIMSON-line of P: prove that PR is parallel to the SIMSON-line of Q, and PQ to that of R. The triangle formed by the three SIMSON-lines is homothetic to the triangle PQR: find the locus of the homothetic centre as QR moves parallel to itself.

**15063.** (Professor UMES CHANDRA GHOSH.)—(Suggested by Quest. 14012). Prove the following identities, if  $a + \beta + \gamma = s$ :—

$$(a) \quad 16 \{ \sin^5(\beta - \gamma) \sin(5s - 3\alpha) + \sin^5(\gamma - \alpha) \sin(5s - 3\beta) + \sin^5(\alpha - \beta) \sin(5s - 3\gamma) \} + \sin(\beta - \gamma) \sin(s + 9\alpha) + \sin(\gamma - \alpha) \sin(s + 9\beta) + \sin(\alpha - \beta) \sin(s + 9\gamma) = 40 \sin(\alpha - \beta) \sin(\beta - \gamma) \sin(\gamma - \alpha) \sin 4s.$$

$$(b) \quad 16 \{ \sin^5(\beta - \gamma) \cos(5s - 3\alpha) + \sin^5(\gamma - \alpha) \cos(5s - 3\beta) + \sin^5(\alpha - \beta) \cos(5s - 3\gamma) \} + \sin(\beta - \gamma) \cos(s + 9\alpha) + \sin(\gamma - \alpha) \cos(s + 9\beta) + \sin(\alpha - \beta) \cos(s + 9\gamma) = 40 \sin(\alpha - \beta) \sin(\beta - \gamma) \sin(\gamma - \alpha) \cos 4s.$$

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**8091.** (A. GORDON, M.A.)—If ABCD is a quadrilateral, M, N the mid-points of AC, BD: prove that (1) MN cuts AB (in P), DC (in R) in segments inversely proportional; (2) if MN cuts CB, AD in Q, S, then MP : MR = MQ : MS, and NP : NR = NS : NQ.

**8276.** (Professor CATALAN.)—Démontrer la formule

$$\frac{1}{2} \pi = 1 - \frac{1}{2} + \frac{1}{4} - \dots \mp \frac{1}{2m-1} - 2m \int_0^{1/2} \cos 2nx \log_e (2 \cos \frac{1}{2}x) dx.$$

**9037.** (Professor SCHEFFER, M.A.)—Show that the reciprocal polar of the evolute of the parabola  $y^2 = 4a(x + a)$ , the focus being the origin, with regard to a circle whose diameter is equal to the semi-latus-rectum,

is the curve  $r \cot \theta = a \sin \theta$ , which represents a circular cubic, of which  $x = a$  is an asymptote, and the point at infinity a point of inflexion.

**9188.** (R. HOLMES, B.A.)—Obtain the solution of the equation  $x^2 y' dx^2 - 2 (\cot 2x + \cos \theta) (dy/dx) + 2 \cos \theta \cot x \cdot y = 0$  in the form  $y = A e^{x \cos \theta} \{ \sin x \cos B + \cos x \cos (B + \theta) \}$ , where  $B = e + x \sin \theta$ ; and  $A, e$  are any two arbitrary constants.

**9779.** Prove the following identities

$$(1) \begin{matrix} 0, & 1, & 1, & 1, & \dots, & 1 \\ 1, & 0, & x_1 + x_2, & x_1 + x_3, & \dots, & x_1 + x_{n+1} \\ 1, & x_1 + x_2, & 0, & x_2 + x_3, & \dots, & x_2 + x_{n+1} \\ 1, & x_1 + x_3, & x_2 + x_3, & 0, & \dots, & x_3 + x_{n+1} \\ \dots & \dots & \dots & \dots & \dots & \dots \\ 1, & x_1 + x_{n-1}, & x_2 + x_{n-1}, & x_3 + x_{n-1}, & \dots, & 0 \end{matrix}$$

$$= -(-2)^n x_1 x_2 \dots x_{n+1} \left\{ \frac{1}{x_1} + \frac{1}{x_2} + \dots + \frac{1}{x_{n+1}} \right\}$$

$$(2) \begin{matrix} 0, & x_1 + x_2, & x_1 + x_3, & \dots, & x_1 + x_{n+1} \\ x_1 + x_2, & 0, & x_2 + x_3, & \dots, & x_2 + x_{n+1} \\ x_1 + x_3, & x_2 + x_3, & 0, & \dots, & x_3 + x_{n+1} \\ \dots & \dots & \dots & \dots & \dots \\ x_1 + x_{n-1}, & x_2 + x_{n-1}, & x_3 + x_{n-1}, & \dots, & 0 \end{matrix}$$

$$= \frac{1}{2} (-2)^n x_1 x_2 \dots x_{n-1} \left\{ (x_1 + x_2 + \dots + x_{n+1}) \left( \frac{1}{x_1} + \frac{1}{x_2} + \dots + \frac{1}{x_{n+1}} \right) - (n-1)^2 \right\}$$

$$(3) \begin{matrix} 0, & 1, & 1, & \dots, & \text{to } n \text{ columns} \\ 1, & 0, & 1, & \dots, & \text{''} \\ 1, & 1, & 0, & \dots, & \text{''} \\ \dots & \dots & \dots & \dots & \dots \end{matrix} = (-1)^{n-1} (n-1).$$

the last to be proved independently, and then shown to be consistent with the first two.

**9922.** (E. LEMOINE.)—Par un point M du plan du triangle ABC mener les deux transversales réciproques qui passent par ce point. Dans quelles régions du plan doit se trouver M, pour que la solution soit réelle ?

**10097.** (W. J. C. SHARP, M.A.)—Prove that the feet of the perpendiculars from any point, whose isogonal conjugate lies upon the plane at infinity, upon the faces of the tetrahedron of reference lie in a plane.

**10277.** (E. CESÀRO.)—Si  $\alpha$  est la  $n^{\text{ème}}$  partie d'un quadrant, démontrer que, pourvu que  $p < 2n$ ,

$$\sin^{2p} \alpha + \sin^{2p} 2\alpha + \sin^{2p} 3\alpha + \dots + \sin^{2p} n\alpha = \frac{1}{2} + n \frac{1 \cdot 3 \cdot 5 \dots (2p-1)}{2 \cdot 4 \cdot 6 \dots 2p}$$

**NOTICE TO CORRESPONDENTS.**

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

**NOTICE.**—Vol. LXXV. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

**THE LONDON MATHEMATICAL SOCIETY.**

Thursday, January 9th, 1902.—Dr. Hobson, F.R.S., President, in the Chair. Present, fourteen members and a visitor.

The Rev. J. Cullen was admitted into the Society. The President (Major MacMahon in the Chair) communicated a paper "On Non-uniform Convergence, and the Integration of Series." Remarks upon the paper were made by Messrs. Larmor, Love, S. Roberts, Whittaker, and the Chairman.

Mr. S. Roberts read a paper "On Networks" (connected with the Map-colouring Problem).

The following papers were taken as read:—"On the Integrals of the Differential Equation

$$\frac{du}{\sqrt{f(u)}} + \frac{dv}{\sqrt{f(v)}} = 0, \text{ where } f(x) \equiv ax^4 + 4bx^3 + 6cx^2 + 4dx + e,$$

considered geometrically," Prof. W. Snow Burnside; and "On the Fundamental Theorem of Differential Equations," Mr. W. H. Young.

In the notice about Amicable Numbers in the Educational Times of 1st January, 1902, p. 40, left column, and last paragraph, read: "announced the discovery of two new pairs," i.e., of Amicable Numbers.

**TEXT-BOOKS, &c., BY J. H. COWHAM**

## Educational Publications.

NOW READY. THIRD REVISED AND ENLARGED EDITION.

**THE STUDENT'S CHEMISTRY:** being Outlines of Inorganic Chemistry and Chemical Philosophy. Adapted for the Board of Education's Examinations in Inorganic Chemistry, the Oxford and Cambridge Local Examinations, the Examinations in Chemistry at the various Universities, &c. By R. L. TAYLOR, F.I.C., F.C.S., Organizing Science Master for the Manchester School Board. Author of "Chemistry for Beginners," "Analysis Tables for Chemical Students," &c. With over 600 Questions and Problems. Crown 8vo, 5s.

**LOW'S CHEMICAL LECTURE CHARTS.** A Series of Twenty-five sheets, 40 in. by 30 in., price £1. 11s. 6d. net; backed with Linen, £2. 10s. net; backed with linen, varnished, and mounted on rollers, £3. 10s. net. Prospectus giving full particulars post free on application.

### WORKS ON CHEMISTRY.

By R. L. TAYLOR, F.I.C., F.C.S.

**CHEMISTRY FOR BEGINNERS.** Adapted for the Elementary Stage of the Science and Art Department's Examinations in Organic Chemistry. Fifth Edition, enlarged. Illustrated. With 200 Questions and Problems. Crown 8vo, 2s. 6d.

**APPENDIX.—EXERCISES IN PRACTICAL CHEMISTRY, MOSTLY QUANTITATIVE.** Crown 8vo, 24 pages, paper covers, 6d.

**CHEMICAL PROBLEMS WITH SOLUTIONS:** being the Key to the Problems in "Chemistry for Beginners" and "The Student's Chemistry." By R. L. TAYLOR and S. PARRISH, A.R.C.S. (Lond.), Teacher of Chemistry in the Central Higher-Grade School, Leeds. Crown 8vo, cloth, 2s. 6d.

**ANALYSIS TABLES FOR CHEMICAL STUDENTS.** Adapted for the Advanced Stage of Practical Inorganic Chemistry and the Elementary and Advanced Stages of Practical Organic Chemistry. Crown 8vo, Imp. cloth, 1s. 3d. APPENDIX, paper covers, 3d.

By CHAPMAN JONES.

**PRACTICAL INORGANIC CHEMISTRY:** a Course of Elementary Experiments. Crown 8vo, cloth, 2s. 6d.

By JOHN MILLS, F.R.A.S.

**ALTERNATIVE ELEMENTARY CHEMISTRY:** being a Course of Lessons adapted to the requirements of the New Syllabus of Chemistry recently instituted by the Science and Art Department. With a Preface by Professor THORPE, F.R.S. Illustrated with 65 Drawings. Crown 8vo, 104 pages, cloth, 1s. 6d.

**CHEMISTRY FOR STUDENTS:** a Text-book for the Elementary Course, Science and Art Department. With over 300 Illustrations. Crown 8vo, cloth, 3s. 6d.

**ANSWERS TO EXAMINATION QUESTIONS.** Alternative Course, Course, 1887-91 inclusive. Crown 8vo, boards, 1s.

**ANSWERS TO EXAMINATION QUESTIONS IN CHEMISTRY:** Theoretical and Practical. Ordinary Course, 1887-91 inclusive. Crown 8vo, boards, 1s.

By T. HANDS, M.A.

**NUMERICAL EXERCISES IN INORGANIC CHEMISTRY.** Crown 8vo, 2s.; with the Answers, 2s. 6d.; Answers separately, 6d.

**THE BIBLE FOR THE YOUNG.** A Series for Schools and Families. By Rev. J. PATERSON SMYTH, B.D., LL.D., Author of "How we got our Bible," "How God inspired the Bible," "How to read the Bible," "The Old Documents and the New Bible," &c.

The *Guardian* says of first volume:—"Packed with thought. Very far above the average standard of Sunday-school lessons." Similarly warm appreciation is expressed by the *Record*, *Literary World*, *Bookman*, &c., &c.

The aim of this series is expressed by the Latin motto in the Introduction—"Placere, docere, movere." 1st. To make the Bible characters live before the child. 3rd. To move his heart to definite high purposes. But it is under the 2nd head ("docere") that the chief characteristic of the series appears—the effort, running all through, to save the child from scepticism in after-life by guarding him against the crude and narrow teaching of the Bible in his childhood.

The old plan was to wait till religious difficulties had made people unbelievers, and then give them books of Christian evidence to win them back by explaining that their childhood's teaching had not been quite correct, and must now be modified by a broader and slightly different view. This series tries the other method of not exposing them to unbelief.

NOW READY.

**GENESIS, ST. MATTHEW.**

IN THE PRESS.

**JOSHUA, JUDGES, THE PRAYER BOOK.**

Single Volumes, 1s.; cloth, 1s. 6d. net. Two Volumes together, 52 lessons, including 4 for Festivals, cloth, 2s.

NEW STUDENT'S EDITION.

**NEW METHODS IN EDUCATION:** Art, Real Manual Training, Nature Study. Explaining processes whereby hand, eye, and mind are educated by means that conserve vitality and develop a union of thought and action. By J. LIBERTY TADD. With a wealth of Illustration. Imp. 8vo, cloth, 8s. 6d. net.

"Recommended to all who are interested in the introduction into our schools of real and profitable art training."—*Athenaeum*.

"It contains all that elementary teachers will be able to make use of."—*School Guardian*.

**ART.—ELEMENTARY HISTORY OF ART.** By N. D'ANVERS. Fourth Edition, revised and brought up to date. With 375 Engravings. Crown 8vo, 10s. 6d.; or in two parts, in plainer binding:—I. Architecture and Sculpture, 5s.; II. Painting: Ancient and Modern, 6s.

**GEOGRAPHY.—PHYSICAL GEOGRAPHY.** By A. GUYOT. Profusely Illustrated. 4to, 10s. 6d.

**GEOGRAPHY.—ECLECTIC PHYSICAL GEOGRAPHY.** By R. HINMAN. With numerous Illustrations. Crown 8vo, 5s.

**GEOMETRY.—A PRIMER OF ORTHOGRAPHIC PROJECTION** (Solid Geometry, &c.). By G. T. PLUNKETT. Crown 8vo, 2s. 6d.

**GRAMMAR.—AN ENGLISH GRAMMAR WITH ANALYSIS AND PROSODY.** For the use of Teachers and the Higher Classes in Schools. By S. E. STRONG, M.A., Q.U.I., Inspector of Schools; and A. R. FAGAR, M.A., T.C.D., First Senior Moderator, and sometime Professor of English Language at Alexandra College, Dublin. Crown 8vo, cloth, 3s.

**HEAT.—A SCHOOL COURSE IN HEAT.** Revised and Enlarged. By W. LARDEN, M.A., Assistant Master in the R.N.E. College, Devonport, late Science Scholar, Merton College, Oxford. Fifth Edition. Enlarged and re-written. Crown 8vo, cloth, 5s.

A Text-book at Rugby, Clifton, Cheltenham, Bedford, Birmingham, Uppingham, and other eminent Schools and Colleges.

**HISTORY.—SCHOOL CHRONOLOGY; OR, THE GREAT DATES OF HISTORY.** By the Rev. W. J. CONYBEARE, M.A., sometime Fellow of Trinity College, Cambridge. New Edition, by the Rev. EDWARD CONYBEARE, 16mo, paper cover, 1s.

**HISTORY.—HARMONY OF HISTORY.** By ASHLEY BICKERSTETH, B.A. 4to, 2s. 6d.

**HISTORY.—OUTLINES OF ROMAN HISTORY.** Four Periods on Sheet. By ASHLEY BICKERSTETH, B.A. 4to, 2s. 6d.

**MECHANICS.—A TEXT-BOOK OF MECHANICS AND HYDROSTATICS.** By HERBERT HANCOCK, M.A., F.R.A.S., F.R.Met.Soc., late Scholar and Triple prizeman at St. John's College, Cambridge. Lecturer on Geometry to the Architectural Association, London. With over 400 Diagrams. Crown 8vo, cloth extra, 5s.

**PHILOSOPHY.—DUGALD STEWART'S OUTLINES OF MORAL PHILOSOPHY.** By JAMES McCOSH. With a Memoir, Supplement, and Questions. Post 8vo, 3s. 6d.

**PHYSICAL EDUCATION.—HOW TO GET STRONG AND HOW TO STAY SO.** By WILLIAM BLAIRIE. With Illustrations. 16mo, cloth, 5s.

**PHYSICAL EDUCATION.—SOUND BODIES FOR OUR BOYS AND GIRLS.** By WILLIAM BLAIRIE. With numerous Illustrations. 16mo, cloth, 2s. 6d.

**PHYSICAL EDUCATION.—A MANUAL OF SWEDISH DRILL FOR TEACHERS AND STUDENTS.** By GEORGE L. MELLO, Gold Medalist. New Edition. Crown 8vo, boards, 2s. 6d.

**PHYSICAL SCIENCE.—SHORT STUDIES IN PHYSICAL SCIENCE.** By VAUGHAN CORNISH, M.Sc. Illustrated. Crown 8vo, cloth, 5s.

**ZOOLOGY.—TEXT-BOOK OF ZOOLOGY.** By Dr. J. E. V. BOAN, Lecturer in Zoology in the Royal College of Agriculture, Copenhagen. Translated by W. J. KIRKALDY, Tutor in Natural Science to the Association for the Education of Women, Oxford, and E. C. POLLARD, B.Sc. Lond., Assistant Lecturer in Biology, University Extension College, Reading. Illustrated with 427 Figures. 1 vol. roy. 8vo, cloth extra, 21s. net.

## The Old Testament Narrative for Schools.

Compiled in the Words of the Authorized Version.

By MARCUS DODS, M.A. (Edin.), B.A. (Cantab.).

Cloth, Red Edges. Price 2s. 6d.

This edition of the historical portions of the Old Testament has been compiled to meet certain of the obvious difficulties of teaching from the Scriptural books themselves. The compiler's object is two-fold:—(1) To arrive at a single statement of the history, freed from legal and ceremonial details; from repetition, so confusing to the youthful mind; and from those genealogical and other lists which so frequently interrupt the essential historical narrative. (2) To remove everything which makes the reading aloud of considerable parts of the Scriptural books undesirable. The arrangement of the story in sections, with heading, will be acceptable alike to Teachers and Pupils and general readers.

### Two entirely New Series of Literary Reading Books.

## THE ROYAL PRINCE READERS. THE ROYAL PRINCESS READERS.

MANY COLOURED PICTURES BY WELL-KNOWN ARTISTS.

LESSONS CAREFULLY GRADUATED.

*Beautifully Clear Type.*

*Paper and Binding of the highest quality.*

Book IV. Price 1s. 3d.

Book V. Price 1s. 6d.

# ROYAL WALL ATLASES.

Combined Teaching and Test Maps.

Printed in Colours on strong Manilla Paper, and Mounted on One Roller.

## ROYAL WALL ATLAS. ROYAL WALL ATLAS. ROYAL WALL ATLAS.

### INTRODUCTORY.

Full Coloured.

For Standards I. and II.  
Nine Sheets, 28 inches by 39½ inches. Price 12s. 6d.

#### LIST OF SHEETS.

1. Cardinal Points.
2. Picture and Plan.
3. Picture and Plan.—Scale.
4. Picture, Plan, and Map.—Scale.
5. Picture and Map—Geographical Terms (Sea Coast).
6. Picture and Map—Geographical Terms (Inland District).
7. A River.—Picture, Map, and Views.
8. Physical Relief Map of England (or Scotland).
9. Form and Size of the Earth.

## ROYAL WALL ATLAS.

New Edition. Full Coloured. 12 Maps.

### No. I. THE BRITISH ISLES.

Printed on strong Manilla Paper, 31 inches by 41½ inches. Price 12s. 6d.

#### LIST OF MAPS.

1. British Isles—Physical.
2. England—Physical.
3. England—Political.
4. England—Northern Section (with Inset—Liverpool and Manchester District).
5. England—South-Eastern Section (with Inset—London District).
6. England—South-Western Section.
7. Scotland—Physical.
8. Scotland—Political.
9. Scotland—Central Section (with Inset—Edinburgh and Glasgow District).
10. Ireland—Physical.
11. Ireland—Political.
12. British Isles—Railways and Industries.

New Edition. Full Coloured. 12 Maps.

### No. II. EUROPE.

Printed on strong Manilla Paper, 34 inches by 38 inches. Price 17s. 6d.

#### LIST OF MAPS.

1. Europe—Physical.
2. British Isles and North Sea.
3. Norway and Sweden and the Baltic.
4. Russia.
5. Germany.
6. Holland and Belgium; Denmark.
7. France and Switzerland.
8. Austria and the Danube.
9. Spain and Portugal (with Inset—Gibraltar).
10. Italy.
11. Turkey, Greece, &c.
12. Europe—Commercial.

## ROYAL WALL ATLAS.

New Edition. Full Coloured. 12 Maps.

### No. III. THE BRITISH EMPIRE.

Printed on strong Manilla Paper, 34 inches by 38 inches. Price 17s. 6d.

#### LIST OF MAPS.

1. World, showing British Possessions.
2. The British Isles.
3. Africa, showing British Possessions.
4. Central and South Africa.
5. India.
6. Further India, &c.
7. Australasia.
8. South-Eastern Australia.
9. New Zealand.
10. British North America.
11. Canada—Eastern Provinces.
12. West Indies, &c.

### No. IV. BIBLE LANDS.

Printed in Colours.

Indispensable for the Bible Lesson and for use in Sunday Schools.

7 Maps.

Size, 41½ inches by 31 inches. Price 15s.

- Inorganic Chemistry for Advanced Students.** By Sir H. E. ROSCOE and A. HARDEN. 4s. 6d.
- Physics for Beginners.** By Sir M. FOSTER, K.C.B., and L. E. SHORE. 2s. 6d.
- Botany for Beginners.** By E. EVANS. Second Edition. 2s. 6d.
- Experimental Science (PHYSIOGRAPHY, Section I.)** By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. 2s. 6d.
- Physiography for Beginners.** By A. T. SIMMONS, B.Sc. 2s. 6d.
- Geology for Beginners.** By W. W. WATTS, M.A. 2s. 6d.

MACMILLAN &amp; CO., LIMITED, ST.

MARTIN'S STREET, LONDON, W.C.

# CAMBRIDGE UNIVERSITY PRESS.

## BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS' EXAMS., JULY AND DECEMBER, 1902.

### The Pitt Press Shakespeare for Schools.

**A Midsummer Night's Dream.** With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. Sixth Edition. With additions and corrections. 1s. 6d.

GUARDIAN.—“For schoolboys of fourteen and upwards this edition is not to be beaten, and we can congratulate Mr. Verity and the University Press upon the publication of what will probably become the standard school edition of this play.”

**Julius Cæsar.** By the same Editor. Sixth Edition. With further additions. 1s. 6d.

GUARDIAN.—“It is as good, and deserves as much praise, as its predecessors. As we said of them, we may say of this book, that in both notes and introduction Mr. Verity displays sound scholarship and learning, while he never forgets that he is writing for boys.”

### Pitt Press Series.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>Macaulay</b> ...	Lays of Ancient Rome	J. H. Flather	1 6
SCHOOL WORLD.—“Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done.”			
<b>Milton</b> .....	Sonnets	A. W. Verity	1 6
<b>Scott</b> .....	Lady of the Lake	J. H. B. Masterman	2 6
“ .....	Marmion	“	2 6
GUARDIAN.—“Far and away the best school edition of the poem we have seen, and it will be difficult, probably impossible, to improve on it.”			
<b>Caesar</b> .....	De Bello Gallico, Book I.	A. G. Peskett	1 6
“ .....	“ Books II.—III.	“	2 0
<b>Cicero</b> .....	De Senectute	J. S. Reid	3 6
<b>Livy</b> .....	Book II.	R. S. Conway	2 6
SCHOOL WORLD.—“This book is a really brilliant piece of editing, and is one of the best of the many excellent volumes of the ‘Pitt Press Series.’ This edition must be used in all classes where Livy is to be begun or continued.”			
<b>Horace</b> .....	Odes, Book I.	J. Gow	2 0
<b>Vergil</b> .....	Aeneid, Book V.	A. Sidgwick	1 6
<b>Euripides</b> ..	Alcestis	W. S. Hadley	2 6
“ ..	Hecuba	“	2 6
<b>Xenophon</b> ..	Anabasis, Book I.	A. Pretor	2 0
“ ..	“ Book IV.	“	2 0

**The Elements of English Grammar.** By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Forty-sixth to Fifty-fifth Thousand. Extra fcap. 8vo, 2s. 6d.

**An English Grammar for Beginners.** By A. S. WEST, M.A. Fifty-fifth to Seventy-fifth Thousand. 1s.

**A Key to the Questions contained in West's Elements of English Grammar, and English Grammar for Beginners.** By A. S. WEST, M.A. 3s. 6d. net.

SCHOOL WORLD.—“This key will supply a real want to the majority of teachers. . . . It is well arranged, and the answers are carefully drawn up.”

### Cambridge Series for Schools and Training Colleges.

**A Short History of the Expansion of the British Empire.** By W. H. WOODWARD, Christ Church, Oxford. With 7 Maps. Cloth, 4s. Cloth extra, gilt top, 5s.

**An Outline History of the British Empire from 1500 to 1870.** By W. H. WOODWARD. With Maps and Tables. 1s. 6d. net.

SCHOOL WORLD.—“This is an abridgement of the author's ‘Short History of the Expansion of the British Empire’ which we welcomed two years ago. The arrangement of chapters and the general order of the subject-matter have not been varied, and therefore it is excellently adapted to put into the hands of pupils, while the teacher reserves for himself the ‘Short History.’ We take this opportunity to heartily recommend both books to those who have not yet heard of the author.”

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>Milton</b> .....	Lycidas and Comus	A. W. Verity	2 0

### The following Editions have Complete Vocabularies:—

<b>Caesar</b> .....	De Bello Gallico, Book I.	E. S. Shuckburgh.	1 6
<b>Phaedrus</b> ..	Fables, Books I. and II.	J. H. Flather	1 6
<b>Vergil</b> .....	Aeneid, Book V.	A. Sidgwick	1 6
<b>Xenophon</b> ..	Anabasis, Book I.	G. M. Edwards	1 6
“ ..	“ Book IV.	“	1 6

Cambridge Editions of *Caesar*, *Vergil*, and *Xenophon*.—The attention of schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the *Pitt Press Series* and the *Cambridge Series for Schools and Training Colleges*. The Editions in the *Cambridge Series for Schools and Training Colleges* have *Complete Vocabularies*. If, in ordering, the Edition required is not specified, the *Pitt Press Edition*, without vocabulary, will be sent.

## PITT PRESS SHAKESPEARE FOR SCHOOLS.

### NEW VOLUME.

**Shakespeare.—Macbeth.** Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. 1s. 6d.

GUARDIAN.—“Undoubtedly the best school edition extant of this particular play, and possibly the best that has ever been produced of any play of Shakespeare's. We will, moreover, go further, and add that it is a mine of wealth for all students of Shakespeare, whatever may be their object in studying him.”

Subjects for Oxford and Cambridge Certificate Examinations, 1902.

**King Lear.** Edited by A. W. VERITY, M.A. Third Edition. 1s. 6d.

ACADEMY.—“A model edition.”  
BOOKMAN.—“Mr. Verity is an ideal editor for schools.”

**King Henry the Fifth.** Edited by A. W. VERITY, M.A. Second Edition. 1s. 6d.

GUARDIAN.—“The school edition of the play.”

## BOOKS SUITABLE FOR VARIOUS EXAMINATIONS, 1902.

### PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>Malot</b> .....	Remi et ses Amis	M. de G. Verrall	2 0
GUARDIAN.—“Mrs. Verrall's notes are models of what ‘junior’ notes should be. . . . The vocabulary is apparently complete, and the whole book may be with confidence pronounced excellent of its kind.”			
<b>Delavigne</b> ..	Les Enfants d'Edouard	H. W. Eve	2 0
<b>De Vigny</b> ..	La Canne de Jone	“	1 6
<b>Erekmann-Chatrion</b> }	Waterloo	A. R. Ropes	3 0
<b>Molière</b> .....	Le Misanthrope	E. G. W. Braunholtz	2 6
<b>Racine</b> .....	Les Plaideurs	“	2 0
“ .....	“ Abridged Edition	“	1 0
<b>Goethe</b> .....	Iphigenie auf Tauris	Karl Breul	3 6
<b>Hauff</b> .....	Das Wirthshaus im Spessart	{ A. Schlottmann & J. W. Cartmell }	3 0
“ .....	Die Karavane	A. Schlottmann	3 0

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
<b>Lessing</b> .....	Minna von Barnhelm	H. J. Wolstenholme	3 0
<b>Riehl</b> .....	Die Gananben und Die Gerechtigkei Gottes	“	3 0
<b>Schiller</b> ..	Wilhelm Tell	Karl Breul	2 6
“ ..	“ Abridged Edition	“	1 6
“ ..	Wallenstein II. (Tod)	“	3 6
<b>Sybel</b> .....	Prinz Eugen von Savoyen	E. C. Quiggin	2 6
<b>Horace</b> .....	Odes, Book I.	J. Gow	2 0
“ .....	“ Book II.	“	1 6
“ .....	Satires, Book I.	“	2 0
GUARDIAN.—“Decidedly the best edition for school purposes.”			
<b>Homer</b> .....	Iliad, Books IX. and X.	J. C. Lawson	2 6
<b>Xenophon</b> ..	Memorabilia, Book II.	G. M. Edwards	2 6

COMPLETE EDUCATIONAL LISTS ON APPLICATION.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

# CLASS LIST

## OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—CHRISTMAS, 1901.

[Throughout the following List, bracketing of names implies equality.]

### PRIZES.

*General Proficiency.*

**FIRST CLASS [OF SENIOR].**

- |  |  |
|--|--|
| 1. Davies, G. McD.<br>(Isbister Prize.)<br>2. Tudball, T. B. D.<br>(Pinches Prize.)<br>3. Browell, R.<br>4. Anderson, Miss E. F. | Mr. Hawe, High School for Boys, Croydon.<br>Mr. Morgan, Castle Hill School, Ealing.<br>Rev. Dr. Scott, Mercers' School, E.C.<br>Miss Burton, 19 Grange Park, Ealing. |
|--|--|

**SECOND CLASS [OF JUNIOR].**

- |   |  |
|---|--|
| 1. Dukes, Miss I. C.<br>2. Webster, G. E.<br>3. Benny, L. B.<br>4. Lacey, W. S. | Miss Conder, Milton Mount College, Gravesend.<br>Rev. J. Spink, Read's School, Drax, Selby.<br>Mr. Collins, Central Foundation School, E.C.<br>Dr. Græver, Park House School, Broadstairs. |
|---|--|

**THIRD CLASS.**

- |  |  |
|--|--|
| 1. Whipp, L. H.<br>2. Jarvis, Miss W. M.<br>3. Howard, Miss G.<br>4. Chubb, Miss E.<br>Prentice, M. A. | Mr. King, Haringey Park School, Crouch End.<br>Mrs. Pizzev, St. John the Divine's High School, Kennington.<br>Mrs. Barnes and Miss Mayoss, Alexandra College, Shirley, Southampton.<br>Miss Wilkes, Goodrich Road School, East Dulwich.<br>Mr. Methven, Woolston College, Southampton. |
|--|--|

*English Subjects.*

## DENT'S SCHOOL MOLIÈRE.

(FOR CAMBRIDGE LOCAL EXAMINATIONS, Dec., 1902.)

Molière's

### LE MISANTHROPE.

Edited, with Preface and very full Notes, by Prof. FREDERIC SPENCER.  
Cloth, 1s. 3d. net.*In the same Series:*

**LE BOURGEOIS GENTILHOMME.** 1s. 3d. net.  
**LES PRÉCIEUSES RIDICULES.** 1s. net.

*School World.*—"Noted above all for a scholarly flavour which is too rarely found in books intended for schools. The text is printed in the manner familiar to those who have seen the 'Temple Shakespeare.' The notes are commendably brief, but contain many happy renderings of Molière's often rather difficult expressions. To those who have been troubled by editions with overloaded commentaries this pretty little volume will appeal irresistibly."

*Educational Review.*—"A beautifully printed text and attractive format, and Prof. Spencer, in the notes, gives just such help as young students need for a proper appreciation of these masterpieces."

### Dent's Modern Language Series.

Edited by WALTER RIPPMMANN, M.A.

Based on the principles advocated by the pioneers of the Reform Movement in Germany (VIETOR, FRANCKE, WALTER, &c.), by the Association Phonétique Internationale, and by a large number of prominent teachers in Switzerland, Scandinavia, and America.

\*\* Full particulars of the Series post free.

# PROFESSOR MEIKLEJOHN'S SERIES.

Ready at the end of February.

Price 1s.

For Schools, Colleges, and Private Students.

## JULIUS CÆSAR.

EDITED BY

Professor J. M. D. MEIKLEJOHN, M.A.

This book has been specially published for students preparing for the College of Preceptors (1902) and other Examinations. It contains a full Introduction; Sketch of the Plot; Analysis of leading Characters; copious Notes on the Text; Notes on old or unusual Grammar, and on Scansion; Short Lives of the chief Characters; Historical Inaccuracies; Anachronisms; and typical Examination Papers. "Julius Cæsar" forms the first of a series which will be edited by, and produced under the direct supervision of, Professor MEIKLEJOHN, assisted by M. J. C. MEIKLEJOHN, B.A. Oxon.

Just Published. 470 pp.+viii. Price 2s. 6d.

## A SCHOOL HISTORY OF ENGLAND.

BY

J. M. D. MEIKLEJOHN, M.A.,

Professor of the Theory, History, and Practice of Education in the University of St. Andrews;

AND

M. J. C. MEIKLEJOHN, B.A.,

Sometime Adam de Brome Exhibitioner, Oriel College, Oxford.

"The book before us is a worthy addition to Professor Meiklejohn's well-known series of educational works. The volume, which will doubtless be largely used by the younger pupil-teachers, is intended as a stepping-stone to higher historical knowledge; and aims rather at a vivid picturing of leading events than at presenting a mass of dry detail. Maps, plans, summaries, and chronological tables are all clear and practical; and the vocabulary of historical terms will be welcome."—The Schoolmaster.

"A thoroughly good history. The writers have treated their subject skilfully; the arrangement of matter is admirable, and the brief, pithy summaries at the end of each reign are indeed unique."—The Board Teacher.

"The book is clearly written and is not too full of details. The facts are lucidly expressed, and the maps and vocabulary of historical terms are exceedingly well done. We unhesitatingly recommend the book as admirably adapted for schools."—The Educational News.

"Professor Meiklejohn's series have earned a just repute, which is in no way diminished by the latest recruit. For young folks it is just the thing, and we can with confidence bring it to the notice of our readers."—The Teachers' Aid.

Full particulars and Specimen pages may be had from the Publisher.

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE, E.C.

**A Short Geography**, with the Commercial Highways of the World. Nineteenth Edition. Crown 8vo, 196 pp. . 1s. 0d.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—The Teachers' Aid.

"Clearness and conciseness exemplified."—The Private Schoolmaster.

**Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. . 6d.

**Asia: its Geography, Resources, Commerce, &c.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 92 pp. (Ready shortly.) 6d.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. . 4d.

**The British Colonies and Dependencies: their Resources and Commerce.** With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. . 6d.

**A Short History of England and Great Britain**, B.C. 55 to A.D. 1890. Fourteenth Edition. Crown 8vo . 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—Education.

**Outlines of the History of England and Great Britain to A.D. 1890.** Fifth Edition. Crown 8vo, 84 pp. . 6d.

**A Short Grammar of the English Tongue**, with Three Hundred and Thirty Exercises. Twelfth Edition . 1s. 0d.

**A Short History of the English Language.** Crown 8vo, 76 pp. . 1s. 0d.

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. . 1s. 6d.

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . 1s. 0d.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—The School Guardian.

**One Hundred Short Essays in Outline.** By Prof. MEIKLEJOHN. Fourth Edition. 110 pp. . 1s. 0d.

"This is undoubtedly one of the most useful books for pupil-teachers, Scholarship and Certificate students, ever produced."—The Practical Teacher.

**The Book of the French Verb.** By J. DE CUSANCE. 107 pp. + viii. . 1s. 0d.

This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

**A First French Book.** By J. DE CUSANCE. With a Preface by Professor MEIKLEJOHN. Crown 8vo, 120 pp. . 1s. 0d.

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—The Educational News.

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . 1s. 0d.

With Answers. 1s. 6d.

"For boys and girls competing for the various County Council Scholarships nothing better could be desired."—The Teachers' Aid.

"It is one of the best Short Arithmetics ever produced. A great feature is the large number of examples culled from the various public examinations."—The Teachers' Monthly.

Matriculation Classes for intending Teachers.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

*Chairman of the Committee*—MR. W. MATHER, M.P.

*Treasurer*—MR. C. G. MONTEFIORE.

*Secretary*—MR. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

*Principal*—MISS E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

*Headmistress*—MISS A. YELLAND.

Further particulars may be obtained on application to the PRINCIPAL.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS,

EDINBURGH.

*Principal*—MISS M. R. WALKER.

This College provides a complete Course of Professional Training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class Teaching in good Schools. Students are admitted in January and October. Several Heriot Bursaries of £30 are offered in October. For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—MISS AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

## JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

*Registrar*—REV. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Headmasters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

FREE.

**For Schools, Colleges, and Private Students.**

## JULIUS CÆSAR.

EDITED BY

**M. J. C. MEIKLEJOHN, B.A. Oxon.**

This book has been specially published for students preparing for the College of Preceptors (1902) and other Examinations. It contains a full Introduction; Sketch of the Plot; Analysis of leading Characters; copious Notes on the Text; Notes on old or unusual Grammar, and on Scansion; Short Lives of the chief Characters; Historical Inaccuracies; Anachronisms; and typical Examination Papers. "Julius Cæsar" forms the first of a series which will be edited by, and produced under the direct supervision of, Professor MEIKLEJOHN, assisted by M. J. C. MEIKLEJOHN, B.A. Oxon.

*Just Published. 470 pp.+viii. Price 2s. 6d.*

## A SCHOOL HISTORY OF ENGLAND.

BY

**J. M. D. MEIKLEJOHN, M.A.,**

Professor of the Theory, History, and Practice of Education in the University of St. Andrews;

AND

**M. J. C. MEIKLEJOHN, B.A.,**

Sometime Adam de Brome Exhibitioner, Oriel College, Oxford.

"The book before us is a worthy addition to Professor Meiklejohn's well-known series of educational works. The volume, which will doubtless be largely used by the younger pupil-teachers, is intended as a stepping-stone to higher historical knowledge; and aims rather at a vivid picturing of leading events than at presenting a mass of dry detail. Maps, plans, summaries, and chronological tables are all clear and practical; and the vocabulary of historical terms will be welcome."—*The Schoolmaster.*

"A thoroughly good history. The writers have treated their subject skilfully; the arrangement of matter is admirable, and the brief, pithy summaries at the end of each reign are indeed unique."—*The Board Teacher.*

"The book is clearly written and is not too full of details. The facts are lucidly expressed, and the maps and vocabulary of historical terms are exceedingly well done. We unhesitatingly recommend the book as admirably adapted for schools."—*The Educational News.*

"Professor Meiklejohn's series have earned a just repute, which is in no way diminished by the latest recruit. For young folks it is just the thing, and we can with confidence bring it to the notice of our readers."—*The Teachers' Aid.*

*Full particulars and Specimen pages may be had from the Publisher.*

**A Short Geography, with the Commercial Highways of the World. Nineteenth Edition.** Crown 8vo, 196 pp. . 1s. 0d.  
"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid.*  
"Clearness and conciseness exemplified."—*The Private Schoolmaster.*

**Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. . . . . 6d.

**Asia: its Geography, Resources, Commerce, &c.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 92 pp. (*Ready shortly.*) 6d.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. . . . . 4d.

**The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions.** By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. . . . . 6d.

**A Short History of England and Great Britain, B.C. 55 to A.D. 1890. Fourteenth Edition.** Crown 8vo . . . . . 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature: and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education.*

**Outlines of the History of England and Great Britain to A.D. 1890. Fifth Edition.** Crown 8vo, 84 pp. . . . . 6d.

**A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Twelfth Edition.** . . . . . 1s. 0d.

**A Short History of the English Language.** Crown 8vo, 76 pp. . . . . 1s. 0d.

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. . . . . 1s. 6d.

**A New Spelling Book. With Side Lights from History. Eighth Edition.** Crown 8vo, 152 pp. . . . . 1s. 0d.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian.*

**One Hundred Short Essays in Outline.** By Prof. MEIKLEJOHN. Fourth Edition. 110 pp. . . . . 1s. 0d

"This is undoubtedly one of the most useful books for pupil-teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher.*

**The Book of the French Verb.** By J. DE CUSANCE. 107 pp. + viii. . . . . 1s. 0d.

This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

**A First French Book.** By J. DE CUSANCE. With a Preface by Professor MEIKLEJOHN. Crown 8vo, 120 pp. . 1s. 0d.

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News.*

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s. 0d.

With Answers, 1s. 6d.

"For boys and girls competing for the various County Council Scholarships nothing better could be desired."—*The Teachers' Aid.*

"It is one of the best Short Arithmetics ever produced. A great feature is the large number of examples culled from the various public examinations."—*The Teachers' Monthly.*

**New.**

## THE OXFORD & CAMBRIDGE HISTORY.

BY ROSCOE MONGAN, B.A.

ONE SHILLING.

COLOURED MAPS. ILLUSTRATIONS OF FAMOUS BATTLES.  
AN ENTIRELY NEW REPRINT. REVISED TO AUGUST 30, 1901.

Specimen Copies of the above Publications will be sent post free to Head Teachers in most cases.—Specimens of Class Text-Books only will be sent.

LONDON: GEORGE GILL & SONS, LIMITED, 13 WARWICK LANE, E.C.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, 1902.

## SUITABLE BOOKS IN THE University Tutorial and Preceptors' Series.

### LATIN AND GREEK GRAMMARS, &c.

**LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A.  
Camb. and Lond. 2s. 6d.

**LATIN READER, THE PRECEPTORS'.** By E. J. G. FORSE, M.A.  
Camb. and Lond. 1s. 6d.

**GREEK READER, THE TUTORIAL.** By A. WAUGH YOUNG, M.A.  
Lond. With Notes and Complete Vocabularies. *Second Edition.*  
2s. 6d.

**THE TUTORIAL HISTORY OF ROME, to A.D. 14.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond.  
3s. 6d.

**THE TUTORIAL HISTORY OF GREECE.** By W. J. WOODHOUSE, M.A., Lecturer in Greek in the University of Sydney. [*In the press.*]

### ENGLISH.

**HISTORY OF ENGLAND, THE MATRICULATION (to 1702).** By C. S. FEARENSIDE, M.A. Oxon. *Second Edition.* 3s. 6d.

**ENGLISH LANGUAGE, THE: Its History and Structure.** By W. H. Low, M.A. Lond. *Sixth Edition.* 3s. 6d.

**ENGLISH GRAMMAR, THE PRECEPTORS'.** By W. H. Low, M.A. Lond., and ARNOLD WALL, M.A. Lond. [*In the press.*]

**ENGLISH LITERATURE, THE TUTORIAL HISTORY OF.** By A. J. WYATT, M.A. Lond. and Camb. *Second Edition.* 2s. 6d.

**ENGLISH HISTORY, THE INTERMEDIATE TEXT-BOOK OF, 1603-1714.** By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb., B.A. Lond. 4s. 6d.

**MILTON.—SONNETS.** By W. F. MASOM, M.A. Lond. and Camb. 1s. 6d.

**SHAKESPEARE.—JULIUS CAESAR, MIDSUMMER NIGHT'S DREAM.** With Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. 2s. each.

### FRENCH.

**FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Camb. and Lond. With Passages for Translation into French. 2s. 6d.

**FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Camb. and Lond. 1s. 6d.

**FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. ès Sc., Univ. Gall. 1s. 6d.

**FRENCH COURSE, THE MATRICULATION.** By E. WEEKLEY, M.A. Lond. and Camb. 3s. 6d. Key, 2s. 6d. net.

This work includes accidence, elementary syntax, exercises, and passages for translation into French. The simplifications authorized by the Decree of Feb. 26, 1901, are incorporated.

**FRENCH PROSE READER.** Containing over 100 Extracts for Translation into English. Edited by S. BARLET, B. ès Sc., Examiner in French to the College of Preceptors, and W. F. MASOM, M.A. Lond. With NOTES and VOCABULARY. *Third Edition.* 2s. 6d.

**FRENCH READER, ADVANCED:** Containing Passages in prose and verse representative of all the modern authors. Edited by S. BARLET, B. ès Sc., Examiner in French to the College of Preceptors, and W. F. MASOM, M.A. Lond. *Second Edition.* 3s. 6d.

### BOOK-KEEPING.

**BOOK-KEEPING, THE PRECEPTORS'.** By T. C. JACKSON, B.A., LL.B. 1s. 6d. EXERCISE BOOK ruled Ledger, Cash, or Journal. 8d. each.

### HYGIENE.

**HYGIENE, FIRST STAGE.** By R. A. LYNTER, B.Sc., Principal of the Municipal Technical School, Smethwick; Exhibitioner and Medallist in Hygiene and Public Health. 2s.

### MATHEMATICS AND MECHANICS.

**ALGEBRA, THE TUTORIAL.** Part I. ELEMENTARY COURSE. By RUPERT DEAKIN, M.A. Lond. and Oxon. 3s. 6d.

**ALGEBRA, THE TUTORIAL.** Part II. ADVANCED COURSE. By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 6s. 6d.

**ARITHMETIC, THE TUTORIAL.** By W. P. WORKMAN, M.A., B.Sc., Headmaster of Kingswood School, Bath. 3s. 6d.

**COORDINATE GEOMETRY.** Part I. The Right Line and Circle. By BRIGGS and BRYAN. *Third Edition.* 3s. 6d.

**COORDINATE GEOMETRY.** Part II. The Conic. By J. H. GRACE, M.A., and F. ROSENBERG, M.A., B.Sc. *Second Edition.* 4s. 6d.

**EUCLID.** Books I.-II. By RUPERT DEAKIN, M.A. Lond. and Oxon. 1s. Books I.-IV., 2s. 6d.

**HYDROSTATICS, AN ELEMENTARY TEXT-BOOK OF.** With Examples and Answers. By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s.

**MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A. Camb., B.Sc. 2s. 6d.

**MENSURATION OF THE SIMPLER FIGURES.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and T. W. EDMONDSON, Ph.D., B.A. 2s. 6d.

**TRIGONOMETRY, THE PRECEPTORS'.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 2s. 6d.

### SCIENCE.

**BOTANY, FIRST STAGE.** By A. J. EWART, D.Sc., Ph.D., F.L.S. 2s.

**BOTANY, TEXT-BOOK OF.** By J. M. LOWSON, M.A., B.Sc. 6s. 6d.

**CHEMISTRY, THE TUTORIAL.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WM. BRIGGS, LL.D., M.A., F.C.S. Part I. NON-METALS. Part II. METALS. 3s. 6d. each.

**CHEMICAL ANALYSIS, QUALITATIVE AND QUANTITATIVE.** By WM. BRIGGS, LL.D., M.A., F.C.S., and R. W. STEWART, D.Sc. 3s. 6d.

**HEAT AND LIGHT, ELEMENTARY TEXT-BOOK OF.** By R. W. STEWART, D.Sc. Lond. *Third Edition.* 3s. 6d.

**HEAT, ELEMENTARY TEXT-BOOK OF.** By R. W. STEWART, D.Sc. Lond. 2s.

**LIGHT, ELEMENTARY TEXT-BOOK OF.** By R. W. STEWART, D.Sc. Lond. 2s.

**MAGNETISM AND ELECTRICITY, FIRST STAGE.** By R. H. JUDE, M.A., D.Sc. Lond. *Second Edition.* 2s.

**PHYSICS, THE TUTORIAL.** By R. WALLACE STEWART, D.Sc. Lond., and E. CATCHPOOL, B.Sc. Lond. In Four Volumes:—Sound, Heat, Light, Magnetism and Electricity. 3s. 6d. each vol.

**SCIENCE, GENERAL ELEMENTARY.** Edited by WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. *Third Edition.* 3s. 6d.

**SOUND, LIGHT, AND HEAT, FIRST STAGE.** By JOHN DON, M.A. 2s.

**ZOOLOGY, TEXT-BOOK OF.** By H. G. WELLS, B.Sc. Lond., F.Z.S. Enlarged and Revised by A. M. DAVIES, B.Sc. Lond. 6s. 6d.

Complete Catalogues, and Lists of Books Classified for each of the following Examinations may be had free on application:—

LONDON UNIVERSITY (including the Special Subjects for Matriculation, Inter. Arts and B.A., 1902 and 1903), Royal University of Ireland, and Intermediate Education Board, Cambridge and Oxford Local, and COLLEGE OF PRECEPTORS' (including the Set Subjects for July and December, 1902), Scotch Leaving Certificate, Teachers' Certificate (England and Scotland), South Kensington, and other Examinations.

## CASEY'S EUCLID.

### THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.

By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.  
Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

### A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."  
By JOSEPH B. CASEY, Tutor, University College, Dublin.  
Second Edition. Small 8vo, price 6s.

### A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."  
Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

### A TREATISE ON THE

### ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS.  
Containing an account of its most recent Extensions, with numerous Examples.  
New Edition. Crown 8vo.

### A TREATISE ON

### ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.  
Third Edition. Small 8vo, 148 pp., price 3s.

### KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.  
With numerous Examples and Questions. Second Edition. Price 3s.

### A TREATISE ON

### PLANE TRIGONOMETRY.

Containing an account of Hyperbolic Functions, with numerous Examples.  
Crown 8vo. Second Edition.

### Crown 8vo, price 5s.

### A TREATISE ON

### SPHERICAL TRIGONOMETRY,

AND ITS APPLICATION TO GEODESY AND ASTRONOMY.  
With numerous Examples.

LONDON: LONGMANS & CO.

## EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

# CAMBRIDGE UNIVERSITY PRESS.

NOW READY. Demy 8vo, paper covers, 1s.

**The Decentralising Policy of the Board of Education in England.** By Prof. S. S. LAURIE, LL.D., University of Edinburgh. An Address delivered to the Association of Principals and Lecturers of Training Colleges, in the National Society's Hall, Westminster, November 16, 1901.

NOW READY. Crown 8vo, cloth, gilt top, 6s. net.

**The Book of Psalms.** With Introduction and Notes by A. F. KIRKPATRICK, D.D., Master of Selwyn College, Cambridge; Regius Professor of Hebrew in the University of Cambridge.

The edition of the Psalms prepared by Prof. Kirkpatrick for the "Cambridge Bible for Schools" having been completed and published in three volumes, the whole work is now also published in a single volume. The page is larger than in the separate volumes, and, a thinner paper being used, it is thought that this edition will be found convenient in size, and that many readers will prefer it to the separate volumes.

## PITT PRESS SERIES.—NEW VOLUMES.

**Horace.—Satires. Book I.** Edited, with Introduction and Notes, by J. GOW, Litt.D. 2s.

*Guardian*.—"Decidedly the best edition for school purposes."

By the same Editor.

**Horace.—Odes and Epodes.** In One Volume. 5s.

ODES. Books I. and III. 2s. each. Books II. and IV. 1s. 6d. each.  
EPODES. 1s. 6d.

*Guardian*.—"Most admirable little books by a first-rate scholar and schoolmaster. The notes are brief, accurate, and are just what would be wanted by any ordinary student of Horace. There can, to our thinking, be no question about the satisfactory character of Dr. Gow's work."

**Homer.—Iliad. Books IX. and X.** Edited by J. C. LAWSON, M.A., Fellow of Pembroke College. 2s. 6d.

**Xenophon.—Memorabilia. Book II.** Edited, with Introduction and Notes, by G. M. EDWARDS, M.A., Fellow and Tutor of Sidney Sussex College, Cambridge. 2s. 6d.

## PITT PRESS SHAKESPEARE FOR SCHOOLS.

NEW VOLUME NOW READY.

**Macbeth.** Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. 1s. 6d.

*Guardian*.—"Undoubtedly the best school edition extant of this particular play, and possibly the best that has ever been produced of any play of Shakespeare's. We will, moreover, go further and add that it is a mine of wealth for all students of Shakespeare, whatever may be their object in studying him."

*School World*.—"Mr. Verity's editions of Shakespeare in this well-known series are always such a high level that it would be difficult to surpass their general excellence in any particular instance. 'Macbeth,' however, strikes us, if the thing be possible at all, as reaching a higher point than any previous play, or, perhaps, as exhibiting the common features of this edition in such a remarkable degree as to entitle it to the highest consideration. . . . It is an edition almost beyond praise."

**Geometry for Young Beginners.** An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, Head Master of Oundle School. 1s. 4d.

**Geometrical Drawing.** With Notes and Examples. By W. H. BLYTHE, M.A., Jesus College, Cambridge.

Part I.—Plane and Elementary Solid. 2s. 6d.

Part II.—Solid or Descriptive Geometry. 2s.

**The Contents of the Fifth and Sixth Books of Euclid.** Arranged and Explained by M. J. M. HILL, M.A., Sc.D., F.R.S., Professor of Mathematics at University College, London. Fcap. 4to, 6s. net.

**A Treatise on Elementary Hydrostatics.** By J. GRAVER, M.A., Fellow of Christ's College, Cambridge. Crown 8vo, 5s. Solutions to the Examples, crown 8vo, 5s.

**Livy. Book II.** With Introduction, Notes, and Map. By R. S. CONWAY, Litt.D., Professor of Latin in the University College of South Wales, Cardiff. 2s. 6d.

*Guardian*.—"This volume ranks with the best of the Pitt Press Series, and bears on every page the trace of a master hand. . . . We trust that this volume will receive from sixth-form masters the attention that it deserves."

*School World*.—"A really brilliant piece of editing. . . . This edition must be used in all classes where Livy is to be begun or continued."

*Journal of Education*.—"This is another useful, or even valuable, edition, with a good introduction, and notes which show that the editor is interested in them, and which are therefore likely to interest other people."

*Educational Times*.—"No better edition could possibly be desired for sixth forms and University students. . . . We trust that this book will meet with the success that its unusual excellence merits."

**Ovid.—Metamorphoses. Book VIII.** Edited, with Notes and Vocabulary, by W. C. SUMMERS, M.A., Assistant Lecturer in Latin in the Owens College, Manchester. 1s. 6d.

## MATHEMATICAL TEXT-BOOKS.

**Geometrical Conics.** By F. S. MACAULAY, M.A., Assistant Master at St. Paul's School. Crown 8vo, 4s. 6d.

**A Treatise on Elementary Dynamics.** By S. L. LONEY, M.A. Fifth Edition. Crown 8vo, 7s. 6d. Solutions to the Examples, crown 8vo, 7s. 6d.

**Plane Trigonometry.** By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College. Fifth Edition. Crown 8vo, 7s. 6d. Or in separate Parts:—

Part I.—Up to and including the Solutions and Properties of Triangles. 5s.

Part II.—De Moivre's Theorem and the Higher Portions. 3s. 6d.

Solutions to the Examples, 10s. 6d.

**A Treatise on Plane Trigonometry.** By E. W. HOBSON, Sc.D., Fellow of Christ's College, Cambridge, and University Lecturer in Mathematics. Demy 8vo, Second Edition, 12s.

## THE PITT PRESS MATHEMATICAL SERIES.

**Euclid.—Elements of Geometry.** Edited by H. M. TAYLOR, M.A., Trinity College, Cambridge.

Books I., II. 1s. 6d. Books III., IV. 1s. 6d.

Books V., VI. 1s. 6d. Books XI., XII. 1s. 6d.

Books I.—IV. 3s. Books I.—VI. 4s.

Books I.—VI. and XI., XII. In One Vol. complete, 5s.

**Solutions to the Exercises in Taylor's Euclid.** By W. W. TAYLOR, M.A. Books I.—IV. 6s. Books VI. and XI. 6s. Books I.—IV., VI., and XI. Crown 8vo, 10s. 6d.

**Arithmetic for Schools.** By C. SMITH, M.A., Master of Sidney Sussex College, Cambridge. With or without Answers. Stereotyped Edition. 3s. 6d. Or in Two Parts:—

Part I.—Chaps. I.—VIII., Elementary. With or without Answers, 2s.

Part II.—Chaps. IX.—XX. With or without Answers, 2s.

**Key to C. Smith's Arithmetic.** By G. HALE, M.A. Crown 8vo, 7s. 6d.

**Elementary Algebra.** By W. W. ROUSE BALL, M.A. 4s. 6d.

**Elementary Plane Trigonometry.** By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

**The Elements of Hydrostatics.** By S. L. LONEY, M.A. Crown 8vo, 4s. 6d.

**Elements of Statics and Dynamics.** By S. L. LONEY, M.A. Seventh Edition. 7s. 6d.

Part I.—Elements of Statics. 4s. 6d.

Part II.—Elements of Dynamics. 3s. 6d.

**Solutions of the Examples in the Elements of Statics and Dynamics.** By the same Author. Second Edition. 7s. 6d.

**Mechanics and Hydrostatics for Beginners.** By S. L. LONEY, M.A. Sixth Edition. 4s. 6d.

The Educational Times.

*Registration of Teachers.* THE Order in Council "for providing the manner in which a Register of Teachers shall be formed and kept," which was laid on the table of the House on January 21, has now become law. The text of the Order is printed on another page, together with a tabular analysis of the principal regulations, and a careful perusal of them will reveal certain features which distinguish this plan of registration from all others that have previously been put forward, as well as from those enactments which regulate the registration of members of other learned professions—in particular, that of medicine.

In previous measures for the registration of teachers promoted by the College of Preceptors, as well as in that promoted by the Teachers' Guild, the precedent of the Medical and Dentists Acts was followed, and full consideration was given to the claims of existing teachers in secondary schools by allowing them to register as such. The Order in Council makes no provision for the registration of teachers on this ground, however long they may have been employed ; and it goes further in declining to recognize, even at the outset, a number of certificates which have acquired current value, some of them as indicating sufficient attainments for ordinary school purposes, and others as all that can be reasonably required from teachers in lower forms or in kindergartens. On the other hand, it admits to the Register all classes of certificated teachers in public elementary schools, from the highest to the lowest. Thus it altogether fails to meet an urgent public need, inasmuch as it makes scarcely any attempt to discriminate among the large body of secondary masters and mistresses who are neither graduates nor certificated elementary teachers.

Other distinguishing features are that the Order in Council does not make registration compulsory, and that it distinguishes between two classes of teachers, the distinction being determined, not alone by actual qualification, but, essentially, by the kind of school in which the teacher has practised. Thus, the Register, in addition to the complete alphabetical list of registered teachers which alone was provided for by the Board of Education Act, is to contain two subsidiary lists, called Column A and Column B.

In Column A are to be included all teachers recognized by the Board of Education as certificated teachers, and in Column B teachers in other than public elementary schools who possess the qualifications referred to in Section 2 of the Schedule to the Order.

It will be seen that there is a wide difference between the minimum qualifications for Column A and those for Column B ; for the lowest Government certificate cannot be supposed to be within measurable distance of a university degree, and a certificate in theory and practice of teaching, which is to be compulsory for Column B, is not required for Column A. In spite of these differences of qualification, teachers in either column will all equally be entitled to describe themselves as "registered teachers," and the public can hardly be expected to distinguish between them. It follows that a teacher registered in Column A on one of the lowest Government certificates, who should afterwards be employed in a secondary school, might figure on the prospectus as a "registered teacher," while a less fortunate colleague, quite as well qualified by examination and experience, but unable to satisfy the much higher conditions for Column B, would be stigmatized as unregistered, and therefore not qualified to teach. It is to be expected that the demand for "registered teachers" will greatly stimulate the influx into secondary schools of teachers registered in Column A. Such a process of educational osmosis has long been in operation, and, if the regulations of the Order in Council were designed to impede the natural flow of teachers from the primary to the secondary school, they will probably defeat their object.

It is, we think, to be regretted that all teachers who possess the minimum qualification are not to be admitted on equal terms to the "Register of Teachers," and that a classification has been made which seems to have relation to the social status of the pupil, rather than to the attainments or professional position of the teacher. But a more serious objection to these regulations is that the public may be led to suppose that any qualification which is not accepted for registration is of lower value than the lowest recognized qualification—for example, than an infant-school mistress's certificate—and thus a grave injustice may be done to thousands of teachers, especially women teachers, who have worked hard to attain a standard of knowledge which, though confessedly below that required for a university degree, is at least respectable, and who have, moreover, in many cases been attested

as to their knowledge of the principles and practice of teaching. Such a refusal to recognize solid attainments of a limited range, even when accompanied by capacity to impart that knowledge, cannot fail to discourage the entry into the teaching profession of those who have special aptitude for the lower and less remunerative walks, and who are content to serve in them, and thus the supply of secondary teachers, which already falls short of the demand, will be still further restricted.

The defects in the Regulations are of such a character as seriously to impair their usefulness, but the Order in Council will, at least, make it possible for authoritative registration to be begun, and we may expect that modifications will be made in the regulations wherever they may be found inexpedient in practice, as provision for such modification is made in Section 10 of the Schedule to the Order. The value of the collective opinion of professional bodies is recognized by the inclusion of representatives of associations of teachers in the provisional Registration Council, and in the requirement that the Council "shall from time to time, and at least once a year, present a report of their proceedings to the Board, together with their observations on the working of the regulations." It is to be hoped that the Registration Council will have due regard to the legitimate claims of existing teachers in secondary schools, which have so far received but scant consideration.

---

### NOTES.

LIGHT has been thrown on some obscure points in the Order in Council relating to the Registration of Teachers by answers given in the House of Commons by the Vice-President of the Committee of Council on Education in reply to questions put by Colonel Lockwood and Mr. Bartley on February 24 and 28. A "recognized" school, said Sir John Gorst, is "one that, in the opinion of the Board of Education, is efficient," and "schools conducted for private profit would, if efficient, be recognized." He did not explain under what conditions a school would be recognized as efficient, but he added that, "if the Registration Council declined to recognize a school for the purposes of Sections 3 and 4 of the Order in Council, the authorities of the school might appeal to the Board of Education, and the efficiency of the school might be established by inspection under the Board of Education Act, 1899."

FROM further answers of the Vice-President it appears that the principal of an efficient private school may, under Section 4 of the Schedule to the Order in Council, be registered in Column B during the first three years without fulfilling the conditions required from other applicants for registration. It was also stated that it is to be left to the Registration Council to determine what kind of "experience in teaching" may be accepted during the first three years as part of the registration qualification. Thus it would appear that, during the probationary period at any rate, the Register is to be open to private tutors as well as to teachers in schools.

ONE other point about which there was some doubt has been cleared up by Sir John Gorst's explanations. He was asked whether the term "elementary school" used in the Schedule was to be interpreted as relating exclusively to a public elementary school as defined in the Education Act of 1870. In reply he stated that "an elementary school is defined by law to be a school, or department of a school, at which the ordinary payments in respect of the instruction from each scholar exceed ninepence a week." From this it is clear that preparatory schools, if efficient, may be recognized for the purposes of the registration regulations.

---

TEACHERS who are qualified to register in Column B will learn with some surprise that the fee charged to them is assessed so as not only to cover the cost of their own registration, but also that of registering sixty-four thousand public elementary teachers in Column A. A statement made by Sir John Gorst in the House of Commons, in reply to a question from Colonel Lockwood, leaves no doubt on this point. This arrangement seems unfortunate; it is inequitable, and it may deter secondary teachers from applying for a registration which, for the present at any rate, secures for them no privilege, nor any higher status than attaches to the lowest Government Certificate.

---

WE cannot but feel that the University of London has taken a step of doubtful expediency in finally determining to accept the proposals of the Technical Education Board of the County Council in connexion with the proposed day training college for teachers. By agreeing to allow the professor who will hold the Chair of Pedagogy in the University to act as Principal of the Training College, the Senate has, it is true, exonerated the corporate funds of the University from the burden of the professor's salary at the expense of the ratepayers. As, however, the scheme is based upon the assumption that the students will be, for the most part, King's scholars, whose general education is not completed, the training course must inevitably be limited to the needs of the elementary-school master. In no way therefore does it provide even the germ of an institution suited for the ordinary graduate who may be ambitious of pursuing a post-graduate course in pedagogics. It offers no hope that the London University chair will be a beacon to give guidance to humbler institutions experimenting in the young science of education.

---

WE congratulate the University of Wales on the acceptance of its Chancellorship by the Prince of Wales, in succession to his father. It was feared that a discordant note would have been introduced into the preliminary arrangements owing to the competition between the five towns of Swansea, Cardiff, Aberystwyth, Bangor, and Carnarvon for the honour of the installation ceremony. At a meeting of the University Court, held at Shrewsbury, the matter was, however, amicably settled in favour of Bangor, on the quaint ground of its proximity to Anglesey, the

cradle of the Tudors. One is tempted to draw a parallel between these innocent rivalries and the gruesome competition between English towns in the reign of Edward I. for portions of the body of the last survivor of the princely line of Wales. Fortunately, the Celtic sense of humour, which is not always brought to bear upon the solution of home problems, wisely led the Court to suppress all local jealousies, and the Prince will be sure of a loyal and enthusiastic welcome. We should not be surprised if the University adopted, as an additional motto, "Kings shall be thy nursing fathers." There is already a precedent in the case of Queen's College, Oxford—"Reginæ crant nutrices."

THE Senate of the University of London are to be congratulated on their resolution to select German as one of the four subjects to which the annual grant of £10,000 made by the London Technical Education Board is to be devoted. To advanced students in every department a knowledge of German is indispensable, and it is strange that it has not yet approached more nearly to French as a standard subject of instruction. It is to be hoped that the endowment will be devoted rather to the scholarly study of the existing language and literature than to antiquarian research. The temporary estrangement of the two great Teutonic and Protestant nations of Europe makes it all the more incumbent on educational authorities to promote mutual understanding—"Amantium iræ amoris integratio est."

THE generous offer made by the Drapers' Company and by a private individual to University College, London, amounting in all to £60,000, and subject to the condition that arrangements shall be made for its incorporation in the University of London, marks a step forward in the direction of a real teaching University for London. There are, no doubt, difficulties in the way. University College School could hardly be taken over, and might well be transferred to a good suburban site, as has again and again been urged both by the present Head Master and by his predecessor. It might also be necessary to place the Hospital and the Medical School under a separate trust. But, if the project is realized, as we trust it may be, the incorporation will be at once a well deserved tribute to the mother of University Colleges and a guarantee of a high standard of teaching and research in the reconstituted University. It may be remembered that University College was opened in 1828 as the University of London; its present designation dates from 1836. It is impossible to exaggerate the services it rendered to the nation during the dark days when Oxford and Cambridge were crippled by the ridiculous system of religious tests, and were sectarian, instead of national, institutions.

ALTHOUGH the movement for severing the connexion between the constituent colleges of Victoria University has, on the whole, been heartily welcomed by the governing bodies of the colleges as well as by the University Court, the graduates themselves are showing a strong opposition to a disruptive policy. At a meeting of Convocation, held at

Owens College, at which a hundred and fifty graduates were present, a resolution condemnatory of the scheme was carried by a large majority. The present state in the controversy is illustrative of some of the disadvantages following from the absence of deliberation. The governing fact in the situation is the determination of Liverpool to have its own University. It has been assumed that this demonstrates both the advisability and feasibility of having Universities also at Manchester and Leeds. As an impoverished and inefficient University is a national calamity, the question is of grave importance, and it is, perhaps, well that the strong action taken by the graduates in Convocation at Manchester will ensure a full discussion of the matter in all its bearings.

THE democratic element in French political life is not allowed to affect the principles which regulate the educational policy of the State, and the recent debate in the French Chamber on the reform of secondary education has shown that the majority of Frenchmen have no desire to loosen the fetters of the existing system. The whole organization of French education turns upon the pivot of the *baccalauréat*—or the leaving examination of the French secondary school. Without the diploma given to those who pass this examination no boy can hope to enter into the service of the State or into professional life. As the examination is a severe one, and none can hope to pass it who has not been through the regular mill of the *lycées*, it is evident that a boy who has followed a commercial or technical curriculum until he is fifteen or sixteen years of age is for ever debarred from a professional career. It is indeed maintained that the career of the average French boy is mapped out by his parents and the State before he is ten years old. M. Leygues, the Minister of Public Instruction, justified this during the debate by saying that "the *lycées* and the faculties must not be thrown open to all; for to do so would be to create a mass of educated men fit for nothing." There is some evidence that this result has already been produced, and it might perhaps be well if French educationists were to consider whether it is not the direct result of the present rigid uniformity of their educational system.

THE Report on Rural Education in France, issued last week by the Board of Education, is a valuable addition to the series of reports brought out by the Special Commissioners of the Board upon the state of education on the Continent. It discloses the existence of an hostility between the State schools and voluntary Church schools even more intense than that which exists in England. There is the same duplication of effort, and, it is needless to say, the children are the greatest sufferers. The hostility to the State schools is in some districts so pronounced that the teachers have the discomforts of a boycott, and in some instances they have even been stoned. Owing to the uniform scheme of salaries, the better teachers are not attracted to the towns, as is the case in England. The rural schools are said to be ahead of ours in the teaching of science and agriculture, and the children are shown the practical application of these sciences. The report is more favourable to *la morale*

—morality taught on a non-religious basis—than the usual English estimate of it. A high opinion is expressed of the French school inspector, who is “the real pivot between the schools and the Central Authority.”

PROF. SONNENSCHNIGER again writes to the *Times* in defence of the Birmingham plan of examining *viva voce* in prescribed books, leaving the choice to examinees and their teachers. It appears that the system was in use at Oxford some thirty years ago, and has since been abandoned in favour of a written examination. He calls attention to the material difficulties of setting papers in a great variety of books, involving a large staff of examiners and a good deal of printing, unless, as is the case both at Oxford and at Birmingham, plain texts are used instead of printed papers. No doubt *viva voce* is a useful supplement to a written examination, and a good antidote to the common practice of almost committing the crib to memory. But it is well worth considering whether, for the real purpose of a University matriculation, which is intended simply to ascertain whether a candidate is qualified to enter on academic studies, unseen papers are not in themselves sufficient. *Viva voce* examinations are of great value in many subjects, especially where, on the one hand, there is danger of mere reproduction, and where, on the other, a candidate's real knowledge is not in a presentable form and requires maieutic treatment to bring it out. Whether translation from a foreign language falls under either of these heads may be doubted.

In his evidence before the Lords' Committee on betting, Dr. Wood, of Harrow, said that the small amount of betting which existed in the school was due chiefly to home influence. The fact is a humiliating one, but we have little doubt that the experience of many a head master would confirm the Head Master of Harrow's statement. The Statute passed a few years ago making it an offence to send betting circulars to schoolboys explains why these missives now come from touts resident on the Continent. A recent prosecution has, however, shown that the real directing agent may reside on this side of the English Channel. Schoolmasters would, nevertheless, do well not to be confident that their boys enjoy an immunity from temptation because they take precautions against the cards of betting touts. Many highly reputable papers have their advertisements in odd corners. But the efforts of schoolmasters are of little use unless parents do their duty. In Dr. Wood's experience, he had met with cases where parents had sent money to their boys because they had been successful in backing a winning horse, and we have even known a case where a parent endowed his boy with a *Racing Calendar* on his leaving home for school.

THE sands of the life of Christ's Hospital as a London school are running out, to the keen regret of “old Blues,” whose affection for their stately home in Newgate Street is historic. In spite of the gross abuses which existed in the school when Charles Lamb and Coleridge indulged in “wit combats” in the cloisters, Elia had none but soft and golden

memories of the place when he wrote his essay thirty-five years after. The present boys, no doubt, look forward to the enjoyment, after the Easter holidays, of many delights at Horsham which were unattainable in the confined limits of their London premises. We can only hope that all their good traditions will follow them, in spite of the fact that they are entering upon new pastures, shepherded by a new Head Master, who is not a “Blue.” The boys' preparatory school at Hertford is also being removed, and the buildings thus left vacant will be used to increase the accommodation for girls. The Hertford schools still preserve their mellow mediæval atmosphere and monastic features, and no one should visit Hertford without going to see their quaint quadrangles of dames' houses, from whose hospitable doors many generations of budding Grecians have found their way to fame.

## SUMMARY.

### THE MONTH.

THE distribution of prizes at the Birkbeck Institution took place on January 29. The chair was taken by Dr. Collins, who spoke with his usual grace and good taste, and the prizes were distributed by Lord Balfour of Burleigh, who, without depreciating the evening work of the Institution, dwelt with satisfaction on the extension of the day classes. Short speeches were also made by Archdeacon Sinclair, Dr. Garnett, Dr. Kimmins, Mr. Whyte, the Chairman of the Council, and Mr. H. W. Eve. The report of the Principal, Mr. Armitage Smith, was extremely satisfactory. It appeared that during the year more than three thousand students, of whom about two thousand were men and one thousand women, had availed themselves of the advantages offered, and that the number of class entries was 10,500, 1,500 of which were for day classes, the latter showing an increase of two hundred on the previous year. Some fifty-four students had passed the Intermediate or Degree Examinations of the University of London, while numerous successes in other examinations were recorded. The average payment per student was 30s.; per class, about a lawyer's fee, 6s. 8d. Dr. Kimmins gave an interesting sketch of the improvements effected in the last few years, thanks to the energy of the Principal and the judicious and liberal aid of the London County Council, who have done much to add to the equipment. Certainly the most has been made of a very limited space; even the coal-cellar had been converted into a metallurgical laboratory. Lord Balfour, as Chief Secretary for Scotland, was gratified to hear that the Institution, the mother of the polytechnics, owed, in a certain sense, its origin to his native country. Dr. Birkbeck's first essay in this direction having been a series of lectures to Glasgow workmen. In his concluding speech, the Chief Secretary gave an interesting reminiscence. One day he received a visitor at his office. Before twenty minutes had elapsed he had an offer of £2,000,000 for educational purposes. Needless to say that the visitor was Mr. Carnegie.

At the distribution of prizes in the Technical Department of University College, Sheffield, it appeared that the same satisfactory increase in the number of day students was in progress as at the Birkbeck Institution. The metallurgical department, in particular, is developing very rapidly, and filling a gap which had long been felt. Prof. Ripper, in the course of his speech, mentioned that at the great technical school of Charlottenburg, at Berlin, alone there were 2,700 students over eighteen years of age, two-thirds of the whole number of technical students in the United Kingdom.

THE Society of Arts has followed the example of the College of Preceptors in instituting *viva voce* examinations in modern languages. At present the oral examination is intended to be supplementary to that now in existence, but hopes have been expressed that it may eventually become a necessary part of the examination for their higher certificates. For the present, oral examinations in French, German, and Spanish will be held at all

centres presenting a sufficient number of candidates, at an extra fee of 2s. 6d.

On February 12, Prof. S. J. Chapman read an interesting paper before the Manchester Statistical Society on "Education for Business and Public Life." He proposed the formation of a faculty in the University on somewhat the same lines as the London School of Economics. The point on which he chiefly insisted was the distinction between business instruments and *technique* on the one hand and "business science" on the other. The last-named, which he considered essential for the highest posts, included the academic study of many branches of social science, namely, besides economics properly so called, (1) economic geography, which describes the belts for different products and the needs of different climes, and the action of physical conditions on temperament, trade, industry, and political institutions; (2) mercantile and industrial law which presents in a systematic form the commercial obligations enforced by legal penalties; and (3) political science, which deals with the nature of the State, the scope of its activities, public administration and public finance, and which may be taken to include constitutional and international law. In this connexion, it may be mentioned that the University of London has under consideration a proposal for granting degrees in commercial science. A Faculty of Commerce is already in existence at Birmingham University.

THE University of Glasgow has sustained a serious loss by the death of Prof. Adamson at the early age of fifty. Educated at Edinburgh and Heidelberg, he was appointed at the age of twenty-four, after acting as assistant-professor for a short time at Edinburgh, to succeed Prof. Stanley Jevons in the Chair of Philosophy and Political Economy at Owens College, Manchester. In 1893 he accepted a chair at Aberdeen, and in 1895 became Professor of Logic and Rhetoric in the University of Glasgow. Few, if any, English scholars possessed a more thorough acquaintance with German philosophy. His articles in the "Encyclopædia Britannica," on Logic, and on Kant, Fichte, and other philosophers, together with a volume on Fichte in Blackwoods' "Philosophical Series," are works of permanent value, and his "Philosophy of Kant," one of his earliest books, have been translated into German. Prof. Adamson seems to have been no less distinguished as a teacher and organizer than as a philosophical writer.

THE *University Extension Journal* calls attention to the literary output of its lecturers during the past year. The Principal of Reading College, it says, has given to the world a work on the Geography of the British Isles. History is strongly represented in Mr. Alison Phillips's "Modern Europe (since 1815)," Mr. Belloc's "Robespierre" and "Paris," Mr. Gooch's "Annals of Politics and Culture," Prof. Grant's "The French Monarchy, 1483-1789," Mr. Horsburgh's "Savonarola," and in "Medieval London," written by Mr. Welch conjointly with Mr. Benham. Mr. P. J. Hartog has also edited a jubilee volume on the Owens College (1851-1900). Mr. Banister Fletcher's "History of Architecture" is a noteworthy contribution to the study of architecture by the comparative method. In literature we note the second edition of Mr. Churton Collins's "Ephemera Critica"; Mr. Hamilton Thompson's "History of English Literature" is practically a new work. Messrs. Wicksteed and Gardner have laid Dante students under a new debt by their "Dante and Giovanni del Virgilio." Mr. A. J. Wyatt's "Old English Reader" completes our list here. Social science is represented by "The Heart of the Empire," to which some of our lecturers contribute; and we can worthily close our survey with Dr. Hutchison's "Food and the Principles of Dietetics."

AN excellent idea comes to us from the Colonies. Sir John Cockburn, Agent-General for South Australia and formerly Minister of Education, has written to the newspapers about a "Nature Study Exhibition," an experiment already tried in Australia. An association has been formed to promote such an exhibition in London in the course of July. Contributions are invited from schools of all grades, and prizes and certificates are to be offered for collections of dried plants, injurious insects, &c., apparatus for class lessons, drawings of natural objects, home-made maps with a school as centre showing features of interest within a radius of two or three miles of the school, note-books, natural history calendars, plans of gardens, photographs, models in clay or plasticine of natural objects, plants grown in boxes and pots, and rustic carpentry. Of

course every pains will be taken to discourage the uprooting of rare plants, which has become such a nuisance in Switzerland. The Honorary Secretary of the Association is Mr. C. S. Roundell, 7 Sussex Square, Brighton, whose sound judgment and long experience as an efficient governor of many places of education, from Harrow down to village schools, is a guarantee that the scheme will be worked on sensible lines. In this connexion it is worth while to call attention to interesting papers on Nature Study reported in recent numbers of the *London Technical Education Gazette*.

THE *Mathematical Gazette* publishes an important memorandum on the teaching of elementary mathematics addressed to the Committee of the British Association by a number of public-school masters. As to geometry, their recommendations are:—(1) That the subject should be made arithmetical and practical by the constant use of instruments for drawing and measuring; (2) that a substantial course of such experimental work should precede any attack upon Euclid's text; (3) that a considerable number of Euclid's propositions should be omitted; and, in particular, (4) that the second book ought to be treated slightly, and postponed till III. 35 is reached; (5) that Euclid's treatment of proportion is unsuitable for elementary work. In algebra they would do as much as possible to discourage mechanical work, and, with that view, they would defer the more abstract and formal topics, and, broadly speaking, arithmetize the whole subject. Among other suggestions, it is proposed to diminish the amount of time given to complicated factors and algebraic fractions, and leave to a later stage such operations as the solution of literal equations and the elaborate working out of G.C.M. and H.C.F. They would introduce the plotting of simple graphs and treat indices only so far as is necessary for the intelligent use of logarithms. They point out that these simplifications of geometry and algebra would enable boys to get much earlier to simple trigonometry, so as to be able to solve right-angled triangles and to work easy problems in "heights and distances," and that without first going through elaborate practice in "identities."

## UNIVERSITIES.

(From our Correspondents.)

THE month of February has been, in Oxford, uneventful. Congregation and Convocation have been alike uninspiring, and rumours of startling proposals still remain rumours. One suggested change, which was alluded to in the Oxford letter of last month, has been rejected: the "Masters of the Schools" are not to be docked of part of their salary, but are to continue to receive £100 a year; the post therefore remains one of the few well paid in Oxford.

The annual statement of the Common University Fund has now been published, and it is satisfactory to find that there is a good balance. Critics are to be found who say that the management of the fund is too stereotyped and lacking in imagination; there are, of course, certain fixed Readerships and Lectureships (and, indeed, during the last year three more were added, *i.e.*, in Egyptology, Pathology, and Phonetics), but it is suggested that good men who are not Professors or Readers might well be encouraged to strike out a line of their own, or, at any rate, make public the result of their private industry in special branches, if certain temporary lectureships, terminable at the end of, *e.g.*, two years, were established. By this means, it is contended that college tutors would have a stimulus to do more original work than is required by the fixed orbit of lecturing for Moderations, *Literæ Humaniores*, or History. A further justification for such a proposal is to be found in the new regulations for *Literæ Humaniores*; in these it is pointed out that "in the assignment of Honours, great weight will be attached to excellence in a special subject." Now this is certainly a distinct change or, at any rate, an efficient recognition of a principle which has perhaps been slowly gaining ground. Not so very many years ago, to take a special subject in *Literæ Humaniores* (as distinct from History or Law, where a special subject is and has been necessary to secure a high class) was the exception rather than the rule, and it was held as a matter of faith that brilliancy in a special subject could not raise a man from a Second to a First Class, though it might, in the case of the man who was "on the line," just give the additional assistance required. Of course, the change will add a great deal to the labours of the examination, and will in many cases require the calling in of outside "assessors"—a practice which in itself leads to complications—and equally, of course, we shall be laying ourselves open to the charge

of spoiling, by specialization, the examination which is supposed to be the pride and boast of the Oxford system.

The appearance of small-pox in Oxford has created a mild scare, and the opponents of vaccination have been hurrying off to the nearest doctor. Much more serious for Oxford parents has been the prevalence of chicken-pox and measles, and in almost all the schools—with the exception of Magdalen College School—the teachers have had to discourse to very empty benches. The Girls' High School has been the worst sufferer, and Miss Haig Brown, the successor this term to Miss Leahy, has had rather an unpropitious first term. Indeed there are many who think that much illness would have been saved in Oxford families had the High School closed its doors a fortnight ago.

The Oxford University Dramatic Society's performance of the "Two Gentlemen of Verona" may be described as a creditable production of what nothing can ever succeed in making an interesting play; in some respects the performance was a considerable advance on the production of the same play by the society about nine years ago. Certainly in the matter of "supers," in the shape of brigands and so on, we find much less untrained incompetence. Among the successes may be reckoned Lord Tiverton and his dog.

The hard frost sadly interfered with the Torpids, and, indeed, on one day there was so much floating ice that the races were abandoned. The Varsity crew, having broken up one boat through a collision with an iceberg, chose the discreet alternative and went off to Bourne End. They are a fair, if not a brilliant, eight, and are perhaps rendered interesting by the fact that two Americans—brothers—have found places. Possibly this may be Oxford's counter-move to Prince Henry's visit to America.

THE Lent term has proved singularly uneventful. The threatened invasion of small-pox has not happened, and there has been no need for the University to disband itself, as at one time was thought highly probable, no measures of precaution having been taken for the isolation of any possible cases. A week's frost, with consequent skating, somewhat disorganized work and play alike; but things have now settled down to their normal condition. There is an increasing tendency among Cambridge men to pursue investigation of a geographical and ethnological character. Mr. Skeat's expedition to the Malay Peninsula is the latest example of this development. Mr. Skeat has returned from his second expedition with a large collection of objects possessing great value and interest to archaeologists. This collection he generously offered to the Museum; but the authorities have very properly granted him a sum which, while utterly inadequate as regards the cost of obtaining the objects, shows that the gratitude of the University does not confine itself to empty thanks.

The proposal to appoint a syndicate to consider the reorganization of the Poll examinations was duly embodied in a Grace which has received the sanction of the Senate; the opponents of the proposed changes reserve their opposition until the Syndicate has been appointed and has reported. Those who know the way of syndicates are fully aware that threatened institutions live long, and when the threats proceed from committees and syndicates they are not always treated with the respect with which the fulminations of individuals might be regarded. The Indian Civil Service Board has sanctioned the application of some of its reserve funds for the assistance of a group of individuals professing to prepare for the examination for the Civil Service. Cambridge has in almost all departments recognized the principle that the coach is a necessity by failing to provide the best men for the teaching work of the place; private coaching being infinitely more profitable, the better men naturally get attracted to a profession which affords an honest and not unsatisfactory livelihood; but any attempt to buttress up individuals by quasi-official recognition is bound to fail. At Oxford the educational experts are found on the staff of the colleges; at Cambridge they remain outside the magic circle, and those who have wives and families are unable to sacrifice a lucrative profession for the local distinction of college office and its perfunctory observances. The evil is plain, but the remedy is as far off as ever, because the present suits everybody except the parents and the paymasters.

A very pretty little discussion has arisen between two rival bodies in Cambridge, the Appointments Association and the Scholastic Agency, the former of which is worked by the energetic Secretary, Mr. W. A. J. Archbold, and the latter by the equally zealous Prof. Lewis. The University is asked to give a somewhat more formal recognition to the work of the first-named body, and

Prof. Lewis argues that not only has the Association trespassed on his domain, but by its system of working practically for nothing has competed with his Agency on rather advantageous terms. However, the public think well of both bodies, and smile at the idea of competition which cannot hurt them. One remark made in the course of the debate in the Senate is worth reproducing. Mr. W. N. Shaw, the Secretary of the Meteorological Office, said that, if he had to advise a pious benefactor as to the best way of spending £100 a year with the object of maintaining or raising the standard of academic ability, he would not advise its assignment to paying one or two promising boys to come to the University, but would fearlessly recommend instead the development of means for enabling annually twenty really competent graduates to go away.

In view of the impending discussions as to the substitution of two "Specials" for one "General" and one "Special" as at present, it is interesting to note the proportion of failures in the various examinations during the past year:—

Specials in Theology, 228 candidates, 53 failures; Political Economy, 11, 0; Law, 188, 38; History, 100, 52; Chemistry, 96, 17; Mechanics, 18, 10; Music, 14, 7; Modern Languages, 25, 1; Mathematics, 37, 12; Classics, 42, 10. The examinations in Botany, Physics, Logic, Geology, and Zoology attracted in all six candidates, who were all successful.

The General Examination results are as follows:—Part I., candidates 389, failures 116; Part II., 403, 131. It looks rather as if it was the searching character of the General Examination which is responsible for the latest agitation. Really the whole question lies in a nutshell. Certain colleges admit men of no literary training, and object to an examination in superior school work. There are many who object to the University being made to supplement the work of the upper fourth form master, but the obvious remedy is to close the doors of the colleges and the University to those who are not sufficiently advanced to profit by the higher teaching which can here be obtained to perfection. Till the remedy is found it will continue to be a truism that to be able to teach Greek grammar is the most profitable gift in Cambridge.

Dr. Griffiths, the new Principal of the South Wales University College, was entertained by his college on February 13 to celebrate his various successes and especially the honour of the Doctorate in Science which was conferred upon him that day by the University. Many of Dr. Griffiths's old friends and colleagues were present to do honour to the occasion, and Dr. Isambard Owen, the Deputy Vice-Chancellor of the University of Wales, was also present. This gentleman excited great interest by his description of the spread of educational enthusiasm in Wales. Much of what he said was very informing to those who live the dull, mechanical life of Cambridge working men, uncheered by any spark of enthusiasm, natural or accidental.

Personal items of the month:—Craven Scholarship, Roger Charnock Richards, Trinity; Waddington Scholarship, S. A. Sydney-Turner, Trinity; Porson Scholarship, J. T. Sheppard, King's; Chancellor's Medals (Classics), William Rennie, Trinity, and J. E. C. Jukes, Pembroke.

### MERCHANT TAYLORS' SCHOOL IN THE FIFTIES.

IN October, 1857, I entered on my duties as Fourth Under Master in Merchant Taylors' School. In its buildings, its arrangement, and its management, the school had some curious survivals to show. The building was in the late Jacobean style, on the left hand as one went down Suffolk Lane to Upper Thames Street. The name "Suffolk" suggests the history of the site. Here had stood the town dwelling of the De la Poles, Dukes of Suffolk. The Company bought part of these premises, with the garden attached to them, about the middle of the seventeenth century, when, at the prompting of Sir Thomas White, the founder of St. John's College, Oxford, they had resolved to establish a school. The buildings which were then erected or adapted perished in the Great Fire, and were restored some six years afterwards.

For more than two centuries the only place where teaching was carried on was the Great School-room; its dimensions were about 85 feet by 30 feet. It was lighted very imperfectly by windows on either side, large enough indeed, but obscured by the heavy leading of the small diamond panes and by long-standing accumulations of dirt. A single fireplace warmed a small part of it. The four class-rooms were all more or less recent additions to the school accommodation. Two had been in

use for some years; they had served in earlier times as an apartment for one of the under masters. The other two had belonged to the Head Master's house, which had been utilized for school purposes a year or two before my coming. To this change the under masters owed the convenience of a common room; up to that time they had had no other accommodation but a cupboard apiece, in which to keep cap and gown, the necessary books, and the still more necessary cane.\*

Other curiosities of arrangement were at the time of my coming in 1857 within quite recent memory. There were no desks in the school-room. The monitors (the eight seniors) had a table; the prompters (the eight next to the seniors) had a bench (furnished, I believe, with a desk). Every one else had to write, when there was occasion for writing, on his knees. And there were no lights. Every boy had to supply his own candle, which was required to be of wax. Going a little further back, there had been no fire. An old gentleman, who came to pay a subscription to the Tercentenary Fund in 1862, told Dr. Hessey that he had been the occasion of the first putting in of a fireplace. He had been a delicate boy, and his father, having friends on the Court, had obtained this concession to modern weakness. And, indeed, the boys of the older time must have been—at least, those who survived—of heroic strength. Dr. Hessey told me, I remember, that he had entered the school at the age of seven—nine was the limit in my time—and that he came from Hampstead—walked, I believe he said, though it sounds almost incredible—every day in time for morning school, then commencing at 7.

Things were not quite so hard in my time, but they were not luxurious. I taught my two forms, commonly numbering about sixty, together—the *maximum* that I remember was sixty-eight—in one of the class-rooms below the Great School, which measured about 30 feet by 20 feet, and may have been 12 feet high. Closely packed together, sitting on benches about 6 inches broad—there was no room for anything larger—allowed no time for play—there was no playground, only a paved yard some 70 feet by 20 feet—they had not a happy time themselves, and certainly did not allow their master to have one. The noise made by even the involuntary restlessness of sixty boys, sitting on uncomfortable benches, and cooped up without a recess for between three and four hours, was almost overpowering. And every now and then some huge wagon thundered down the narrow roughly paved lane, and nothing at all could be heard. Another distracting noise came from the door. The Company would not allow a porter, and the head boy of my upper form had to discharge his functions. There was neither bell nor knocker. An applicant for admission used his foot—a classical method which suited the strictly conservative traditions of the school. I remember a lady nearly related to myself coming to make some inquiry. She was standing perplexed when a drayman, better acquainted with the custom of the place, solved her doubts, and was good enough to administer a kick which was heard to the furthest end of the building. The young porter rushed to the door and opened his eyes wide in wonder that so delicate a foot had made so great an impression. But the noise of the class-room was nothing to what I had to endure when, as happened four times in the week, the room was wanted for one of the French masters, and I had to migrate up-stairs. Three or four masters were teaching there at the same time; twice a week, if my memory serves me, there was as many as five. We shouted against each other; but the victory belonged, I think, to a good friend of mine now enjoying the well earned repose of a rich but not populous City living, but still doing good service to his old school as one of its governors. (Since I wrote these words he has passed away.)

Another survival of the past was to be found in the system of appointing the under masters. The Company kept the patronage most jealously in their own hands. The members of the Court of Assistants had to be canvassed in the old fashion. The one person to whom most of them would refuse to listen was the Head Master. When I was appointed, the choice was limited by the advertisement to "Oxford graduates who had taken a First or Second Class in the Classical School." I understood at the time that this was done to exclude a candidate—a Cambridge man—whom the Head Master was supposed to favour. The consequence of this state of things was an independence which,

\* So stern was the conservatism of the place that when a new arrival, not an old Merchant Taylor, prepared to introduce, at his own expense, a washing-stand, his older colleagues declared that they would eject it. No under master ever had washed his hands at school, and none ever should.

I am sure, was mischievous. The Head Master left us almost absolutely alone. Nor had he any power to utilize our services as he might think best for the school. I was the only one of the four who had taken a degree in Classical Honours; but I never was put to anything more advanced than teaching the rudiments. I had a liking, almost amounting to a passion, for Latin verse, then held in greater honour than is now accorded to it; but I never got beyond teaching "Bland."

The proportion of teachers to taught was, of course, on the old inefficient scale. The numbers of the school ranged between two hundred and sixty and two hundred and seventy. The Head Master and his assistant provided for about fifty of these; the rest were divided between the four under masters. The place which I filled was a recent institution, dating back, I think, to 1840. The first Head Master's Assistant entered upon his duties at the same time as myself. This appointment was the result of a long struggle between Dr. Hessey and the Court. The first point gained was that he should have a helper. Before he had to teach *forty* boys! The next that he should choose this helper himself. This was a bitter pill for the Court to swallow. They showed, I remember, their jealousy and dislike by neglecting to include the Assistant in their invitation to the great festival of the "Election Day" dinner. At this our chief, a long-suffering man, who ultimately got his way by an inexhaustible patience, struck. He declared that he would not attend himself, and we backed him up with a similar threat. On this the Court gave way, moved somewhat by the fact that they had just ended another feud. "Election Day" got its name from the custom that on June 11 the President and two Senior Fellows of St. John's came to elect, with the assistance and concurrence of the Court, Merchant Taylor scholars to such Fellowships as might be vacant.\* Their labours finished, they were entertained to dinner. Of course they were the guests of the evening, and as such claimed the right to sit at the Master's right hand. On one occasion this place was given to the Archbishop of Canterbury. The offended Dons refused to come till they had been guaranteed against the slight. The quarrel was now made up, and it would have been too absurd to begin another. The result was that we all went to the dinner.

Another curious custom that must have come down from a remote past was the way in which the school fees were collected. These were called *quarterages*; each boy paid his to the master of his form. We kept a proportion—15s., if I remember right—out of the quarterly fee of £2. 10s., and paid over the rest to the head master, who, in his turn, paid it over to the Company. Another survival, I fancy, was an entrance fee of 5s. from every boy who was admitted to the school, paid to the master of the form in which he was placed, and "moving money," 5s. paid by every boy who was promoted from one form to another.

There was not a little of the survival about the teaching. There had, indeed, been a great advance within quite recent memory. Hebrew, Greek, Latin, Divinity had been the curriculum. If any one wanted to know how to write and to cipher, he had to learn it out of school. Then mathematics and arithmetic were introduced; the former at first to little purpose. A veteran under master was in charge of this teaching. "Ungrateful rascals!" he is said to have exclaimed when his classes failed in the examination, "when I have given them the whole half-year to work by themselves!" All this was changed in my time. The mathematical school, for which the forms were re-arranged in the afternoon, were under most efficient guidance. The morning was wholly given to the old studies, except, indeed, for a couple of hours on Thursdays, when the two lowest forms learnt geography, with the help of blank maps and a very dry little manual of towns and

\* Merchant Taylor boys then went up to St. John's College as "Fellows"—*probationers* at first, and, after two years, I think, *full* Fellows. This system was changed by the legislation which followed the first University Commission, much to the disgust of the Company and of the conservative party in the college. The school was treated a little harshly, having its thirty-seven fellowships changed to twenty-one scholarships. I remember Dean Mansel, a Merchant Taylor and a Johnian, quoting, at the tercentenary dinner, certain lines of Virgil, which he accompanied with a free translation: "Tercentum regnabitur annos," "It shall be ruled for three centuries"; "gente sub Iliaca," "under the Merchant Taylors' Company"; "donec regina sacerdos," "until the Queen's Government"; "Marte gravis," "pressed by a hostile opposition"; "geminam partu dabit Iliam prolem," "shall give birth to a double Commission." The "double Commission" was that of the Public Schools and that of the Universities.

rivers, and read an English history published by the S.P.C.K., the work, if I remember rightly, of Bishop Davys, of Peterborough, which would hardly come up to modern standards. All the forms above the third had two hours per week of French. When I began teaching, the Latin grammar in use was "King Edward VI.'s," a variant, so to speak, of the "Eton Grammar." A vast amount of time was spent on learning the "As in presenti" and the "Propria quæ maribus," phrases which will convey no meaning to the younger generation. The first was a set of barbarous hexameters, some two hundred and fifty in number, by which the scholar was supposed to learn the perfects and supines of verbs; the other, of about a hundred and forty like verses, was a *memoria technica* for the genders of Latin nouns. Keate, of Eton, is said to have called it "a noble poem"; but it always seemed to me a most cumbersome piece of educational machinery. I never knew but one boy who could say both these sets of hexameters without a mistake, and he was exceptionally stupid. The "Public School Primer" superseded this antiquated volume in 1862. Probably it is itself antiquated now. But this is not the occasion for criticizing school books, and I must hold my hand.

A. J. C.

**DRAFT OF AN ORDER IN COUNCIL FOR PROVIDING THE MANNER IN WHICH A REGISTER OF TEACHERS SHALL BE FORMED AND KEPT.**

WHEREAS by virtue of Section 4 of the Board of Education Act, 1899, it is lawful by Order in Council to establish a Consultative Committee for the purpose of framing, with the approval of the Board of Education, regulations for a Register of Teachers, which is to be formed and kept in manner to be provided by Order in Council.

And whereas a Consultative Committee has been established by Order in Council; and the Committee so established have, with the approval of the Board of Education, framed the regulations for a Register of Teachers set forth in the Schedule to this Order.

Now, therefore, His Majesty, by and with the advice of His Privy Council, and by virtue of the authority committed to Him by the Board of Education Act, 1899, and of all other powers enabling Him in that behalf, is pleased to order and it is hereby ordered as follows:—

1. For the purpose of forming and keeping such Register of Teachers, there shall be established a Registration Authority, called the Teachers' Registration Council, and in this Order referred to as "the Council," which shall consist provisionally of twelve members, of whom six shall be appointed by the President of the Board of Education, and of the remaining six one member shall be appointed by each of the following bodies:—

- The Conference of Head Masters.
- The Incorporated Association of Head Masters.
- The Association of Head Mistresses.
- The College of Preceptors.
- The Teachers' Guild of Great Britain and Ireland.
- The National Union of Teachers.

2. The members so appointed shall hold office for three years from the date of this Order.

3. On a casual vacancy occurring in the Council during the said period of three years, the authority by whom the member whose seat is vacated was appointed shall appoint another member in his place.

4. The first appointments of members of the Council shall be made not later than the first day of April, one thousand nine hundred and two, and each appointing authority shall as soon as may be after making the appointment communicate to the Board of Education the name and address of the person appointed by them.

5. The first meeting of the Council shall be convened by the Board of Education, and that Board may take such steps as they think necessary for the purpose.

6. After the expiration of three years from the date of this Order, the constitution of the Council shall be such as may hereafter be provided by Order in Council.

7. If any member of the Council is adjudged bankrupt or makes a composition or arrangement with his creditors, or is absent from meetings of the Council for more than twelve months consecutively, except in case of illness, or for some reason approved by the Council, his office shall become vacant.

8. The Council may appoint Committees and delegate, with or without conditions or restrictions, any of their powers and duties to any committee so appointed, and may regulate the procedure and conduct of business of the Council and of any Committee so appointed.

9. No act or proceeding of the Council or of a Committee of the Council shall be questioned on account of any vacancy in their body.

10. The Council shall establish and keep a Register of Teachers in accordance with the regulations contained in the Schedule to this Order, as framed by the Consultative Committee and approved by the

Board of Education, and with such other regulations as may from time to time be framed and approved in like manner.

11. Subject to the approval of the Board of Education, the Council may provide an office and appoint a Registrar, and appoint or employ such other officers and persons as may be required for the execution of their duties, and may assign to any person so appointed or employed such remuneration as may be approved by the Board.

12. All fees payable in respect of registration and matters incidental thereto, as fixed by or under the said regulations, shall be carried to a Registration Fund, and the expenses of the Council shall be paid out of such fund.

13. There may be paid to members of the Council out of the Registration Fund such fees for attendance at meetings and such allowance for travelling expenses as may be approved by the Board of Education.

14. The accounts of the Council shall be audited and published by or under the direction of the Board of Education.

15. The Council shall make a report of their proceedings once a year to the Board of Education.

**THE SCHEDULE.**

**REGULATIONS FOR THE FORMATION OF A REGISTER OF TEACHERS.**

1. As soon as may be after the establishment of a Registration Authority there shall be established a Register of Teachers (hereinafter called "the Register") in which the name of every registered teacher shall be set forth in alphabetical order.

In addition to this alphabetical list, there shall be two columns distinguished as Column A and Column B.

Column A shall contain the names of all persons for the time being recognized by the Board as certificated teachers under the Code of Regulations for Elementary Day Schools.

Column B shall contain the names of all persons who fulfil the conditions of registration hereinafter set forth.

There shall also be recorded in the Register, in respect of each teacher, when registered therein, his postal address, the date of his registration, and a brief statement of his qualifications and teaching experience, in the following form:—

Alphabetical List.	Col. A.	Col. B.	Address.	Date of Registration.	Qualifications.	Experience.

Additional qualifications and experience may be added from time to time, when verified by the Registration Authority.

2. A person shall be entitled to be placed on Column B of the Register of Teachers if he satisfies the Registration Authority that he fulfils the conditions set forth in Regulation 3; or if he applies at any time within three years from the establishment of the Registration Authority to be placed on the Column B of the Register, and satisfies the Registration Authority that he fulfils the conditions set forth in Regulation 4.

3. A person shall be entitled to be placed on Column B of the Register if he fulfils the following conditions:—

(1) He must have obtained a degree conferred by some University of the United Kingdom, or have obtained one of the diplomas or certificates mentioned in Appendix A to these regulations, or have attained some other approved standard of general education.

(2) He must either—

(i.) Have resided and undergone a course of training for at least one year at one of the Universities or training colleges mentioned in Appendix D to these regulations, or some other recognized institution for the training of secondary teachers, and have passed the examination for one of the diplomas or certificates in the theory and practice of teaching mentioned in Appendix C of these regulations; or

(ii.) have passed an approved examination in the theory of teaching, have spent at least one year as a student teacher under supervision at a recognized school (not being an elementary school), and have produced evidence of ability to teach.

(3) He must have spent at least one year of probation as a teacher at a recognized school (not being an elementary school), and must satisfy the Registration Authority that he has shown fitness for the teaching profession.

4. A person shall be entitled to be placed on Column B of the Register if at any time within three years from the establishment of the Registration Authority he makes application to be so placed, and fulfils the following conditions:—

(1) He must have obtained a degree conferred by some University of the United Kingdom, or must show, to the satisfaction of the Registration Authority, that he has obtained one of the diplomas or certificates, or has passed one of the examinations mentioned in Appendices A and B to these regulations, or has attained some other approved standard of general education; and

(2) He must either—

- (i.) have been engaged during the three years next preceding his application as a teacher at a recognized school or schools (not being an elementary school or schools); or
- (ii.) have passed the examination for one of the diplomas or certificates in the theory and practice of teaching mentioned in Appendix C to these regulations, and produce evidence satisfactory to the Registration Authority of experience in teaching (other than the teaching in an elementary school or teaching of a purely elementary character) extending over a period of not less than three years.

Provided that a head master or head mistress of a recognized school, not being an elementary school, shall be entitled on application to be placed on Column B of the Register without fulfilling the above conditions, if the applicant has held the office for at least one year previous to the date of his application.

5.—(1) The Registration Authority may place on Column B of the Register the name of any person who does not fulfil all the conditions of registration, but who, in their opinion, would have fulfilled all the necessary conditions but for the fact—

(a) that part of the period of his study or training was spent in an approved course of study or training at a foreign University, college, or school, or

(b) that part of the period of his study, training, or probation was spent in original research certified to have been conducted under proper supervision and to the satisfaction of the Registration Authority.

(2) The Registration Authority may, if they think fit, at any time within three years from the establishment of the Registration Authority, place on Column B of the Register the name of any person who does not fulfil all the conditions of registration, but who has, in their opinion, proved himself to be an exceptionally qualified teacher.

(3) The Registration Authority shall report to the Board every three months the name of every person registered under this regulation and the grounds of his registration.

#### SUPPLEMENTAL REGISTERS.

6. There shall be annexed to the Register Supplemental Registers of teachers of music, drawing, physical training, manual instruction, cookery, needlework, and such other special subjects as may be from time to time approved.

A person shall be entitled to be placed on a Supplemental Register if he produces evidence satisfactory to the Registration Authority—

- (i.) that he has acquired special knowledge of the subject after a thorough course of training,
- (ii.) that he is competent to teach the subject, and
- (iii.) that he has taught the subject for a period of not less than two years.

A person may be placed on one or more than one Supplemental Register whether he is or is not placed on the Register.

The form of a Supplemental Register shall be the same as that of the Register, except that Columns A and B shall be omitted.

7. A person whose name is placed on one or more of the Supplemental Registers, but not on either column of the Register, shall not be entitled to describe himself as a registered teacher without also indicating the Supplemental Register or Registers on which his name is placed.

Any person proved to the satisfaction of the Registration Authority to have wilfully so described himself shall be liable to have his name removed from any Supplemental Register on which it is placed, and shall not be entitled for a period of two years to have his name placed on any Register of Teachers.

#### GENERAL.

8. In the case of any person applying to be placed on Column B of the Register, or any Supplemental Register, the Registration Authority may, if they think fit, and after giving the applicant an opportunity of being heard, refuse to register him on the ground that his moral character renders him unfit to be employed as a teacher.

9. The Registration Authority may at any time remove from Column B of the Register, or from any Supplemental Register, the name of any person proved to their satisfaction, and after such person has had an opportunity of being heard, to have been guilty of felony or misdemeanour, or of conduct unbefitting a teacher.

10. Every person applying and qualified to be placed on Column B of the Register, or on a Supplemental Register, shall, before he is so placed, pay to the Registration Authority the sum of twenty-one shillings. A further fee of two shillings and sixpence shall be paid by a teacher registered on Column B before any additional qualification or experience is recorded on the Register or any Supplemental Register.

11. No fee shall be payable for placing a person on Column A of the Register; but if any person so placed applies to have registered any qualifications and experience other than those required by the Board from certificated teachers, he shall, before any such qualification or experience is recorded, pay the sum of two shillings and sixpence.

12. In approving or recognizing a degree, diploma, certificate, ex-

amination, or other standard of education, for the purpose of Column B, or in recognizing an institution for the purpose of training, or in approving subjects for a Supplemental Register, the Board shall act after taking the advice of the Consultative Committee.

13. The Registration Authority shall from time to time, and at least once every year, present a report of their proceedings to the Board, together with their observations on the working of these regulations.

14. The Register and every Supplemental Register shall be published annually, and shall be open at any reasonable time to public inspection on the payment of the proper fee; and any person shall, on payment of the proper fee, be entitled to take copies of and make extracts from the Register and any Supplemental Register, and to have delivered to him extracts from any such Register certified by the Registrar to be true.

The fees for the purpose of this regulation shall be such as may be fixed by the Registration Authority, with the approval of the Board.

15. In these regulations "the Board" means the Board of Education. "Approved" or "recognized" means approved or recognized for the time being by the Board for the purpose of the regulation in which the expression is used. "The Registration Authority" means the body to be established for forming and keeping the Register.

16. These regulations may be from time to time modified and altered by regulations framed by the Consultative Committee, with the approval of the Board.

#### APPENDIX A.

A tripos certificate granted by the University of Cambridge to women.

A diploma or certificate showing to the satisfaction of the Registration Authority that the applicant, if a woman, has fulfilled all the conditions which, if the University of Oxford granted degrees to women, would entitle her to a degree in that University.

A diploma or certificate showing to the satisfaction of the Registration Authority that the applicant, if a woman, has fulfilled all the conditions which, if the University of Dublin granted degrees to women, would entitle her to a degree in that University.

The Associateship of the Royal College of Science, London.

The Associateship of the Central Technical College, London.

The Fellowship of the College of Preceptors.

A Special Honours Certificate of the Higher Local Examinations (Oxford and Cambridge), granted under the following conditions:—

- (i.) That the holder has passed in four groups or sections and obtained a First or Second Class in at least two of them; and
- (ii.) that the certificate includes at least a pass in two languages, and at least a pass either in mathematics or in logic.

#### APPENDIX B.

London University—Intermediate Arts, Intermediate Science.

Oxford University—Pass Moderations, Law Preliminary, Science Preliminary.

Cambridge University—the General Examination.

In the case of women:—(i.) "Moderations" or "Finals," in the University of Oxford. (ii.) Tripos examinations of the University of Cambridge, or "the standard of the ordinary degree."

Oxford and Cambridge Higher Local Examinations (Honours Certificate).

Birmingham University—Intermediate Arts, Intermediate Science.

Victoria University—Intermediate Arts, Intermediate Science.

University of Wales—Intermediate Arts, Intermediate Science.

Dublin University—Final Examination of Senior Freshman year.

Royal University of Ireland—the Second University Examination in Arts.

College of Preceptors—Licentiatehip.

#### APPENDIX C.

Diplomas or Certificates in the Theory and Practice of Teaching, granted by the following institutions:—Universities of Oxford, Cambridge, London, Victoria, Durham, Birmingham, Edinburgh, Aberdeen, Glasgow (Diploma with Distinction), Dublin, Royal University of Ireland, College of Preceptors (Fellowship and Licentiatehip, together with the Certificate of Ability to Teach).

#### APPENDIX D.

*Institutions, &c., for the Training of Secondary Teachers.*

Course of training for secondary teachers at Oxford for the Oxford University Diploma (this training would be accepted, provided that students stayed for a year); University of Cambridge (Day Training College), Secondary Department; Durham University; Birmingham University; Owens College, Manchester; University College, Liverpool; Yorkshire College, Leeds (provided the training were of one year's duration); University College of North Wales, Bangor; University College of South Wales, Cardiff; University College of Wales, Aberystwith; Cambridge Training College; Maria Grey College, London; Cheltenham Ladies' College; Bedford College for Women, University of London; Mary Datchelor College, London; St. George's Training College, Edinburgh; Catholic Training College, Cavendish Square, London; St. Mary's Hall, Mount Pleasant, Liverpool.

**TABULAR ANALYSIS OF CLAUSES IN THE ORDER IN COUNCIL FOR REGISTRATION OF TEACHERS RELATING TO QUALIFICATIONS FOR REGISTRATION IN COLUMN B.**

UP TO 1ST OF APRIL, 1905.

I. General Education.	II. { Experience in a Recognized School } or { Experience in Teaching and a Certificate in Theory and Practice of Teaching. }	
<p><i>One of the following :—</i>            Degree Examination of any University in the United Kingdom.            Inter. Arts { London.                              or Victoria.            Inter. Science { Birmingham.                                      Wales.            Pass Mods. } Oxford.            Law Prelim. }            Science Prelim. }            General Examination—Cambridge.            Final Examination of Senior Freshman Year—Dublin.            Second Univ. Examination in Arts—R.U.I.            Higher Local in Honours.            A.R.C.Sc.            A.C.T.C.            F.C.P.            L.C.P.  <i>Some other approved standard of general education.</i></p>	<p>Three years—i.e., the three years next preceding the application for registration—as Teacher at a recognized school or schools (not being an elementary school or schools).</p>	<p>Three years' experience in Teaching (other than the teaching in an elementary school or teaching of a purely elementary character);  <b>and</b>  <i>One of the following Certificates in Theory and Practice of Teaching :—</i>            Oxford University.            Cambridge "            London "            Victoria "            Durham "            Birmingham „ (Higher Diploma).            Edinburgh „ (Sec. School Dipl.).            Aberdeen „ (Dipl. with Distinc.).            Glasgow „ " " "            University of Dublin.            Royal University of Ireland.            College of Preceptors (Fellowship and Licentiatehip, together with Certificate of Ability to Teach).</p>

*Notes.*—1. A head master or head mistress of a recognized school, not being an elementary school, shall be entitled, on application, to be placed on Column B of the Register without fulfilling the above conditions, if the applicant has held the office for at least one year previous to the date of application.

2. The Registration Authority may place on Column B of the Register the name of any person who does not fulfil all the conditions of registration, but who, in their opinion, would have fulfilled all the necessary conditions but for the fact—

(a) That part of the period of his study or training was spent in an approved course of study or training at a foreign University, college, or school; or  
 (b) That part of the period of his study, training, or probation was spent in original research certified to have been conducted under proper supervision and to the satisfaction of the Registration Authority.

3. The Registration Authority may, if they think fit, place on Column B of the Register the name of any person who does not fulfil all the conditions of registration, but who has, in their opinion, proved himself to be an exceptionally qualified teacher.

AFTER 1ST OF APRIL, 1905.

I. General Education.	II. Training.	III. Probationary Experience.
<p><i>One of the following :—</i>            Degree Examination of any University of the United Kingdom.            Higher Local Special Honours.            A.R.C.S.            A.C.T.C.            F.C.P.  <i>Some other approved standard of general education.</i></p>	<p><b>Bither—</b>            (1) A year's residence and training at a recognized institution for the Training of Secondary Teachers (i.e., the institutions named in the Schedule, Appendix D, or any other institution approved by the Board);  <b>and</b>            (2) <i>One of the following Certificates in Theory and Practice of Teaching :—</i>            Oxford University            Cambridge "            London "            Victoria "            Durham "            Birmingham „ (Higher Diploma);            Edinburgh „ (Secondary School Dipl.);            Aberdeen „ (Dipl. with Distinction);            Glasgow „ " " "            University of Dublin;            Royal University of Ireland;            College of Preceptors (Fellowship and Licentiatehip, together with the Certificate of Ability to Teach).  <b>Or—</b>            (1) A year's training as Student-Teacher under supervision at a recognized school (not being an elementary school);            (2) Evidence of fitness to teach; and            (3) An approved examination in the Theory of Teaching.</p>	<p>One year as Teacher at a recognized school (not being an elementary school);  <b>and</b>            Evidence of fitness for the teaching profession.</p>

*Note.*—The Registration Authority may place on Column B of the Register the name of any person who does not fulfil all the conditions of registration, but who, in their opinion, would have fulfilled all the necessary conditions but for the fact—(a) That part of the period of his study or training was spent in an approved course of study or training at a foreign University, college, or school; or (b) That part of the period of his study, training, or probation was spent in original research certified to have been conducted under proper supervision and to the satisfaction of the Registration Authority.

# FROM MR. MURRAY'S EDUCATIONAL LIST.

## MR. MURRAY'S UNIVERSITY MANUALS.

### ENGLISH LITERATURE.

- SHAKESPEARE AND HIS PREDECESSORS IN THE ENGLISH DRAMA.** By F. S. BOAS, Professor of English Literature, Queen's College, Belfast. Crown 8vo, 6s.

## HISTORIES OF LITERATURE AND THEIR USE IN THE EARLIER STAGES OF LITERARY STUDY.

ON Wednesday evening, February 19, the Rev. J. O. BEVAN, M.A., took the Chair at the monthly evening meeting of members of the College of Preceptors, when Mr. H. COURTHOPE BOWEN, M.A., read the following paper:—

Some years ago, when explaining my views on the study of literature, I said: "By the study of literature as literature I mean the study of a poem or prose work for the sake of its substance, its form, and its style; for the sake of the thought and imagination and feeling it contains, and the methods used to express these; for the sake of its lofty, large, or acute perception of things; its power of exposition; the beauty, force, and meaning of its metaphors, its similes, and its epithets; the strength and music of its language."\* I held, and hold still, that our aim should be to appreciate thought as thought, a work of art as a work of art; and thereby not only to enlarge, enrich, and refine our minds and hearts, but also to win for ourselves a knowledge and ability of expressing ourselves, when we have something to say, both correctly and well. The study of grammar and philology and antiquarianism will help us but little to accomplish this object. But there are other things which will help us. To-day I wish to inquire whether among those other things helpful in the earliest stages to students of literature, adult or young, we may reckon *histories of literature*; and, if so, what is the nature of the help they can give and what should be the general character of their contents.

Sir Henry Wotton, in his "Aphorisms," tells us that "the way to knowledge by epitomes is too strait [narrow]"; and, he adds, "they show a short course to those who are contented to know a little, and a sure way to such whose care is not to know too much." Bacon, however, in his "Essay of Studies" says: "Some books also may be read by deputy, and extracts made of them by others; but that," he hastens to explain, "would be only in the less important arguments, and the meaner sort of books." This no doubt might provide an excuse for those histories of literature whose chief object seems to be to display a gratuitous learnedness in the small writers, and the "meaner sort of books," which the world has very unwillingly let die. But here we shall have nothing to say about the "meaner sort of books"; and so such histories will be nothing to our purpose. In his "De Augmentis Scientiarum" Bacon warns us to avoid all digests and epitomes of learning, for they are a species of imposture, giving men the means to make a show of learning who have it not. I am afraid that, only too frequently, it is this very purpose—so like that of "Mangnall's Questions"—to enable those to make a show of learning who have it not, which causes histories of literature to be read, at any rate in schools—to enable the young to chatter about books of which they have never read a line. "Oh, it is so dreadful!" I have heard it said, "that those who are supposed to be educated should not know when Milton lived and what he wrote!" Every ignorance, I have replied, is regrettable at some time or other—though there are seasons when, we are assured, it may be bliss. To me it is less "dreadful" that any one should not be acquainted with the date of Milton's period and the names of his works than that he or she should not have read with attention any one of those works. Moreover, I must confess that I am not quite clear as to what you mean by "when Milton lived and what he wrote." Do you mean by *when* the date? Or the condition of things politically, socially, intellectually, morally in England; or, more widely, in Europe? What do you mean by *what he wrote*? The names of his works, or their contents and the relation of these contents to his times—what in them belonged to Milton himself, what to his predecessors, what to his times, and what remains on to this day of value to us? I am not prepared to admit at once that the mere date and the list of titles are of any use at all. A fact is of no value by itself. Its value lies in its relations to other

\* See "English Literature Teaching in Schools." (Rivingtons, 1s. 6d.)

facts. That Milton lived in a certain period does not help us to know the character of that period, unless we know Milton; nor does it help us to know Milton unless we know the character of the period, the spirit of the times. The parade of facts and dates is mere vanity, or worse, unless we understand their mutual bearings, and their bearings on other facts and dates. History is not a mere catalogue of names and dates and events, but an *organized* body of these, wrought into a connected and intelligible narrative. Granted, has been the answer. But, if we do well to study the history of a country or of a people, why should we not study the organized and intelligible narrative of the facts and events of its literature? Why not indeed? I have replied: Why not indeed?—provided that by so doing we learn to appreciate thought as thought, a work of art as a work of art, that we enlarge, enrich, and refine our minds and hearts, and that we gain a fuller power to understand and love the writings and the writers dealt with; for this must be the true aim of our study. If we stop short of this understanding and love, we shall lose the best reward of our work and have disquieted ourselves to very little purpose.

But there are many differences between the history of a nation and the history of its literature, some of which I must briefly touch upon before I proceed further. A history of literature is inevitably to a large extent a comparison between, and an appreciation of, the works of authors; it consists largely of opinions and criticisms in addition to its narrative of facts and events. These opinions and criticisms can have no real meaning, no true intellectual value, till some personal knowledge has been acquired of the works dealt with—or of the chief of them. In the case of literature, our aim, I hold, is to get to know and to appreciate the original documents on which the history is based. This is not the aim of political or national history. There the aim is to get to know and to appreciate the nation and its political life, to get to understand how things came to be what they are. With the young student of literature there should be no question of various readings and disputed dates, no question of authenticity or reliability. These things are beyond their scope; they should study the documents actually before them. Of course, just as some passages cannot be properly understood apart from their context, so some writings cannot be properly understood apart from the environment in which they were produced. But to use the environment as an aid in the interpretation of a particular literary work or a particular writer is by no means the same as the study of a history of literature. Mr. Leslie Stephen has given an excellent example of the use of the intellectual and social environment in the interpretation of Pope in a lecture on "The Study of English Literature," printed in the *Cornhill Magazine* for May, 1887—to which I shall return later on. Let me say here, however, to avoid misunderstanding, that I am well aware that in this world we cannot learn everything at first hand; that we must accept much as information imparted by others. And I admit that this is by no means always hurtful, provided that the learner realizes the immense difference between real first-hand knowledge and merely second-hand information. And this is not possible for a young student. I have said that for immature students there should be no questions of authenticity and reliability, these things being in general beyond their scope. But in the construction of the history of a nation questions of authenticity and reliability of documents, of the degrees of credence to be given them, are of prime importance. Until these are settled we cannot even begin. Now these things are beyond the young; and the young therefore cannot in any true sense study the history of a nation from original documents—a delusion very prevalent in the United States. The quantity of fairly reliable material is often enormous. There must therefore be a selection; and this implies a selector; and the selector speaks his views through the mouths of his original authorities instead of with his own lips. That is all—very fresh and interesting—but it is only the selector, and not the reader, who in any true sense studies history from original documents. The young must take the story as the historian gives it, whether he speaks in his own person or not, with his warnings on doubtful points and his picturesque quotations from originals. Their interest and profit must lie in the narrative itself, with its examples of action, of conduct, of character, of the progress of law and order, and the rest. They do not study national history for the light it throws on the original documents on which it is based. With the history of literature I hold the reverse is the case—the young student can only profitably study it for the help it gives in the understanding of the original writings of the authors—that is, of *literature itself*—on which everything is ultimately based. Of course, the history of a nation is of great value in the interpretation of

its literature. Indeed there is much to be said in favour of the view that this history is the best introduction to the literature—when, besides dealing with politics and the constitution, it is the history of the social, intellectual, and moral growth of the nation. And, lastly, the experience of everyday life enables us to grasp in a general way—even from the mere names and terms employed—the facts and actions out of which the story of a nation is composed. But we cannot grasp the nature of a book from its name. We must, to some extent, have read it, become acquainted with it for ourselves—which marks another decided difference between the two kinds of history. To gain a knowledge of a book *as a part of literature*, it is not enough to know its name, its subject, and the general gist of its contents; while this as a rule is enough for beginners in the case of constitutional and political documents.

In a lecture delivered to his own college class of University students and printed in his "New Studies in Literature" (1895), Prof. Dowden expresses a desire for an outline map or brief "general sketch" of European literature—resembling in character Freeman's "General Sketch of European History"—which, he thinks, might, in a month or two, be made to enter the head of every student at the start—by brute force if necessary. This chart, he believes, would keep things in their right relations, and parts of it might later be filled in with more topographical details, as required. I do not know whether the Professor ever puts his tongue into his cheek at lectures; but I fancy that his tongue must have, perhaps unconsciously, assumed something like that position when he made this astonishing statement. It is better, I think, to hang a chart on the wall for frequent consultation than to attempt to hammer it into the head of any student. It will be safer on the wall, and the student's head won't suffer. It is the same old mistake made in the teaching of a language—the attempt to hammer in the grammar before any acquaintance has been made with the language itself. And the result would be the same—a not very intelligent knowledge of the grammar, and a very slight acquaintance with the language,—or, in this case, an unintelligent acquaintance with names and dates and formulas, and no knowledge of literature—while the hammered heads would have acquired a habit of turning away from learning. But the Professor reassures us by stating that there is no such sketch in existence suitable to his purpose. When he comes to English literature, he again mentions a general sketch or history, but would not have a beginner touch it till he or she has thoroughly learnt the difference between *knowing about* a book or an author and *knowing that* author or book, till he or she can appreciate the vast difference between first-hand and second-hand knowledge. Now this is precisely what a beginner cannot do; for such an appreciation can only be learnt from experience, which the beginner has not yet had. So, practically, the general sketch goes out of court—and *remains outside*. For in the admirable description which follows of how literature should be studied it does not reappear. This description—which deserves the careful attention of every student of literature—is followed by the consideration of what is called the "biographical method of study," or the study of a man's works in relation to the man's life and personality; which naturally leads us to the study of the man and his works in relation to his environment, his times. In both cases—but more particularly in the second case—Prof. Dowden's views are somewhat like those expressed by Mr. Leslie Stephen in the lecture already mentioned, and I shall discuss what they have to say together. Lastly, Prof. Dowden—again like Mr. Stephen—urges us to study English literature and English history together for their great mutual enlightenment. And I think I am not far wrong in stating that the kind of history they both have in mind is not altogether unlike Green's "Short History."\*

I may now turn to consider the biographical method of studying literature and the study of the author in relation to his environment. As far as the biographical method means—and this is what it mainly means with Prof. Dowden—as far as it means the endeavour to get at the author's mind and personality through his works, I will say at once that, in my opinion, this is not a matter for beginners, but belongs to critics of wide reading and much experience. It takes a Dowden to give us "the mind and art of Shakespeare." No doubt the difficulties differ widely in different cases. It is easier to find Milton in

\* As to how history and literature can be combined, Mr. Leslie Stephen's "History of English Thought in the Eighteenth Century" will show you. See especially Vol. II., page 330, quoted by Prof. Dowden.

"Paradise Lost" and "Samson Agonistes" and "Comus," or Wordsworth in the "Excursion," or Tennyson in the "Idylls," than Shakespeare in "Hamlet," "King Lear," "Much Ado," and his plays generally,—and, as Mr. Sidney Lee has shown us, in his sonnets. But, in any case, the attempt is full of rocks and pitfalls, and is liable to lead us all—even the most inexperienced—into forming grave misconceptions. This, as it seems to me, to quote only one instance, has been the result of the attempt to construct the true Bacon from his "Essays." Moreover, as soon as we arrive at this provisional personality we are driven, in order to understand it, to consider the circumstances and spirit of the time in which it grew, the doings of the time, its social existence, its joys and fears and hopes, its outlook on the universe and on man—its "criticism of life," as Matthew Arnold would say. Now this life and spirit of a time we cannot properly learn except from the study of its literature. So back we come once more to the study of the actual books produced. At first it would seem as if we had got into a vicious circle. We cannot understand fully the spirit of the time without first knowing the literature produced in it, and we cannot really understand the literature without first knowing the spirit of the time. But a little reflection will show us that this is merely the old question between *inductive* and *deductive* methods, which is best solved by using them alternately. We rise from our study of particular books to a general idea of the time, and then descend by applying this general idea to the interpretation of other particular books. And this rising and descending will have to be done more than once. For my own part, I would leave the finding of the author in his works—the biographical method—till the learner has gone up and down several times. You will see readily at what points of my progress I would call in the aid of a history of literature.

I am aware that the idea I have just indicated will cause dismay to those in the obscurer recesses of whose minds there lurks the thought that a learner need read, or will read, a book, or set of books, only once. My answer is twofold: first, it is not every book produced which need be read, or is worth reading, more than once; second, that I am at present considering the cases of genuine students, and not of those who would apply to literature the methods they apply to railway novels and the morning paper. The reader of *one* reading can never enter into the kingdom of literature. I am sorry for him, for he will miss one of the greatest and purest joys of life. But he cannot take this kingdom of heaven by force.

I have been led by the general chain of my argument to indicate one of my main pleas before I had intended to do so. But I must not on that account omit certain considerations which should properly have preceded it. I have stated one of my reasons for not using the biographical method at an early stage, and I believe Prof. Dowden agrees with me on that point. There is another reason. The aim of this method is to gain a conception of the personality and genius of the author; and an admirable aim it is. But my present aim, both first and last, is to understand and appreciate the *literature*, not the *author*; or rather, the author only so far as this will help me to understand the literature. I think we should begin with this aim and never lose sight of it, keeping the finding of an author in his works as quite a secondary, or at least a very late, aim. But there is another side to what may still be called the biographical method—the use of what general history tells us of the author's time and the external circumstances of his life—his biography, in fact—to help us to understand his point of view, his limitations, his purpose, and the objects of greatest interest to him. But here a caution is necessary. It is not always that the author's biography will help us to understand a particular work of his. It is mere trifling and a waste of time to require a young student to learn the life of Shakespeare as introductory to a study of "Julius Cæsar," or indeed of almost any play; for this will give him either no help at all, or not the help he needs. The play is the thing—its subject, its characterization, its dramatic art. The introductory work should call his attention to these, interest him in them, and help him to observe them intelligently. The study of the author's personal equation may come after—long after. On the other hand, some knowledge of the circumstances of Milton's life will undoubtedly help the beginner who is about to make acquaintance with the strength and beauty of "Samson Agonistes," as will also some knowledge of the general nature of Greek drama. Some knowledge of Pope's life and of the circumstances of his time is essential to the understanding of the "Essay on Man," or "The Rape of the Lock." It is evident, therefore, that, in the use of this method, careful discrimination will always be necessary.

But I will let Mr. Leslie Stephen speak on this matter in his clear-sighted, clear-mannered way:

Literature [he says in the lecture already mentioned] may be considered in two ways. A book is the utterance of an individual mind. It is the *sic cogitavit* of a Francis Bacon, a William Shakespeare, or an Alexander Pope. But it does not depend simply upon the individual mind. Every individual is a constituent part of a society. He transmits as well as creates. He utters his own thoughts, but he is also the organ through which the spirit of the age utters its thoughts. He looks upon the world, but he is also, in part at least, a product of its development. His philosophy, the enthusiasms which stir him, the doubts which torment him, the answers which he supplies to them, the form in which he states the eternal problems and tries to utter a solution, are all in great measure determined for him by the social element in which he lives. . . . Literature in this aspect is simply one function of the social organism. . . . and any serious treatment of it must recognize that fact. The greatest men, it is true, sav what is of interest for all times; but even the very greatest, the Homers and Dantes and Shakespeares, say it in the dialect and under all the conditions of their own time. . . . You should, I say, understand the spirit of the age, and by that I do *not* mean that you should study what is called the philosophy of history. There is, indeed, no more fascinating study—but in the first place, the doctrines which it announces are still the guesses of clever men rather than the established conclusions of scientific observers; and, in the next place, true or false, they are abstract theories, not concrete pictures. What you require is not a clever analysis, but a vivid representation, of the period. You should see it, not be full of formula about it.

Again, he says when dealing more particularly with Pope:

Some peculiarities of Pope's poetry are set out in every manual of English literature. There is his famous theory of "correctness"; there are the limitations which he accepted and introduced into English verse, and the so-called conventionality which produced the so-called reaction of Wordsworth and his school; and it is, of course, necessary to know what were the peculiarities thus indicated, and what was the history of their growth and decay. But, if it is necessary to know this, it is necessary also to pass beyond this knowledge. Why did he adopt these canons of taste, and why did they so impress his contemporaries? No answer can be suggested from the bare facts; you must feel the relation between the facts and the whole spirit of the time. . . . I do not mean, however, that any profound philosophical study is needed—far from it. I only mean that you must have some such acquaintance with the general drift of thought as Pope himself possessed—which, to say the truth, was superficial enough—before you can fairly appreciate him, or cease to be repelled by some otherwise unintelligible peculiarities. But still more necessary is a study which in truth is closely connected with this. The study of philosophy is most intimately connected with the study of society. The philosophical movement was congenial to, if it was not due to, the peculiar conditions of society.

After dealing in a most interesting way with the details of this question, Mr. Stephen says:

Feel this; see these men as they were, and so you will understand why Pope uttered himself in his characteristic fashion, and see the real power which was hidden under an unfamiliar mask. And how to feel this? By reading some of the most delightful books in the language.

He then proceeds to mention some of these "most delightful books, and to briefly indicate their characteristic features: Addison and Swift, Pope's Correspondence, Lady Mary's Letters, "Robinson Crusoe," "Gulliver's Travels," &c. But, strange to say, we do not in the whole list find a single history of literature.

I must not leave you, however, with the idea that Mr. Leslie Stephen is so bookish that he considers this literary preparation as alone sufficient:

It is not sufficient [he says], because after all what a man wants for the appreciation of books is not so much to have this or that kind of knowledge as to be a clever fellow and to have a sensitive nature. . . . A good education for literary purposes is by no means exclusively an education in literature. To appreciate Shakespeare you want something much more important than cramming with facts. To enjoy "Romeo and Juliet" the best qualification is to be one-and-twenty (which is compatible with being also thirty or forty). To enjoy "Hamlet" it is, perhaps, better to be, let us say, fifty-four [his own age at the time of writing]. The education which comes through life, through the possession of certain passions and feelings, is the most important of all education. But, I hasten to observe, this does not tell against education in general, but only against a narrow education which fails to stimulate all our powers. . . . If I were asked whether a young man would best fit himself for a literary career or for the study of literature by reading books about authors or by reading mathematics (supposing him to have time for only one pursuit), I should unhesitatingly advise mathematics (a subject which he considers to

have least in common with literary study). Not, of course, that he will learn anything directly useful. He will never require to apply the binomial theorem to the criticism of "Paradise Lost." But an exclusive reading of mere criticism on literary history has a strong tendency to make a man a prig, to suppress all spontaneous and independent judgment, and to leave his general faculties undeveloped.

One last quotation to conclude with :

In any case remember that reading worthy of the name is not the acquisition of a set of dates and facts, or a knowledge of correct critical labels, but an occupation which to be pursued to any purpose must be pursued with zeal—must become, if it should not begin by being, a real and keen enjoyment, and which should end by becoming not a mere luxury, but a necessity of life.

I fear I may be thought to have dealt too much in quotation from Mr. Stephen's admirable lecture. If this be so, my excuse is that it is so good, and, as far as I can ascertain, so little known; moreover, it expresses my own ideas far better than I could express them for myself; and I have wished to remind you that I have very much on my side our two greatest living authorities on English literature.

From what I have said and quoted, it will, I think, be evident that I do not think that the first stage of literary study should consist in the study of a history of literature. The literary history of a period should not be introduced, in my opinion, until we have made a personal acquaintance with some of the best, though not the most difficult, literature of that period, and are making our first attempt to rise from particulars to generals. Even then it should be used sparingly at first. Our first attempts at generalization should be brief and not too detailed or too intricate. From the nature of the case they cannot be complete or completely accurate. Let us be content if they are as complete and as accurate as the extent and character of our knowledge allow. Let us avoid hurry, and rest satisfied if we make them a little more complete and a little more accurate at each return to them, and not be too eager to adopt the generalizations and critical formulas of others.

As to what should be the nature of the contents of a history of literature such as we shall need, I have already indicated my opinion, though only indirectly. I will now be more explicit. In what I say, however, I would beg you to bear in mind that I do not refer to hand-books, or dictionaries or cyclopedias, or chronological outlines of literature. Many of these are excellent and very useful as *books of reference*—in particular I may mention Mr. Ryland's small and compact "Chronological Outlines of English Literature" and Chambers's "Cyclopaedia of English Literature," both of which I frequently turn to; and there are others. But a book of reference is not by any means the same as a class-book for young students. It is of the latter only—books for students young in their study of literature—that I shall speak. I can, of course, speak of only a few by name in the time at my disposal. In the first place, I demand that a history of literature should be a *history*, not a mere concourse or catalogue of facts, dates, and events, but an organized body of these wrought into a connected and intelligible narrative. In the second place, I require that it should show us the very form and body of the time, its spirit, the conditions of its society, and enable us to appreciate thought as thought, works of art as works of art, and that thereby it should enlarge, enrich, and refine our minds, and lead us to an understanding and a love of literature; and this cannot be done in a very small book. We do not want, I think, any gratuitous learnedness about small writers and the "meaner sort of books"—those are things to be left to books of reference and dictionaries; buried decently there, with proper mound and headstone, and for epitaph—no, not "Rubbish shot here"—that would be unkind—nor yet "Here lies one whose name was writ in water," which is a challenge; but just the word "Peace." Moreover, since our rising from particulars to generals is not to be done once for all at any one stage, but more than once and at a succession of stages, we shall want not *one* history—even with large and small type—but a *succession* of histories; a succession based not merely on size and price, but on mode of treatment.

It has been my sad fate for some years past to have to read many histories of literature, of various sizes, for notice or review. The prominent characteristic of most of them is that they are not histories. The plan seems to be to write a short biography of each author with dates, adding the names of his works with dates, and also brief appreciations; arrange chronologically; divide into chapters, with or without decorative titles; and print. You may add an index and an appendix or two, and, if, like Madame Eglentyne, you have a "conscience and tendre hert," you may give references to the sources from which you have taken your

information. But this is not really necessary—you are not expected to be original. And, besides, we noticers of books like to show our cleverness in hunting out your sources. In these books there is very little connectedness of narrative, organic or otherwise, and nothing or next to nothing about the conditions of society and the spirit of the times. But there is plenty of formula. They are not interesting to read and not very helpful. I am told, however, that they are useful in preparing for examinations, but which examinations I am not told. As an examiner I should doubt it somewhat. Faults of teaching are not always entirely due to the examiner.

I am not speaking, and do not intend to speak, about books for advanced students. Such books as Prof. Ten Brink's, for instance, are outside my purview. Moreover, I am well aware the books that I desire are not for every writer's venture. Of the many books which I have read, and sometimes used, a fair number are good in many ways, but none exactly suited to my purpose. I have to gather my honey from many flowers. But some are more nearly suitable than others. I will mention a few, though they are all well known to you. Naturally, I first think of that charming and well informed little book Mr. Stopford Brooke's "Primer." The spirit in which it is written and the character and accuracy of its information are excellent; but it attempts too much for its size—it is too full of details and too condensed for young students. Moreover, its condensation leads to another drawback—it is too full of labels and formulas, very true and excellent in themselves, but very dangerous for beginners. And it is on too small a scale for older students. Were some of the minor details and a few of the formulas cut out, and the rest of the book expanded to twice its size and provided with at least some quotations, it would be a better book; at any rate, it would be much more nearly what I want. Perhaps some day we shall get such a book from Mr. Stopford Brooke.

When we come to somewhat older students the difficulty of providing for their needs is still greater. A writer equally at home in all the twelve centuries of our literature is more needed and is hard to find. The solution commonly attempted is to divide the history into periods of various lengths, with a different historian for each period—never a completely satisfactory plan. Under this head I may mention a series—called *hand-books*, but really histories—with Prof. Hales as general editor, a name always a guarantee for accurate and scholarly work even if at times the antiquary is allowed to overshadow the man of letters. We have "The Age of Milton," "The Age of Johnson," &c., the plan being to make the great author the centre of his period and to group the lesser folk in their respective ranks around him. I can vouch for one at least of the volumes being excellent—"The Age of Johnson"; or, if you desire to divide up still further, you cannot do better than to go to that admirable series "English Men of Letters," and you can either take one volume at a time or group two or three for one period. Of course this does not entirely suit my plan; not because you are obliged to take period by period—for that is my idea—but because you may be led to take writers more or less singly, and to treat each more or less exhaustively and isolatedly before going to the next. This is not my idea. The complete treatment of single authors belongs to a later stage as I conceive it—a stage when our successive generalizations have at length given us one sufficiently full and accurate to allow us to attempt the interpretation of one great writer by the spirit and the light of his age.

The books which are only partly helpful in work of the kind which I have indicated are too numerous for me to attempt a list of them. Perhaps, however, I ought to mention Henry Morley's "First Sketch of English Literature," a wonderful compendium of information as to facts, dates, titles, contents, &c., but singularly uninspiring and lacking a steady standard of literary values and an insight into the life of the times; and yet so full and so accurate that an older student can hardly dispense with its aid as a book of reference. There are also the volumes on "Social England" edited by Mr. H. D. Traill, and I must not forget that very interesting and well written book by Mons. J. J. Jusserand, "The Literary History of England." But the monographs on particular literary epochs and particular writers, the volumes of memoirs, correspondence, &c., these are as the sands of the sea in number; and you must hunt them up for yourselves in Sargent's "Guide-Book to Books" or W. S. Sonnenschein's "Dictionary of the Best Books." But to name and discuss them now would distract attention from the points which I desire to have a very careful consideration: the possible use of a history of literature in the earlier stages of literary study; when it should be used; and what should be the general character of its contents.

I have spoken of young students, not of pupils at school. But, if you allow my plea to be valid in the case of the former, you will, I think, agree with me in holding it to be still stronger in the case of the latter. But, however this may be, I think we shall all be united in the opinion that points such as I have brought forward must be carefully considered and judged before ever we can place English literature in such a position of authority both at school and college as we most of us in our hearts desire it to occupy.

Mr. BARNETT was in entire sympathy with all that the lecturer had said, and hoped that his efforts would result in the reform of English studies in our schools and colleges. Hitherto English in the schools had been too exclusively a gymnastic on the lines set by the old classical studies, and teachers, believing that their work should be mainly interpretative, had devoted themselves to dissecting the literary work before them instead of endeavouring to make their pupils appreciate thought as thought. The purpose literature had to serve, and to which the school could contribute, was to make the pupils like, understand, and feel with the author put before them; for the cultivation of literary taste was not the same thing as the cultivation of knowledge of things. He knew from observation that it was possible to get even young children to appreciate literary expression and to sympathize with the thoughts expressed. The contrast which the lecturer had emphasized between history as history and literature as literature was particularly instructive. In the earlier stages of child life history must be treated as pictures of facts, and it was only late in the school career that history became a study of literature.

Mr. ORCHARD agreed with the lecturer that the study of the history of literature should occupy an intermediate place between the study of special works of literature and biographical study of authors. For the study of the history of literature involved an appreciation of the relations between literary works, which would be impossible unless those works were known, and to some extent understood, beforehand. The study of biographies was rightly placed at a later stage. In order to study with profit the life and literature of any author it was necessary to take account of his time, and to have sympathy and the power of analyzing character, and of weighing and estimating different elements and degrees of character. For this purpose a philosophical training was required.

The CHAIRMAN said that English literature was one of the most inspiring subjects that could be taught or learnt, but in many ways it was one of the most disheartening. There was such an immense amount of detail that the teaching of any history was very exhausting both to teacher and scholar. The choice of samples of literature must rest with the teacher, and it was, therefore, important that he should be properly instructed as to the method of selection. English literature was often rendered extremely repulsive to young pupils by the way in which it was presented. In many schools the teaching of the literature was almost entirely neglected in order that the various references might be dealt with. In this way continuity of thought was sacrificed to word exercises, complicated with reference to history and geography. No course would be more likely to make the child hate literature. It was to be hoped that the lecture would bring home to the minds of teachers that the play was the thing, and that it was quite possible to teach that in the first place in such a way as to bring before the minds of the pupils the beauty of the poem as a whole.

Mr. BOWEN, in replying to the remarks of the various speakers, said there would in the future be a tendency to leave the study of English literature out of the school curriculum. The study of French and German would become more and more a study of the languages for practical purposes instead of a study of art and beauty of expression. He would, therefore, urge the importance of teaching English literature in schools for the sake of the culture it afforded.

A vote of thanks to the lecturer concluded the proceedings.

**CORRESPONDENCE.**

*We do not hold ourselves responsible for the opinions expressed by our correspondents.—Ed. E.T.]*

**THE ORDER IN COUNCIL RELATING TO REGISTRATION.**

*To the Editor of the Educational Times.*

SIR,—The long-expected Regulations for Registration must be a severe disappointment to many, especially to those who have had the subject most at heart.

Certain of the provisions are distinctly unfair. The book of the Register will be involved and unwieldy. Unless teachers in secondary schools come forward in considerable numbers, it is difficult to see whence funds will be derived for the payment of salaries and publishing expenses. If this class of teachers boycott the Register—and there is but little inducement to place oneself

upon it, and but little fear of penal consequences if one forbears—the whole scheme must end in a *fiasco*.

It is sincerely to be hoped that secondary teachers will not commit themselves to any preliminary steps, nor even give public expression to any desire to put their names on such a list, until their various associations have met and agreed upon a common policy that shall tend to bring about essential changes in the Order at the earliest possible opportunity.

This result may seem difficult in face of the terms of the Order in Council, but the circumstances seem to demand strong language and stronger measures. Secondary teachers hold the key of the position; and, if they will only realize it, it will be possible, by combined action, to exact a pledge of revision even from the Board of Education.—I am, Sir, obediently yours,  
OBSERVER.

London, February 20, 1902.

**MR. LEWIS SERGEANT.**

WE record, with deep regret, the death of Mr. Lewis Sergeant, for over six years the Editor of this journal and a valued member of the Council. His health began to break down last summer; but, although he had been compelled by his doctor to give up most of his literary work some months ago, his active control of this journal continued up to his death, which occurred on February 2 at a sanatorium at Bourne-mouth, at the age of sixty. Mr. Sergeant was a graduate of Cambridge (St. Catharine's College), and his connexion with literature and journalism began soon after he left college, over thirty-five years ago. Few men in the ranks of London's literary army could claim a wider or more varied acquaintance with the higher branches of journalism, and he belonged to that now diminishing band whose culture is allied with sound learning and scholarship. As the *Athenæum*, to which he had been a contributor for some thirty years, said of him, he was one of the few men in London journalism who knew his Horace. For the last six years he was a leader writer and reviewer on the staff of the *Daily Chronicle*, and, in addition to the work done by him for the *Athenæum* and as editor of the *Educational Times*, he wrote several books on political and historical subjects. The principal are the following:—"New Greece" (1878), "England's Policy" (1881), "William Pitt" (1882), "The Government Handbook" (1890), "John Wyclif" (1893), "Greece in the Nineteenth Century" (1897), and "The Franks" for the "Story of the Nations" Series.

His fine courtesy and ready sympathy with the interests of others won the affection of all who came in contact with him, and he possessed in a remarkable degree a receptivity for new ideas, while at the same time maintaining his political and other principles, sometimes in the face of personal loss. Since 1878 he acted as Honorary Secretary of the Greek Committee in London, and he was created by King George a Knight of the Greek Order of the Redeemer for his services to the Greek cause. It is characteristic of the modesty of the man that the present writer, who knew him intimately during the last seven years, never discovered this fact till after his death.

**MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.**

A MEETING of the Council was held at the College, Bloomsbury Square, on February 8. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Baumann, Rev. J. O. Bevan, Mr. Bowen, Mr. Brown, Mr. Butler, Mr. Charles, Mr. Chettle, Mr. Eve, Mr. Milne, Mr. Pinches, Dr. R. P. Scott, Rev. Dr. Scott, Rev. T. W. Sharpe, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the resolutions adopted at a joint meeting of representatives of the College of Preceptors, the Teachers' Guild, and the Private Schools' Association on January 8 had been forwarded to the Duke of Devonshire.

He announced, with great regret, the death of Mr. Lewis Sergeant, a member of the Council and Editor of the *Educational Times*.

The Order in Council relating to the Registration of Teachers, which had been laid on the table of the House of Commons, was referred to a Special Committee for consideration.

The diploma of Fellow was granted to Miss F. A. White, that of Licentiate to S. Jones and F. J. Wyeth, and that of Associate to J. P. Bolger and A. B. Coomb, who had passed the required examinations.

It was resolved that application should be made to the Board of Education for the recognition of the College as an Inspecting Body under Section 3 (1) of the Board of Education Act, 1899.

The Report of the Finance Committee was adopted.

The Report of the Education Committee was adopted.

The Rev. T. W. Sharpe, M.A., C.B., was elected President of the

Council, and Dr. Wormell, Sir Philip Magnus, and the Rev. J. Stewart were re-elected Vice-Presidents. Mr. H. W. Eve was re-elected Dean, and Mr. E. E. Pinches Treasurer of the College.

The following persons were elected members of the College:—

- Mr. W. E. Harrison, A.C.P., Handsworth Technical School, Staffs. Miss C. O. Hættel, 22 Abundel Square, Barnsbury, N. Mr. H. C. Osborne, A.C.P., The County School, Richmond, Surrey. Mr. O. Riley, A.C.P., The Poplars, Eiland. Mr. S. G. Shrive, A.C.P., Wesley College, Sheffield. Mr. J. B. Wilkinson, Grammar School, Brighton.

The following books had been presented to the Library since the last meeting of the Council:—

By E. ARNOLD.—Arnold's Britannia History Readers (5 vols.); Eastwood's Student's Synopsis of English History; Tatlam's Virgil's Æneid, Book II.; Wilkins and Hollingsworth's Algebra for Beginners, Parts I, II, and III., and Answers. By G. BELL & SONS.—Marchant's First Greek Reader; Masse's Cicero de Amicitia; Phillipson's Virgil's Æneid, Book V.; Roberts's Ovid's Tristia, Book I.; Walker's Elementary Inorganic Chemistry. By A. & C. BLACK.—Brandin's Grands Prévôtiers du dix-septième Siècle; Finmore's Boys and Girls of Other Days (Second Series); Florian's Dumas' Aventures de Chicot; Hartog's Histoire de Bayard; Hebertson's Descriptive Geography from Original Sources (North America); Milne's Passages for Paraphrasing; Smith's Scott's Waverley. By the CLARENDON PRESS.—Laurence's Scenes from Sophocles' Antigone. By K. & J. COOPER.—Scott's Scott's Marmion (2 vols.). By GINN & Co.—Abbott's Roman Political Institutions; Allen's Tacitus' Annals I.-VI., and Tacitus' Germania and Agricola; Allen and Greenough's Cicero de Senectute; Allen and Moore's Euripides' Medea; Atkinson's First Studies of Plant Life; Carpenter's English of the XIVth Century; Clapp's Homer's Iliad XIX.-XXIV.; Collier's Virgil's Æneid VII.; Cutler's Virgil's Æneid IX.;

Moliere's Les Precieuses Ridicules; D'Ocge's Latin Composition, and Sophocles' Antiope; Dyer's Plato's Apology and Crito; Emerson's Introduction to the Middle Ages; Fruit's Milton's Lycidas; Frye's Complete Geography; Gayley's Classic Myths in English Literature; Gold's Tales from Hauff; Greenough's Homer's Satires and Epistles, Livy, Books I, and II., and Virgil's Bucolics and Æneid I.-VI.; Greenough and Peck's Livy, Books XXI, and XXII.; Humphreys' Aristophanes' Clouds; Huntington's Milton's L'Allegro, &c.; Inamont's Burke's Speech on Conciliation with America; Lockwood and Emerson's Composition and Rhetoric; Long's Pensets of the Field and Fowls of the Air; MacMechan's Carlyle's Heroes and Hero-Worship; Moliere's L'Avare and Le Misanthrope; Montgomey's Leading Facts of English History; Macaulay's Essay on Lord Clive; Macaulay's Second Essay on Lord Clatham, and Scott's Old Mortality; C. D. Morris's The Cyclopes, Book I.; E. P. Morris's Captives and Trimmimus of Plautus; Muller and Wenckebach's Gluck Auf, and Schiller's Maria Stuart; Myers's General History, History of Greece, Rome; its Rise and Fall, and The Eastern Nations and Greece; Nicolson's Aristophanes' Plutus; Perrin's Homer's Odyssey I.-IV., and V.-VIII.; Porter's The Stars in Song and Legend; Rollins's Ercannum-Chatrium's Madame Therese; C. F. Smith's Thucydides, Book III., and Thucydides, Book VII.; C. L. Smith's Horace's Odes and Epodes; Tarbell's Demosthenes' Philippics; Tellow's Virgil's Æneid, Book VIII.; Wecklein's Æschylus' Prometheus; Winkler's Goethe's Faust; Wright's Juvenal; Yonge's Scott's Quentin Durward; Zitzkala's Old Indian Legends. By D. C. HEATH & Co.—Thomas's Goethe's Faust, Parts I, and II. By HEEFER & SONS.—Lindsey's Problems and Exercises in English History, Books Band G, and Certificate Note-Book of European History, 1814-1848. By W. HEINEMANN.—Mackinder's Britain and the British Seas. By MACMILLAN & Co.—Esser's Geobel's Hermann der Cherusker, and Word and Phrase Book for the Same; Hadley's Practical Exercises in Magnetism and Electricity. By METHUEN & Co.—Rubie's Gospel according to St. Mark; Williamson's Junior English Grammar. By J. MURRAY.—Judd's Student's Lyell. By RIVINGTONS.—Willis's Algebra, Part I., and Answers. Calendars of the University of Manitoba, 1901, and of the Pharmaceutical Society of Great Britain, 1902

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION. CHRISTMAS, 1901.

The following is the list of the successful candidates at the Colonial and Foreign Centres—British Guiana, Buenos Ayres, Cape Coast, Chefoo, Colombo, Freetown (Sierra Leone), Grenada, Jamaica, Lagos, Nassau (Bahamas), St. Lucia, and Port of Spain (Trinidad).

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a = Arithmetic, g = Geography, h = History, l = Latin, s = Scripture, ad = Sound, Light, and Heat, sp = Spanish. b = Bookkeeping, d = Drawing, e = English, eu = Euclid, f = French.

The small figures 1 and 2 prefixed to names in the Second and Third Class Lists denote that the candidates were entered for the First and Second Classes respectively.

Bracketing of names implies equality of merit.

BOYS.

Table listing candidates for Boys' Certificate Examination, categorized by First Class (Senior), Second Class (Junior), and Third Class (Honours).

Table listing candidates for Third Class—Honours Division, including names like Acquah, G. R., Craig, O.A., and Wilson, C. E. g.a.

Table listing candidates for Third Class—Pass Division, including names like Kay, T. L. bk., Tonkin, M. McN., and Manners, T. N.

Table listing candidates for Lower Forms Examination, categorized by Boys and Girls, including names like Durham, J. A. al., Shodlesan, A. O. al., and Wuppermann, M.M.

Table listing candidates for Lower Forms Examination, categorized by Boys and Girls, including names like Wuppermann, M.M., Prada, V., and Besson, M. e.g.a.f.d.

Table listing candidates for Lower Forms Examination, categorized by Boys and Girls, including names like Ulrich, F. f., Copp, R. A., and Gannes, E. f.

Table listing candidates for Lower Forms Examination, categorized by Boys and Girls, including names like Algernon, R. E., Barrow, J. N., and Brown, F.

## REVIEWS.

*National Education—Essays towards a Constructive Policy.* By Prof. H. E. Armstrong, H. W. Eve, Sir Joshua Fitch, Prof. W. A. S. Hewins, J. C. Medd, T. A. Organ, A. D. Provand, Rev. B. Reynolds, F. Storr, and the Editor, Laurie Magnus. (John Murray.)

This volume of essays appears at an opportune moment. It would have been an advantage to have an authoritative survey of our existing educational machinery before any endeavour was made to discuss the best ways of improving it; but, in the absence of such a survey, we must be thankful for the information and practical suggestions supplied by the highly competent private writers who have contributed to Mr. Laurie Magnus's *symposium*. The essayists make no systematic attempt to set before us either the deficiencies in our educational system or the defects in our educational methods, though, incidentally, they throw considerable light upon both. They assume as a matter of notoriety that our machinery is inadequate in amount and defective in point of efficiency, and leave us to judge of the value of their suggestions in the light of common experience.

Mr. Laurie Magnus's introductory essay, entitled "Aims and Methods," is a kind of extended preface, in which he has successfully drawn together the threads of the essays supplied by his contributors. The only subject on which he writes independently is the study of English literature in our schools and Universities, for the treatment of which, oddly enough, he found a strong reluctance on the part of those best qualified to speak:

The head master of a leading public school [he tells us] was averse from publishing his experience in the matter because, so far as it went, it told against the prospect of successful results from such teaching. He found that boys do not take to English literature, and that, unless they are able to "make" or to "do" something, they respond more readily to a call to learn foreign accidence and idioms than to appreciate the resources of their own language.

This is a lamentable confession to make. If English literature fails to attract the young, it is because youthful tastes and capacities are disregarded by the teacher. We can well understand how boys and girls are soon bored with the philological and archaeological notes with which our English classics are so frequently overlaid when treated in class, but we have never found our native literature fail to interest a class, if the subject was suitably chosen and the teacher restricted himself to what was absolutely necessary in the way of elucidation, and availed himself, wherever it was possible, of the co-operation of his pupils. Mr. Magnus thoughtfully suggests that literature-teaching should rest on a psychological foundation. He says:

The Herbartian principle must be discreetly applied and the study of the art should be adjusted to the development of the student's mind. Beginning with ballad literature and the heroic tales of Hebrew and Greek mythology, of French, German, and English legend, the course would gradually lead through all the moulds of literature to that preparation for philosophy which is enjoined in the Prussian Code.

Prebendary Reynolds's contribution on "Church Schools and Religious Education" will do good by keeping before the mind of the public that the old "religious difficulties" which attended the discussion of elementary education will inevitably re-present themselves as soon as the State seriously addresses itself to deal with secondary schools and secondary training colleges. There is a growing feeling in the country that the parent should have a voice in determining the religious education of his child, and should suffer no educational disadvantage at the hands of the State on account of his preference.

Mr. Francis Storr gives an interesting account of the history of the registration movement and takes up the cudgels for the training of secondary teachers, concerning the value of which some of our head masters are still sceptical. Mr. Storr holds:

(1) That training for secondary teachers must be post-graduate; (2) that theory and practice must be studied concurrently and in combination; and (3) that a practising school, or, at least, a school where classes can be continuously taken by the students, is an integral part of a training college. A training college without its school attached is a *chimæra bombinans in vacuo*.

He points out the unfairness of comparing the certificated Board-school teacher with the untrained public-school master, to the disadvantage of the former. The proper comparison would be between the trained and untrained elementary teacher. No training can take the place of culture, or enable a teacher to im-

part what he does not know. Mr. Storr, as an examiner for the University of London, has had the advantage of comparing the teaching of trained and untrained graduates, and has no hesitation in pronouncing in favour of the former.

Sir Joshua Fitch writes on the inspection of secondary schools. His large experience in the inspection of elementary schools and training colleges gives his opinions a special value. He holds that the inspection of secondary schools is needed for the better information of parents and the public respecting the status of the several schools, their staff of teachers, their material equipment, and their academic and other successes. It is also needed, he thinks, in order that it may be seen whether the schemes framed under the Endowed Schools Acts or the programmes put forth by the several governing bodies of the schools are actually carried into effect. In answer to the question, Is it wise to rely more on inspection or examination? Sir Joshua Fitch pronounces in favour of individual examination as indispensable. The task of Government inspectors on visiting a secondary or intermediate school would be in the first place to collect its statistics, to report on the school premises and equipment, and then to say: "Are your scholars examined by a University or other recognized public authority? If so, let us have the report, and that will suffice. If not, tell us what your plans and aims are, and what you propose to have done; we will then endeavour to see how those plans have been carried out and with what result."

Prof. Armstrong holds a brief for the teaching of physical science, and what he calls "practical studies." He considers that the school programme of the future will not be to inculcate knowledge, but to develop "knowingness." This, we presume, is only a new way of saying that the cultivation of faculty will be held of greater importance than the communication of facts.

The essays of Mr. A. D. Provand, Mr. T. Organ, and Prof. Hewins upon our industrial needs and commercial education are based upon a wide acquaintance with the facts of our commercial and manufacturing interests. The writers have little difficulty in showing that we have lost invaluable opportunities for keeping our industries abreast of the latest discoveries of science, and for fitting our clerks and business men for the special work that they have to do. One of the great difficulties to be overcome in meeting existing needs arises from the scarcity of teachers who are competent to give practical instruction in the technicalities of commerce and of practical science. The ordinary teacher does not know much about business, and the business man does not know much about teaching. These difficulties, however, must be overcome, even if we have to spend money freely in the training of specialist teachers or in inducing business men to spare some portion of their time for teaching.

Mr. J. C. Medd offers some valuable suggestions on agricultural education in connexion with the elementary school, the training of teachers, higher primary schools, evening continuation schools, practical agricultural schools, secondary schools with an agricultural side, collegiate centres, winter schools, dairying and veterinary colleges. He is in favour of the formation of a central authority, preferably the Board of Agriculture, to supervise and report upon every grade of agricultural education, but urges no good reason for leaving agricultural education under a separate authority. We have had quite enough of independent authorities, and, at a time when there is a general desire for establishing a single authority for dealing with all departments of education, the country is not likely to recognize the claims of agricultural education to separate treatment.

One of the most attractive essays is that on "The Teaching of Modern Languages," by Mr. Eve, who writes with a scholar's knowledge of languages, classical as well as modern, and balances their claims with singular fairness. A sixth-form boy, Mr. Eve reminds us, has gained from his classical studies many substantial advantages. He has worked through a delicately graduated series of problems, each just within the reach of his powers, thus exercising an increased mental activity, while constantly adding to his store of knowledge. There is no breach of continuity in his studies. Accuracy of observation has been cultivated as far as words are concerned. The discipline of applying remembered facts to new problems has been steadily enforced. The study of words has involved, to a large extent, the study of ideas. The practice of translation has formed the habit of grasping the exact idea which a group of words conveys. Delicacy in the use of words has been assiduously cultivated. Something of the rationale of language has been learnt that could not have been equally well learned from the mother-tongue, and will not be without its value in studying other languages. Lastly, the sixth-form boy has been com-

pelled to read with minute attention some masterpieces of literature, and he has incidentally been introduced to a good many serious problems—ethical, historical, and philosophical—in a form not too closely associated with modern controversies. Mr. Eve admits, however, that these results are accessible only to the few. To the large majority of the pupils of secondary schools Greek remains a sealed book, and Latin is intelligible only through the help of a crib. Mr. Eve would substitute, in the case of boys and girls leaving school at sixteen or seventeen, German and French for Greek and Latin, and one of the most interesting parts of his essay is devoted to showing how the modern languages may be made to supply the disciplinary and humanizing influences associated with successful classical training. He makes a convincing defence of the utility of translation as part of a training in modern languages.

The editor contributes a bibliographical note on "Educational Treatises," which will be found useful for purposes of reference; and an appendix is supplied presenting the various Church of England schemes that have been put forward for dealing with elementary education.

*Britain and the British Seas.* By H. J. Mackinder, M.A.  
(Heinemann.)

Few men have done more than Mr. Mackinder to popularize the teaching of geography and to raise it from the dull accumulation of facts into a systematic training of the reasoning powers. The work before us, the first of a series on "The Regions of the World," will, therefore, be welcome to the rapidly increasing number of intelligent teachers of the subject. The first chapter discusses the position of Britain. The contrast is pointed out between Virgil's "penitus toto divisos orbe Britannos," the Britain on the very edge of the old map in Hereford Cathedral with Jerusalem in the middle, and Britain the centre of the land hemisphere. Attention is called, too, to the remarkable fact that the nearest point of England to the Continent is just opposite to the end of the dividing line between Teutonic and Latin Europe. In the following chapters water takes precedence of land, and the British seas, the submarine platform, and the tides are discussed. The structure of the land is then described in detail, and that in language intelligible to any one possessing only an elementary knowledge of geology. Special attention is called to the "Rift Valley" of Scotland, between the Grampians and the Southern Uplands, a phenomenon reproduced in many parts of the world, notably in the Great Rift Valley of Africa. These chapters lead up to an interesting sketch of the probable history of our islands as worked out by modern geologists. Their view is that there once existed a Northern "Atlantis," a continental area connecting Greenland and Norway, and dividing the Atlantic from the Arctic Ocean. Traces of this continent are found in the submarine ridge joining Iceland to the North of Scotland. On its southern frontier stood the chain of hills now represented by the Outer Hebrides and part of the Northern Highlands. Southward and eastward spread in the course of the Carboniferous epoch, and again of the Cretaceous epoch, a vast extension of the Atlantic Ocean covering a great part of Europe, including much of the British Isles. Only at a late period of the Tertiary epoch did "Atlantis" entirely disappear, leaving the British Isles in connexion with Europe; next came the separation of Ireland, and, last of all, the cutting of the Straits of Dover. It has often been pointed out that the absence of snakes in Ireland is due, not to St. Patrick, but to the comparatively short period during which that island remained in connexion with the European continent.

The river system is also treated in detail, with an interesting appendix on the formation of rivers, and the way in which it is possible, from time to time, for one river to capture the tributaries of another. It almost seems as if modern science had revived the myth of Alpheus pursuing Arethusa. The larger generalization of this part of the book is that of a greater Rhine in a more extended continent still connected with "Atlantis," flowing past the Dogger Bank, and receiving as tributaries the Elbe, on the right bank, and the Thames, Trent, and other British streams, on the left. A discussion of British climate follows, with a lucid explanation of weather charts and their interpretation.

Thus far we have been concerned with Nature. The second half of the book treats of Nature as modified by man. On the racial question Mr. Mackinder's general conclusion is that, "while Britain has been subjected to overpowering Celtic influence, the amount of Celtic blood in Britain is probably not very

great. In the main, the races of Britain were either Teutonic or aboriginal and pre-Celtic. This is much what M. d'Arbois de Jubainville says of the Celts in Gaul. The chapter on "Historical Geography" is necessarily brief, and gives only in outline the growth of the division into counties, so charmingly worked out in the late J. R. Green's "Making of England" and "Conquest of England." One interesting point may be noticed: the counties constituting Mercia are named after their county towns, and not, as Essex or Suffolk, on independent grounds. Mr. Mackinder supplies an explanation. Coming down to modern times, we have a description of the several divisions of the British Islands. For this purpose England is divided into metropolitan England and industrial England, the line of demarcation being drawn from the mouth of the Severn to the Wash, and these are again subdivided for purposes of description. The term "metropolitan" may seem somewhat proleptic: the distinguishing features of the section are (1) that nearly all the main roads and railways converge on London; (2) the coast-line looks over the narrow seas; (3) there are no considerable sources of mechanical motive power. Anyway, the distinction between the two sections is a very real one. The causes which have located towns form, of course, an important element in this part of the book; the various influences that have made London are traced in considerable detail.

It only remains to add that the book is admirably illustrated with about a hundred and thirty inset maps and plans, each confined to the elucidation of a single point. Most of them are due to Mr. A. W. Andrews and Mr. B. B. Dickinson, to whom teachers are much indebted for the useful lantern slides circulated by the Geographical Association. It forms an excellent compendium of the results of modern research, and fully justifies Mr. Mackinder's high position among *Stubengeographien*, to which he has recently added the qualifications of an explorer. Each chapter is supplemented by a useful list of authorities.

*Source Book of the History of Education for the Greek and Roman Periods.* By P. Monroe. (Macmillan.)

It is always an advantage, when time permits, to study original authorities rather than what other people have said about them. In the case of Greek and Roman education, those authorities are not very numerous, and Dr. Monroe has performed useful work in doing for them what Mr. Bosanquet has already done for the educational chapters of the "Republic." Non-classical students will be grateful for a useful selection of extracts from books otherwise inaccessible to them, and even those to whom some of the passages are familiar in the original will be glad to have them in combination. The extracts from Plato are from the late Master of Balliol's translation; other passages mostly from recognized versions. Each group is preceded by a short introduction, summarizing the *pieces justificatives* which follow. In the first chapter we have the famous speech of Pericles contrasted with an extract from Plutarch's "Life of Lycurgus" and with a passage from the "Protagoras" to indicate the scope of the change that had taken place in educational ideals. In another chapter the contrast between the rhetorical teaching of the Sophists and the more conservative views of education is brought out by extracts from "The Clouds" and from the orations of Isocrates. Longer passages follow from the "Cyropædia" of Xenophon, the "Republic" and the "Laws" of Plato—the one ideal, the other more practical and conservative—and the "Politics" of Aristotle. Later Greek education, as represented by the University of Athens, so well described by Mr. Capes, is illustrated by decrees of the Athenian Senate and Assembly, dating from about 100 B.C., and by an extract of the fourth century A.D., dealing with the college life of St. Basil and St. Gregory of Nazianzen. It will be remembered that it was from the University of Athens that Horace was carried off to join the standard of Brutus and Cassius, and that Atticus was one of its most distinguished *alumni*.

As to early Roman education, our sources of information are not numerous. The Laws of the Twelve Tables, which formed an important part of it, give us some hints, and it is easily gathered from the classical writers that it consisted mainly in an apprenticeship to the duties of a citizen. According to the legend, Virginia went to school in B.C. 449, but it is not till the third century B.C. that we have any details. In that century Livius Andronicus translated the "Odyssey," which became a standard text-book. With Greek influence grammar and rhetoric came to play a more and more important part. Dr. Monroe gives us extracts from the lives of eminent grammarians and rhetor-

icians by Suetonius, and a short passage from the "Bacchides" of Plautus, showing that the conflict between the old and the new had already begun. For the period between 100 B.C. and 200 A.D. the sources of information are comparatively abundant. Horace, Juvenal, and Martial supply incidental hints; Marcus Aurelius, in his "Thoughts," details the influences which had contributed to form his character; Cicero, in the "De Oratore," sets up the orator (or, rather, the statesman) as the ideal product of education; Musonius anticipates modern ideas in assimilating the education of women to that of men; Tacitus gives a pessimistic description of the results of the newer education as compared with those of the good old discipline, while Pliny takes a kindlier and more sympathetic view. A more systematic *conspectus* is presented by Quintilian, himself a famous teacher. Two short extracts may show how little the world has changed. Juvenal, after describing all that is required of a tutor, adds: "And, when the year comes round again, receive for your pay as much gold as the people demand for the victorious charioteer." Modern schoolmasters might draw a similar comparison between their own stipends and the pay of successful jockeys. Hear, again, Tacitus on the gilded youth of his day:—

To say truth, it seems as if a fondness for horses, actors, and gladiators—the peculiar and distinguishing folly of this our city—were impressed upon them even in the womb; and when once a passion of this contemptible sort has seized and engaged the mind what opening is there left for the noble arts? Who talk of anything else in their homes? If we enter the schools, what other subjects of conversation do we hear among the boys?

"Heroes of the Nations."—*Henry V.* By Charles Lethbridge Kingsford, M.A. (G. P. Putnam's Sons.)

"The most Christian champion of the Church, the beam of prudence and example of righteousness, the invincible King, the flower and glory of all knighthood, Henry the Fifth," was not only a monarch so fortunate, so capable, so popular, that, under him, according to Bishop Stubbs, even "Parliament forgot to grumble," but the typical mediæval hero whose extraordinary achievements were equalled by his sincerity and grandeur of character.

It is true that to most Englishmen the military genius of Henry has eclipsed his other qualities. We are apt to think of him only as the victor at Agincourt, the Regent of France. The ballad of Drayton, the play of Shakespeare, are the sources of the popular conception of the warrior king. But Shakespeare's "little touch of Harry in the night" really reveals far other qualities in his hero than mere military skill and prudence. It shows him as great in counsel as in war, able not only to conquer, but to rule; far-seeing, laborious, just, self-restrained, a man of ideals, and with a strong sense of duty. The elaborate historical studies on which Mr. Kingsford's interesting monograph is founded bear out this view; and, if he may seem, as is the way of biographers, unduly to exalt the virtues of his hero, it is beyond question that he has more justification than is frequently the case. There is, however, one point in which we can hardly agree with him—that Henry's nature was merciful. To us Henry's severity appears inflexible. It was an act of mercy to take the fire from the half-roasted martyr Badby when there appeared to be signs of his recanting; it may have been a religious duty to have the fire relighted when there was no recantation; but it was not the religion of mercy. It may have been a military necessity to massacre the prisoners at Agincourt; but what are we to say to the horrible story of the twelve thousand old men, women, and children, expelled from the besieged city of Rouen, whom Henry kept between his lines and the city walls, to die slowly of starvation? That he gave them a dinner on Christmas Day is a somewhat ineffectual proof of his mercy.

A noteworthy element in this book is the treatment of Henry as a constitutional sovereign. "In its outward form, the Revolution of 1399 resembled closely that of 1688. Both owed their success to the existence of a genuine national feeling; both were actually the work of an oligarchical party." The reign of Henry V. was, perhaps, the period of the most constitutional government before 1688. That it was premature was not his fault. He knew how to meet his Parliament half way; under him the estates obtained the first constitutional boon, the statutes were to be made without altering the words of the petitions on which they were based. But Henry knew how to control his Parliaments; witness the enormous grants they were always ready to make him. The importance and success of his foreign policy is also well brought out. Henry was his own Foreign Minister; in fact, his capacity for work, his mastery of details,

was fully as remarkable in civil life as it was in military. Nor was his determination to establish a good and equitable government confined to England. His wise and liberal domestic policy—if it may so be called—in France throws a new light on his aggressive wars.

An interesting part of the book deals with the legends of Prince Henry's early life. The facts of history show that all the time Prince Hal was said to have been amusing himself by beating the watch and robbing travellers he was fully occupied in fighting the Welsh, and that he had hardly reached manhood before he was called to preside over the affairs of the nation. It may comfort some to be told that, though "the evidence of facts is overwhelming, on the other hand the weight of tradition is too great to be lightly put aside." There is no evidence of his ever having been addicted to vicious courses. But Mr. Kingsford pleasantly suggests that "high-spirited and full of vigour, his enjoyment of life was complete."

With regard to the sudden change of life on assuming the crown, to which many traditions point, the author very pertinently points out that it may mean nothing more than that his sometime friendship for the unpopular Lollard leader Oldcastle came to an end:—

The historians who charge Henry with wildness as Prince find his peculiar merit as King in the maintaining of Holy Church and destroying of heretics. . . . It is probable that his religious attitude after his accession to the throne was a blow to Lollard hopes; perhaps it was somewhat of a surprise to his political opponents. Did his "change suddenly into a new man" mean no more than this?

(1) "Cambridge Natural Science Manuals."—*Zoology: an Elementary Text-Book.* By A. E. Shipley, M.A., and E. W. MacBride, M.A., D.Sc. (Cambridge University Press.) (2) *A Text-Book of Zoology.* By G. P. Mudge, A.R.C.Sc. (Arnold.)

(1) Unlike most of the other manuals in this well known series, the present one cannot be said to strike out a new line. The purpose it serves is already served by several other recent works, from which it differs only in those details of arrangement, selection of illustrative material, and the like which depend on the personalities of the authors. The purpose of the book is to give a progressive account of the adult anatomy, habits of life, and classification of all the main classes of the animal kingdom—progressive in the sense that it is not planned as a book of reference, but as one in which the reader of later chapters is assumed to have read the earlier ones. The disadvantage of such a work is that it must begin with an introduction dealing with a number of important abstractions before the concrete facts on which they are based have been laid before the student in their normal context. When will some zoologist have the courage to break with traditions, and write a text-book in two parts—an elementary one dealing with the concrete study of a few selected species, with such generalizations as may safely be drawn from them; and an advanced part, dealing systematically with the whole animal kingdom, but in definite sequence to the first part?

The treatment of those parts of the book that we have sampled is clear and well arranged; the diagrams are good and plentiful. One innovation in arrangement is a distinctly good feature—the relegation to the end of the work of the miscellaneous small groups of "worms," which in most books stand as a Slough of Despond on the path leading to the more important great phyla. Embryology, histology, and palæontology are very rarely touched upon—only where essential to the understanding of some feature of adult anatomy. We think the classification of Cephalopoda and Vertebrata would have been improved by the inclusion of extinct forms.

Since a reviewer is allowed the privileges of the unmuzzled ox treading out the corn, we wish to take objection to two statements in the book, both of which are matters of opinion and do not affect the value of the work. The first (page 12) is that the Protozoa are "slightly modified survivors of the first animals which appeared on the globe." Perhaps we have misunderstood the phrase, but it strikes us as overlooking the immense possibilities of degeneration at which the combination of very simple structural characters with the possession of a perfectly well defined nucleus seems to hint. The second (page 475) is the objection to Huxley's union of birds with reptiles as one class—Sauropsida, in contrast with Mammalia. We think the authors overlook the fact that the Mammalia branched off at the very bottom of the reptilian trunk when it was scarcely, if at all, above the amphibian level, while birds had a long ancestry admitted as reptilian before they became birds. If birds are to go in a separate class from lizards

and crocodiles, at least the reptilian ancestors and first cousins of birds should go into the former class, and not the latter; but no classifier has proposed to do that yet. Or else, to be consistent, the lowest grades now included among Mammalia should be relegated to the reptiles.

(2) This is an elementary text-book based on the "type-system," but in which the original idea of that method of teaching is very greatly altered, whether for better or worse may perhaps be disputed. That original idea found its first expression in the now almost forgotten "Huxley and Martin," which consisted of a series of simple monographs of selected species, as a foundation on which, by comparison and generalization, the building-up of the knowledge of biology might proceed. In the work before us we first find an introductory chapter which deals, not with any one species, but with such broad subjects as the physical changes which may have led to the evolution of the horse from *Eohippus*, and much more, among which such words as *thigmotaxis*, *homoplasia*, and *bioplasts* catch our eye in clarendon type. When we proceed to the description of the vertebrate "types," we find, instead of a connected account of each animal, a description of the skeletons of dogfish, frog, and rabbit compared with one another; then in turn follow the vascular systems of the same three, their nervous systems, &c. There are possible advantages in this method of treatment, but it appears to us to tend too much to make the student think he is only studying morphological abstractions instead of animals that live a life in the world. The same method is followed with the Invertebrata chosen. Finally the book ends with some chapters on embryology, and the problems of heredity, variation, &c.

Apart from our objection to the general plan, we have little fault to find with the book. The diagrams are effective, and the descriptions clear. The author is to be congratulated on not tying himself down to any syllabus that we are acquainted with; for, though the Intermediate Science Examination of London University seems to be in his view, he includes several animals unknown to that syllabus. He also allows himself plenty of space for the discussion of broad questions like heredity. A few verbal inelegancies must be noticed, such as "intersusception" for "intussusception," and the irritating use of "area" as the plural of the thoroughly naturalized word "area." And we wish that the author had taken geological advice before propounding to elementary students his theory of the causes of the evolution of the horse, which is that the reduction of toes just kept pace with the change of the surface of North America from swampy ground to dry prairie. What, we wonder, does he think would have happened to the horse tribe if the swamps had been drained in much less time than the length of one or two geological periods? And what is his evidence that they were not?

*The Point of Contact in Teaching.* By Patterson du Bois. (American School and College Text-Book Agency.)

This little book contains much good sense—to the address, mainly, of Sunday-school teachers, but of interest also *urbi et orbi*. For the latter, small as the book is, it might have been still smaller without any great loss of effectiveness; and it cannot be commended for cheapness. It has, however, had a considerable sale, we are told, in America, amongst all sorts of teachers, "secular" and other, and, no doubt, they have profited by it. For the point of contact is Mr. Du Bois's presentment of what the Herbartians call interest; and, under this name, the author illustrates very agreeably, if with some prolixity, the principle of connectedness, the profitableness of proceeding from the known to the unknown, the need of fitting new ideas to the old stock in the pupil's mind, and so forth. It may be commended to the notice of two different sets of dealers in education—first of all to those who mistake minuteness and particularity for precision and connectedness, the victims of a most unsound psychology, who do not realize that the young require *wholes*—large units—so that the wood may not be obscured by the trees, who would impose on children the wearisome, and often exceedingly abstract, procedure of the "scientific" investigator, with his balances, his measurements and minute pursuit of detail, *and his previous logical knowledge*; and, next, to those who present to children the last results at which they themselves have arrived as the first for children to apprehend—rules before processes, "concepts" before "percepts," and the rest.

Mr. Du Bois does not seem to recognize the importance of the obsession of emotional ideas in education; but this is a common fault with the "scientific" writers on that very unpositive sub-

ject. The austere preachers of positive processes as the only valid types of education have done, and are doing, much harm; and readers of such tractates as this should remember that there is a large field of education to be worked by example, injunction, iteration, if only to supply the aesthetic and emotional matter to which the action of reason is logically and actually posterior.

*Better Food for Boys.* By Eustace H. Miles, M.A. (Bell & Sons.)

It ought to be more generally known and acknowledged that too much flesh meat is eaten at our tables, that a diet for school or home is often improperly chosen, that the cooking and preparing of food frequently leave much to be desired, and that the English—as a nation—have to be credited with excessive waste in respect of food. We ought, therefore, gratefully to acknowledge the efforts of any writer who treats of such important subjects as these. The book before us is hardly the work of an expert in dietetics. Indeed, the author acknowledges his obligations to the works of Dr. Robert Hutchinson and others. His style, too, is somewhat confused, and the language slipshod: e.g., on page 14 we have "the power of these two allies of health are not unlimited." In fact, the book seems to have been composed in a hurry, and, perhaps, dictated to an amanuensis. In spite of all this, the testimony of the author is valuable as that of an athlete as well as a brain worker. He insists strongly upon the necessity for studying the laws of dietetics for the individual, and earnestly puts forward the desirability of substituting for flesh fleshless foods, such as milk, fruit and grain, and their respective products, vegetables and salads.

But there is a more serious side to the work. In the preface the object is stated to be that of drawing the attention of parents and schoolmasters to the following question:—Are we wise or right in subjecting our boys to a heating and stimulating diet, at the most impressionable time of life, when not merely physical, but also intellectual and moral, habits are being formed? It is alleged that to preach to the mind of the boy that the body must be kept in temperance, soberness, and chastity while that body is being regularly goaded to rebel against such restraint can hardly have any other result than that with which some of us are familiar. That an evil of this kind exists is but too certain; and, if a beneficial change could be wrought by paying greater attention to dietary, that, of itself, should furnish a cogent reason why this matter should receive close attention.

Few of us, perhaps, would be prepared to follow the author in his complete practice, but most persons who have investigated the ground-work of the moral and physical well-being of children—girls as well as boys—would be disposed to allow that flesh food should be used more sparingly than custom warrants, and that greater reliance should be placed upon foods of less actively stimulating properties.

*College Chemistry.* By Ira Remsen. (Macmillan.)

The preface states that this book has been written with the object of filling a place intermediate between the author's "An Introduction to the Study of Chemistry" and his "Inorganic Chemistry." It is further said that the time has not yet come for the abandonment of the study of the elements and compounds in what some are pleased to call the old-fashioned way. It is not surprising, therefore, to find that the method of treatment presents no new features, and is of a highly conventional type. The earlier chapters are devoted to theoretical considerations and a somewhat detailed study of the non-metallic elements, and the later chapters deal more briefly with the metals and the first principles of organic chemistry. Each chapter has a set of experiments appended. The apparatus suggested for performing them is, in some cases, quite impracticable, as may be seen from the drawing on page 80, which illustrates the collection, under impossible conditions, of a considerable quantity of water from burning hydrogen. The instructions given for making many of the experiments clearly indicate that the author has no conception of the manner in which they should be carried out. On page 74, for example, it is stated that hydrogen, mixed with about half its volume of oxygen, may be exploded noiselessly in a eudiometer, and with little or no danger. Apart from the question of personal safety, the author ignores the great possibility, when the gases are exploded in the proportions indicated, of the rupture of an instrument which may have taken many hours to calibrate. Again, if the directions for the preparation of perchloric acid, given on page 152, were followed,

a serious mishap might occur, for no mention of the necessity of separating any unchanged chlorate before distillation with sulphuric acid is made. The experiment for the preparation of phosphoric acid, in which the student is told to boil in a reflux apparatus 10 to 15 grams of ordinary phosphorus with commercial nitric acid, if carried out in accordance with the instructions, could not fail to lead to a violent and dangerous explosion.

Many expressions in the book are wanting in accuracy, for example, combining weight and atomic weight are confused. In the earlier part of the book the terms are regarded as synonymous, whilst later on the equivalent significance of the former is brought out. Taken as a whole, the book compares unfavourably with the author's earlier publications, and is not likely to add to his reputation as chemist or writer.

"Normal Tutorial Series."—*A Text-Book of Political Economy.*

By E. C. Robinson, M.A., LL.B. Lond.

This small book of some two hundred pages successfully achieves in its own department what appears to be the aim of the series; it is not an elementary introduction to economics, but contains a large amount of valuable information on its special topic compressed into the narrowest limits. It is concise, clear, and methodical, and leaves untouched very few of the subjects which are more exhaustively handled in ordinary treatises on economics; but the result is that many points are treated with exceeding brevity. The writer is well informed, and gives frequent quotations from authors whose names are regarded as authoritative. As a condensed summary of economic doctrine and the chief arguments involved in economic issues it is a good piece of work, well arranged and well carried out.

The defects of the book arise from its conditions; it keeps the examination standpoint always in view, and thus suggests rather a concise compendium or abstract than a treatise or a text-book. It will not displace the larger manuals: as a matter of fact, economics is too vast and comprehensive a subject to be condensed into very small compass. Full and detailed discussions and illustrations are essential if the foundations of economic truths are to be thoroughly grasped; there is no short cut to general knowledge in this complex branch of social science, and only patient study will make an economist, but the busy man who has not time for fuller investigation will find this a useful book of reference; also to the school teacher who has made himself familiar with economic doctrine it will supply a valuable handbook for his class lessons; and the examination student will find it a useful refresher, but he will be well advised not to substitute what is practically a valuable guide or abstract for a thorough and detailed study of the full arguments and history of the subject.

GENERAL NOTICES.

CLASSICS.

Κλίμαξ πρώτη. A First Greek Reader. By E. C. Marchant. (Bell & Sons.)

The first part of this little book consists of some twenty pages of simple stories and conversations, mostly in sentences of a single line, including, for example, a dialogue between Hermes and Charon, the story of Arion, and some simple adaptations from Xenophon. The second part is a version in Attic Greek of some of the adventures of Ulysses, adapted from the "Odyssey," a proceeding for which the writer quotes the authority of Lucian. They take the hero as far as Ithaca. Perhaps his adventures there are reserved for a Second Reader. It is a happy idea to introduce boys thus early to Greek legend. The reading of Xenophon, like the reading of Cæsar, does nothing to stimulate the imagination. Perhaps it would be worth while to try a similar plan with the "Metamorphoses" of Ovid, once a favourite subject for school reading. There is a vocabulary with a few notes, but intentionally very few. Is it wise, by the way, looking to the future, to say "μέν is generally to be omitted in translation"? Mr. Marchant would be horrified if the converse proposition were suggested in hints on writing Greek iambs. The illustrations are well selected from the antique, with the addition of a few of Flaxman's studies, and the book is a most valuable addition to our resources for the elementary teaching of Greek.

Homer, *Iliad IX. and X.* Edited by J. C. Lawson. (Cambridge University Press.)

The introduction and notes are well stocked with the usual matter, including constant references to Mr. Mouro's "Homeric Grammar," to

Prof. Jebb, and to Dr. Leaf. But, at the same time, there is a certain independence about the notes that redeems the volume from being superfluous. Mr. Lawson makes several suggestions that are certainly worth consideration, and some of the remarks that a reviewer looks for in school editions of Homer are conspicuous by their absence. Thus Mr. Lawson passes over the favourite interpretation of the epithet γλαυκῶπις, "with flashing eyes," and declares for "owl-faced." He also refers often to Prof. Ridgeway's "Early Age of Greece," to which various epithets are applied by those who think they know. Some of the notes merely repeat what is very accessible elsewhere, particularly those on the development of grammatical constructions. We agree with Mr. Lawson that ἔβρα nowhere, even in the "Odyssey," means anything but "price of the bride," and, in "Odyssey," l., line 277, we would render ἐπὶ παδός "in quest of a daughter."

*The Odyssey of Homer, Book I.* Edited by Rev. E. C. E. Owen. (Blackie.)

A bright, serviceable, and scholarly edition, which will be welcome to sixth-form boys. The well executed illustrations enhance the value of the book. We think that here and there a difficulty is not commented on with sufficient fulness. For example, the meaning of the aorist participle in line 24, as compared with the present, is not easy to see; and the reason of the change from dative to nominative case in lines 50 and 51 seems to call for remark. Mr. Owen does not devote any space to philological points, and he takes no account of the effect of pronunciation on the Homeric prosody. Nevertheless, his edition is well laid out and should prove stimulating.

*Scenes from Sophocles: Antigone.* By C. E. Laurence. (Clarendon Press.)

We have not had any opportunity of putting Mr. Lawrence's interesting experiment to a practical test, and can only repeat what we said recently of his "Ajax"—that he seems to us to have done all that can be done to simplify Sophocles and to bring him within the range of middle forms. But we must confess to misgivings, and, despite what the editor says in justification of his venture, we should prefer to stick to Euripides.

*The Æneid of Virgil, Book I.* Edited by H. B. Cotterill. (Blackie.)

This volume of Blackie's "Illustrated Classics" contains a great quantity of information collected by an editor who is evidently an enthusiast; and, though we have an irrepressible misgiving that for schoolboys—we do not include schoolgirls—Mr. Cotterill overdoes it, yet we very gladly acknowledge not only his ability, but also that he possesses in a marked degree the admirable curiosity that impels a true scholar to insist on getting to the bottom of things. As one among many good results of this quality we may mention a most useful appendix on the risings and settings of stars, from which much is to be learned that will help classical students—and even editors of the classics. We cannot understand what a vocabulary is doing in such a book. Surely Mr. Cotterill, who was formerly a master at Haileybury, knows that his commentary and appendices are far above the range of those who use vocabularies.

*Cæsar, De Bello Gallico, Book I.* Edited by E. S. Shuckburgh. (Cambridge University Press.)

Mr. Shuckburgh has provided a good elementary edition. He keeps to the beaten track of grammatical comment, translation, and a sort of stage directions; but the introduction, with its woodcuts, shows an approximation to a newer order of things. There is a vocabulary, and the text is printed in a bold type. On the whole, a very practical edition.

*Ovid, Metamorphoses, Book VIII.* Edited by W. C. Summers. (Cambridge University Press.)

Mr. Summers's edition deserves high praise, and we can say without hesitation that a better guide could not be desired. The editor combines good scholarship with the sound common sense of a practical teacher; and, while he knows all about the subject, nevertheless, like Longfellow's maiden fair, he "knows how much it is best to show." His notes are embellished by contributions from Dr. J. S. Reid and Dr. A. S. Wilkins. The introduction is an excellent piece of work, and, though quite short, it contains many suggestive remarks. Specially good sections are those on the "Metamorphoses" as a poem, and on the diction of Latin poetry. It seems to us that Mr. Summers would do well to employ his leisure, if he has any, in continuing his studies in the Latin poets. Whatever he writes on the subject seems to show the man capable of a *magnum opus*.

*Phædrus, Books I. and II.* Edited by J. H. Flather. (Cambridge University Press.)

Because it is on a small scale, and is carefully prepared to meet the needs of beginners, this edition of "Phædrus" deserves mention. Mr. Flather confines himself to simple comment, and does not give parallel passages. No reference is made to the characteristic features of Phædrus's Latinity; but the brief introduction contains paragraphs on Phædrus, Æsop, and metre. The book should fulfil its humble purpose successfully.

## SCIENCE.

*Guide to the Examinations in Physiology, and Answers to Questions, Elementary Stage (1894-1902).* (Blackie.)

This is a new issue of one of the well known "Guides to the Science Examinations of the Education Department" issued by Blackie & Son. The summary of regulations and hints to candidates are clear and useful; but brief model answers of this kind are liable to great abuse, for they are often committed to memory, with the worst possible results. It may also be added that some of these particular answers are far from being good models. For example, on page 24, Question 4, the only use assigned to the thin walls of capillaries is to provide for the easy passage of the nutrient material to the tissues"; and, on page 49, Question 5, the action of the diaphragm is described in an imperfect and mi-leading way.

*An Introduction to Chemistry and Physics.* By W. H. Perkin, Jun., Ph.D., F.R.S., and Bevan Lean, D.Sc., B.A. Second Edition. Two vols. (Macmillan.)

These little books will be welcomed by the science teacher who recognizes that the learning of how knowledge is gained is more important to his pupils than the acquiring of actual facts. The lines followed are almost identical with those recommended in the syllabus of a course of instruction in elementary science, including physics and chemistry, issued by the Incorporated Association of Head Masters. The books are written with great care, and the illustrations are good; so that any intelligent teacher will have no difficulty in carrying out the experiments and obtaining satisfactory results.

*Practical Chemistry.* By R. Abegg and W. Herz. Translated by H. T. Calvert. (Macmillan.)

An attempt to apply the ionization theory to qualitative analysis. The book is practical in little else but name.

*Graduated Exercises in Elementary Practical Physics.* By C. J. Leaper. (Biggs & Co.)

This book describes a series of experiments in practical physics, intermediate in difficulty between those of which an account is given in the primers used in some boys' and girls' schools and those described in the manuals employed in colleges of University rank. The theory of most of the experiments is given in detail, which makes the book particularly suitable to those students who have had very little mathematical training.

*Practical Exercises in Magnetism and Electricity.* Being a Laboratory Course for Schools of Science. By H. E. Hadley, B.Sc. (Macmillan.)

The first ninety pages of this useful little book are devoted to magnetism, the remaining one hundred and twenty to electricity. Though all are good, the former are the better. The latter contain a few theoretical explanations of which but few applications are given. The principle of Wheatstone's Bridge, for instance, may be applied in a very large variety of measurements and in many forms of experiment that are both useful and interesting, and not too complicated for a school laboratory. Many such uses of the principle have been devised by Prof. G. Carey Foster.

*Snaith and Field's Elementary Botany.* (Thomas Laurie.)

In the preface the authors of this little book take as their ideal "a dry text-book," to be learnt by heart; and those who think with them will, no doubt, find the present volume eminently satisfactory. Unfortunately, however, the pupils who commit the book to memory will store up in their minds a number of mistakes, imperfect definitions, and antiquated ideas, of which examples may be mentioned. On page 7 vegetable physiology is regarded as distinct from botany, the latter being incorrectly defined. Cells (on page 10) are inadequately described, and the *nucleus* is not even mentioned. It is hardly correct to say that leaves (page 34) convert the food into "secretions, by which the plant is nourished, &c." Even the beginner ought to know better than that the cells of the cambium layer "are produced from a viscid substance, called *cambium*, having almost the same composition as gum" (page 36). The embryo sac is badly maltreated on page 56. The ancient and misleading terms "exogens" and "endogens" are retained on pages 60 and 61. In conclusion, it may be stated that the cuts are far from good, and some of them are printed from ancient worn blocks.

*Browne's Elements of Botany.* Fifth Edition, rewritten and greatly enlarged. (John Heywood.)

This text-book has been carefully written, and is reasonably good so far as flowering plants are concerned. The account of chlorophyll requires amendment, and so does the summary of facts regarding respiration. Only a very meagre sketch is given of such things as dispersal of seeds and fruits, cross-pollination, and other biological topics which constitute the most interesting part of the subject. And, after reading in the preface that the author means to keep in view the leading results of investigations on the relation of phanerogams to cryptogams, it is disappointing to find that the latter receive scant justice, while there is no attempt to explain the flower by reference to the reproductive arrangements of lower types.

## MATHEMATICS.

*An Elementary Treatise on the Calculus.* By George A. Gibson, M.A., F.R.S.E. (Macmillan.)

Mr. Gibson's work forms an important addition to the text-books which have been written on the subject. The author throughout has kept before him the needs of students of applied science, who require the calculus chiefly for the sake of the valuable assistance afforded to them by a knowledge of its leading principles. He criticizes, however, the fallacy of supposing that an entirely superficial acquaintance with the subject is sufficient for the purpose. Due regard for these points has been paramount in determining the scope of the work and the mode of treatment. The book deals both with the differential and the integral calculus, and also gives a slight sketch of the standard methods of solving ordinary differential equations. A feature of the work is the introduction of useful and interesting chapters on various subjects, in order that these may be used later to show how the processes of the calculus can be applied to them. Another characteristic is the reversion to the custom of earlier writers, who drew their illustrations largely from natural philosophy as well as from branches of pure mathematics. Stress is constantly laid on the value of graphical representation, and the use made of it in the course of the work fully bears out the theory of its importance. Owing to the wide range that the text seeks to cover, many theorems that the author was anxious not to omit entirely, but for which he was unable to find space in the body of the work, have been included as exercises.

*Algebraical Examples, with Answers.* By H. S. Hall, M.A. (Macmillan.)

This is a small volume, published with a two-fold object. It is intended, in the first place, to furnish additional exercises for students using Hall and Knight's "Algebra for Beginners," or the "Elementary Algebra" by the same authors, though it must be noted that the present work corresponds only to a discussion of the subject as far as and including quadratic equations. In the second place, the volume has been compiled in order to meet an existing demand for a collection of graduated algebraical exercises not connected with text. Course of time has proved that, for questions of certain types, a further representation than that given in the above-named text-books would be desirable. To such portions of his subject the author has taken this opportunity of devoting some special attention. To aid the task of revision, several sets of test papers have been introduced at intervals. The name of the author should be, in itself, the best of recommendations for any work on algebra due to his pen.

*Algebra.* Part I. By H. W. Willis, M.A. (Rivingtons.)

This is a book of examples collected into graduated exercises suited for a lesson of about an hour. The chief difficulty in the use of such exercises lies in the difference in the rate of working of members of a class. Some will finish the exercise while others are not half through it. What is to be done then? Are the laggards to be left behind, or are we to delay the foremost to bring up the rear? Experience suggests a compromise. In the last ten minutes of the time allotted to a paper the whole class may be brought to discuss the last part of the work of its best members, and by the process the lame dogs may be helped over the stile. With judicious supplements of this kind the collection will be useful.

## MODERN LANGUAGES.

*German Lyrics and Ballads.* Selected by J. T. Hatfield. (Isbister.)

The late Prof. Ruggles, of Dartmouth College, in the United States, had collected materials for an anthology, and his work has been completed by Prof. Hatfield. It contains a good many old favourites, and some extracts from the most recent poets—as Ferdinand Meyer, Fontane, and Liliencron. The introduction is thoughtful and interesting, but is, perhaps, pitched a little too high for the young students for whom it is intended. It is a very difficult task to present literary history and criticism in an elementary form. The notes give careful indications of the sources and associations of the different poems. They are hardly suggestive enough in the way either of scholarly interpretation or poetical rendering.

"Blackie's Little French Classics."—(1) *Rabelais, Gargantua and Pantagruel.* Edited by E. C. Goldberg, M.A. (2) *Mérimée, Mateo Falcone.* Edited by J. E. Michell, M.A. (Blackie.)

This admirable little series of cheap classics is growing rapidly, and the general editor is to be congratulated on his excellent choice of authors and editors. (1) It was a happy thought to include some selections from Rabelais; it is, we believe, the first time that any part of the writings of the great French humourist has been made accessible to the pupils of our schools. The notes and glossary are helpful; some explanation of the peculiar spelling might have been added with advantage. A skilful teacher will be able to make the most varied use of this little volume. (2) The other book contains the complete story of "Mateo Falcone," one of the cleverest that Mérimée ever wrote, and some extracts from "La Vénus d'Ille," which he considered his masterpiece. The notes are quite satisfactory.

*A. von Kotzebue, Der gerade Weg der beste.* Edited by J. H. D. Matthews, M.A. (Blackie.)

This is a bright little play, which will be read with interest. Its

literary value is not great, but there is plenty of action, and the moral is unexceptionable. More care should have been taken over the spelling; *nichts* is no longer written with a capital, *Witue* has only one *t*, and *bisschen* is preferred to *bischen*. The notes are very brief, but will probably be found sufficient. There are some "short exercises" for retranslation, and also subjects for short pieces of composition.

*French Conversational Sentences.* By G. E. Avery. (Blackie.)

This useful little book contains a large number of words and phrases, with the English renderings in parallel columns. They are taken from everyday conversation, and are classified under such headings as numbers, the time, the weather, parts of the body, examples of interrogation, &c. Those who teach according to the translation method will find the book very useful for purposes of revision; while teachers on reform lines will be able to utilize the lists for class-work, though they may not like to put the book into the hands of their pupils.

"Black's French Series."—General Editor, Mr. F. B. Kirkman.

(1) *Histoire de Bayard.* Abrégée et modernisée par W G Hartog. (2) *Dumas, Les Aventures de Chicot.* Annotées par A. R. Florian, M.A. (Black.)

We can warmly recommend this series to our readers; and the publishers are to be congratulated on having secured in Mr. Kirkman a most able general editor. He is responsible for the excellent head-notes and footnotes which elucidate the text, as well as for the selection of suitable pictures, which in the volume before us are particularly good. The idea of issuing the books with or without the English notes and French-English vocabulary is a welcome concession to teachers who are anxious to exclude the mother tongue from French lessons as far as possible.

(1) The story of "Bayard" makes capital reading, and will appeal specially to boys. In the second edition, which we believe will soon be called for, it will be necessary to correct a certain number of misprints, and to overhaul the vocabulary.

(2) The "Aventures de Chicot" is taken from Dumas's novel "Quarante-Cinq," and is full of thrilling incidents. An appendix contains a contemporary account of the taking of Cahors, which is welcome; and a list of the principal parts of the irregular verbs, which seems out of place in a book which, though presenting no great difficulties, is yet too hard for elementary classes. The vocabulary is better than in the book just noticed, but we have observed several omissions here also.

*Deutsche Sagen.* By Franciska Geibler. (Longmans.)

Another German reading-book from across the Atlantic, with a wordy introduction, in which we are told, for instance, that "memory finds its best chance in moments of imaginative activity," and that the teacher, "in seeking for simplicity of structure suitable to the linguistic weakness of his pupils, is driven back to the use of trivial books of an inane simplicity of sentiment and diction quite unsuited to the better tastes of adolescent Americans." This kind of verbiage is getting distressingly common in American text-books. The idea of telling a number of German legends in a short and interesting form was a happy one, and has been executed with some skill. At times the condensation has been carried too far; the tale of "Roland" occupies seven lines! The style is not always good; there is an excessive use of *derselbe*, a sure sign of *der papierne Stil*. Sometimes the wording is distinctly funny, as when we read that Venus lives in the Venusburg: "mit vielen schönen, leichtsinnigen Frauen," and that "Tannhäuser führte in ihrer Mitte ein fröhliches doch unmoralisches Leben." The text is not free from misprints; most strange it is to find three times the form *grösste* for the superlative of *gross*. Is this taught in American schools? There are no notes, a good deal being left to the teacher. The vocabulary is fairly complete, but we miss the principal parts of verbs and the plural of substantives.

*H. von Sybel, Prinz Eugen von Savoiën.* Edited by E. C. Quiggin, M.A., Ph.D. (Cambridge University Press.)

There is no doubt that this must be regarded as the standard edition of Sybel's famous account of Prinz Eugen. Mr. Quiggin has done his work with very great care. A capital historical introduction, a map illustrating the campaign against the Turks, and copious notes give every help for following the hero's eventful career; and difficulties of language are fully and clearly explained. The book is very well and correctly printed, and forms a welcome addition to the "Pitt Press Series."

#### HISTORY.

*First Makers of England.* By Lady Magnus. (John Murray.)

A new volume in "The Home and School Library Series." The term "maker" is used in a wide sense; it is the making of our "welfare," of our "national character," rather than of our institutions and material well-being, that Lady Magnus has in view. Her three types are Julius Cæsar, King Arthur, and Alfred the Great. Her account of the early life of Cæsar and the influences that tended to form his character is interesting; but it is a little difficult to believe that his main object in attacking Britain was to introduce "the arts of peace," or to see how he gave our brave barbarian ancestors "their very first glimpse into the Beyond." Roman law has, as she rightly says, had

great influence on English law; but this did not come through the Roman occupation, but through the great jurists of a much later period. But she is fully entitled to say that "the ideal of honour which the 'Round Table' typified" is "as much a part of English history as all the accurately dated events which have occurred since the Norman Conquest." From this point of view she tells the old tales of Arthur and his knights—acknowledging, of course, that they "are not quite history, and there is no dull exactness of dates about them." In her hands the old legends lose nothing of their beauty or force or power of inspiration. With Alfred we come to more definite history. But, though we are told a few dates, we can truly say this is the only "dull exactness" in the story. It is told in a manner that cannot fail to interest both the children for whom it is primarily intended and children of a larger growth. The moral teaching which forms the basis of the work, though not obtruded, is beyond praise. A book of heroes, it is well adapted to light one to foster the heroic fire.

"The Picture Shakespeare."—Henry V. (Blackie.)

The title "The Picture Shakespeare" is hardly justified by the merit of the pictures. The portrait of Henry V. is well known, but the pictures of him in this book are in no degree like the known portrait. The notes are said to have been revised by some well known teachers. On the first page we find: "This wooden O refers to the Globe Theatres, which were built of wood and were circular within." How many Globe Theatres do the editors suppose there were?

*A First History of England.* Part II., 1066-1272. By C. L. Thomson. (Marshall & Son.)

The writer's opinion is that children from nine to twelve years of age should be taught history orally in the form of stories, and that then a book should be given them for revision. The plan may be good, but we cannot help suspecting that the author's oral method was simpler than her written method. Her stories are good, but are somewhat too crowded with detail. In other respects the book has the faults of most books of its type; the geographical basis of history is not brought out. The wars of William I. with Hereward and with the Danes did not, like the wars of the angels, take place in Chaos, but in the Fen country. But, though the term *Fenland* is repeatedly used, and though we are told that it was not then drained, there is nothing in the text, or even on the accompanying map, to show the child that it was situated in this country. That "Aldred of York was now dead, and was succeeded by Thomas of Bayeux," is a fact for which no child of twelve ought to be asked to grieve. Children, unlike Macbeth, love to sup full with horrors; but the story of the head of Watheof continuing to recite the Lord's Prayer after execution seems too gruesome even for young children. The best part of the book is its pictures.

(1) *Problems and Exercises in English History.* Book G, 1688-1832

(2) *Certificate Note-Book of European History, 1814-1848.* By J. S. Lindsey. (Cambridge: Heffer & Sons.)

An elaborate apparatus for helping examiners in history to prepare for any attack or "surprise" on the part of the examiner. The author has apparently been at the pains to tabulate the "Persons, Places, and Terms" asked in recent examinations, and gives a selection of questions with specimen answers. In the hands of a good teacher or careful student the book might prove a valuable auxiliary. A most valuable feature is an exhaustive list of books, pamphlets, scattered articles, poems, and even novels, bearing on each period.

*Aids to the Study of English History.* Issued by the Principal of Clark's Civil Service. (Civil Service Book Depot.)

This book is designed for the purpose of enabling students to "more easily grasp and treat of the difficulties of examination papers." The title should have rather been "Aids to the Passing of History Examinations." In its own line it is clever, and the writer well understands how to economize work and assist the memory. It will enable many a candidate to pass, and some perhaps who ought to fail.

*A Little History of the Midlands.* (Nelson.)

The history and geography of seven counties, with illustrations and poetical extracts, are here treated in some 150 pages. Not much, in any direction, can be expected, but the little book may prove useful as a change from the ordinary geography, and give at least a fresh point of view.

*A Brief Sketch of French History, 1789-1815.* By Léony Guilgault. (Blackie.)

The period dealt with in this small text-book is the whole revolutionary period. The book is well written, and will be found a reliable guide, intermediate as regards size between the voluminous histories of Thiers, Louis Blanc, and others and the historical outlines so much used in cramming.

#### MISCELLANEOUS.

"Rambles after Flowers."—(1) *Across the Common.* (2) *Through the Copse.* (3) *Around a Cornfield.* (4) *A Stroll on a Marsh.* (5) *Down the Lane and Back.* By M. C. Cooke, M.A., LL.D. (Nelson & Sons.)

These five little books are intended to lead children to take note of the wild flowers they meet with in their rambles. The form used is that of a dialogue between teacher and pupil, the language on both sides

being simple and natural, without condescension on the one hand or pertness or priggishness on the other. The popular names of the flowers only are given in the text, their botanical names being relegated to footnotes. The print is large and clear, the illustrations sufficient for the comprehension of all necessary details; a coloured frontispiece serves as an epitome of the contents of each separate booklet, and there is an index at the end of each. The binding is pliable, and the size suited to the pocket. We can thoroughly recommend the series as one of the best introductions to the study of Nature that we have met with.

*The Gospel according to St Mark.* Edited by A. E. Rubie, M.A. (Methuen)

We cannot recommend this book too highly for the use of junior students. There is an excellent introduction, containing all that can be known concerning the origin and purpose of the Gospel, and divers interesting particulars connected with the land of Palestine and its people at that time. The text is according to the Authorized Version, while the notes at the bottom of each page contain the revised variations, together with such explanations of the text as are needful, and there are valuable appendices. The editor has gathered his material from the best sources, notably from Edersheim's "Life and Times of Jesus."

*The Old Testament Narrative for Schools.* By Marcus Dodds, M.A. (Nelson.)

It is somewhat difficult to understand what purpose this book is designed to fulfil; but, as it contains a prefatory recommendation by a head master of so wide an experience as Bishop Welldon, we are bound to suppose that its usefulness is thus guaranteed. It is simply the historical portions of the Old Testament arranged chronologically in the *ipsissima verba* of the sacred writers, according to the Authorized Version, and without note or comment. The narrative is broken up into paragraphs, with appropriate headings. The feature likely to commend it for the use of young students is that the history is "Bowdlerized"; all genealogies and undesirable passages, as well as repetitions, being omitted.

*"Stops"; or How to Punctuate.* By Paul Allardyce. (Fisher Unwin.)

There is such diversity in the matter of punctuation, and so little of apparent law, that Mr. Allardyce may be credited with the performance of good service in the construction of this little book. It costs only a shilling, like Prof. Nichol's equally useful little *vade mecum*, and it is well worth the money. The author has drawn up a set of rules—though too many, we think—which should help diffident writers, and some also who are confident on insufficient grounds, to guard against misconstruction. He is rather too lenient with the colon, leaving it too free to intrude on the domain of its half-brother. On the other hand, he gives no countenance to the artificial and misleading trick (which we seem to have learnt from the French) of leaving out the comma after the second of a trio of concatenated words before the *and*. But, making all allowances for some unnecessary detail, the book is cheap, complete, and useful.

*How to enter the Civil Service,* by Ernest A. Carr (Grant Richards), can be recommended as a reliable and up-to-date guide to State employment for boys and girls, men and women. The standpoint of the author, as a Service man, is within; and from that vantage ground he deals, in a clear, matter-of-fact, sometimes colloquial style, with conditions of entry, examination subjects, appointments and prospects for posts at home, in the colonies, and abroad. Hints to students, specimen examination papers, and an index complete a handy half-crown volume which should be very acceptable to intending candidates.

*A Junior English Grammar,* by William Williamson, B.A. (Methuen), is a new book for younger pupils. It is obviously the work of a practical teacher, and based on the sound historical principle that Modern English must find its grammatical explanation in Old English. A prominent place is rightly allotted to sentence analysis. Useful practical hints are given on essay writing, paraphrasing, and punctuation; Oxford and Cambridge Junior Local Examination papers and other sets of questions are appended, and a useful index completes the work. A convenient, if not original, illustration of the various periods of our speech is afforded by quotation of the Lord's Prayer (1) in Old English (*minus* the accents), (2) in the Middle English of 1250, and (3) in the practically Modern English of Tyndale's Version (1526). Altogether this neat little work seems excellently suited to the requirements of those for whom it is intended.

*Perspective.* By Robert Pratt. (Longmans.)

This new elementary treatise on perspective also includes the discussion of the projection of shadows and reflections. Its scope and character will be best understood from the statement that it is written primarily, though, of course, not exclusively, for art students following the course prescribed for candidates for the Art Class Teacher's Certificate under the new regulations of the syllabus of 1901.

*A Commercial Geography of Foreign Nations.* By F. C. Boon, B.A. (Methuen.)

A handy book of reference for rough statistics of trade and for general facts bearing on the commercial wealth of all countries except the British Empire. It is intended as a companion volume to Mr. Lyde's book in the same series, treating of the latter only. Evidently

pupils are not meant to commit the contents to memory, but only to use the facts as a basis for intelligent comparison and reasoning. As such it will be found very useful, and to many minds intensely interesting.

*Tales of the Spanish Main.* By Mowbray Morris. (Macmillan.)

A more fascinating title for a boys' book could hardly be found. As the author says, those three little words, "The Spanish Main," are among the most eloquent in our language, and dull indeed must be the imagination in which they can kindle no spark of enthusiasm. Boys will enjoy here yet another chance of worshipping Columbus, Drake, Sir Richard Grenville, and many another hero. Maps, dates, and a thorough historical treatment are given, so that the book will inform and enlarge the reader's mind as well as delight his patriotic feelings. We say patriotic, for to the English mind all noble sailors are their countrymen. It is very attractively bound and printed, and will serve admirably as a gift-book.

*A Second Illustrated Composition Book* (Nelson) consists of a simple grammar, with exercises and copious pictures intended to be described by the pupils as composition work. The directions are clear and the grammar rules simply given, but too much is crammed into each page.

*The Stars in History and Legend.* By C. G. Porter. (Ginn & Co.)

This is a collection of legends and poetical quotations connected with the heavenly bodies. Under "The Moon," for example, we have, among others, the legend of Buddha, who, disguised as a hare, cast himself into the fire to be roasted for his guest Indra who presented himself as a beggar, the story of "Jack and Gill," an Indian legend from "Hiawatha," and quotations from Ben Jonson, Morris, Milton ("Satan's Shield"), and Browning ("One Word More"). "Perseus and Andromeda" suggest quotations from Mrs. Browning and Charles Kingsley. The legend is told and attention is called to the beautiful double star Almach and to the great nebula. The book is illustrated with excellent reproductions of Albert Dürer's drawings.

*Shakespeare's Julius Cæsar.* Edited by Stanley Wood, M.A., and Arthur Syms-Wood, B.A. (Gill.)

Every possible requirement for schools and examination purposes seems to be met in this edition. There are marginal notes for the younger, and footnotes for the elder pupils, and notes at the end for senior students, with a wealth of historical, dramatic, and critical introductions, glossaries, &c. The text itself is much marred by excessive use of italics referring to the notes, so that it would be impossible for a pupil to read it intelligently. The whole strikes one as being overloaded, and nothing is left for research or imagination. There is something humorously incongruous in the juxtaposition of a map of the Mediterranean and a picture of Anne Hathaway's cottage.

*A Counting-House Guide.* By W. G. Cordingley. (Eppingham Wilson.)

This is a fairly complete guide to most of the commercial principles and practice followed in London business houses. A useful feature is the large number of copies of actual commercial documents which are given to illustrate the ordinary routine business operations; and the explanations are sufficiently clear and simple to suite the requirements of boys who have just left school. The chapters on shipping documents and bills of exchange are particularly well done, though a future edition should more fully explain the actual mode of protesting foreign bills of exchange. Some of the arithmetical portions might be omitted, while the book would be more complete if the more important provisions of the Sale of Goods and Factors Acts were given.

*Twentieth Century Dictionary of the English Language.* Edited by the Rev. Thomas Davidson. (W. & R. Chambers.)

We can recommend this work to those who require a trustworthy English dictionary at a moderate price. We have tested it for many words which have recently crept into the language, including South African importations, and have only found it wanting in the case of "sjambok."

*Elementary Practical Hygiene.* By William S. Furneaux. (Longmans.)

This is a practical guide to elementary physics and chemistry, designed as a basis for the study of domestic science covered by Section I. of the Elementary Hygiene Syllabus of the Board of Education. The diagrams are clear, and detailed explanations of the more important experiments are given. The book is well adapted for use in class.

*The Child at Home.* By Mrs. Clement Parsons. (Nisbet.)

Two essays on childhood which may be recommended as sensible and helpful; one dealing with "The Only Child," and the other with "The Beauty of Simplicity."

*The Windsor Shakespeare.* Edited, with Notes, by Henry N. Hudson, LL.D. (Edinburgh: T. C. & E. C. Jack.)

Messrs. Jack are to be congratulated on their spirit in reproducing the "Harvard" edition of Shakespeare, with Dr. Hudson's well approved notes, in this sightly and well printed form. The volumes already published are "Julius Cæsar," "Romeo and Juliet," "The Merchant of Venice," "A Midsummer Night's Dream," "Macbeth," "Coriolanus," "As You Like It," and "Hamlet." Each volume is opened by a portrait, or a sketch of some house or cottage associated with the life of Shakespeare.

# COLLEGE OF PRECEPTORS.

## Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

## INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D.,

Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (Thirtieth Annual Series) commenced on Thursday, February 20th, at 7 p.m.

The course, consisting of Twelve Lectures, will deal with the laws of development of the child's intelligence, with the ideal aims of intellectual training, and with the conditions which the teacher has to satisfy in order to further a complete and many-sided type of intelligence. An effort will be made to bring the principles to bear on the practical problems of school instruction.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

### SYLLABUS.

**LECTURE I.**—Education as viewed by science. Different directions of education. Intellectual education in relation to education as a whole. Historical evolution of idea of intellectual education. Opposition of theoretical and practical tendency. Training of faculty and useful information. Relation of formation of intelligence to acquisition of knowledge.

**LECTURE II.**—Idea of mental development and of education, how connected. Laws of intellectual development. Idea of infant mind as a clean slate and as a group of congenital tendencies. Reception and assimilation of material from without. Elaboration of intellectual products as work of the child's mind. Part of human surroundings and of education in child's mental development.

**LECTURE III.**—The function of the senses in intellectual development. Spontaneous exploration of its world by child. Importance of the finer use of sense-organs. New methods of testing the senses. Methodical exercise of attention and the development of the observing faculty. Common defects in the teacher's appeals to the senses.

**LECTURE IV.**—Early development of ideas. How clear images of things are formed and retained. The laws of association and the orderly arrangement of ideas. General and special characteristics of children's memories. Value and proper use by teacher of verbal memory. Is the cultivation of the memory a special aim in education?

**LECTURE V.**—Early forms of productive imagination in the race and in the child. How the materials of experience are transformed in imaginative processes. Value of the imagination. The disciplined activity of imagination in methodical construction of ideal products. The teacher's control of the imagination. Common errors in children's efforts to imagine things.

**LECTURE VI.**—The relation of imagination to general thinking. The organic connexion of thought and language. First generalizations of the child. The development of general ideas in fullness and precision. Methodical exercises in generalization by the teacher. The relation of the observation to the classification of things.

**LECTURE VII.**—Thinking as apprehension of relations. Articulation of thought in the sentence. Judgment as means of rendering vague knowledge clear. The early forms of inference. The logical forms of the reasoning process. Educational problems growing out of the early exercise of the reasoning powers.

**LECTURE VIII.**—Interactions between observation, imagination, and thought. Intelligence as a trained capacity to understand. The process of assimilating knowledge and the doctrine of apperception. Early forms of apperception. Methodical apperception by way of clear general ideas and systems of ideas. The action of the teacher on child's apperceptive tendencies.

**LECTURE IX.**—The fiction of an isolated intellectual activity. The development of intelligence as including that of feeling and volition. The attitude of interest and attention. Different estimates of children's curiosity. The development of interests. The desire for knowledge and the higher control of the attention.

**LECTURE X.**—The concrete process of learning. The inquisitive attitude and its development by the teacher. The management of the material of instruction so as to promote the process of learning. The use by the teacher of the child's ideas and the art of questioning. Teaching as a progressive and systematic control of the learning process. Instruction by the teacher and self-instruction.

**LECTURE XI.**—Bearing of psychology and logic on methods of instruction. Adaptation of subject-matter and mode of treatment to stage of intellectual development. Method as involving advance from known to unknown and from vague to clear knowledge. Method as orderly presentation of connected parts of knowledge. Logical distinctions of method and their value for the teacher. Principles which help us in selecting and co-ordinating subjects of the curriculum.

**LECTURE XII.**—Intellectual idiosyncrasy. The reasons for studying the germs of individual capacity and taste. Attempts to discover the contents of children's minds and their value. Problem of adapting the process of instruction to individual capabilities and inclinations. The problem of satisfying at once the conditions of many-sidedness and individual development. Questions relating to the specialization of study.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

C. R. HODGSON, B.A., Secretary.

# BLACKIE & SON'S NEW LIST

**ENGLISH TALES IN VERSE.** With an Introduction by Professor C. H. HERFORD, Litt.D. (*New volume in the Warwick Library of English Literature.*) 3s. 6d.

**A FIRST LATIN COURSE.** A Latin Book for Beginners. Based on Conversation throughout. By E. H. SCOTT, B.A., and FRANK JONES, B.A., of King Edward's School, Aston, Birmingham. 1s. 6d.

**TERENCE'S PHORMIO.** Edited by W. CECIL LAMING, M.A. (*Blackie's Illustrated Latin Series.*) 4s. 6d.  
An edition de luxe of the play, the illustrations being of special interest.

**CAESAR'S GALLIC WAR, BOOK VI.** Edited by Prof. BROWN, B.A. (*Blackie's Illustrated Latin Series.*) 1s. 6d.

**THE LATIN PERIOD.** An Elementary Latin Exercise Book. By E. A. WELLS, M.A., of Highfield School, Southampton. Cloth, 1s.

This book contains well-graded hints towards the construction of Latin periods, with copious exercises. It will prove an excellent introduction to Latin prose.

**XAVIER DE MAISTRE—LA JEUNE SIBÉRIENNE.** Edited by W. G. ETHERIDGE, M.A. With vocabulary, 1s.

**A BRIEF SKETCH OF FRENCH HISTORY, 1789-1815.** By Professor LÉONY GUILGAULT. 1s. 6d.

**A BRIEF SKETCH OF FRENCH HISTORY, 1815-1873.** By HENRY HIRSCH, B.A., Senior Modern Language Master, Campbell College, Belfast. 1s. 6d.

## BLACKIE'S LITTLE FRENCH CLASSICS

The aim of this series is to provide students of French literature with well printed selections over a wide range in a cheap and handy form. Each book consists of from 32 to 40 pages, uniform in size with the well known Junior English Classics, and contains, in addition to the French Text, a brief Introduction and short Notes. The price is *Fourpence*.

**SELECTIONS FROM RABELAIS.** Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

**MOLIÈRE—SCENES FROM LE MÉDECIN MALGRÉ LUI.** Edited by W. J. CLARK, M.A., Ph.D.

**LESAGE—SELECTIONS FROM GIL BLAS.** Edited by H. W. ATKINSON, M.A., of Rossall School.

**MADAME DE SÉVIGNÉ—SELECT LETTERS.** Edited by Miss M. F. VERNON HARCOURT, of Notting Hill High School.

**PROSPER MÉRIMÉE—MATEO FALCONE, &c.** Edited by J. E. MICHELL, M.A., of Westminster School.

**THÉOPHILE GAUTIER—LE PAVILLON SUR L'EAU.** Edited by W. G. HARTOG, of Liverpool Institute.

**LA FONTAINE—LONGER FABLES.** Edited by A. H. WALL, M.A., of Marlborough College.

**BOSSUET—ORAISONS FUNÈRES.** Edited by the Rev. H. J. CHAYTOR, M.A., of Merchant Taylors' School, Crosby.

**MUSSET—SELECTIONS.** Edited by F. W. B. SMART, M.A., of Eastbourne College.

**BRUEYS AND PALAPRAT—L'AVOCAT PATELIN.** Edited by É. B. LE FRANÇOIS, of Redcliff House, Clifton.

# BLACKIE'S SOUTH KENSINGTON DRAWING SHEETS AND CARDS

*Based on Poynter's South Kensington Drawing Books.*

**THE SHEETS** are beautifully printed in Colours on superfine, smooth cartridge paper, 28 by 20 inches, are eyeletted, and done up in strong portfolios. There are six sets of twenty sheets each.

- |   |   |
|---|---|
| I. CURVES AND SIMPLE OBJECTS. Outline only. 10s.      | IV. ORNAMENT (ELEMENTARY). Coloured. 12s. 6d. |
| II. COMMON OBJECTS, MORE ADVANCED. Outline only. 10s. | V. ORNAMENT (ADVANCED). Coloured. 12s. 6d.    |
| III. GEOMETRIC AND SIMPLE FORMS. Coloured. 12s. 6d.   | VI. PLANT FORMS. Coloured. 12s. 6d.           |

**THE CARDS** (*Just published*): **Reduced Copies of the Sheets, beautifully reproduced and done up in strong packets, Sets 1 and 2, 1s. each. Sets 3, 4, 5, 6, 1s. 6d. each.**

**The Journal of Education** says: "It is impossible to bestow too much praise on these handsome folios, which are all that the most exacting art master can wish for. They are certainly the best and finest we have seen. Not only are the paper, the printing, the colouring, good and attractive, but the large size, the handy arrangement, and general convenience are just what a master busied with large classes desires. . . . We do not see how it is possible for anything better to be produced."  
**The Schoolmaster** says: "A most excellent set. These Sheets will prove an invaluable adjunct to the art teacher's stock-in-trade."  
**The School Guardian** says: "This excellent series. The copies are graceful in design, boldly executed, and tastefully coloured."

*Reduced Specimen of any set post free on application.*

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

**MATHEMATICS.**

Note on Quest. 14954, evaluating the integral  $\int_0^x \frac{\sin(\frac{1}{2}r\pi + ax)}{x^{n-r}} dx$ . By  $\theta$ .  $\beta$ .

It appears to have escaped notice entirely that the integral in question may have no meaning. In fact, the integral  $\int_0^a \frac{\sin x}{x^m} dx$  ( $a > 0$ ) has no meaning unless  $m < 2$ ; and  $\int_0^a \frac{\cos x}{x^m} dx$  has none unless  $m < 1$ ; while  $\int_a^\infty \frac{\sin x}{x^m} dx$  and  $\int_a^\infty \frac{\cos x}{x^m} dx$  require  $m > 0$ , in order that they may have a meaning.

Summing up, it appears that when  $r$  is even the integral

$$\int_0^\infty \frac{\sin(\frac{1}{2}r\pi + ax)}{x^{n-r}} dx$$

requires the condition  $2 > (n-r) > 0$ , and, when  $r$  is odd, the condition is  $1 > (n-r) > 0$ . Both of the cases are thus reduced to familiar results.

The first solution published affords an excellent illustration of the danger of differentiating under the integral sign without first examining whether such an operation is permissible. Consider, for instance, the integral

$$\phi(a) = \int_a^\infty \sin(ax) f(x) dx,$$

$f(x)$  being supposed such that  $\phi(a)$  has a meaning. Then

$$\begin{aligned} \frac{1}{h} [\phi(a+h) - \phi(a)] &= \int_a^\infty \frac{\sin(a+h)x - \sin(ax)}{h} f(x) dx \\ &= \int_a^\infty \frac{\sin \frac{1}{2}hx}{\frac{1}{2}h} \cos(ax + \frac{1}{2}hx) f(x) dx, \end{aligned}$$

and  $\phi'(a)$  will be the limit of this expression (if such limit exists) as  $h$  tends to the limiting value zero. But, since the upper limit of the integral is infinite, we cannot say that, for all values of  $x$  within the range of integration  $\text{Lt}_{h \rightarrow 0} \frac{\sin \frac{1}{2}hx}{\frac{1}{2}h} \cos(ax + \frac{1}{2}hx) = x \cos(ax)$ .

It may be possible, of course, if  $f(x)$  has a suitable form, to avoid the difficulty; for instance, let  $f(x) = e^{-x}$ , and then we can write, if  $h$  is

$$\begin{aligned} \text{positive, } \frac{1}{h} [\phi(a+h) - \phi(a)] &= \int_a^{1/\sqrt{h}} e^{-x} dx \frac{\sin \frac{1}{2}hx}{\frac{1}{2}h} \cos(ax + \frac{1}{2}hx) \\ &+ \int_{1/\sqrt{h}}^\infty e^{-x} dx \frac{\sin \frac{1}{2}hx}{\frac{1}{2}h} \cos(ax + \frac{1}{2}hx). \end{aligned}$$

In the first of these we may put

$$\text{Lt}_{h \rightarrow 0} \left\{ \frac{\sin \frac{1}{2}hx}{\frac{1}{2}h} \right\} \cos(ax + \frac{1}{2}hx) = x \cos(ax),$$

while the second is, in absolute value, less than

$$\int_{1/\sqrt{h}}^\infty \frac{2}{h} e^{-x} dx = [2/(\sqrt{h})^2] e^{-1/\sqrt{h}},$$

which tends to zero with  $\sqrt{h}$ .

It has been assumed that  $h$  is positive; but a similar method can be applied when  $h$  is negative, and the same result is obtained. Thus we have

$$\phi'(a) = \int_a^\infty x \cos(ax) e^{-x} dx,$$

where

$$\phi(a) = \int_a^\infty \sin(ax) e^{-x} dx,$$

so that the ordinary rule is justified; but it has required a special proof. It is, unfortunately, impossible to refer to an English text-book in which such questions are adequately discussed; they are fully treated in good foreign books on the calculus, and in Mr. G. H. HARDY'S recent papers.

**15023.** (R. CHARTRES.)—If  $C_r$  denote the combinations of  $n$  things  $r$  together, and  $D_r$  those of  $(2n-1)$  things  $r$  together, sum the series

$$\frac{C_1 C_1}{D_1} - \frac{C_2 C_2}{D_3} + \frac{C_3 C_3}{D_5} - \frac{C_4 C_4}{D_7} + \dots$$

Solution by the PROPOSER.

Taking LEGENDRE'S  $n$ -th coefficient  $P_n$  ( $n$  even)

$$n \int_{-1}^{+1} x^n - \frac{n(n-1)}{2(2n-1)} x^{n-2} + \dots = 0,$$

$$\text{or } n+1 = \frac{C_1 C_1}{D_1} - \frac{C_2 C_2}{D_3} + \dots$$

**14665.** (H. MACCOLL, B.A.)—Each letter denoting a statement, and  $\alpha'$  being the denial of  $\alpha$ , show that  $(\alpha x = ay) (\alpha' x = \alpha' z)$  and  $\alpha(x = y) + \alpha'(x = z)$  are equivalent when  $\alpha$  is a constant ( $x, y, z$  being unrestricted), but not necessarily when  $\alpha$  is a variable. [Def.: A state-

ment is a constant when it is either certain or impossible; a variable when it is neither certain nor impossible.]

Solution by the PROPOSER.

Let  $\phi$  denote  $(\alpha x = ay)$  ( $\alpha' x = \alpha' z$ ), and let  $\psi$  denote  $\alpha(x = y) + \alpha'(x = z)$ . Employing my usual notation, we get by mere inspection

$$\begin{aligned} \alpha' : \{ \phi = (x = y) \} \{ \psi = (x = y) \} : (\phi = \psi), \\ \alpha : \{ \phi = (x = z) \} \{ \psi = (x = z) \} : (\phi = \psi). \end{aligned}$$

Hence,  $\alpha' \cdot \alpha : (\phi = \psi)$ . That is, when  $\alpha$  is a certainty ( $\epsilon$ ) or an impossibility ( $\eta$ ),  $\phi$  is equivalent to  $\psi$ .

But this equivalence does not necessarily hold when  $\alpha$  is a variable ( $\theta$ ). It fails, for example, in the case  $\alpha' x y z$ ; for then (remembering that no variable or its denial can be impossible)

$$\begin{aligned} \phi &= (\theta \epsilon = \theta \epsilon) (\theta' \epsilon = \theta' \eta) = \epsilon (\theta' = \eta) = \eta, \\ \psi &= \theta (\epsilon = \epsilon) + \theta' (\epsilon = \eta) = \theta + \eta = \theta. \end{aligned}$$

An impossibility is a statement whose chance of being true is absolute zero. The chance of a variable may be infinitesimal, but it is never zero; it is always  $> 0$  and  $< 1$ . A certainty is a statement whose chance is absolute unity. [The rest in Volume.]

**14979.** (Rev. T. ROACH, M.A.)—Circles are described on SP, S'P in an ellipse as diameters and meet the auxiliary circle in R, R'; show that RR' is the tangent at P.

Solution by M. R. PEIRIS and LIONEL E. REAY, B.A.

Since circle SPR is described on SP as diameter, this circle touches the auxiliary circle at R; therefore SRP is a right angle and RP touches

the ellipse. Similarly, R'P touches the ellipse, therefore RPR' is the tangent at P.

**9848.** (Professor HANUMANTA RAU.)—Solve the equation

$$x^3 - 3mx^2 + 3x - m = 0.$$

Solutions (I.) by Professor S. SIRCOM; (II.) by Rev. T. WIGGINS, B.A., F. W. REEVES, B.A.; and others.

(I.) If  $m < 1$ ,  $x = \tanh(2r_1 \frac{1}{2}\pi + \alpha)$ ,  $r = 0, 1, 2$ , where  $m = \tanh 3\alpha$ . If  $m > 1$ ,  $x = \coth(2r_1 \frac{1}{2}\pi + \alpha)$ ,  $r = 0, 1, 2$ , where  $m = \coth 3\alpha$ .

(II.) For  $x$  substitute  $(a + m)$ , and the equation becomes

$$a^3 + 3a(1 - m^2) + 2m(1 - m^2) = 0.$$

For  $a$  substitute  $(y + z)$ , and the new equation becomes

$$y^3 + z^3 + 3yz(y + z) + 3(1 - m^2)(y + z) + 2(1 - m^2) = 0.$$

This is satisfied if  $y^3 + z^3 = -2(1 - m^2)$ ,

and  $yz = -(1 - m^2)$  or  $y^2 z^2 = -(1 - m^2)^2$ .

Hence  $y^3$  and  $z^3$  are the roots of  $t^2 + 2m(1 - m^2)t - (1 - m^2)^3 = 0$ ; therefore (by solving)  $y^3 = (m^2 - 1)(m + 1)$ ,  $z^3 = (m^2 - 1)(m - 1)$ ; whence

$$x = a + m = y + z + m = \sqrt[3]{(m^2 - 1)(m + 1)} + \sqrt[3]{(m^2 - 1)(m - 1)} + m,$$

which is the real root.

**14761.** (A. F. VAN DER HEYDEN, B.A.)—Let  $I, I_1, I_2, I_3$  denote the in- and ex-centres of a triangle. Given the circum-centres of the triangles  $II_2 I_3, II_1 I_3$ , and of the original triangle, construct the triangle.

Solutions (I.) by H. W. CURJEL, M.A.; (II.) by Professor SANJANA, M.A.

(I.)  $I$  is the orthocentre of  $I_1 I_2 I_3$ , and the circum-circle (centre  $O$ ) of triangle  $ABC$  is the nine-point-circle of triangle  $I_1 I_2 I_3$ . Hence the circum-centres of  $II_1 I_2, II_1 I_3, II_2 I_3, I_1 I_2 I_3$  are all equal. Therefore the middle point  $F$  of the line joining the centres  $L, M$  of circles  $II_2 I_3, II_1 I_3$  (i.e., middle point of  $II_3$ ) lies on circle  $ABC$ . Therefore the circle  $ABC$  can

be described, and line  $I_2I_3$  drawn; where it cuts the circle ABC again is point C, and  $I_1I_2$  passes through C and is at right angles to  $I_2I_3$ . Also  $I_2OM$ ,  $I_1OL$  are straight lines; hence  $I_2, I_1$  are determined, and hence also  $I_3$  as intersections of circles with centres L, M and radii  $LI_2, MI_1$ . And the intersections of  $II_1, I_1I_2$  with  $I_2I_3, I_2I_1$  are the points A and B.

(II.) Bisecting  $II_1, II_2, II_3$  at right angles by the lines  $O_2LO_3, O_3MO_1, O_1NO_2$ , we get  $O_1, O_2, O_3$  as the circum-centres of  $II_2I_3, II_3I_1, II_1I_2$ , respectively. Now

$$\begin{aligned} \angle O_1I_2I_3 &= \frac{1}{2}(\pi - I_2O_1I_3) \\ &= \frac{1}{2}\{\pi - (2\pi - 2I_2II_3)\} \\ &= I_2II_3 - \frac{1}{2}\pi \\ &= \text{BIC} - \frac{1}{2}\pi = \frac{1}{2}A, \end{aligned}$$

and  $\angle II_3I_2 = \frac{1}{2}B$ ;  
hence  $\angle NI_3O_1 = \frac{1}{2}(B+A)$ .

So also  $\angle O_2I_3I_1 = \frac{1}{2}B$   
and  $\angle II_3I_1 = \frac{1}{2}A$ ;  
hence  $\angle NI_3O_2 = \frac{1}{2}(B+A)$ .

Therefore N is the mid-point of  $O_1O_2$ . So L and M are the mid-points of  $O_2O_3, O_3O_1$ . Thus the circle ABC is the nine-point-circle of  $O_1O_2O_3$ , as it goes through L, M, N. Hence, of the triangle  $O_1O_2O_3$ , two angular points  $O_1$  and  $O_2$  are given, and the nine-point-centre O is also given; this triangle therefore can be easily constructed. With centres  $O_1, O_2, O_3$  and radii each equal  $2ON$ , strike arcs meeting two and two in  $I_1, I_2, I_3$ ; the pedal triangle of  $I_1I_2I_3$  is the original triangle.

**15006.** (Professor IGNACIO BEYENS, Lt.-Col. du Génie.)—Soit SABC un angle trièdre trirectangle; SD une droite intérieure que l'on projette sur les faces SAB, SAC, SBC, suivant SC', SB', SA'; démontrer que  $A'SB' + A'SC' + B'SC' = 180^\circ$ , et déduire de ce théorème la propriété correspondante du triangle sphérique (démonstration géométrique).

Solution by ALETROP.

Considérons le parallépipède dont l'un des angles trièdres est SABC et SD une des diagonales. Menons  $A'B', B'C', CA'$ . Par avoir un côté commun et les deux autres côtés égaux comme diagonales de rectangles égales, on a  $\triangle SA'B' = SB'C'$ , d'où  $\angle A'SB' = SB'C'$ ;  
 $\triangle SA'C' = SB'C'$ , d'où  $\angle A'SC' = SC'B'$ ;

par suite  $\angle A'SB' + \angle A'SC' + \angle B'SC' = \angle SB'C' + \angle SC'B' + \angle B'SC' = 180^\circ$ .

De là on déduit aisément: Le périmètre du triangle pédal d'un point pris dans l'intérieur d'un triangle sphérique trirectangle (de référence et égal à une demi-circonférence de cercle maximale).

**14970.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show how to find a set of three or more numbers  $q_r$  such that  $(x^{q_0}-1), (x^{q_1}-1), (x^{q_2}-1), \dots$  are divisible by  $q_1, q_2, q_3, \dots$ , respectively for several assigned values of  $x (= a, b, c, \dots)$  at once. Give examples when  $x$  has each of the values 2, 3, 4, 5, 6, 8, 9, 10, 12, 15, 16, 18, 20, 24, 25, 27, 30 for the same set of exponents  $q_0, q_1, q_2, \dots$ , &c., with the respective divisors  $q_1, q_2, q_3, \dots$  &c.

Solution by the PROPOSER.

Let  $q_1, q_2, q_3, \dots$  be a succession of primes such that

$$q_1 = 2q_0 + 1, \quad q_2 = 2q_1 + 1, \quad q_3 = 2q_2 + 1, \quad \&c. \dots (1);$$

$$\text{whence } q_0 = \frac{1}{2}(q_1 - 1), \quad q_1 = \frac{1}{2}(q_2 - 1), \quad \&c. \dots (1A).$$

Then the question requires

$$x^{q_0} \equiv 1 \pmod{q_1}, \quad x^{q_1} \equiv 1 \pmod{q_2}, \quad \&c. \dots (2);$$

so that  $x$  should be a 2-ic residue of  $q_1, q_2, q_3, \dots$  (2A).

This is satisfied if  $q^r = 4m_r \cdot x - 1$  for each  $r = 1, 2, 3, \dots$  (3).

Now, taking  $q_1 = 4m \cdot x - 1, \dots$  (4)

gives, by (1),  $q_1 = 4(2m) \cdot x - 1, \quad q_2 = 4(4m) \cdot x - 1, \quad \&c. \dots (4A)$ , which are all of the required form (3). If several of these ( $q^r$ ) in succession be prime, they would satisfy (2), and therefore solve the problem for any particular base  $x$ .

Next, giving  $x$  several values  $x = a, b, c, \dots$ , and taking

$$X = \text{L.C.M. of } a, b, c, \dots (5),$$

and, taking  $q_1 = 4mX - 1$ , giving by (1),

$$q_2 = 4(2m)X - 1, \quad q_3 = 4(4m)X - 1, \quad \&c. \dots (5A),$$

these  $q$ 's are all of the required form (3) for each of  $a, b, c, \dots$ ; and, if several of them in succession were prime, they would also satisfy (2) for any base  $x = a^p \cdot b^q \cdot c^r, \dots$ .

This completes the general solution.

[The rest in Volume.]

**14959.** (R. KNOWLES, B.A.)—P, Q are the ends of a diameter of a conic, centre C; R, R' are the points through which pass all the chords

which subtend a right angle at P, Q respectively. Prove that R, R', C are collinear.

Solutions (I.) by JAMES BLAIKIE, M.A.; (II.) by R. TUCKER, M.A.; (III.) LIONEL E. REAY, B.A., and others.

(I.) Let a circle described on PQ as diameter meet the conic in  $P', Q'$ ; then the normals at P and Q will meet the diameter  $P'Q'$  in R, R', the points through which pass all the chords which subtend a right angle at P, Q respectively. Thus R, C, R' are collinear.

(II.) R, R' are the FRÉGIER points for P, Q, and their coordinates (see ONY, Conics, ch. xii., Ex. xxxv., 29, or other text-books) are  $a^2e^2 \cos a, \frac{-a^2b^2 \sin a}{a^2 + b^2}$  and  $(\frac{-a^2e^2 \cos a}{a^2 + b^2}, \frac{a^2b^2 \sin a}{a^2 + b^2})$ ; whence, &c.

(III.) R is the FRÉGIER point of P and is on the normal at P. Similarly, R' is on the normal at Q. By the symmetry of the figure  $PR = QR'$ ; therefore, at once, R, C, and R' are collinear.

[Other solutions, too numerous to publish, have been received.—EDITOR.]

**14725.** (ROBERT W. D. CHRISTIE.)—Prove the following theorems on circulators. P = any prime having an even period;  $H_1$  = the number formed by the figures of the first half;  $H_2$  = the number formed by the figures of the second half. Then

$$\begin{aligned} P-1 &= (H_2+1)/(H_1+1), \quad H_2(P-1) = (P-2)10^{4p} + H_1 \dots (1, 2), \\ (H_2+1)/(H_1+1) &= (10^{4p}-H_1)/(10^{4p}-H_2), \quad 10^{4p}-H_1 = 0 \pmod{P} \dots (3, 4), \\ H_1+H_2+2 &= 0 \pmod{P} = 10^{4p}+1 \dots (5), \\ (H_1+H_2+2)/(H_2-H_1) &= P/(P-2) \dots (6), \\ P(H_1+1) &= 10^{4p}+1 \dots (7), \end{aligned}$$

and various others by combination.

Example of (1)—  $P = 7, \quad \dagger = 142857$ ;

therefore  $7-1 = (857+1)/(142+1) = 6$ .

Solution by ALETROP; H. W. CURJEL, M.A.; and A. M. NESBITT, M.A.

Soit p le nombre pair de chiffres de la période de 1/P. On a

$$1/P = (10^{4p}H_1 + H_2)/(10^{4p}-1) \dots (a).$$

D'ailleurs, on sait bien que, p étant pair,

$$H_1 + H_2 = 999 \dots (\text{jusqu'à } \frac{1}{2}p \text{ chiffres}) = 10^{4p} - 1 \dots (b).$$

$$\text{De (a) et (b) on tire } H_1 = 1/P(10^{4p} + 1) - 1 \dots (c),$$

$$H_2 = 10^{4p} - 1/P(10^{4p} + 1) \dots (d).$$

Maintenant, il est facile de vérifier les égalités proposées. Tout d'abord

$$H_1 + 1 = 1/P(10^{4p} + 1), \quad H_2 + 1 = (P-1)/(10^{4p} + 1) \dots (e, f),$$

d'où, par division, (1). Multipliant (d) par P-1 et en regard de (c), il vient (2). En divisant les valeurs de  $H_2+1$  et  $H_1+1$  tirés de (b), on a (3). De cette dernière et de (1),

$$10^{4p} - H_1 = (10^{4p} - H_2)(P-1) = 0 \pmod{P-1} \dots (4).$$

De (1), après avoir ajouté 1 aux deux membres,

$$H_1 + H_2 + 2 = (H_1 + 1)P = 0 \pmod{P} \dots (5).$$

L'addition de (e) et (f) donne  $H_1 + H_2 + 2 = 10^{4p} + 1 \dots (5)$ .

Cette-ci divisée par la différence entre (f) et (e), fournit (6). Enfin, (7) est (e) mise sous forme entière.

**14967.** (R. TUCKER, M.A.)—The tangent at P ( $ap^2, ap^3$ ) to the curve  $ay^2 = x^3(A)$  meets the curve again at Q; prove that (1) the normals at P, Q meet, in R, on the curve  $6561y^4 + 2430axy^2 + 32a^2y^2 = ax(75x + 8a)^2$ ; (2) the evolute to (A) is  $9y^2(729y^2 + 1728ax + 32a^2) + 512ax(6x + a)^2 = 0$ . (GREGORY'S Exercises, p. 195, gives a surd result.) If  $9p^2 = 2$ , then PR is also a tangent. Find the locus of the intersection of orthogonal tangents, and also of the circum-centre of POQ (O the cusp), and show that the mid-point of PQ lies on another semicubical parabola.

Solution by the PROPOSER and LIONEL E. REAY, B.A.

$$1. \text{ Tangent at P is } 2y - 3px + ap^3 = 0 \dots (i).$$

This meets the curve in  $p' = -\frac{1}{2}p$ . The normals at P, Q are

$$\begin{cases} 3py + 2x = a(3p^4 + 2p^2) \\ -24py + 32x = a(3p^4 + 8p^2) \end{cases} \dots (ii),$$

After some reduction we have to eliminate p between

$$729y^2p^2 - (1620xy + 144ay)p + 900x^2 + 96ax = 0$$

and  $2ap^2 + 9yp - 10x = 0$ ;

$$\text{whence } 81y^2(16a + 225x)(729y^2 + 360ax + 32a^2) = x(3645y^2 + 900ax + 96a^2)^2.$$

When cleared we get the result.

2. To obtain the evolute we eliminate  $p$  between (ii.) and  $3y = 12ap^2 + 4ap$ . Reducing, we get the equations

$$27y^2p^2 + 4(6x+a)p - 3y = 0, \quad 4ap^2 - 9py - 8x = 0.$$

Ultimately we have

$$144y^2(18x-a)^2 = (243y^2 + 96ax + 16a^2)(27y^2 + 192x^2 + 32ax).$$

This reduces to the result in question.

3. If (ii.) is a tangent, we have  $3pp'^2 + 2p'^2 = 3p^4 + 2p^2$ . This gives for contact  $(3p^2 + 2)(9p^2 - 2) = 0$ ; hence  $9p^2 = 2$ .

4. For locus of intersection of orthogonal tangents, we have (i.) and  $2y - 3\lambda x = -a\lambda^3$ , where  $9p\lambda + 4 = 0$ ; i.e., multiplying,

$$4y^2 - 6xy(p + \lambda) - 4x^2 = -\frac{4}{9}a^2p^2, \quad \text{also} \quad 3x = a(p^2 + \lambda^2 + p\lambda);$$

whence  $(27x - 4a)x^2y^2 = 4a(y^2 - x^2 + \frac{1}{9}a^2p^2)$ .

This reduces to  $(729)^2(27x - 4a)x^2y^2 = 4a[729(y^2 - x^2) + 16a^2]^2$ .

5. If equation to circle OPQ is  $x^2 + y^2 = 2ax + 2\beta y$ , we get

$$ap^2 + 6\beta p - 10a = 0, \quad 9\beta^2p^2 - (30a + 2a)\beta p + 2a^2 + 25a^2 = 0;$$

whence locus is  $a(25a + 2a)^2 = 4\beta^2(4a^2 + 45a + 10\beta^2)$ .

6. The locus is readily got to be  $125y^2 = 98x^2$ .

11264. (Professor ZERR.)—Show that the intrinsic equation to the evolute of the curve  $r^m = a^m \cos m\theta$  is

$$S' = \frac{a}{m+1} \left\{ \left( \cos \frac{m}{m+1} \phi \right)^{(1-m)/m} - 1 \right\}, \quad \text{where } \phi \text{ has its usual meaning.}$$

Solution by the PROPOSER.

We easily get that  $dr/d\theta = r \tan(\theta - \phi)$ . From the equation to the curve  $dr/d\theta = -a(\cos m\theta)^{1-m} \sin m\theta = -r \tan m\theta$ ; therefore

$$\tan(\theta - \phi) = -\tan m\theta, \quad \phi - \theta = m\theta, \quad \text{or} \quad \theta = 1/(m+1) \phi \dots (1).$$

$S' = \rho - C$  is the equation to the evolute  $ds/d\theta = a(\cos m\theta)^{(1-m)/m}$ , but  $d\theta = 1/(m+1)d\phi$ ; therefore  $ds/d\phi = a/(m+1)[\cos m/(m+1)\phi]^{(1-m)/m} = \rho$ ; therefore  $S' = a/(m+1)[\cos m/(m+1)\phi]^{(1-m)/m} - C$ , when  $S' = 0$ ,  $\phi = 0$ , and  $C = a/(m+1)$ ; therefore  $S' = a/(m+1) \{ [\cos m/(m+1)\phi]^{(1-m)/m} - 1 \}$ .

QUESTIONS FOR SOLUTION.

15064. (H. MacCOLL, B.A.)—Let  $\phi$  denote the alternative statement  $xyz'a' + xyb' + xy'z' + y'z'a'$ . Express the implication  $\epsilon : \phi$  (which asserts that  $\phi$  is certain, i.e., follows necessarily from our data) in the form  $(M : z : N)(P : y : Q)(R : x : S)(T : \eta)$ ; in which M denotes the weakest statement from which (in conjunction with our data) we can deduce z, and N denotes the strongest conclusion we can draw from z. Similarly P, Q, R, S are to be interpreted. It is understood that M and N may contain y and x, but not z; that P and Q may contain x, but neither y nor z, and that R, S, T contain neither x nor y nor z, though they may contain a or b. The implication T :  $\eta$  asserts that T is impossible, i.e., inconsistent with our data or definitions. The symbol A' is the denial of A, so that, whatever be the statement A, we have always  $\epsilon : A + A'$  and  $AA' : \eta$ . Logicians will notice the connexion between this Question and the "inverse problem" of Prof. JEVONS; and mathematicians will notice the analogy between it and the problem to find the successive limits of integration in multiple integrals.

15065. (Rev. Prebendary W. A. WHITWORTH, M.A.)—Show that, if  $x > y + z + 1$ ,

$$1 + \frac{y^2 R_1^2}{R_1} + \frac{R_2^2 R_2^2}{R_2} + \frac{R_3^2 R_3^2}{R_3} + \dots \text{ ad inf.} = \frac{(x-y-z-1)(x-1)!}{(x-y-1)!(x-z-1)!}$$

( $R_n$  here denotes, as in *Choice and Chance*, the number of combinations of n things r at a time when repetitions are allowed.)

15066. (R. KNOWLES.)—Prove that the sum of the series  $1 + 4^2(\frac{1}{2}) + 10^2(\frac{1}{2})^2 + \dots + \{ \frac{1}{2} [(r+1)(r+2)(r+3)] \}^2 (\frac{1}{2})^r + \dots$  ad inf. = 1008.

15067. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—If  $\sigma(N)$  denotes the sum of the divisors of N (including 1, but excluding N), find when  $\sigma(N) = 2^n$  admits of solutions of form  $N = 2^p \cdot p$  (p being an odd prime). Ex.—Solve  $\sigma(N) = 2^{24}$ .

15068. (ROBERT W. D. CHRISTIE.)—Solve generally the following Christmas puzzle:—Find four integers a, b, c, d, such that

$$(1) \quad ad = bc = 1 \text{ mod } p, \quad (2) \quad a^2 + b = c + d^2 = 0 \text{ mod } p, \\ (3) \quad a^2c + 1 = bd^2 + 1 = 0 \text{ mod } p, \quad (4) \quad bc^2 + d^2 = 0 \text{ mod } p,$$

where p = prime of form 4m-1, and give all the solutions.

15069. (ALBROG.)—N et k étant des entiers donnés, de combien de manières différentes a-t-on en nombres entiers  $N = a^2 + kb^2$ , lorsque cela soit possible? (Voyez GAUSS, *Disq. Arith.*, Lipsiæ, 1801, p. 219.)

15070. (C. F. SANDBERG, M.A.)—If, for all values of r from 0 to n,

$$a_r = a_r + ra_{r-1}x + \frac{r(r-1)}{1.2} a_{r-2}x^2 + \dots + ra_1x^{r-1} + a_0x^r,$$

then, for the same values of r,

$$a_r = a_r - ra_{r-1}x + \frac{r(r-1)}{1.2} a_{r-2}x^2 + \dots + (-1)^r a_0x^r.$$

15071. (R. F. DAVIS, M.A.)—Solve the equation  $x^4 - y^4 = x + y$ .

15072. (R. TUCKER, M.A.)—PSQ, RST are orthogonal focal chords of a parabola. O, O' are the respective co-normal points (i.e., PO, QO are normals, and also RO', TO'). Show that the join of O, O' passes through a fixed point, that O, O' lie on the same parabola, and find the locus of the intersection of OO' and the join of the third co-normal points of (P, Q) and (R, T).

15073. (A. M. NESHITT, M.A. See Quest. 14917, July, 1901.)—If we call the conic which touches the nine sides of the triangles  $\Delta_1, \Delta_2, \Delta_3$  the "nine-tangent conic" of the three original conics, prove that, if four conics P, Q, R, S be such that all pass through one point, while not more than two pass through any other point, then the four "nine-tangent conics" of QRS, RSP, SPQ, and PQR have a common tangent. The following particular case of the reciprocal of Quest. 14917 ought to admit of a solution by purely geometrical methods. Two parabolas P, P' have a common focus S, and a circle C touches their common tangent. If the common tangents to P and C, and to P' and C form triangles  $\Delta$  and  $\Delta'$ , prove that the point S and the six vertices of  $\Delta$  and  $\Delta'$  all lie on a circle.

15074. (Professor NEUBERG.)—Construire le centre et les asymptotes de l'hyperbole équilatère qui passe par deux points donnés A, B et qui touche une droite donnée d en un point donné C.

15075. (H. L. TRACHTENBERG.)—The straight line joining the centres of the two rectangular hyperbolas that touch four fixed straight lines is bisected at right angles by the directrix of the parabola which touches these straight lines.

15076. (Professor N. BHATTACHARYA.)—A conic is circumscribed about a triangle whose diameters parallel to the sides of the triangle are proportional to the corresponding sides. Show that the locus of the inverse of a point on this conic is the line joining the three points, where the tangents (at the vertices) to the circum-circle meet the opposite sides. If the vertices A, B, C are joined to any point in this line meeting the sides BC, CA, AB in A', B', C' respectively, then B'C', C'A', A'B' meet BC, CA, AB respectively in three collinear points whose envelope is the BROCARD ellipse of the triangle.

15077. (Professor COCHEZ.)—

On donne une circonférence O et un point A, par lequel on mène une sécante variable coupant la courbe en B et C. Lieu de l'orthocentre du triangle BOC.

15078. (Professor HUDSON, M.A.)—If a uniform chain of length 2s be fastened to two points distant 2x apart in the same horizontal line, and be acted on by vertical forces such that the force acting on a length ds is  $mgds + \mu gdx$ , prove that the horizontal tension is approximately  $(m + \mu)g \{ x^2/6(s-x) \}^{1/2}$ , and that the sag at the middle point is  $\{ \frac{2}{3}x(s-x) \}^{1/2}$ , assuming that  $(s-x)/x$  is small.

15079. (Rev. T. ROACH, M.A.)—Prove geometrically

$$\sin^{-1} \frac{1}{3} + \sin^{-1} \frac{1}{\sqrt{5}} + \sin^{-1} \frac{1}{\sqrt{10}} = \frac{1}{2}\pi.$$

15080. (Professor NANSON.)—Lines drawn through the vertices of a triangle  $\Delta$  divide the angles into the segments  $\alpha, \alpha'; \beta, \beta'; \gamma, \gamma'$ , and form a triangle  $\Delta'$ . If R, R' are the radii of the circum-circles of  $\Delta, \Delta'$ , prove that  $\frac{R'}{R} = \frac{\sin \alpha \sin \beta \sin \gamma - \sin \alpha' \sin \beta' \sin \gamma'}{\sin(\beta + \gamma') \sin(\gamma + \alpha') \sin(\alpha + \beta')}$ , and deduce the theorems of CEVA and MENELAUS.

15081. (D. BIDDLE.)—Given the in-circle and the circum-circle, with the distance between their centres =  $(R^2 - 2Rr)^{1/2}$ , construct the triangle.

15082. (Professor SANJANA, M.A.)—The SIMSON-line of a point P makes an angle  $\theta$  with the base BC of the triangle of reference; prove that the distances of P from the line, and from BC, CA, AB, are respectively  $2R \cos \theta \cos(\theta - B) \cos(\theta + C)$ ,  $2R \cos \theta \sin(\theta - B) \sin(\theta + C)$ ,  $2R \sin \theta \sin(\theta - B) \cos(\theta + C)$ ,  $2R \sin \theta \cos(\theta - B) \sin(\theta + C)$ , R being the radius of the circum-circle.

15083. (JOHN PRESCOTT, B.A.)—Given two lines AB and CD in the same plane, but not parallel, find a point P such that the triangles formed by joining P to the extremities of AB and CD shall be similar, the two given lines subtending equal angles at P.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8938. (D. EDWARDS.)—Prove that

$$2\sum x^2 \frac{\sinh(2r+1)\alpha}{\sinh(2r+1)\beta} = \sum_0^x [\text{cosech}\{(2r+1)\beta - \alpha\} - \text{cosech}\{(2r+1)\beta + \alpha\}].$$

9688. (A. E. THOMAS.)—Solve the equations

$$a^2x^3 - 3acxy^2 + 2bcy^3 = p, \quad 3a^2x^2y - 6acxy^2 + y^3(4b^2 - ac) = q.$$

**9781.** If  $ax + by + cz + dw = 0$ , and  $a'x + b'y + c'z + d'w = 0$ , where  $a, b, c, d, a', b', c', d'$  are functions of a parameter  $\theta$ , be the equations to a line, this line will generate a ruled surface of order  $m+n$ , where  $m$  and  $n$  are the orders of the two given equations as functions of  $\theta$ . Especially examine the case when  $m=n=1$ , and show that a second set of lines exists in this case.

**9850.** (Professor NEUBERG.)—On considère tous les triangles de même somme des carrés des côtés. Quelle est la probabilité que l'angle de BROCARD de l'un de ces triangles, pris au hasard, soit compris entre  $\alpha$  et  $\beta$ ?

**9933.** (Professor SEN.)—Find the curve which always intersects an ellipse at right angles (1) when it moves with its major axis along a right line, (2) when its centre moves on another ellipse with their major axes parallel.

**10049.** (J. LEMAIRE.)—Soit un quadrilatère ABCD et une droite parallèle à la diagonale BD. Cette droite rencontre AB, BC, CD, DA respectivement en E, F, G, H; AF et AG coupent CD et BC en I et K. Enfin EK et HI se rencontrent en O. Démontrer que la droite CO passe par le milieu de EH.

**10157.** (R. W. D. CHRISTIE.)—If  $p$  be a prime number  $> 2$ , prove  $\{(2p-1)/2 \times p! \times p!\} - 1 = p^2(M)$ , where  $M$  is the sum of  $\frac{1}{2}(p-1)$  integral square numbers.

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 13th, 1902.—Dr. Hobson, F.R.S., President, in the Chair. Thirteen members present.

Prof. Lamb read a paper on "Boussinesq's Problem." Messrs. Love, Hargreaves, Cunningham, Macdonald, and the President, took part in a discussion on the paper.

Mr. Alfred Young read a second paper on "Quantitative Substitutional Analysis." Prof. Elliott asked one or two questions.

Prof. Love explained a new proof of a well known theorem concerning zonal harmonics.

The following papers were communicated by the President:—

(i.) "On the Density of Linear Sets of Points," (ii.) "On Closed Sets of Points defined as the Limit of a Sequence of Sets of Points": Mr. W. H. Young.

"On Plane Cubics": Prof. A. C. Dixon.

"On the Wave Surface of a Dynamical Medium, Anisotropic in all respects": Prof. Bromwich.

"Elementary Proof of a Theorem for Functions of several Variables": Dr. H. F. Baker.

#### JUST OUT.

CASSELL & COMPANY, LIMITED, LUDGATE HILL, LONDON.

**THOROUGH PREPARATION FOR EXAMINATION.**

**TEXT-BOOKS for HIGHER SCHOOLS.**

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following books:—

**ARITHMETIC.**

Small amount of Theory, large amount of Practice. Worked-out examples for each step. Prominence given to the Metric System. Laboratory Exercises in a Special Section.

**GEOGRAPHY.**

Physical facts made the basis of Political. Commercial aspects kept constantly in view. British Empire fully treated. Many Coloured Maps and Diagrams.

**ENGLISH GRAMMAR.**

Examples made the basis of instruction. Analysis introduced early. Aids to correct speaking a prominent feature. Plenty of scope given for "practice."

**ENGLISH HISTORY.**

Contains landmarks of our national history. More than usual attention given to last three centuries. The Growth and Greatness of the Empire specially considered.

PUBLISHED AT ONE SHILLING EACH.

The *Schoolmaster* says: "We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

Specimens and particulars sent free to Head Teachers.

(LING'S SWEDISH SYSTEM).

There are more openings for Students trained at this College than can be filled.

Apply for Prospectus to the PRINCIPAL, The Leasowes, Halesowen.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)  
Principal—H. R. REICHEL, M.A.

The Session began on October 1st, 1901. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the various Prospectuses, apply to  
JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

**UNIVERSITY OF DUBLIN. TRINITY COLLEGE.**

The Board of Trinity College are prepared to receive applications from candidates for two Readerships in Indian Languages:

- (1) A READERSHIP IN BURMESE AND HINDUSTANI.
- (2) A READERSHIP IN TAMIL AND TELUGU.

The Salary of each will be £150 per annum, in addition to Fees from Students. The duties will be to lecture on three days in the week during each of the eighteen weeks of the University Arts Course, beginning in the first week of November, 1902, and also during six weeks in the months of August-September, beginning in 1903, and such other duties as the Board of Trinity College may direct.

Candidates must send copies of their testimonials, before May 15th, to the REGISTRAR, Trinity College, Dublin.

**UNIVERSITY OF WALES.**

**IMPORTANT NOTICE.**

Owing to the date of the Coronation, the Matriculation Examination of the University of Wales will be held on Monday, June 30th, 1902, and following days, instead of Monday, June 23rd, and following days, as originally fixed. Applications for Entry Forms must be made not later than Monday, May 26th, to IVOR JAMES, Registrar of the University, Brecon.  
March 19th, 1902.

**SCHOOL BOARD FOR LONDON.**

**THE Services of ASSISTANTS** qualified to teach the subjects set out in Schedule V. of the New Code of the Board of Education are required at the Board's Pupil-Teachers' Schools as set out below.

<i>School.</i>	<i>Sex of Assistant.</i>
FINSBURY, Offord Road, Barnsbury	Woman.
MILE END, Essex Street, Mile End Old Town, E.	Man.

Salary: Men, £150 per annum, rising by annual increments of £5 to £200 per annum; Women, £130 per annum, rising by annual increments of £5 to £165 per annum.

Applications to be made on Form 40 P.T., on which, with other information, copies only of three testimonials must be given. A copy of this form can be obtained from the Clerk of the Board. If a written application is made for one, it must be accompanied by a stamped and addressed envelope or wrapper.

Applications must be received by the CLERK of the BOARD, School Board Offices, Victoria Embankment, London, W.C., by or before the first post on Monday morning, April 7, 1902.

Applicants who applied for the recently-advertised vacancies for Assistants in the Board's Pupil-Teachers' Schools can have the Form 40 P.T. they then submitted placed before the Committee on informing the Clerk of the Board on or before April 7.

All communications on the subject of this notice should be marked outside "P.T. Schools."

Candidates from the country invited to attend the Committee will be allowed third-class return railway fare to London, and, if necessary, hotel expenses not exceeding 10s. a day for two days. If application for such payments is made, it must be accompanied by receipted vouchers; but if a candidate after being nominated refuses to take up the appointment, these expenses will not be allowed. Applicants who do not receive, on or before April 19, a summons to attend before the Committee on April 21 will understand that they have not been included in the list of candidates to be seen by the Committee, and will not be further communicated with.

**VIRGIL.—AENEID, BOOK III.** The new Oxford Text, by special permission of the University. Edited, with Introduction, Notes, and a Map, by **M. T. TATHAM**, M.A. Cloth, 1s. 6d.

**THE COMMONWEALTH OF AUSTRALIA.** A Reading Book for Schools, with a Preface by **SIR JOHN COCKBURN**. With illustrations and a coloured Map. Cloth, 1s.

**ENGLISH ANALYSIS AND GRAMMAR.** By **R. WILSON**, B.A., Author of "Language Lessons." Cloth, 1s.

HISTORY AND GEOGRAPHY.

**A HISTORY OF ENGLAND.**

By **C. W. OMAN**, M.A., Fellow of All Souls' College, Oxford. Fully furnished with Maps, Plans of the Principal Battlefields, and Genealogical Tables. 760 pp. Revised Edition. Crown 8vo, cloth, 5s.

SPECIAL EDITIONS (each volume containing a separate Index).

In Two Parts. 3s. each: Part I., from the Earliest Times to 1603; Part II., from 1603 to 1885.

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s. Division III., 1688 to 1885, 2s. 6d.

\* \* In ordering please state the period required, to avoid confusion.

*Guardian*.—"This is the nearest approach to the ideal School History of England which has yet been written. It is of reasonable length. A just proportion between the several periods is carefully observed. Every page bears the stamp of the practised historian and the practised teacher. Unmistakable marks of the historical insight and the historical judgment which appertain only to the aristocracy of historians are everywhere visible; but the special characteristic which to our mind raises Mr Oman's work distinctly above previous efforts in the same direction is the gift which Matthew Arnold used to call 'lucidity.' Every sentence rings out clear and sound as a bell, without any of that affectation of childliness which was once so common, without any of the heavy dullness usually so painfully prevalent."

**THE STUDENT'S SYNOPSIS OF ENGLISH HISTORY.**

Based chiefly upon Oman's "History." By **C. H. EASTWOOD**, Head Master of Redhough School, Gateshead. Crown 8vo, cloth, 2s.

While this book forms an excellent companion to Oman's "History," it contains nothing to prevent its use with other manuals. It consists of Lists of Sovereigns, Genealogical Tables, a Detailed Chronological Analysis of the whole of English History, Notes on Scotland, Ireland, Wales, Education and the Press, Lists of Laws, Treaties, Great Writers and Battles, Short Biographies and Definitions.

**ENGLAND IN THE NINETEENTH CENTURY.** By **C. W. OMAN**, M.A., Author of "A History of England," &c. With Maps and Appendices. One vol., crown 8vo, 3s. 6d.

**AN ILLUSTRATED SCHOOL GEOGRAPHY.** By **ANDREW J. HERBERTSON**, M.A., F.R.G.S., Assistant Reader in Geography at Oxford University, and **ALEXIS E. FRYE**. With sixteen pages of Coloured Maps, about fifty Outline and Photographic Relief Maps, and nearly seven hundred magnificent illustrations. Large 4to (about 12 by 10 inches), 5s.

*School Board Chronicle*.—"Nothing finer in the shape of a modern school-book of geography has ever been published."

**A MANUAL OF PHYSIOGRAPHY.** By **ANDREW HERBERTSON**, Ph.D., F.R.G.S., Assistant Reader in Geography at the University of Oxford. Fully Illustrated. Cloth, 4s. 6d.

PRICE EIGHTEENPENCE.

**THE LONDON SCHOOL ATLAS.** Edited by **H. O. ARNOLD-FORSTER**, M.P. Containing 48 Coloured Maps. In stout paper wrapper with cloth strip at back. 1s. 6d.

Paper Boards, 2s.  
Cloth, cut flush, 2s. 6d.

Limp Cloth, 3s.  
Cloth gilt, 3s. 6d.

A Complete Educational Catalogue will be forwarded post free on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

## THE OXFORD & CAMBRIDGE HISTORY.

BY ROSCOE MONGAN, B.A.

ONE SHILLING.

COLOURED MAPS. ILLUSTRATIONS OF FAMOUS BATTLES.  
AN ENTIRELY NEW REPRINT. REVISED TO AUGUST 30, 1901.

Specimen Copies of the above Publications will be sent post free to Head Teachers in most cases.—Specimens of Class Text-Books only will be sent.

LONDON: GEORGE GILL & SONS, LIMITED, 13 WARWICK LANE, E.C.

# MESSRS. LONGMANS & CO.'S LIST.

By **CYRIL RANSOME, M.A.**  
ELEVENTH EDITION.

## A SHORT HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE DEATH OF QUEEN VICTORIA.

With Tables, Plans, Maps, Index, &c.

Crown 8vo, 3s. 6d. Or, in Two Parts. 2s. each. PART I.: To the Death of Elizabeth, A.D. 1603. PART II.: A.D. 1603 to 1901.

## A SUMMARY OF RANSOME'S SHORT HISTORY OF ENGLAND.

With 22 Maps and Plans and 34 Genealogical Tables. Crown 8vo, 1s.

By **SAMUEL RAWSON GARDINER, M.A., LL.D.**

## A STUDENT'S HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO 1885.

IN ONE VOLUME, with 378 Illustrations. Crown 8vo, 12s.

Or, in **THREE PARTS**:—VOL. I.: B.C. 55 to A.D. 1509. With 173 Illustrations. Crown 8vo, 4s. VOL. II.: 1509 to 1689. With 96 Illustrations. Crown 8vo, 4s. VOL. III.: 1689 to 1885. With 109 Illustrations. Crown 8vo, 4s.

**PREPARATORY QUESTIONS ON THE ABOVE.** By R. SOMERVELL, M.A., Assistant Master at Harrow School. Crown 8vo, 1s.

## A SCHOOL ATLAS OF ENGLISH HISTORY.

With 66 Maps and 22 Plans of Battles, &c. Fcap. 4to, 5s.

## OUTLINE OF ENGLISH HISTORY, B.C. 55 TO A.D. 1901.

With 96 Woodcuts and Maps. Fcap. 8vo, 2s. 6d.

By the **Rev. D. MORRIS, B.A.**

One Hundred and First Thousand. Fcap. 8vo, 3s. 6d.

## A CLASS-BOOK HISTORY OF ENGLAND.

Designed for the use of Students preparing for the University Local Examinations, the London University Matriculation, &c.

With 4 Historical Maps, 20 Plans of Battles, and 30 other Illustrations.

## EPOCHS OF ENGLISH HISTORY.

YORK POWELL'S EARLY ENGLAND to the NORMAN CONQUEST. 1s.	CREIGHTON'S (Bishop) TUDORS and the REFORMATION, 1485-1603. 9d.	TANCOCK'S ENGLAND during the AMERICAN and EUROPEAN WARS, from 1765-1820. 9d.
CREIGHTON'S (Mrs.) ENGLAND A CONTINENTAL POWER, 1066-1216. 9d.	GARDINER'S (Mrs.) STRUGGLE against ABSOLUTE MONARCHY, 1603-1688. 9d.	BROWNING'S MODERN ENGLAND from 1820-1897. 9d.
ROWLEY'S RISE of the PEOPLE and the GROWTH of PARLIAMENT, 1214-1485. 9d.	ROWLEY'S SETTLEMENT of the CONSTITUTION, 1689-1784. 9d.	

**EPOCHS OF ENGLISH HISTORY.** Complete in One Volume, with 27 Tables and Pedigrees and 23 Maps. Fcap. 8vo, 5s.

## EPOCHS OF ANCIENT HISTORY.

10 Volumes, with Maps. 2s. 6d. each.

BEESELY'S GRACCHI, MARIUS, and SULLA.	COX'S GREEKS and THE PERSIANS.	MERIVALE'S ROMAN TRIUMVIRATES.
CAPE'S EARLY ROMAN EMPIRE.	COX'S ATHENIAN EMPIRE.	SANKEY'S SPARTAN AND THEBAN SUPREMACIES.
CAPE'S ROMAN EMPIRE of the SECOND CENTURY.	CURTEIUS'S RISE of the MACEDONIAN EMPIRE.	SMITH'S (BOSWORTH) ROME AND CARTHAGE.
	IHNE'S ROME to its CAPTURE by the GAULS.	

## EPOCHS OF MODERN HISTORY.

19 Volumes, with Maps. 2s. 6d. each.

AIRY'S ENGLISH RESTORATION and LOUIS XIV., 1648-1678.	GARDINER'S (Mrs.) FRENCH REVOLUTION, 1789-1795.	MCCARTHY'S EPOCH OF REFORM, 1830-1850.
CHURCH'S BEGINNING of the MIDDLE AGES.	HALE'S FALL OF THE STUARTS, and WESTERN EUROPE, from 1678 to 1697.	MOBERLY'S THE EARLY TUDORS.
COX'S CRUSADES.	JOHNSON'S NORMANS in EUROPE.	MORRIS'S AGE OF ANNE.
CREIGHTON'S AGE OF ELIZABETH.	LONGMAN'S FREDERICK THE GREAT and the SEVEN YEARS' WAR.	MORRIS'S THE EARLY HANOVERIANS.
GAIRDNER'S HOUSES OF LANCASTER AND YORK.	LUDLOW'S WAR OF AMERICAN INDEPENDENCE, 1775-1783.	SEEBOHM'S PROTESTANT REVOLUTION.
GARDINER'S THIRTY YEARS' WAR.		STUBBS'S THE EARLY PLANTAGENETS.
GARDINER'S FIRST TWO STUARTS.		WARBURTON'S EDWARD THE THIRD.

## CAMBRIDGE UNIVERSITY PRESS.

**THE CAMBRIDGE HISTORICAL SERIES.**

General Editor—G. W. PROTHERO, Litt.D.,  
Hon. Fellow of King's College, Cambridge, and formerly Professor  
of History in the University of Edinburgh.

VOL. II. NOW READY

- History of Scotland.** By P. HUME BROWN, M.A.,  
LL.D., Fraser Professor of Ancient (Scottish) History and Palaeo-  
graphy in the University of Edinburgh.  
Vol. I.—TO THE ACCESSION OF MARY STEWART. Crown 8vo, with  
7 Maps, 6s.  
Vol. II.—FROM THE ACCESSION OF MARY STEWART TO THE REVOLU-  
TION OF 1689. Crown 8vo, with 4 Maps and Plan, 6s.  
Vol. III. (Completing the Work.) *In the press.*

**PITT PRESS SHAKESPEARE FOR SCHOOLS.**

NEW VOLUME NOW READY.

**Macbeth.** Edited, with Introduction, Notes, and Glossary,  
by A. W. VERITY, M.A., sometime Scholar of Trinity College,  
Cambridge. 1s. 6d.

*Guardian.*—"Undoubtedly the best school edition extant of this particular play, and possibly the best that has ever been produced of any play of Shakespeare's. We will, moreover, go further and add that it is a mine of wealth for all students of Shakespeare, whatever may be their object in studying him."

*School World.*—"Mr. Verity's editions of Shakespeare in this well-known series are always on such a high level that it would be difficult to surpass their general excellence in any particular instance. 'Macbeth,' however, strikes us, if the thing be possible at all, as reaching a higher point than any previous play, or, perhaps, as exhibiting the common features of this edition in such a remarkable degree as to entitle it to the highest consideration. . . . It is an edition almost beyond praise."

**THE PITT PRESS MATHEMATICAL SERIES.**

**The Elements of Hydrostatics.** By S. L. LONEY,  
M.A., Professor of Mathematics at the Royal Holloway College,  
sometime Fellow of Sidney Sussex College, Cambridge. Crown 8vo,  
4s. 6d.

*Extract from Preface.*—"The present volume is intended to be for the use of the class of students for whom my 'Elements of Statics and Dynamics' was written, and may be regarded as a continuation of that book."

*Guardian.*—"A thoroughly satisfactory text-book of a simple character."  
*Educational Times.*—"This work equals its predecessors in clearness and simplicity."

*Oxford Magazine.*—"Professor Loney's name stands for clearness of exposition and orderliness of arrangement. The present volume is up to his usual high standard."

**Elements of Statics and Dynamics.** By S. L.  
LONEY, M.A. Seventh Edition. 7s. 6d.

Part I.—Elements of Statics. 4s. 6d.

Part II.—Elements of Dynamics. 3s. 6d.

**Solutions of the Examples.** Second Edition. 7s. 6d.

**Mechanics and Hydrostatics for Beginners.** By  
S. L. LONEY, M.A. Sixth Edition. 4s. 6d.

**Euclid.—Elements of Geometry.** Edited by H. M.  
TAYLOR, M.A., Trinity College, Cambridge.

Books I., II. 1s. 6d. Books III., IV. 1s. 6d.

Books V., VI. 1s. 6d. Books XI., XII. 1s. 6d.

Books I.—IV. 3s. Books I.—VI. 4s.

Books I.—VI. and XI., XII. In One Vol. complete, 5s.

**Solutions to the Exercises in Taylor's Euclid.**  
By W. W. TAYLOR, M.A. Books I.—IV., 6s. Books VI. and XI., 6s.  
Books I.—IV., VI. and XI., crown 8vo, 10s. 6d.

**Arithmetic for Schools.** By C. SMITH, M.A., Master  
of Sidney Sussex College, Cambridge. With or without Answers.  
Stereotyped Edition. 3s. 6d. Or in Two Parts:—

Part I.—Chaps. I.—VIII., Elementary, with or without Answers, 2s.

Part II.—Chaps. IX.—XX., with or without Answers, 2s.

**Key to C. Smith's Arithmetic.** By G. HALE, M.A.,  
Crown 8vo, 7s. 6d.

**Elementary Algebra.** By W. W. ROUSE BALL, M.A.  
4s. 6d.

**Elementary Plane Trigonometry.** By E. W.  
HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

**State Intervention in English Education.** A  
Short History from Early Times down to 1833. By J. E. G. DE  
MONTMORENCY, B.A., LL.B., of St. Peter's College, Cambridge, and  
of the Middle Temple, Barrister-at-Law. Crown 8vo, 5s. net.  
[Nearly ready.]

**A Short History of the Hebrews to the Roman  
Period.** By R. L. OTTLEY, M.A., Rector of Winterbourne Bassett,  
Wilts, sometime Student of Christ Church and Fellow of Magdalen  
College, Oxford. Crown 8vo, with 7 Maps, 5s.

*Journal of Education.*—"It marks an immense advance in the popular treat-  
ment of the Bible history, and teachers and students alike will find it a most  
valuable aid."

*Bookman.*—"The book is scholarly, impressive, and full of thought."

*Expository Times.*—"This 'Short History of the Hebrews' must take the place  
of all other text-books. . . . It makes use of the last fifty years' work on the Old  
Testament. It adopts the results of that work, though with discretion, and, what  
is much more than that, it frankly recognises the validity of the critical principles  
which have produced those results. There is no great hardihood in prophesying  
that Mr. Ottley's 'Short History of the Hebrews' will mark a turning-point in the  
study of the Old Testament."

**A Short History of the Greeks from the  
Earliest Times to B.C. 146.** By E. S. SHUCKBURGH, M.A.,  
late Fellow of Emmanuel College, Cambridge; Author of "A  
Translation of Polybius," &c. Crown 8vo, with Illustrations and  
Maps, 4s. 6d.

*Times.*—"Clear, scholarly, and readable."

*Academy.*—"Mr. Shuckburgh's work is worthy of his reputation."

*Saturday Review.*—"An excellent school history, equally suitable for teacher and  
learner."

**Demonstrations in Greek Iambic Verse.** By  
W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cam-  
bridge, Head Master of the Perse School, Cambridge. Crown 8vo,  
6s.

*School World.*—"This is a good book, which should be obtained by every classical  
master. . . . The author's system of teaching—he is a Rugby master—is well calcu-  
lated to attract the greatest amount of interest on the part of the learners, and also  
to do away with a great deal of the drudgery of merely correcting and amending  
each individual copy by the teacher. It will also be just what the student who has  
to work without a master needs to enable him to keep up and materially improve  
what he has learnt at school."

**Graduated Passages from Greek and Latin  
Authors for First-Sight Translation.** Selected and  
supplied with short Notes for Beginners by H. BENDALL, M.A.,  
and C. E. LAURENCE, B.A., Assistant Master of Blackheath Proprietary  
School. Crown 8vo.

Part I.—EASY. 1s. 6d.

Part II.—MODERATELY EASY. 2s.

Part III.—MODERATELY DIFFICULT. 2s.

Part IV.—DIFFICULT. 2s.

**A NEW FRENCH VERSE READER.**

**A Primer of French Verse for Upper Forms.**  
Edited by FREDERIC SPENCER, Professor of the French Language  
and Literature in the University College of North Wales; for-  
merly Chief Master on the Modern Side in the Leys School,  
Cambridge. 5s.

*School World.*—"Teachers owe a debt of gratitude to Prof. Spencer for this  
attractive volume. . . . It is a very good book."

*Guardian.*—"Simplicity and freshness characterize the whole of the work, and  
Mr. Spencer may be congratulated upon having made a really valuable contribution  
to the list of French school-books."

**Random Exercises in French Grammar, Hom-  
onyms and Synonyms for Advanced Students.** By L. BOUCEL,  
Lecturer at Emmanuel and Newnham Colleges. New Edition.  
Crown 8vo, 3s. 6d.

**Key to the above.** By the same. Crown 8vo. 10s. 6d. net.

**Exercises in French Composition for Advanced  
Students.** By the same. Demy 8vo, 3s. 6d.

The Educational Times.

*The Education Bill.* THE long-expected, and not a little dreaded, Education Bill was at last introduced into the House of Commons on March 24 by Mr. Balfour, Sir John Gorst being absent through regrettable illness. Mr. Balfour's statement, though in points vague, indicated clearly enough a series of far-reaching changes. As we go to press, the Bill itself is not available, but the text is not at all likely to be any less drastic than Mr. Balfour's exposition. Definite and final criticism must await an examination of the actual provisions.

Both primary and secondary education are dealt with in the measure, and this "with a view to their better co-ordination." Both, with technical education thrown in, are placed under a single authority—the rating authority of the district; that is to say, the County Council or the Borough Council. The arrangement, however, is not so simple as it looks, for the Council is to work through a Committee or Committees formed under a scheme to be approved by Whitehall, and a Committee is to be constituted in a composite fashion, the Council appointing at least a majority, while "another portion will be by nomination of other bodies of persons experienced in education and acquainted with the needs of the various kinds of schools in the area for which the Council acts." Wales is given the option of retaining her existing Secondary Authority, in case she should not wish to adopt the new Committees. What sort of scheme for a Committee will gain approval at Whitehall we have yet to learn.

There are two notable exceptions to the universality of the Bill, besides the option for Wales. The London School Board is respite till next Session. London was treated exceptionally in 1870; and this precedent is now followed. For London "exists under a different set of sanitary and police laws," says Mr. Balfour; "its legislation affecting constituent boroughs is different from the legislation affecting other boroughs in the kingdom"; the Bill "is quite big enough for the present Session"; and the case of London will gain "all the advantage which discussion of the present

measure will give." The other exception illustrates a legislative process that this Government has made tolerably familiar. "We propose," says Mr. Balfour, "to leave it to the Councils of the various districts to adopt the elementary portion of this Act if they please." This permissive element shows weakness, and promises to make confusion worse confounded. Sir Richard Jebb at once pronounced it the blot on the Bill. But, then, pleaded Mr. Balfour, "we have to carry with us the Local Authorities on whom the working of the Bill falls"; and there is the precedent of 1876 as to compulsory attendance by-laws with non-School Board areas. These exceptions indicate how far the scheme still falls short of comprehensiveness and finality.

"The County Councils and Borough Councils," Mr. Balfour tells us, "will have a 2d. rate to work upon" in secondary education. Mr. Balfour himself, however, admits his own conviction that it will "in many places" be insufficient. Well, if it be, the County Council can apply for a provisional order to get the limit raised. On the one hand, it will be asked why should the local people be hampered in any way in making such provision for local education as their intelligence and generosity may impel them to make. On the other hand there will be strong objections to an increased rate. Conflicts are more than probable; and the expensiveness of provisional orders is certain.

The new Local Authority, in taking over elementary education, will, of course, take over the voluntary schools as well as the Board schools. The Government frankly claims the support of the rates for the voluntary schools. There would be no grudging of the money provided the conditions of grant were generally acceptable. But already the war-cries are resounding because the voluntary school, wholly supported by public funds, will still remain denominational. It would, indeed, be an incalculable gain to the country and to education—and notably in the agricultural districts, half of which have never contributed a penny from the rates to the elementary education of the children—if the religious conflict could be definitively ended, and the course of education left free. But how can any such devoutly wished consummation be reasonably anticipated under this Bill? Why, we have it on the authority of Sir John Gorst himself not only that the people in the villages

“prefer the Church school with its Catechism and its clerical tyranny to a School Board”; but that “they would rather their children were taught anything than that they should have to pay a School Board rate.” Conscience or no conscience, will they be any more willing to pay a common Voluntary and School Board rate? Again, where the Bill is not adopted, the School Boards will remain apparently as they were, yet not so in fact; neither in day nor in night schools will they have power to offer instruction to any pupils beyond the age of fifteen, nor is there open to them any hope of development. Such matters will be warmly debated on both sides, to the peril of the Bill.

The Councils, as public elected bodies, would no doubt command popular confidence and labour to maintain it; but surely they have business enough on their hands to justify the gravest doubt whether they can possibly give to the great and growing subject of education the time and care it imperatively demands. It may further be doubted whether the ranging of education as one only of the many matters to be cared for by the Councils is likely to secure the best local talent and energy for service in educational work. As matters develop, such apprehensions may prove to be vain. But will the Bill go through? The elementary school portion, as we have seen, bristles with contentious points. Secondary education appears to be treated substantially as it was in the Bill of last year, and the provisions, unfortunately, will have to share the multiplied risks besetting the provisions for elementary education. Yet, after all, the Government is bound to make a great effort to retrieve the failures of the past.

---

### NOTES.

---

THE appointment of Mr. Pinches as the representative of the College of Preceptors on the Teachers' Registration Council will, we believe, give general satisfaction to the members of the College. His long and varied experience in the examination and inspection of secondary schools in all parts of the country peculiarly fits him to discharge the duties of the office, while his well known sympathy with the work of private-school teachers affords a guarantee that their just claims to consideration will not be overlooked. The criteria of efficiency of secondary schools will have to be considered by the Registration Council, and it will not be out of place to call attention to the paper on this subject read by Mr. Pinches at the Conference on the Report of the Royal Commission on Secondary Education six years ago, and printed in the *Educational Times* for February, 1896.

It would appear from the answers of Sir John Gorst to questions in Parliament, which will be found in another column, that the functions of the Teachers' Registration Council are of a somewhat more comprehensive character than seemed at first sight to be provided for in the Order in Council. For on the Council will devolve the task of determining the conditions on which schools may be recognized

for the purposes of registration of their head masters and mistresses, as well as of the teachers employed in them. It is implied that recognition involves efficiency; and efficiency is a relative term, whose meaning will depend on a variety of considerations. It is stated that, in any case where recognition is refused, appeal may be made to the Board of Education, who will decide the question by inspection of the school. It is, however, to be noted that, in the inspections that the Board has hitherto undertaken, it has refrained from pronouncing a definite opinion on the efficiency of the schools. In the case of the Supplemental Registers, the determination of the sufficiency of qualifying examinations is to be left to the registration authority—a task of no small difficulty having regard to the constitution of the Council; while, with regard to the general qualifications for admission to the Register which have been laid down by the Consultative Committee, it is evident that some revision is urgently called for if grave injustice is not to be done to numbers of deserving teachers. It will undoubtedly be the duty of the Registration Council to call attention to serious anomalies in these regulations, and to make representations to the Board of Education for their amendment at the earliest possible date.

---

WE congratulate Owens College on the brilliant success of its Jubilee celebrations, and felicitate it on the splendid record of struggle and achievement that has won for it the admiration of the educational world. We do not doubt that such a lusty youth will advance to a vigorous manhood, and we wish the institution a career of continuous success. The endowments of the college, though ten times the original sum, have been outstripped by the needs generated by the college work and by the advance of educational ideas. The good understanding between the college and the municipality and neighbourhood will be opportunely fostered by the judicious counsels of the Prince of Wales. The question of development into a University is for home settlement. The fundamental point of all is the question of men—advisers of policy and teachers of capacity and breadth; and therein Owens has been, and is, fortunate. The celebrations may also be expected to work a general educational advantage; as the *Manchester Guardian* justly remarked, “anything that makes a more striking figure of a great educational institution is valuable, for the bane of education in England—University, secondary, and elementary—is sheer public inattention.”

---

WE are glad to note that the humbler ranks of the profession have not been overlooked in the conferment of honorary degrees this month. The recognition of good work in the less obtrusive spheres is particularly encouraging to teachers in institutions below University rank. Victoria showed a creditable example in conferring the honorary M.A. on Miss Adamson and the honorary M.Sc. on Messrs. Jones, Reynolds, and Scotson. Miss Adamson's degree prompts a repetition of the inquiry: Why do Oxford and Cambridge lag behind? Why cannot they give degrees to women on the same terms as to men? A certificate, though testifying the same facts, is still, in this imperfect world, a very

different thing from a degree in practical potency. Edinburgh honours itself by conferring its honorary LL.D. on Miss Beale. She is, if we mistake not, the first lady to receive this degree on the score of educational merit.

THE benefactions of rich Americans to institutions of public usefulness should spur the rivalry of rich Englishmen. The New York correspondent of the *Daily Express* has been adding up the items of last year's generosity, and arrives at the comfortable total of £52,000,000. Even so he treats as negligible such trifles as gifts of less than £1,000 each, the ordinary denominational contributions for educational, benevolent, and religious purposes, State and municipal appropriations to public and sectarian institutions, and Congress grants for various measures of relief. Mrs. Leland Stanford consummated her long-planned endowment of Leland Stanford Junior University, San Francisco, by a contribution of £6,000,000—thrice the Scottish gift of Mr. Carnegie, and that, too, as a mere supplement to previous millions. Mr. Carnegie himself gave away last year some £6,500,000 to American places of learning and study, some £2,500,000 being devoted to libraries; and at the end of the year he had conditional offers of over a million more pending. Mr. J. D. Rockefeller gave the best of another million to his great University of Chicago, and yet another million has just been announced. Surely we have, if not one, yet, say, a score of philanthropists that might find the million required by University College, London—to begin with—and never miss it. Why should the national, and even the merely commercial, value of educational institutions be more vividly realized in America than in England? We fall behind at our peril. Fortunately, however, our well-to-do fellow-citizens seem to be gradually getting impressed with the importance of education. Elsewhere we record two noble gifts of the month.

WHETHER Mr. Carnegie might have adopted a better scheme for his Scottish Universities Trust is a question that might be long discussed before reaching a conclusive settlement. So far, on the first report of the trustees, the fee clause of the actual scheme seems to be working satisfactorily and with good promise. Under this clause £22,941 has been assigned to 2,441 students—between £9 and £10 apiece, and there is clear evidence that even this moderate individual assistance has in very many cases relieved a real strain. The number of matriculated students, however, does not yet appear to have been affected. Where there is an increase, it is but slight, and may be accounted for by ordinary causes of fluctuation. Why is this? One of the requirements of the Trust is “that the applicant must be qualified by preliminary examination, under the ordinances of the Scottish Universities Commission and the regulations of the Joint Board of Examiners, to attend the classes for which payment of fees has been claimed”—a very proper requirement. But, then, it implies a course of study that many parents of promising boys may not have been able to afford. This difficulty has long been foreseen, and there is a growing belief that Mr. Carnegie's benefaction will not come into full operation till

the barrier between primary school and University be broken down by setting free, or by adequately organizing and assisting, secondary education.

THERE is another clause, however, that will probably prove a still more effective educational force than the fee clause of the Trust deed. It has awakened the Scottish Universities to a comprehensive investigation of their “more urgent needs,” such as they would scarcely have tackled without some definite prospect of fulfilment. Edinburgh asks for a capital sum of £45,000, and a permanent annual grant of £9,000. Aberdeen wants some £21,000 a year, and a substantial capital sum (we will not labour to add up the items). St. Andrews appears to be content with £15,000, and £2,800 a year; but her modesty is compensated by the bold demand of Dundee for £66,100 (spread over seven years), and £2,650 annually. Glasgow—are there not rich men enough in the Second City of the Empire to make full provision for the University? If there is danger of pauperizing a student under the one clause, what of the danger of pauperizing a city under the other clause? The lump grants will mostly run into stone and lime, renovation or expansion being everywhere necessary. For the rest, there is a hungry demand for more Chairs, more laboratory equipment, more complete libraries, and so forth. All this is in the right direction, and if you bode a silk gown you may perchance get a sleeve of it.

THE growing responsibilities of the nation and the increasing competition of other countries are regarded by Mr. Hanbury, the Minister of Agriculture, not without uneasiness. We should be glad to believe that more Ministers are similarly uneasy, and especially those that are peculiarly charged with the interests of national education. “We cannot afford to leave a single child uneducated,” said Mr. Hanbury to a Preston audience (March 20). “We want all the talent we can summon to our aid. We must pave the way for talent and for merit. The day of patronage is past.” Why, here are headlines for copy-books. No doubt, then, Mr. Hanbury himself has been, and is, pressing on his fellow-Ministers practical measures of reform and amelioration. We have heard all these excellent opinions before now, and what we are concerned for is an educational organization that shall secure the objects so devoutly to be wished. Mr. Hanbury has but to cast his eye, however casually, over his own jurisdiction in order to discern a superabundance of arguments for action—and prompt and thorough-going action—on the part of the Government. He is reported to have “decried mere book knowledge,” and to have said “that our children must become . . . an inventive race, which could use its own brains to some purpose.” Well, book knowledge has its own virtue, and, as to the children's using their own brains, is this not a continual object of teachers so far as the existing system permits them to pursue it?

DR. ALBERT HEINIG, of Freiberg, considers “Commercial Education in Germany and England” in the February number of the *Chicago School Review*, and arrives at conclusions that have a strong present interest for us, however

obvious they appear. He agrees with our own Foreign Office Report (434, November, 1897) that "the wonderful increase of commercial schools is a result, and not one of the causes, of the trade successes of Germany." But he asks: "How has it been possible for Germany to increase the number of her commercial schools to far greater extent than England has done since the time when the schemes of the London Chamber of Commerce were published?" His answer is this:

In Germany a sound elementary and secondary education had laid a firm foundation to build upon. Every town went to work, according to its own local needs, and the Government watched, centralized, and aided all these endeavours in order to prevent overlapping and unnecessary expenditure.

Dr. Heinig tells us that "England is paying her penalty for having neglected education for a century." It would be easy enough to demur to such a sweeping statement, but it would be more prudent to give heed to the essential truth it embodies. There can be no doubt that "England can only hope to have lasting results for the sums spent on mercantile schools if she considers and organizes commercial education as resting on the firm basis of a systematically organized secondary education." And this necessarily implies the firm basis of a systematically organized elementary education.

LAST Session the First Lord of the Admiralty, repeating the unanimous opinion of admirals and captains fresh from the sea, affirmed that the existing system of naval education was as good as possible, and that, therefore, no alteration was contemplated. This Session, however, he invited criticism on the subject. Already criticism had been at work, and Mr. Julian Corbett had written a scathing denunciation of the present "Education in the Navy," which appeared in the *Monthly Review* for March. Mr. Corbett notes, what is so generally forgotten, that the virtues of the old system went out with masts and sails. He rakes the "Britannia" course fore and aft: "it is neither instruction nor education that a boy gets in the 'Britannia,' but rather a mere deadening of the appetite for what concerns his profession, and a voracious interest in various things that do not." The second stage—from sixteen to nineteen—on board ship, is also discredited: "to say it is a failure is almost to compliment it." And the final stage—at "what is dignified by the name of the Naval College at Greenwich," and at Portsmouth (where the young officer "is rushed through short courses of gunnery, torpedo, and pilotage," in six months)—is treated with like severity, not to say contempt. "Whatever the difficulties, one thing is certain," Mr. Corbett concludes: "the present system will not do." Lord Selborne had better consult the junior officers, "who are in direct touch with the youngsters, who have to get the work done by them, and who are responsible if it is done ignorantly—these are the men that know." Lord Charles Beresford's long-standing complaint that naval officers have practically no opportunity of learning their business in its wider and higher aspects completes a sufficiently comprehensive indictment. We cannot afford to cherish any illusions, educational or other, about our first line of defence.

It is a far cry to Demerara. Still, Demerara is British, and the brethren there deserve at least sympathy in difficulties greater than beset us even here. There is an

agitation in process: "a map of the colony is very much wanted in the schools"—for Standards V. and VI. of the Code, in which the geography of British Guiana is prescribed. Again, our plucky and earnest contemporary, the *Guide*, the monthly magazine of the British Guiana Teachers' Association, has been for the past eighteen months urging the Government to meet a pressing social want by "initiating the elder and advanced girls of all the primary schools in the city [Georgetown] in the elements of practical domestic economy." But it cannot get the necessary 200 or 300 dols. a year, though "a grant of 500! dols. has been regularly given by the Government towards horse-racing." Further, there are parents that "sometimes come to the school, not to inquire, but to fight the under-teachers on the evidence of their lying children alone." Once more: "The colony has as many as twelve industrial schools—*on paper and in posse*. But there are fewer boys in the whole number than there are in the reformatory." The People's Memorial Committee recently sent home representations on some such difficulties, but the reply (February 10) intimates that, "in Mr. Chamberlain's opinion, it is not an opportune time to increase the liabilities of the Colonial Government." One cannot but hope that this is a very exceptional example of the discharge of "Imperial" responsibility in administration. British Guiana cannot afford a map of the colony! What can be expected of the rising generation but that they will, in their turn, "fight the under-teachers," like their fathers before them?

### SUMMARY OF THE MONTH.

THE first Report of the Carnegie Trust for the Universities of Scotland shows that for the winter session 1901-2 the sum of £22,941. 16s. 6d. was paid by the Trust up till December 31, 1901, on behalf of 2,441 students, representing the fees of 7,610 classes. This comes to a little over £9 a head. The number of students and the class fees were as follows:—St. Andrews, 268 students, class fees, £2,452. 16s.; Glasgow, 828 students, class fees, £7,672. 13s. 6d.; Aberdeen, 473 students, class fees, £3,806. 1s. 6d.; Edinburgh, 872 students, class fees, £9,010. 5s. 6d. In two cases the fees paid have since been refunded; in one, by a father on learning that his son was a beneficiary; in the other, on gaining a Fellowship, by a student, who expressed the pleasure it "gave him to take advantage of the excellent provision of the Trust which gives applicants the opportunity of repayment." This prompt act of repayment has been acknowledged by Mr. Carnegie in very joyous and elevated terms, for has not the honest young man shown "the spirit of manly independence so dear to the Scots"? "The Committee, in accordance with the expressed desire of Mr. Carnegie, did not make question respecting the circumstances of applicants; but from information voluntarily offered by applicants themselves they have ample assurance that in a large number of cases the payment of class fees has proved a boon of the greatest value to deserving students; and many acknowledgments of the letter sent to the parents and guardians of applicants express gratitude for the timely assistance rendered by the Trust." So much for one section of the Trust. Meantime the Universities have been drawing up schemes exhibiting their "more urgent needs." These will now fall to be considered by the trustees.

THE classics are still to the fore beyond the Tweed. There has just been formed "The Classical Association of Scotland," with Prof. Ramsay, of Glasgow, for President, and Prof. Butcher, of Edinburgh, for Vice-President. Mr. Coutts, of Watson's College, Edinburgh, is Secretary. The Association makes a start with over a hundred members, including some of the foremost classics and classical teachers in the country. The objects of the Association are to bring together for practical conference all persons interested in classical study and education; to promote com-

munication and comparison of views between Universities and schools; to discuss subjects and methods of teaching and examination, and any other questions of interest for classical scholars. There will be two meetings annually, one in spring and one in autumn, held in the four University towns in rotation.

THE conferment of the honorary degree of LL.D. on Prince Henry of Prussia by Harvard University (March 6) gained special distinction from a passage in President Eliot's speech that deserves record:—

As University men we feel the immense weight of the obligation under which America rests to the technical schools and Universities of the German Fatherland. Our whole people have the most profound sympathy for the unification of Germany, and we gladly welcome this worthy representative of German greatness. We see in him, however, something more than the representative of a superb nationality and an Imperial ruler. Universities have long memories. Forty years ago the American Union was in deadly peril, and thousands of its young men were bleeding and dying for it. It is credibly reported that at a very critical moment the Queen of England said to her Prime Minister: "My lord, you must understand that I will sign no paper which means war with the United States." The grandson of that illustrious woman is sitting with us here.

Peace hath her victories no less renowned than war. The degree was conferred at a special session. Only on two previous occasions has Harvard held a special session to confer degrees, and then the recipients were both Presidents of the United States.

OWENS COLLEGE celebrated its jubilee on March 12. It has practically doubled its forces in the past twenty years. It has upwards of a hundred professors, lecturers, and demonstrators. The roll for the present session counts 1,035, not including 174 evening students, or the students from the Bankers' Institute for law lectures. In the Departments of Arts, Science, and Law there are 744 students, of whom 178 are women; and in the Medical Departments there are 335, of whom 6 are women. The Day Training College numbers 134—72 men and 62 women. A week before the celebrations the Jubilee fund was brought up to £100,000 by a special gift of £2,400 from Mr. J. H. Gartside, whose munificent foundation of commercial scholarships we mention elsewhere. About £20,000 of the sum had been contributed by Owens men, old and new. Mrs. Rylands, too, added a fresh benefaction—the fine organ now building in the Whitworth Hall, which has just been added to the institution. It may be justly claimed for Owens that it is "the largest, wealthiest, and best equipped college of its type outside London." Pity that John Owens could not look up and see the rich fruits of his wise and generous forethought.

THE PRINCE AND PRINCESS OF WALES were received at the College with the greatest enthusiasm. The Duke of Devonshire, President of the College, having opened the proceedings in the Whitworth Hall, Dr. Hopkinson, K.C., LL.D., the Principal, presented to the Royal visitors an address of welcome. The Prince replied at some length, paying a handsome tribute to the benefactors of the College, and strongly bespeaking for the College "a generous local and municipal support to enable it to keep abreast of the ever-growing demands of modern life, whether it be in the arts, in sciences, or other departments of a liberal education." Sir R. C. Jebb and Principal Rücker spoke as representatives of Literature and of Science, with great acceptance. Exhausted nature next demanded luncheon, which was dispensed under the presidency of Lord Mayor Hoy. On this occasion the Prince scored brilliantly by expressing his pleasure that Manchester—the youngest of British ports, and the sixth in rank—had "found her sea-legs." Finally, the Prince unveiled a statue of the late Queen in the west porch of the Manchester Cathedral—"T'owd Church"—"executed and presented," said the Prince, "by my dear aunt," Princess Louise, Duchess of Argyll. Next day (March 13), a long procession of representatives of Universities, colleges, and learned societies presented congratulations to Owens College, and many of them received honorary degrees at the hands of Earl Spencer, Chancellor of Victoria University. We give a short list elsewhere.

It was fitting, as Dr. Maclaren remarked, that "the ceremonies of the week should be enclosed in a circlet of religious observances." On the preceding Sunday evening (March 9) a special commemorative service was held in the Cathedral, and the Bishop of Manchester preached from Romans i. 20 a broad-minded sermon on the alleged conflict between science and religion. "While

not venturing to hope that all antagonism between the men of knowledge and the men of faith will be brought to an end at once," said Dr. Moorhouse, "I do believe that as the years go by religious men will perceive that all real advances in scientific knowledge are friendly, and not hostile, to religion." His frank and sensible concluding words were:

To you, then, who are teachers in Owens College I would say: Set yourselves to teach the truth in every department of human thought. Teach it clearly, fully, fearlessly, knowing that there is no enemy of truth but darkness, and that you are then most surely doing His will who is "the Light of the World" when you are seeking to dispel that darkness.

On the next Sunday evening (March 16) the Rev. Dr. Maclaren preached at a commemorative service in the Union Chapel, in Oxford Street, from Proverbs iv. 7: "Wisdom is the principal thing, therefore get wisdom; and, with all thy getting, get understanding." "Whatever may be the attitude of their representatives," he said, "there is unity in the aim of these two mighty powers—learning and religion." And "it is impossible to overestimate the benefit of having planted in the midst of a great centre of commercial life an institution the very existence of which is a perpetual witness that there are higher things in the world and truer wealth than all the success and riches that can be won in mills and warehouses." So also the Rev. Dr. Salomon, preaching at the Great Synagogue, Cheetham Hill, on Saturday (March 15), declared that "religion and science could now well work hand-in-hand." Judaism had always considered knowledge as the foundation of faith.

It has been officially announced, on behalf of Victoria University, that, in the event of disruption, students will be enabled to complete their courses and to present themselves for the corresponding degree examinations. With regard to the proposal for separate Universities, Lord Spencer, as Chancellor, has called upon each of the three constituent colleges of the University to nominate four members to the Committee appointed to consider the terms and conditions for the establishment of the three Universities.

THE relations of friendship and mutual respect between Liverpool and Manchester educationists were pleasantly illustrated at a dinner of the members of the Liverpool University College Association (March 15). Owens College was largely represented among the guests. Principal Dale, who occupied the Chair, proposed the toast of "Owens College." Having expressed regret for the absence of Dr. Hopkinson (through a family bereavement), he referred to the congratulations that had just come from all quarters to Owens College, and said, in the name of all his colleagues, that the college first associated with Owens College in the work of a University also joined in those congratulations, and wished for the institution growing fame, growing power, and increasing prosperity. He congratulated Owens College on the advancement of the past and on the promise of the future; but the most important service rendered by Owens College to the intellectual life of England was the nationalizing of the idea of the city University. In the political life of our country we had long recognized the importance of maintaining a vigorous life outside the capital of the Empire, and what was important in politics was no less important in science and letters. He was convinced they would not advance their educational system, or solve the problems that confronted them at this moment, by any policy of centralization; but they would make good what was lacking and meet their difficulties only by developing and by encouraging local patriotism, local enthusiasm, and local effort. What they had seen in France during the last few years might serve them by way of warning and by way of encouragement. In that country they had discovered the danger of draining the provinces of intellectual vitality, and of making the capital control, not lead. Now, attempts were being made to raise faculties to the rank of a University with a very large measure of local independence. That was the direction in which educational development in this country would certainly move. That was the goal which they must keep in sight. It must be remembered that for thirty years, at any rate, Manchester and Owens College had led the way in this great movement. When the time came for their parting, he trusted it would be done with mutual affection and with mutual regard. In the meantime, they should continue to act, as they had acted during the last twelve months, in the spirit of an announcement he had seen on certain premises, which read: "Business will be carried on as usual during alterations." When they had parted, he was convinced that the Universities of Lancashire, at any rate, would be able to act together in the fullest sympathy and fullest intelligence in

all questions that affected the intellectual interest of this part of the country. Prof. Wilkins, responding, said that it would be poor testimony to the spirit of harmony that had always existed between Liverpool and Manchester, if they did not regret, to a degree, the anticipation of the severance of those bonds which connected them. He did not say that the severance was not desirable in the interests of both institutions, but he hoped that, whatever provisions might be made, they would be able to co-operate in some parts of University work. In some subjects they could still work, side by side, with the same harmony and self-respect as in the past. Dr. Gamgee, acknowledging the toast of "Our Guests," said that he was astounded at the amount of scientific work which had been done by past and present professors of University College, and he felt that that institution merited what was asked for, and he hoped they would obtain it. He considered the multiplication of Universities was an unmixed good. In Germany one could not fail to recognize that its intellectual position, its advancement in science and in industry depended upon its Universities. British people, however, were inclined to be optimistic, and did not sufficiently recognize the true value of knowledge. Certain of their industries had left them, because no scientific men had devoted themselves to the study of those industries. Germany's Universities were centres of learning and research. He believed the greatest function of such institutions was research.

A VALUABLE endowment for promoting the higher and more effective study of commerce and industry has been established in connexion with the Owens College. Mr. J. H. Gartside, of Hollingsworth, Cheshire, and Overstone Park, Northampton, has generously given the sum of £10,000, which has been applied in the purchase of an annuity of £1,163 for ten years, payable to the college, to be used for the provision of scholarships, which are to be known as "the Gartside Scholarships of Commerce and Industries." The scholarships are intended to induce young men that have already received a good education to devote a year at least in Owens College to the special study of subjects bearing on commerce and industry, and then to go abroad for the study of some particular subject, either in Germany or in the United States or some other approved country. The electors to the scholarships—with whom such approval will rest—will in the first instance be the founder of the scholarships, together with two electors appointed by the Owens College and one by the Manchester Chamber of Commerce. The emoluments of the scholar while in England will be about £80 a year; but when he goes abroad a larger sum will be given, which in the case of scholars travelling in the United States will probably be about £250 per annum. The scholars are to furnish reports of their investigations in the foreign countries they visit. These scholarships are intended by Mr. Gartside to be an incentive and assistance to those who contemplate a careful study of commercial and industrial methods.

THE *British Medical Journal* states that the sum of £25,000 has been given by Mr. William Johnston, shipowner, of Liverpool, for furthering the University movement in that city. The money will be devoted, in accordance with the donor's wishes, to promote research in pathology and physiology. The £25,000 is divided as follows:—£10,000 is allocated to found a Chair of Chemical Biology; £6,000, at 5 per cent. interest, to endow permanently three Research Fellowships of £100 a year each; and the remaining £9,000 is to be spent in building a laboratory to accommodate the Tropical School, the Professor of Chemical Biology, and experimental medicine, comparative pathology, and serum research departments. Of the three research fellowships, one is to be held by a medical graduate of a colonial University, a second by a graduate of medicine in the United States, and a third by a research student in gynaecology.

PROF. SONNENSCHNIGER discoursed to the "Symposium" of Non-conformist ministers and laity at Birmingham (March 17) on "City Universities: their Functions in the Twentieth Century." He magnified the impulse communicated by his own University of Birmingham, ascribing to it the agitation now in process for independent Universities in Liverpool and Manchester. What was it that Liverpool was fighting for, especially, and perhaps in a less degree Manchester, at the present time? It was just what Birmingham had fought for in the nineties—particularly between 1898 and 1900—the establishment of a city University in the place of a federal University. Having described the constitution of the city Universities, he urged that a debt is owing to the Victoria University as being the first organization to

claim with success for local colleges in England the right of granting degrees. He mentioned an improvement in the methods of conducting examinations as an instance of the sort of work the new city Universities would have to do, and he explained how in Birmingham in regard to matriculation the new principle had been adopted, the essence of which was that they should not expect all candidates to show precisely the same qualification. It was not necessary for the University that they should. They therefore laid down the principle that there must be some degree of differentiation in the requirements imposed upon a candidate according to the faculty in which he was going to study. He thought the greatest work before city Universities was the reinstatement of the idea of the University as a professional school. Whereas the old Universities reckoned with only three or four professions—the learned professions were medicine, theology, and law—our new Universities would have to reckon with a very large number—the professions of the chemist, the metallurgist, the miner, the brewer, and the man of commerce. In conclusion, he referred not only to Birmingham, but to the whole country, in mentioning as one very great difficulty that of getting the country to wake up to the necessity for this higher kind of education. But was there, he asked, a real danger threatening us? He did not think there was, but we could not pass by the opinion represented in many quarters as to the lowering of degrees. There were, he held, two forces which must be brought to bear upon the tendency to lowering degrees. "First," urged the Professor, "make your new Universities as independent as possible of students and of fees, so that they may not be exposed to the temptation of offering the attraction of an easy degree, merely for the purpose of drawing to the Universities by the paying of a certain number of fees; and, secondly, cultivate a jealous sense of honour and self-respect among the professors by giving them a status and a position which they can be proud of, and which will lead to their regarding any degradation as a personal slur upon yourselves." With these things in view he thought city Universities had a very fair prospect opening up before them.

CANON LYTTELTON, the Head Master of Haileybury, lectured at Birmingham University (March 17) on "The Training of Secondary Teachers." He dealt with the scope of the training for secondary teachers in reference to the new provisions for registration. He discussed first what the training of teachers is expected to do. Theoretical training, he said, included something besides psychology—the history of education, for instance. It was his opinion that the benefits of a prolonged study of psychology might be easily exaggerated, but a certain attitude of mind was likely to be induced by a fair acquaintance with the science, while direct benefit might be looked for from the study of the history of education more by way of enriching the teacher with a noble enthusiasm than of showing him how to get over difficulties. As to the practical side, he favoured a system of apprenticeships whereby young men might for a period enter boarding schools and, side by side with their theoretical studies, obtain some amount not only of practical work, but of experience of the life of such a school. Such a system was open to any arrangement that a great institution like the Birmingham University might make. There should be a master of method working in the University who would have time to give to the apprentices working in the schools.

THE scheme for providing bursaries at Birmingham University for the children of artisans is making progress. The exact financial result of the exhibition organized last year by the trade unionists of the city is not yet known, and some promised contributions have yet to come in, but the total sum realized will be between £3,250 and £3,500, and the committee charged with the responsibility of arranging the bursaries has ascertained that the income will be sufficient to provide two of the value of £45 per annum. Some prominent members of the committee would like to see an effort made to increase not only the amount of the bursaries, but also their number, and with this object they have suggested the desirability of holding another exhibition after the lapse of a reasonable time—say three years. In the meantime the conditions of holding bursaries have been drawn up and submitted to the authorities of the University, and a curious difficulty has arisen. The promoters of the fund keenly desire to tie its benefits to the children of the working classes so securely that there shall be no danger of misapplication in the future. They are actuated by the feeling that in the case of the grammar schools they have been robbed of their birthright. They argue that the schools were created for their benefit, and that in the

years that have elapsed since the days of Edward VI. their privileges have been usurped by the middle classes, who can well afford to pay for the education of their children. So they are determined to secure that nothing of the kind shall happen to the bursary fund. In the agreement they therefore proposed that in the future, in the event of the scholarships being for any reason out of date, the fund should revert to the representatives of the working classes, who should have power to apply it otherwise. The authorities of the University decline to entertain such a condition, because it would introduce an element of uncertainty which would be inconvenient and altogether foreign to the conditions that underlie other bequests, &c. Further, they point out that the Government has power to deal with funds that have ceased to serve their original purpose. Probably it will be found possible to devise a clause that will satisfy the legitimate desires of the promoters.

THE South Wales University College authorities are considering the proposal to give University rank to the Technical College at Swansea. Principal Trevor Owen, of the Swansea Technical College, who has been interviewed on the question (March 14), says it is the intention of the governors to develop the College to its fullest possibilities, with a view to its taking its part in the University work of the Principality and being admitted to the privileges and the degrees granted by the University of Wales. Affiliation with the Cardiff University College was the only avenue to that end. The cause of education would be greatly strengthened by such an affiliation, and it would bring educationists in Swansea into more direct touch with the University of Wales. The charter only admitted of three resident Universities, but it was possible to establish as many branch University Colleges as might be thought necessary, and in both towns there was ample room for branch University Colleges. Swansea would be placed on the same footing as Cardiff, and students could reside at Swansea for nine months, instead of at Cardiff, for the purpose of qualifying for a degree.

In Wales the educational problem is much complicated by the existence of a separate organization under the Intermediate Education (Wales) Act, controlling the whole system of secondary education. The local and county governing bodies under this Act have done and are doing excellent work, and the proposal to put education under control of County and Borough Councils is strenuously opposed. Mr. W. J. Heppell, the chairman of the Aberdare School Board, lecturing in that town on March 17, submitted a scheme that is creating much interest. His scheme provides for the abolition of all existing Welsh educational authorities (excepting the University), and for the election, by popular vote, of an Educational Authority in each of the fifty-two Poor Law unions of Wales, with power to delegate any of its powers, except that of raising money, to committees of local managers. Voluntary school managers may place their schools under the Local Authority on terms to be mutually agreed upon, receive assistance from rates in the same way as Board schools, and retain the right to give denominational teaching to such pupils as desire it before the time for secular teaching. Each Local Authority shall appoint one delegate to a Central Council, and pay to that Council an agreed percentage of its income, the Council to provide peripatetic teachers in cookery, laundry work, woodwork, dairy work, engineering, mining, &c. In this way wealthy districts would assist poorer districts, and general efficiency be promoted. The Central Council would provide and maintain training colleges. The scheme further provides for the payment of Government grants to the Central Council, and the creation of a Government Education Department for Wales on the same lines as the Department at present existing for Scotland.

THE Commercial High School in Cologne, though only at the end of its second term, has developed rapidly. In the first term it had 120 regular students and 629 visitors. In the second term the number of matriculated students rose from 68 to 119; there were 17 visitors from the Commercial Teachers' Seminary, and 45 *Hospitanten*—altogether 882 persons attended the lectures. Besides professors of the Bonn University and members of the Judicature and legal deputies in Cologne, Prof. Dr. Hassert, of Tübingen University, Prof. Dr. Schröer, of Freiburg University, and Prof. Dr. Eckert, of Berlin University, have been among the lecturers. The legacy of 300,000 marks bequeathed by the late Frau Geheimrath von Mevissen will enable the High School to extend its operations still further during the coming summer.

## UNIVERSITIES.

(From our Correspondents.)

**Oxford.** SINCE term ended Oxford has been very empty, as the long Easter vacation has proved too great a temptation to college tutors, who are by now dispersed all over Europe, one or two being adventurous enough to make for Egypt. Perhaps also the fact that there has been a good deal of sickness at Oxford accelerated their departure; influenza ran riot in one or two colleges, especially New College, while Magdalen are not having their usual Easter services owing to mumps having decimated, or rather bisected, the choir.

The term ended with various meetings political and otherwise: among the latter the Toybee Hall meeting at Balliol deserves special mention for its success, while the orators were in excellent form. Mr. Asquith, Canon Barnett, and Mr. Masterman—well known in the Cambridge Union—were the chief speakers. Then we had the meeting of the United Empire League, with Lord Avebury as its mouthpiece.

Several prominent men have lately resigned their posts, two in order to secure more time for independent work, one to seek fresh fields. The first two are Prof. Tylor, who is now, after nineteen years, ceasing to be Keeper of the Museum, while continuing to be Professor of Anthropology, his special branch of scientific study; and Mr. Arthur Sidgwick, who is ceasing from his labours as a tutor at Corpus Christi. The third is the Rev. C. R. Carter, who is becoming head of a large private school. As an undergraduate Mr. Carter was one of those who are rightly held up to us as proofs that it is possible to combine "music" and "gymnastic"; for, besides taking Honours both in Classics and in Mathematics, he played Rugby football for the University and rowed in the Eight. Both at Wellington College and also at Magdalen, where he succeeded the present Bishop of Stepney as "Dean of Divinity," Mr. Carter has made a great mark and many friends, and his place will be hard to fill.

Another historian has met with a reward, as Mr. Armstrong, of Queen's, has been appointed to the newly established, or rather we should say resuscitated, "Lectureship in Foreign History." Mr. Armstrong is a hard-working member of what is often called the "History Ring" in Oxford by those who envy its unity and organization, and has also done much to encourage women in participating in the advantage of a University education.

Talking of the "History Ring" reminds us that in the new "History of England," which is, we presume, to take its place as the standard work on the subject, several prominent members of the inner circle will be represented—Mr. A. L. Smith, Mr. Oman, and Mr. Fisher. The Warden of Merton has also been prevailed upon to take up the pen and deal with the earlier decades of the nineteenth century.

The Union has done well in electing as its new President Mr. Macfadyen, of Wadham, who has had the distinction of serving in South Africa and the misfortune of having been very badly wounded. He belongs, we are informed, to the Liberal Imperialist band.

In matters sporting we have, as all the world knows, once more won the Sports against Cambridge, and been badly beaten—more badly than even our most gloomy prophets expected—in the Boat Race.

**Cambridge.** THE continued ill-health of the Regius Professor of History, Lord Acton, has rendered necessary the appointment of a deputy, and Mr. S. M. Leathes has been nominated by the General Board of Studies for the vacant post. A curious point in the University regulations is herein emphasized—namely, that the appointment of deputies to professors is never made by the same body that elects to the higher post; yet the lower appointments are invariably made with judgment and discretion.

The Syndicate to consider the advisability of changes in the poll examinations has now been appointed. Some little difficulty has been met with in procuring representative members, and there is practically no doubt that the report that is to be produced in the remote future will be in the nature of a compromise, and will receive an emphatic and well deserved *non-placet*.

Another question, however, is rapidly coming into prominence and will, before long, emerge into the region of practical politics. It has been repeatedly urged in these notes that the admission of men with practically no educational attainments whatever is good neither for themselves nor for the University. On this point

the practice of certain colleges conflicts with the opinion of the public. The practical outcome of it all promises to be that, by a very simple alteration of the regulations, the Little-Go will become a University entrance examination. This result can be attained almost by a stroke of the pen. At present no one can be entered for the examination unless he is an accepted candidate for some college. Now, if this regulation be abrogated, and the Little-Go is open to all who have paid a fee to the University, an unnecessary examination will be abolished—namely, that for entrance at the various colleges—while it will be quite certain that all would-be entrants for a college have reached the minimum standard of efficiency as prescribed in the Little-Go. The University can procure the same result in another way—by refusing to allow a man's terms till he has passed the whole of the Little-Go. By utilizing the machinery of the Local Examination Syndicate it would be perfectly possible to bring the Cambridge examination system—at any rate, so far as the elementary examinations are concerned—home to the very doors of the candidates themselves.

Only those conversant with University life and methods can know of the complexity of the rules and regulations which beset candidates and examiners alike at Cambridge. The only remedy for the existing state of chaos is to turn over all the arrangements for examinations to some authority, such as the Local Examination Syndicate, with an efficient permanent staff. In this way would be secured continuity of standard and control over examiners, and the difficulties that often occur in this respect would be obviated.

Negotiations are on foot for the purchase by the University of six more acres of land from Downing College; the Board of Agriculture have fixed the price at a sum that would bring in a rent charge of £120 an acre. It is hoped that the University will not let the opportunity slip, as there are no other sites available for the erection of the various University buildings that are absolutely necessary if the present rate of growth in certain departments is preserved. The terms of the purchase are so arranged as to make it very easy for the University, and hitherto no decided opposition has been manifested.

The proposal that the University should recognize the work of the Appointments Association by a small pecuniary contribution was *non-placeted* by Prof. Lewis, who contended that the Scholastic Agency was suffering from unfair competition; the large majority in favour of the grace shows, however, that people in Cambridge believe that there is room for both institutions, and that both do good work. Those who have been brought into business relations with the Scholastic Agency never fail to be impressed by the courtesy and attention shown them by the secretary, Mr. Stewart, and his able assistant, Mr. Trinder, the latter being chiefly responsible for the excellent position in which the Agency now finds itself.

The term has passed without the dreaded outbreak of small-pox among University men. The cases in the gaol were due to the gross mismanagement of the authorities in London, who utilize the Cambridge gaol for all and sundry prisoners from all parts of the country. The original smallpox case in Cambridge was that of a prisoner who contracted the infection in Maidstone and was sent on here to serve his time. To add insult to injury, the authorities send criminals to Cambridge and order their discharge at the door of the gaol; the Cambridge authorities very wisely have them taken to London and let them loose there.

The result of the Boat Race was in no way a surprise to such as had observed the doings of both boats—probably no two better crews have ever rowed in the race. The greatest credit is due to the coaches, Mr. J. E. Payne and Mr. Dudley Ward, who with infinite pains have endeavoured to do the best with the existing material rather than to make constant changes in the *personnel* of the crew, a policy that in some years has been far too prevalent.

The result of the Sports was disappointing to partisans of Cambridge, but there is a consolation in the reflection that Cockshott's defeat by a yard and a half in the mile was the deciding event, and that no better race has ever been run by University representatives.

Personal items of the month:—Isaac Newton Student, T. H. Havelock, St. John's; Balfour Student, J. S. Budgett, Trinity; Allen Scholar, F. N. Hales, Trinity; Bell Scholars, C. Ransford, Emmanuel, and C. F. Russell, Pembroke; Chancellor's Medal, English Verse, G. L. Strachey, Trinity; Porson Prize, J. S. Sheppard, King's; Powis Medal, H. D. Wakely; Smith's Prizes, T. H. Havelock, St. John's, and J. E. Wright, Trinity.

## THE ORDER IN COUNCIL RELATING TO REGISTRATION.

### QUESTIONS IN PARLIAMENT.

FEBRUARY 24, 1902.

Colonel LOCKWOOD asked the Vice-President of the Committee of Council on Education whether, with regard to the Order in Council for regulating the Registration of Teachers, it is the intention of the Board of Education to prescribe the conditions on which a school can become a recognized school for the purposes specified in Sections 3 and 4 of the Schedule to the Order; whether these conditions will be made to cover the case of schools conducted for private profit; whether it is the intention of the Board of Education to publish a list of recognized schools; and whether the term "elementary school" used in the Schedule is to be interpreted as relating exclusively to a public elementary school as defined in the Education Act, 1870; and, if not, what is the significance of the term?

Sir J. GORST: No; it is intended that such schools shall be recognized as are, in the opinion of the Board of Education, efficient. Schools conducted for private profit would, if efficient, be recognized. The publication of a list of recognized schools is a matter that shall be considered. An elementary school is defined by law to be "a school, or department of a school, at which elementary education is the principal part of the education there given, and does not include any school, or department of a school, at which the ordinary payments, in respect of the instruction, from each scholar, exceed ninepence a week."

Mr. BARTLEY: May I ask whether any statement will be issued on the subject of what schools are to be recognized as soon as this conditional order becomes established?

Sir J. GORST: I think not. The Board of Education have very little experience at present in regard to secondary schools. It would be mere guess-work to prescribe the conditions beforehand, or, till some experience has been gained, to attempt to give a list.

Colonel LOCKWOOD asked the Vice-President of the Committee of Council on Education whether experience as a private tutor will be held by the Board of Education as coming within the meaning of the expression "experience in teaching," as used in the Schedule [4(2) (ii.)] to the Order; also whether it is intended that, while the teachers in Column A are wholly exempt from payment of registration fees, the whole of the expenses of registration shall be borne by such teachers only as are placed in Column B, or on the Supplemental Registers. If not, will a Treasury grant be made to the Registration Council on behalf of the teachers registered in Column A? Should the income derived from registration fees fall short of the expenses of registration, who is to be responsible for meeting the deficit?

Sir J. GORST: The experience in teaching must be such as is satisfactory to the Registration Authority. The question in Paragraph 2 is answered by Sections 10 and 11 of the Schedule. The answer to the third paragraph is in the negative. The registration fees in the first year will be more than sufficient. The fees will be so regulated afterwards as to cover the cost.

FEBRUARY 27, 1902.

Mr. MOONEY asked the Vice-President of the Committee of Council on Education whether he is aware that, although the Board of Education, when administering the Science and Art Vote for Ireland, granted the same privileges to Associates of the Royal College of Science, Dublin, as to Associates of the Royal College of Science, London, in the Draft Order in Council for providing the manner in which a Register of Teachers shall be formed and kept, the Board of Education has omitted from Appendix A, page 10, the Associateship of the Royal College of Science, Dublin, while including the Associateship of the Royal College of Science, London; and whether such an omission is a mere inadvertence, and, if so, will he take steps to have it at once corrected?

Sir J. GORST: The regulations contained in the Order in Council were drawn up by the Consultative Committee. I will call their attention to the omission.

Dr. MACNAMARA asked the Vice-President of the Committee of Council on Education whether a certificated teacher, having been trained in a training college for elementary-school teachers, and having worked exclusively in elementary schools, can, on payment, have any University qualifications he may possess entered in Column B of the Teachers' Register; and, if not, will the Vice-President consider the desirableness of issuing an amending Order in Council providing that such entry may be made?

Sir J. GORST: No qualifications are inserted in Column B, but names only. A certificated teacher can have his name inserted in Column B if he fulfils the same conditions and pays the same fee as other persons whose names are inserted therein.

FEBRUARY 28, 1902.

Mr. BARTLEY asked the Vice-President of the Committee of Council on Education (1) with reference to the term "efficient," as used by him in relation to the term "recognized school," as used in Sections 3

and 4 of the Schedule to the Order in Council for regulating the Registration of Teachers, whether he can say in what way the Board of Education intends to determine whether a school is efficient; (2) whether he can state what steps must be taken by the authorities of a school in order that the school may be recognized as efficient.

Sir J. GORST said that, if the Registration Council declined to recognize a school for the purposes of Sections 3 and 4 of the Order in Council, the authorities of the school might appeal to the Board of Education, and the efficiency of the school might be established by inspection under the Board of Education Act, 1899.

Mr. BARTLEY asked the Vice-President of the Committee of Council on Education whether, in view of the fact that the number of persons who are entitled, as being recognized by the Board of Education as certificated teachers under the Code of Regulations for Elementary Day Schools, to be placed on the Register of Teachers without payment of any registration fee exceeds sixty-four thousand, and that registration for other teachers is not compulsory, he will state who is to be responsible for meeting a deficit in the event of the income derived from registration fees falling short of the expenses of registration.

Sir J. GORST: It is not considered possible that the registration fees will fall short of the expenses of registration during the first three years, as the number of cases of teachers seeking registration will be abnormally great in that period; but during that period the Board of Education will be responsible. After that period the fees will be fixed at such an amount as to secure that the receipts will not fall below the expenditure.

Mr. BARTLEY: Will the right hon. gentleman say whether, if there is a deficiency, the Board of Education will pay?

Sir J. GORST: I cannot contemplate the possibility of there being a deficiency.

Mr. BARTLEY asked the Vice-President of the Committee of Council on Education whether the term "head master or head mistress," as used in Section 4 of the Schedule to the Order in Council for regulating the Registration of Teachers, is to be understood as applicable to the principal of a school conducted for private profit.

Sir J. GORST: The answer to this question is in the affirmative.

Mr. BARTLEY asked the Vice-President of the Committee of Council on Education, in respect of the term "satisfactory," as used by him in reference to the term "experience in teaching," as used in the Schedule 4 (2) (ii.) to the Order in Council for regulating the Registration of Teachers, whether he will state what experience will be considered satisfactory to the Registration Authority.

Sir J. GORST: No, Sir. This will be a question for the Registration Authorities.

**SIR RICHARD TEMPLE.**

WE regret to have to record the death, on March 15, in his seventy-seventh year, of Sir Richard Temple, G.C.S.I., C.I.E., who had been identified with educational movements, both in and out of Parliament, for many years past, and especially with the registration of teachers, having brought in the Bill promoted by the College of Preceptors for this purpose in the year 1890. He was educated at Rugby and Haileybury, and began his public career in 1846 by entering the Indian Civil Service, in which he continued for thirty-four years, rising rapidly from one important post to another till he was appointed Governor of Bombay in 1875. His services in connexion with the famines in 1874 and 1877 were invaluable, and his capacity for hard and continuous work was extraordinary, even when measured by the standard of Indian administrators. Sir Richard returned to England in 1880, and entered Parliament as member for the Evesham Division of Worcestershire in 1885, about which time he was also elected a member of the London School Board, and filled the post of Chairman of the Finance Committee, for which his Indian experience specially qualified him. His work in Parliament and on the School Board was what might be expected from such a man with such a record, and, though he could not be called a successful speaker, his opinions carried weight, and no member was more constant in his attendance at debate and division. In the interval between his return from India and his entry into Parliament he wrote several books, the material for which was derived mainly from his personal experiences, and his talent for water-colour drawing (many specimens of which are to be found in his "Palestine Illustrated") provided recreation for his few leisure hours. Those who had the privilege of being brought into contact with Sir Richard Temple in matters of public business were able to appreciate his influence in promoting any movement that he took up, his persistent energy, his vigilance, his clearness of view, and instant perception of material points.

**MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.**

A MEETING of the Council was held at the College, Bloomsbury Square, on March 15. Present: The Rev. T. W. Sharpe, President, in the Chair; Mr. Barlet, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. Brown, Mr. Charles, Mr. Chettle, Miss Day, Mr. Eve, Miss Jebb, Rev. R. Lee, Sir Philip Magnus, Mr. Millar Inglis, Mr. Pinches, Dr. R. P. Scott, and Dr. Wormell.

The minutes of the last meeting were read and confirmed.

The Secretary reported the result of the steps that had been taken to elicit information from the Government on certain ambiguous expressions in the Order of Council relating to the Registration of Teachers.

The Diploma of Licentiate was granted to Miss E. J. Lock, who had passed the required examination.

The following resolution was unanimously adopted:—"That the Council desire to convey to the Very Rev. the Dean of Wells their hearty thanks for the valuable services rendered by him to the College as their President for more than a quarter of a century, and to express their hope that as a life-member of the Council he will continue undiminished that interest in the affairs of the College which they have so heartily appreciated in the past."

The Report of the Examination Committee was adopted. Mr. J. W. Longdon, M.A., was appointed one of the Examiners in French, and Mr. F. Ramirez one of the Examiners in Spanish; and Mr. F. B. Kirkman, B.A., was added to the list of Assistant Examiners.

The Report of the Literary Committee was adopted, and Prof. A. F. Murison, M.A., LL.D., was appointed Editor of the *Educational Times*.

The Report of the Special Committee on the Order in Council relating to the Registration of Teachers was adopted. The Report comprised a memorial to the Board of Education giving reasons why the Associateship of the College should be included in the examinations qualifying for admission to the Register specified in Appendix B to the Schedule to the Order.

Mr. E. E. Pinches was appointed the representative of the College on the Teachers' Registration Council.

Mr. W. W. Kelland, M.A., Principal of Oakfield School, Crouch End, was elected a member of the Council, in place of the late Mr. Lewis Sergeant.

The following books had been presented to the Library since the last meeting of the Council:—

- By the AUTHOR.—Leonard's Practical Science.
- By the GENERAL MEDICAL COUNCIL.—Vol. XXXVIII. of the Minutes of the General Medical Council.
- By the SMITHSONIAN INSTITUTION.—Annual Report of the Smithsonian Institution, 1900.
- By BLACKIE & SON.—Clarke's Hugo's Waterloo; Hartog's Gautier's Le Pavillon sur l'Eau; Le Francois' Bruyts-Palapat's L'Avocat Patelin.
- By C. J. CLAY & SONS.—Edwards's Xenophon's Anabasis, Book I.; Plather's Phœdrus' Fables, Books I. and II.; Lawson's Homer's Iliad, Books IX. and X.; Quiggin's von Sybel's Prinz Eugen von Savoyen; Shuckburgh's Caesar's Gallic War, Book I.; Summers's Ovid's Metamorphoses, Book VIII.
- By W. B. CLIVE.—University Correspondent, Vol. XI., 1901; Matriculation Directory, No. XXXI.; Stewart's Text-Book of Magnetism and Electricity; Workman's Tutorial Arithmetic.
- By GINN & CO.—Tompkins's Philosophy of School Management, and Philosophy of Teaching.
- By A. M. HOLDEN.—De Cusance's First French Book; J. M. D. Meiklejohn's Short History of England; J. M. D. and M. J. C. Meiklejohn's School History of England; M. J. C. Meiklejohn's Asia.
- By MACMILLAN & CO.—Bayfield's Sophocles' Antigone; D'Alissas' Les Histoires de Tante; Geikie's Geology; Perkin and Lean's Introduction to Chemistry and Physics, Vols. I. and II.; Scott's Kenilworth; Scott's Quentin Durward; Vaughan's Dumas' Napoléon, and Word and Phrase Book to the same.
- By RELEE BROS.—Advance Dictation Sentences and Spelling; Carter's Rules of Latin Syntax, and History of England, Part II.; Harris's One-Hour Exercises in English Grammar; Knight's Second Arithmetic; Matthews's Sound and Sentence Practice for Beginners in French, Part III.
- By RIVINGTONS.—Stewart's Book of Exodus.
- By WHITTAKER & CO.—School Calendar for 1902.
- By G. BELL & SONS.—English History during the Hanoverian Period.
- By A. & C. BLACK.—Davies' Scott's Kenilworth; Schmeil's Text Book of Zoology, Parts I., II., and III.; Scott's Structural Botany, Parts I. and II.; Taylor's Synthetical Atlas of England and Wales.
- By METHUEN & CO.—Test Cards in Mathematics, Stages I., II., and III.; Bally's French Commercial Reader, French Commercial Correspondence, German Commercial Reader, and German Commercial Correspondence; Baron's French Prose Composition; Boon's Commercial Geography of Foreign Nations; Botting's Easy Greek Exercises; Cook and Marchant's Passages for Unseen Translation; Davis's Tacitus' Agricola, and Tacitus' Germania; Delbos' The Metric System; Dunn and Mundella's General Elementary Science; Edwards's Commercial Law; Frosse's Captivi of Plautus; French's Practical Chemistry, Part I.; Gibbins's Industrial History of England, British Commerce and Colonies, Economics of Commerce, Commercial Examination Papers, and The Companion German Grammar; E. M. Gray's German Sight Translation Papers; P. L. Gray's Magnetism and Electricity; Green's Notes on Greek and Latin Syntax; Jackson's Primer of Business; Jacob's Junior French Examination Papers; Jones's Guide to Professions and Business; Lambbridge's Ballads of the Brave; Liddell's Easy Selections from Herodotus; Lyde's Commercial Geography of the British Empire; Malden's Rights and Duties of the English Citizen; M'Allen's Principles of Book-keeping; Mellows's Short History of English Literature; Rodwell's New Testament Greek; Sted's World of Science; Stedman's Steps to French, First French Lessons, French Vocabulary for Repetition, Easy French Exercises on Elementary Syntax, Easy French Passages for Unseen Translation, Initia Latina, First Latin Lessons, Easy Latin Exercises, Exempla Latina, First Latin Reader, Latin Vocabulary for Repetition, Notandi Quædam, The Latin Compound Sentence, Easy Latin Passages for Unseen

Translation, Vocabulary of Latin Idioms and Phrases, Easy Selections from Cæsar, Easy Selections from Livy, Steps to Greek, Shorter Greek Primer, Greek Vocabulary for Repetition, Easy Greek Passages for Unseen Translation, and Greek Testament Selections: Stone's Wanderings of Ulysses: Stroud's Elementary Practical Physics; Swift's Demosthenes against Conon and Callicles; Taylor's Commercial Arithmetic; Wardlaw's Examination Papers on the Constitutional and General History of England; Webber's Carpentry and Joinery; Wells's Practical Mechanics; Whitfield's Precise Writing and Office Correspondence; Williamson's Class Book of Dictation Passages; Winbolt's Exercises in Latin Accidence; Wright's German Vocabularies for Repetition.

## PRIZE COMPETITIONS.

### PROFESSOR CHURCH'S PRIZE.

THE Prize offered by Prof. Church in our February number has been won by Miss Alice Ruddle, Shebbear College, North Devon, for the following translation of a passage from Cæsar:—

Cicero, on all previous days, had kept his soldiers in camp with the utmost diligence, according to Cæsar's orders, and had not permitted even a camp-follower<sup>1</sup> to pass outside the fortification. On the seventh day, however, he feared that Cæsar would hardly keep his promise as to the number of days, hearing that the latter had gone on further, and no report of his return had reached him. Moreover, he was influenced by the cries of those who said that his patience<sup>2</sup> amounted almost to a blockade if he would not even allow them to go outside the fortification. Expecting no casualty of the kind which actually occurred, by which<sup>3</sup> any disaster could happen within a range of three miles from the camp, as nine legions and a large body of cavalry were in the field against an enemy who were scattered and well-nigh annihilated, he sent five cohorts to forage in the nearest cornfields, between which and the camp a single hill intervened.

Prof. Church appends the following notes:—

<sup>1</sup> *Calo*, a "soldier's servant," rather than a "camp-follower."

<sup>2</sup> "Patience" scarcely English—"defensive attitude."

<sup>3</sup> "By which." This is awkward. "Expecting no such chance, as that, with nine legions, a disaster should happen within a distance of three miles from the camp." A fair translation—English, if not of the best kind.

[Mentioned with commendation: Miss Daisy Selkirk Charles, privately educated.]

### ANOTHER PRIZE.

A Prize of 10s. is offered for the best prose paraphrase of the following verses:—

#### THE SPLENDID SPUR.

Not on the necks of prince or hound,  
Nor on a woman's finger twined,  
May gold from the deriding ground  
Keep sacred that we sacred bind;  
Only the heel  
Of splendid steel  
Shall stand secure on sliding fate  
When golden navies weep their freight.

The scarlet hat, the laurel'd stave  
Are measures, not the springs, of worth;  
In a wife's cap, as in a grave,  
Man's airy notions mix with earth.  
Seek other spur  
Bravely to stir

The dust in this loud world, and tread  
Alp-high among the whispering dead.

TRUST IN THYSELF—then spur amain:  
So shall Charybdis wear a grace,  
Grim Ætna laugh, the Lybian plain  
Take roses to her shrivelled face.  
This orb—this round  
Of sight and sound—  
Count it the lists that God hath built  
For haughty hearts to ride a-tilt.

Candidates must send with their paraphrase a certificate from their head master or head mistress, or, if not attending a school, from some person in a responsible position, that the paraphrase has been done without any help from any one else, and that they are seventeen years of age.

## IMPORTANT NOTICE.

Principals wishing their Schools included in

### THE FIFTH EDITION

OF

## PATON'S LIST OF SCHOOLS AND TUTORS

6 Vols. fcap. 4to, 15s. each.

## THE PLAYS OF ARISTOPHANES.

The Greek Text Revised, and a Metrical Translation on opposite pages, together with Introduction and Commentary. By BENJAMIN BICKLEY ROGERS, M.A.

Vol. V., containing **THE FROGS** and **THE ECCLESIAZUSAE**, is now ready. The Plays may also be had separately, viz., **Frogs**, 10s. 6d.; **Ecclesiazusae**, 7s. 6d. (Other volumes preparing.)

"At last we are likely to get an edition worthy of the supreme comedian. For here we have a carefully collated text, scholarly notes of explanation, introductions on the history of the plays, their subjects and metres: and, above all, we have an admirable English translation, reproducing for English readers the true spirit of the Athenian in all its moods—the moods of the satirist, the dreamer, the statesman, the jester, the patriot, the candlestick-maker, the monthly nurse, the scavenger, the fried-fish wife, and the decadent poet. Mr. Rogers may be said to be doing for Aristophanes what Jowett did for Plato. No scholar could have a higher aim or finer reward."—*Daily Chronicle*.

6 Vols. crown 8vo, with Maps, 6s. net each.

## A HISTORY OF MODERN EUROPE,

From the Fall of Constantinople. By THOMAS HENRY DYER, LL.D. Third Edition, Revised and Continued to the End of the Nineteenth Century. By ARTHUR HASSALL, M.A., Student of Christ Church, Oxford.

Vol. VIII., with Full Index, completing the work now ready.

## HISTORY OF THE CITY OF ROME IN THE MIDDLE AGES.

By FERDINAND GREGOROVIVS. Translated by Mrs. HAMILTON. Crown 8vo, £3. 3s. net the Set. Or, separately, Vols. I., II., and III., 6s. net each; Vols. IV., V., VI., VII., and VIII., each in Two Parts, 4s. 6d. net each Part.

Medium 16mo, treble columns, xii+941 pages, 3s. 6d.

## A CONCISE DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES.

By F. E. A. GASC.

"It furnishes all that the schoolboy wants, and deserves the same popularity that the large work has attained. It is a thoroughly sound and scholarly dictionary." *Journal of Education*.

"Should be widely appreciated."—*Athenæum*.

"Undeniably one of the most trustworthy of all French-English dictionaries." *Bookman*.

"The excellence of Gasc's French Dictionary is well known, and we welcome an abridgment of it published at 3s. 6d. by Messrs. George Bell & Sons. It is intended especially for the middle forms of public schools, but its completeness and accuracy will no doubt obtain for it a still wider usefulness."—*Daily News*.

2 Vols. crown 8vo, 4s. 6d. each.

## AN INTRODUCTION TO THE STUDY OF THE COMPARATIVE ANATOMY OF ANIMALS.

By G. C. BOURNE, M.A., D.Sc., F.L.S., Fellow and Tutor of New College, Oxford; Lecturer in Comparative Anatomy. Vol. I. Animal Organization: The Protozoa and Coelenterata. Vol. II. The Coelomate Metazoa.

# Twentieth Century Edition of WEBSTER'S INTERNATIONAL DICTIONARY

REVISED THROUGHOUT, WITH

25,000 ADDITIONAL WORDS  
AND PHRASES

WEBSTER is the best practical Working Dictionary of the English Language. It is recognized as the standard authority throughout the English-speaking world. It is an indispensable reference-book

SUITABLE BOOKS IN THE

## University Tutorial and Preceptors' Series.

**Algebra, The Tutorial.** Part I.: Elementary Course. By RUPERT DEAKIN, M.A. Lond. and Oxon. 3s. 6d.

**Algebra, The Tutorial.** Part II.: Advanced Course. By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 6s. 6d.

**Arithmetic, The Tutorial.** By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. 3s. 6d.

**Book-Keeping, The Preceptors'.** By T. C. JACKSON, B.A., LL.B. 1s. 6d.

**Botany, First Stage.** By A. J. EWART, D.Sc., Ph.D., F.L.S. 2s.

**Botany, Text-Book of.** By J. M. LOWSON, M.A., B.Sc. 6s. 6d.

**Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WM. BRIGGS, LL.D., M.A., F.C.S.  
Part I. NON-METALS. Part II. METALS. 3s. 6d. each.

**Chemical Analysis, Qualitative and Quantitative.** By WM. BRIGGS, LL.D., M.A., F.C.S., and R. W. STEWART, D.Sc. 3s. 6d.

**Coordinate Geometry.** Part I.: The Right Line and Circle. By BRIGGS and BRYAN. Third Edition. 3s. 6d.

**Coordinate Geometry.** Part II.: The Conic. By J. H. GRACE, M.A., and F. ROSENBERG, M.A., B.Sc. Second Edition. 4s. 6d.

**English Language, The.** By W. H. LOW, M.A. Sixth Edition. 3s. 6d.

**English Literature, The Tutorial History of.** By A. J. WYATT, M.A. Lond. and Camb. Second Edition. 2s. 6d.

**Euclid.** Books I.-II. By RUPERT DEAKIN, M.A. Lond. and Oxon. 1s. Books I.-IV., 2s. 6d.

**French Course, The Preceptors'.** By E. WEEKLEY, M.A. Camb. and Lond. With Passages for Translation into French. 2s. 6d.

**French Course, The Matriculation.** By E. WEEKLEY, M.A. 3s. 6d.

This work includes accidence, elementary syntax, exercises, and passages for translation into French. The simplifications authorised by the Decree of Feb. 26, 1901, are incorporated.

**French Reader, The Preceptors'.** With Notes and Vocabulary. By E. WEEKLEY, M.A. Camb. and Lond. 1s. 6d.

**French Prose Reader.** Edited by S. BARLET, B. ès Sc., Examiner in French to the College of Preceptors, and W. F. MASOM, M.A. Lond. and Camb. With Notes and Vocabulary. Third Edition. 2s. 6d.

**French Reader, Advanced:** Containing Passages in Prose and Verse. Edited by BARLET and MASOM. Second Edition. 3s. 6d.

**Greek Reader, The Tutorial.** By A. WAUGH YOUNG, M.A., Lond. With Notes and Complete Vocabulary. Second Edition. 2s. 6d.

**Heat, Elementary Text-Book of.** By R. W. STEWART, D.Sc. Lond. 2s.

**History of England, The Matriculation (to 1702).** By C. S. FEAREN-SIDE, M.A. Oxon. Second Edition. 3s. 6d.

**Hydrostatics, An Elementary Text-book of.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 2s.

**Hygiene, First Stage.** By R. A. LYSTER, B.Sc. 2s.

**Light, Elementary Text-Book of.** By R. W. STEWART, D.Sc. Lond. 2s.

**Latin Course, The Preceptors'.** By B. J. HAYES, M.A. Camb. 2s. 6d.

**Latin Reader, The Preceptors'.** By E. J. G. FORSE, M.A. Camb. 1s. 6d.

**Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. Lond. Second Edition. 2s.

**Mechanics, The Preceptors'.** By F. ROSENBERG, M.A. B.Sc. 2s. 6d.

**Mensuration of the Simpler Figures.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and T. W. EDMONDSON, Ph.D., B.A. 2s. 6d.

**Milton—Sonnets.** By W. F. MASOM, M.A. Lond. and Camb. 1s. 6d.

**Physics, The Tutorial.** By R. WALLACE STEWART, D.Sc. Lond., and E. CATCHPOOL, B.Sc. Lond. In Four Volumes:—Sound, Heat, Light, Magnetism and Electricity. 3s. 6d. each vol.

**Science, General Elementary.** Edited by WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. Third Edition. 3s. 6d.

**Sound, Light, and Heat, First Stage.** By JOHN DON, M.A. 2s.

**Trigonometry, The Preceptors'.** By WM. BRIGGS, LL.D., M.A., F.R.A.S. and G. H. BRYAN, Sc.D., F.R.S. 2s. 6d.

**Zoology, Text-Book of.** By H. G. WELLS, B.Sc. Lond., F.Z.S. Enlarged and Revised by A. M. DAVIES, B.Sc. Lond. 6s. 6d.

**STUDENT'S MANUAL OF THE ENGLISH LANGUAGE.** By GEORGE P. MARSH. Crown 8vo, 7s. 6d.

**STUDENT'S MANUAL OF ENGLISH LITERATURE.** A History of English Literature of the chief English Writers, founded upon the Manual of THOMAS B. SHAW. A new Edition, Thoroughly Revised. By A. HAMILTON THOMPSON, B.A., of St. John's College, Cambridge, and University Extension Lecturer in English Literature. With Notes, &c. Crown 8vo, 7s. 6d.

**STUDENT'S SPECIMENS OF ENGLISH LITERATURE,** Selected from the Best Writers, and arranged Chronologically. By T. B. SHAW, M.A. Crown 8vo, 5s.

### SCRIPTURE AND CHURCH HISTORY.

**STUDENT'S OLD TESTAMENT HISTORY.** From the Creation of the World to the Return of the Jews from Captivity. With an Introduction to the Books of the Old Testament. By PHILIP SMITH, B.A. With 40 Maps and Woodcuts. Crown 8vo, 7s. 6d.

**STUDENT'S NEW TESTAMENT HISTORY.** With an Introduction, containing the connection of the Old and New Testaments. By PHILIP SMITH, B.A. With 30 Maps and Woodcuts. Crown 8vo, 7s. 6d.

**STUDENT'S MANUAL OF ECCLIASTICAL HISTORY.** A History of the Christian Church to the Reformation. By PHILIP SMITH, B.A. 2 vols.; crown 8vo, 7s. 6d. each.  
PART I.—A.D. 30-1003. With Woodcuts.  
PART II.—A.D. 1003-1614. With Woodcuts.

**STUDENT'S MANUAL OF ENGLISH CHURCH HISTORY.** By G. G. PERRY, M.A., Canon of Lincoln. 3 vols.; 7s. 6d. each.

First Period—From the Planting of the Church in Britain to the Accession of Henry VIII. A.D. 596-1509.

Second Period—From the Accession of Henry VIII. to the Silencing of Convocation in the Eighteenth Century. A.D. 1509-1717.

Third Period—From the Accession of the House of Hanover to the Present Time. A.D. 1717-1884.

### ANCIENT HISTORY.

**STUDENT'S ANCIENT HISTORY OF THE EAST.** From the Earliest Times to the Conquests of Alexander the Great, including Egypt, Assyria, Babylonia, Media, Persia, Asia Minor, and Phœnicia. By PHILIP SMITH, B.A. With 70 Woodcuts. Crown 8vo, 7s. 6d.

**STUDENT'S HISTORY OF GREECE.** From the Earliest Times to the Roman Conquest. With Chapters on the History of Literature and Art. By SIR W. M. SMITH, D.C.L. Thoroughly Revised and in part Rewritten by G. E. MARINDIN, M.A. With many new Maps and Illustrations. Crown 8vo, 7s. 6d.

**STUDENT'S HISTORY OF ROME.** From the Earliest Times to the Establishment of the Empire. With Chapters on the History of Literature and Art. By Dean LIDDELL. New and Revised Edition, incorporating the results of Modern Research, by P. V. M. BENECKE, M.A., Fellow of Magdalen College, Oxford. With Coloured and other Maps and numerous Illustrations nearly all prepared specially for this edition. Crown 8vo, 7s. 6d.

**STUDENT'S HISTORY OF THE ROMAN EMPIRE.** From the Establishment of the Empire to the Accession of Commodus, A.D. 180. With Coloured Maps and numerous Illustrations. By J. B. BURY, Fellow and Tutor of Trinity College, Dublin. Crown 8vo, 7s. 6d.

**STUDENT'S GIBBON.** A History of the Decline and Fall of the Roman Empire. Abridged from the Original Work by Sir W. M. SMITH, D.C.L., LL.D. A New and Revised Edition in Two Parts. Crown 8vo, 5s. each.

PART I.—From the Accession of Commodus to the Death of Justinian. By A. H. J. GREENIDGE, M.A., Lecturer and late Fellow of Hertford College, Lecturer in Ancient History at Brasenose College, Oxford.

PART II.—From A.D. 565 to the Capture of Constantinople by the Turks. By J. G. C. ANDERSON, M.A., late Fellow of Lincoln College, Student and Tutor of Christ Church, Oxford. With Maps and Illustrations.

**HERODOTUS.** The Text of Canon Rawlinson's Translation. With the Notes abridged for the use of Students. By A. J. GRANT, M.A., of King's College, Cambridge; Professor of History, Yorkshire College, Leeds; Author of "Greece in the Age of Pericles." With Map and Plans. 2 vols. Crown 8vo, 12s.

"The delightful pages of the old Greek whose flavour has been so admirably presented by Canon Rawlinson will thus be made accessible to a far wider circle than heretofore. There is no better introduction to Greek history and literature than Herodotus, and the English reader gets him here under the best possible conditions."—*Literary World*.

**THE STORY OF THE PERSIAN WARS AS TOLD BY HERODOTUS.** In English. Selected, arranged, and edited so as to form a History Reading Book for Schools. By the Rev. C. C. TANCOCK, Head Master of Tonbridge School. With Illustrations, Map, and Plans. Crown 8vo, 2s. 6d.

### FRANCE.

**STUDENT'S HISTORY OF FRANCE.** From the Earliest Times to the Fall of the Second Empire. By W. H. JERVIS, M.A. A new Edition, thoroughly Revised, and in great part Re-written, by ARTHUR HASSALL, M.A., Censor of Christ Church, Oxford. With a Chapter on Ancient Gaul, by F. HAYFIELD, M.A., Student of Christ Church, Oxford. Coloured Maps and many new Woodcuts. Crown 8vo, 7s. 6d.

## MURRAY'S STUDENT'S MANUALS—continued.

### EUROPE.

**STUDENT'S HISTORY OF MODERN EUROPE.** From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, Thoroughly Revised. Crown 8vo, 7s. 6d.

**STUDENT'S HISTORY OF EUROPE DURING THE MIDDLE AGES.** By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

**EUROPE IN THE MIDDLE AGES.** By OLIVER J. THATCHER, Ph.D. and FERDINAND SCHWILL, Ph.D. Large crown 8vo, 9s.

**A GENERAL HISTORY OF EUROPE, 850-1900.** By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps and Genealogical Tables. Crown 8vo, 9s.

"A model of condensation, omitting no essential facts. . . . The volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

### GEOLOGY.

**STUDENT'S ELEMENTS OF GEOLOGY.** By Sir CHARLES LYELL, Thoroughly Revised by Prof. J. W. JUDDE. Crown 8vo. With 600 Woodcuts. 9s.

### LAW AND PHILOSOPHY.

**STUDENT'S EDITION OF AUSTIN'S JURISPRUDENCE** Compiled from the larger Work. By ROBERT CAMPBELL. Crown 8vo, 12s.

**AN ANALYSIS OF AUSTIN'S JURISPRUDENCE.** By GORDON CAMPBELL. Crown 8vo, 6s.

## TWO NEW VOLUMES IN MR. MURRAY'S HOME AND SCHOOL LIBRARY.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

**A SHORT HISTORY OF COINS AND CURRENCY.** By Lord AVEBURY, F.R.S., &c. With many Illustrations. Fcap. 8vo, 2s.

**THE FACE OF NATURE.** Popular Readings in Elementary Science. By the Rev. C. T. OVEYDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Fcap. 8vo, 2s.

*A List of the Volumes in this Series will be sent post free on application.*

## WORKS BY PROF. T. D. HALL.

## CURRENT EVENTS.

THE next evening meeting of the members of Fixtures. the College of Preceptors will take place on April 23, when Mr. J. L. Paton, M.A., Head Master of University College School, will read a paper on "The Feelings as a Factor in School Education."

DR. SULLY'S course of lectures on "Intellectual Education" will be resumed on April 24.

THE Board of Education announces that the Day Science and Art Examinations fixed to be held during the week ending June 28 will be held during the week ending July 5 instead.

It is proposed to hold a Conference at Warwick Castle on May 1 to discuss matters relating to agriculture and rural industries, and enable "those who need teachers or trained workers to meet those who are fully trained and capable of teaching others." Lady Warwick, Warwick Castle, or the Warden, Lady Warwick Hostel, Reading, will furnish particulars.

THE Gresham Lectures will be read to the public gratuitously on the following days, at 6 p.m., in the Theatre of Gresham College, Basinghall Street:—Physic (Dr. H. Symes Thompson), April 8, 9, 10, 11; Law (Mr. G. H. Blakesley), April 15, 16, 17, and 18; Divinity (Rev. H. E. J. Bevan), April 29 and 30, May 1 and 2; Astronomy (Rev. E. Ledger), May 5, 6, 7, and 9; Geometry (Mr. W. H. Wagstaff), May 13, 14, 15, and 16; Rhetoric (Mr. J. E. Nixon), May 20, 21, 22, and 23. The Music lectures, by Sir Frederick Bridge, will be delivered on April 22, 23, 24, and 25—the first at Gresham College and the other three at the City of London School.

THE following are the lecture arrangements at the Royal Institution after Easter:—Dr. Allan Macfadyen, three lectures on "Recent Methods and Results in Biological Inquiry"; Prof. F. York Powell, three on "English Kings and Kingship"; Prof. Karl Pearson, three on "The Laws of Heredity, with special reference to Man" (the Tyndall Lectures); Prof. Dewar, three on "The Oxygen Group of Elements"; Dr. A. Smith Woodward, three on "Recent Geological Discoveries"; Mr. M. H. Spielman, three on "Contemporary British Sculpture"; Mr. W. H. Cummings, three on "British National Song" (with musical illustrations); Prof. Walter Raleigh, three on "Poets and Poetry"; and Prof. Brander Matthews, three on "The Development of the English Drama": (1) "The Art of the Dramatist," (2) "The Drama of the Middle Ages," (3) "The Drama under Elizabeth." The Friday evening meetings will commence on April 11, when Prof. Dewar will deliver a discourse on "Problems of the Atmosphere." Succeeding Friday evening discourses will be delivered by Sir John H. A. Macdonald, Dr. J. Mackenzie Davidson, Sir Robert Ball, Sir Benjamin Baker, Prof. A. E. Tutton, and other gentlemen.

A UNIVERSITY Extension Summer Meeting will be held at Cambridge from August 1 to August 26. The general sub-

ject of the lectures will be "Some Aspects of Life and Thought in Europe and America in the Nineteenth Century." The Vice-Chancellor (Dr. A. W. Ward) will, if his health permits, deliver the inaugural address, which will form a general introduction to the History Section. The lectures will group themselves under the following heads:—(1) history; (2) art, literature, and music; (3) physical and natural science; (4) economics; (5) education. There will also be lectures on theological subjects.

THE special feature of the Cambridge meeting will be the Historical Section. Foreign professors of history will lecture on certain aspects of the political history of their own countries in the nineteenth century, and will present biographical studies of some of the great foreign statesmen of the period. Other lectures in history and economics will offer help towards the solution of present-day problems. Among the lecturers will be the Master of Trinity, Sir Mountstuart Grant Duff, the Hon. Canon Lyttelton, the Dean of Ely, Profs. Westlake and Vinogradoff, Messrs. A. Gilbert, R.A., Alfred East, A.R.A., G. W. E. Russell, W. N. Shaw, F.R.S., Arthur Sidgwick, Sidney Lee, and Bolton King. Prof. Sir Richard Jebb has undertaken to preside at an Educational Conference. Full information may be obtained from Mr. R. D. Roberts, M.A., Syndicate Buildings, Cambridge.

HONORARY degrees have been falling in showers up and down the country. The Victoria University, under the exaltation of feeling induced by the Owens College Jubilee, has been especially generous. The following are the new additions to the Doctorate division of its roll of fame:—

LL.D.:—Sir William R. Anson, Bart., M.P., Warden of All Souls', Oxford; Sir John T. Hibbert, K.C.B., Chairman of the Lancashire Council; the Right Hon. James Hoy, Lord Mayor of Manchester; Mr. Justice Kennedy (formerly Lecturer in Law at Owens College); the Rev. Dr. E. C. Maclure, Dean of Manchester; Mr. Alfred Neild, of Manchester; Principal T. F. Roberts, Vice-Chancellor of the University of Wales; Sir Albert K. Rollit, M.P.; Lord Strathcona and Mount Royal; Mr. R. T. Wright, Secretary of the Pitt Press, Cambridge.

LITT.D.:—Prof. A. Angellier, Lille University; Prof. A. C. Bradley, LL.D., Oxford University; Prof. H. Breymann, Munich University; Prof. A. Espinas, University of Paris; Prof. W. P. Ker, LL.D., University College, London; the Rev. Dr. McLaren, of Manchester; the Right Rev. Dr. Moorhouse, Bishop of Manchester; Dr. W. W. Merry, Rector of Lincoln College, Oxford, and Public Orator of the University; Prof. A. S. Napier, Ph.D., Oxford University; Mrs. John Rylands; Mr. J. L. Wylie, author of "The Reign of Henry IV."

D.Sc.:—Sir Thomas Barlow, Bart., Physician to the King; Sir John S. Burdon-Sanderson, Bart., Regius Professor of Medicine, Oxford; Sir William S. Church, Bart., President of the Royal College of Physicians; Mr. H. G. Howse, President of the Royal College of Surgeons; Prof. A. R. Simpson, Edinburgh University; Prof. H. Becquerel, University of Paris; Prof. R. Chodat, of Geneva; Principal G. Carey Foster, LL.D., of University College, London; Dr. J. W. L. Glaisher, President of the Royal Astronomical Society; Principal E. H. Griffiths, of University College, Cardiff; Principal W. M. Hicks, of University College, Sheffield; Dr. E. W. Hobson, President of the London Mathematical Society; Prof. G. B. Howes, President of the Zoological Society; Prof. W. Jack, LL.D., Glasgow University; Principal O. J. Lodge, Birmingham University; Prof. Nernst, Göttingen University; Prof. J. H. Poynting, Birmingham University; Prof. W. A. Tilden, Royal College of Science, London; Prof. Voigt, Göttingen University; Prof. H. Marshall Ward, Cambridge University.

Mus.D.:—Mr. Adolph Brodsky and Dr. Hans Richter.

THE honorary M.A. was conferred on Miss Annie Adamson, Manchester High School for Girls; and M.Sc. on Mr. Francis Jones, Manchester Grammar School; Mr. J. H. Reynolds, Principal of the Municipal School of Technology, Manchester; and Mr. James Scotson, Central Higher Grade School, Manchester.

THE Senatus of the University of Edinburgh have resolved to confer the honorary degree of LL.D. on Mr.

H. H. Asquith, K.C., M.P.; Miss Dorothea Beale, Principal of Cheltenham Ladies' College; Prof. John Cleland, M.D., Glasgow; Prof. Samuel Dill, Queen's College, Belfast; Mr. Austin Dobson; Prof. James Alfred Ewing, Cambridge; Principal Rücker, London University; Mr. J. G. Schurman, President of Cornell University; and Sir John Batty Tuke, M.P., Edinburgh.

THE Senatus of the University of Aberdeen have included two deserving Southrons in their honorary degree list. They are to confer D.D. on the Rev. Henry Bennett, M.A., of Hackney College; and LL.D. on Prof. Joseph Wright, M.A., Ph.D., of Oxford University.

GLASGOW, exhausted by the great effort of last year, promises an undistinguished list, mainly local. Prof. Paul Brouardel, of the University of Paris, and Prof. Wallace M. Lindsay, M.A., of St. Andrews, are the most notable of the LL.D.'s.

THE University of Wales proposes to confer honorary degrees on the occasion of the installation of the Prince of Wales as Chancellor. The Prince will be adorned with yet another LL.D., and the Princess will be created a Doctor of Music. There is not a Chancellor of a University in the United Kingdom that need go without LL.D. if he but choose to attend and add brilliancy to the assemblage. D.Sc. is destined to Lord Kelvin, Lord Lister, and Mr. Alfred Russel Wallace, LL.D.; and D.Litt. to Mr. George Meredith, Principal Rhys, Sir R. C. Jebb, M.P., LL.D., Dr. Edward Caird, and Dr. J. A. H. Murray, the lexicographer.

VACANCIES and APPOINTMENTS. IN accordance with the Order in Council for the Registration of Teachers, the following representatives of the teachers' associations have been appointed members of the Teachers' Registration Council:—Mr. A. T. Pollard, by the Head Masters' Conference; Dr. R. P. Scott, by the Incorporated Association of Head Masters; Mrs. Woodhouse, by the Head Mistresses' Association; Mr. E. E. Pinches, by the College of Preceptors; Mr. Francis Storr, by the Teachers' Guild; Mr. G. Sharples, by the National Union of Teachers.

MR. LESLIE STEPHEN, M.A., D.Litt., Honorary Fellow of Trinity Hall, has been appointed Ford Lecturer in English History at Cambridge for the ensuing academical year.

MR. R. A. S. REDMAYNE, F.G.S., Member of the Institute of Mining Engineers, has been appointed to the new Professorship of Mining in the University of Birmingham. Prof. Redmayne studied in the Durham College of Science at Newcastle-on-Tyne, gained mining experience at Sir Lindsay Wood's Hetton Collieries, Durham, and went out to South Africa for two years to report on colliery matters for the Natal Government and on gold mines in Natal and the Transvaal. Since 1893 he has been resident manager of the Seaton Delaval Collieries (Northumberland). He is joint author (with Mr. Bulman) of a standard treatise on "Colliery Working and Management."

MR. THOMAS TURNER, B.Sc. (Birm.), F.I.C., A.R.S.M., has been appointed to the new Professorship of Metallurgy in the University of Birmingham. Prof. Turner was a Demonstrator of Chemistry and Lecturer in Metallurgy, under Dr. Tilden, at Mason College, from 1883 to 1894, and since 1894 has been Director of Technical Instruction to the Staffordshire County Council. He is the author of "The Metallurgy of Iron," the discoverer of the influence of silicon and other elements on the qualities of iron and steel, the inventor of a process for extracting the acids out

of waste galvanizing pickle, and the writer of a very large number of original papers, as well as an experienced organizer and teacher.

\* \* \*

MISS EDITH AITKEN, late scholar of Girton College, Cambridge, has been appointed Head Mistress of the High School for Girls shortly to be opened in Pretoria. She took a First Class in both parts of the Natural Science Tripos, and has for some years directed the science teaching of the North London Collegiate School for Girls.

\* \* \*

MR. ISRAEL ABRAHAMS, M.A., has been appointed Reader in Talmudic and Rabbinic Literature at Cambridge. He succeeds Dr. S. Schechter, who has accepted the post of Director of the Jewish Religious Seminary in New York. Mr. Abrahams has long been Senior Tutor of the Hebrew Seminary in London, and is joint-editor of the *Jewish Quarterly Review*, and author of "Jewish Life in the Middle Ages," and other works.

\* \* \*

MR. W. M. THOMPSON, of the Grammar School, Hampton-on-Thames, has been appointed Head Master of King Edward VI. School, Saffron Walden.

\* \* \*

REV. E. J. B. HOUGHTON, M.A., Head Master of King Edward's School, Stratford-on-Avon, has been appointed Head Master of St. Edmund's School, Canterbury.

\* \* \*

REV. J. E. KENT, B.A., assistant master at Lincoln Grammar School, has been appointed Head Master of the Boys' School, Bolton Church Institute.

\* \* \*

REV. W. A. RENWICK, B.A., second master at Grantham School, has been appointed Head Master of S. Michael's College, Tenbury.

—•••—

Literary Items. MR. YOXALL'S novel, entitled "The Girl from St. Agneta's," has just been published by Messrs. Ralph, Holland, & Co. It is a story of life in a training college, in a London Board school, and a village school. It is a "novel with a purpose," inasmuch as it illustrates the need for protecting teachers against arbitrary dismissal.

\* \* \*

WE are glad to learn that arrangements have been made to accelerate the production of the remaining portion of the great "Oxford English Dictionary." The whole work will consist of ten volumes (the last to contain certain addenda). The sixth volume is now in course of publication, the instalment of L, M, N being due to-day (April 1). Title-pages have been prepared for those that wish to have the Dictionary bound in half volumes, and in future the work may be obtained in this form.

\* \* \*

AN important new "History of England," primarily political, which aims at giving the results of the latest research in readable form, is to be published by Messrs. Longmans. The Rev. William Hunt and Mr. R. Poole will be responsible for securing unity of treatment between the following sections and authors: Vol. I., to 1066, by Mr. Hodgkin; Vol. II., to 1216, by Prof. G. B. Adams; Vol. III., to 1377, by Prof. Tout; Vol. IV., to 1485, by Prof. Oman; Vol. V., to 1547, by Mr. H. A. L. Fisher; Vol. VI., to 1603, by Mr. A. L. Smith; Vol. VII., to 1660, by Prof. F. C. Montague; Vol. VIII., to 1702, by Prof. Richard Lodge; Vol. IX., to 1760, by Mr. I. S. Leadam; Vol. X., to 1801, by the Rev. William Hunt; Vol. XI., to 1837, by the Warden of Merton; and Vol. XII., to 1901, by Mr. G. W. Prothero.

THE National Union of Teachers is holding its General. Thirty-third Annual Conference this Easter at Bristol. Mr. Allen Croft is the new President.

\* \* \*

THE Managing Committee of the National Physical Laboratory at Teddington, just opened (March 17), state that "it will be very difficult for them to maintain and administer it for the amount annually allowed by the Treasury." The initial cost has been about £19,000; the annual grant is £4,000. Congress allowed £60,000 for the establishment of the United States National Laboratory, and £9,000 annual grant. The Physikalisch-Technische Reichsanstalt cost £201,625, and the annual expenditure is over £16,000.

\* \* \*

THE Midland Education League considers that no proposals for "the co-ordination and improvement of education" will be satisfactory unless three things be provided: (1) local control by an Education Authority composed of directly elected representatives of the people; (2) the inclusion of both primary and secondary education under one and the same Local Authority; and (3) adequate powers of the Local Authority over all such schools within its area as are supported by public money.

\* \* \*

SOME benighted "correspondent" of the *Medical Press* bewails the University of Dublin. Why? "Weary of being the constant and faithful mother of learning in Ireland, she desires to conquer fresh fields, and to become the step-mother of blue-stockings." It would take a keen eye to detect her "weariness"; and why "step"-mother? We resist the obvious pun; but why should an *alma mater* not have girls as well as boys?

\* \* \*

THE Bangor City Council, by an overwhelming majority, has resolved to acquire a site for the North Wales University College. The gift will cost the town some £15,000. But the money will be profitably laid out; it will keep the college at Bangor.

\* \* \*

THE reports of the gentlemen deputed to inspect the University Colleges last year on behalf of the Government have been received by the Chancellor of the Exchequer, who is to refer them to a Committee, as was done in 1897, and, it so happens, to the same Committee. The members, however, will not meet till May; but this, says Sir Michael Hicks-Beach, "will cause no delay in the actual distribution of the grants."

\* \* \*

SOME friends of the late Mr. Walter Wren, M.A., have offered to Christ's College, Cambridge, of which Mr. Wren was a scholar, a handsome sum of money to associate his name with his old college and with the examination for the India and Home Civil Services. The offer has been accepted by the Master and Fellows. The interest will be given annually to such member of the college as, having resided in it at least two years, shall be placed highest in the list of successful candidates in the examination aforesaid.

\* \* \*

THERE seems to be a special talent for languages (says the *Tatler*) in the family of the Earl of Onslow—"Lord Festina Lente," as the wags call him in recognition of the punning motto of the house. A couple of years ago his eldest daughter, Lady Gwendolen, was first in foreign languages out of seven thousand who competed at the examination of the College of Preceptors; and now her younger sister, Lady Dorothy, has won a similar distinction out of five thousand candidates at the recent examination.

### THE TEACHING OF ELEMENTARY MATHEMATICS : IMPENDING REFORMS.

On Wednesday evening, March 19, Mr. H. W. EVE took the Chair at the monthly evening meeting of members of the College of Preceptors, when Dr. J. J. FINDLAY, M.A., read the following paper :—

1. My purpose is an eminently practical one. I intend to give an account of the ground which I have myself traversed in studying the views of Prof. Perry and his friends,\* telling you exactly where I have got to, and suggesting lines on which I and other school teachers may continue our investigations.

First of all, a note as to the origin of the present agitation. It commenced with articles by Prof. Perry in *Nature* about two years ago, and it is my impression that the editors of that journal (closely associated with an enterprising magazine called the *School World*, issued from the same publishing house) recognized that the time was ripe for stirring up both the scientific world and the teaching world on this subject.

The time was found to be ripe, let me say, for an *agitation*—not to promulgate new truths, but to insist upon old ones. Let this be the first matter on which we may agree. The Committee of the British Association will make a great mistake if it spends much time on the substance of these proposals as if there were something novel about them. They have long been familiar, in their main outlines, to the many teachers, “thoughtful teachers,” who think for themselves. Prof. Perry himself tells us that he has been prophesying in vain since 1880, and the columns of the *Educational Times* and the *Journal of Education* contain repeated sketches of reform, worked out in great detail, on the very lines now put forward. Possibly there is some novelty in the proposals to employ the calculus at an early age; but this is not important at present, for it is clear that such employment can only be allowed to pupils who have been rightly trained in more elementary mathematics.

At the present moment, then, we stand just here: An agitation, most ably led by Prof. Perry, has succeeded in the preliminary work of rousing public attention and in procuring the appointment of an influential Committee. In fact, the teaching of reformed mathematics now stands exactly where the teaching of reformed science stood after the British Association meeting of 1889.

But there the parallel ends; for chemistry and physics was then a new subject in our schools. There was no organized experience in the teaching profession to criticize the proposals of professors of science; but there was a strong public opinion urging the importance of these studies, and this was backed up by generous financial grants from South Kensington and from County Authorities as a result of the Technical Instruction Act passed just at that time. The result was that a signal success was gained, and, in spite of extremist views, an undoubted benefit has been conferred on pupils in secondary schools.

Having achieved one victory, it may appear easy for the British Association to march forward to a second. The teachers of science demand that mathematics shall be reformed, because they find that they cannot proceed further in the improvement of science (*i.e.*, of physics) unless mathematics is treated on sounder lines; and they look to the British Association for help. But the situation here will be found to be very different from that of science in the nineties; it will correspond much more to the situation presented by modern language teaching, which has been subject to a slow—terribly slow—process of reform for many years—a reform which meets with all kinds of difficulties at every step. I do not wish to dwell in a pessimistic spirit upon difficulties: I take it we are in sympathy with reform, or we should not come here to discuss reform. So far as these difficulties spring from the inertia, from the reactionary spirit, found in all Universities and schools, we shall have to meet them with patience and courage. But one special difficulty needs to be borne in mind, for it was nothing like so prominent in the case of chemistry and physics—it lies in the fact that mathematics begins with the beginnings of school life—reform must start with the infant school and the kindergarten, or it will never have a sound basis. Prof. Perry's suggestions start with decimals; but what of all the years spent on mathematics before decimals are begun?

And closely associated with this difficulty is the fact that,

whereas in the case of science the teachers (for good or evil) are mainly specialists, devoting their attention almost exclusively to these two branches, the teachers of mathematics (in its really elementary stages) are by no means exclusively concerned with mathematics.

To sum up: the principles, as well as many of the details, of this reform are not novel; they are already accepted by multitudes of well-wishers. But the carrying out of these principles will involve labour far beyond what is contemplated by many who are now agitating for reform.

2. How then is this reform to be undertaken? In the analogous case of science, the British Association produced a syllabus, and there its labours ended. Now we can conceive of this plan being imitated in the case of arithmetic and algebra, although I have my doubts when I notice how very remote most of the members of the Committee are from actual contact with young pupils. But will they venture to do the same in respect of geometry? And it is geometry that suffers most from the attacks of reformers.

But, if they succeed in producing a syllabus, and in recommending this to the notice of examining bodies, what will be the result? The examining bodies will reply, most justly, that they are bound to examine candidates on what the candidates have studied, not on what the British Association thinks they should have studied. And no amount of lecturing and talking will enable the thousands of teachers on the staffs of schools to combine in the adoption of new methods; until they do, the examining bodies will not alter *their* plans.

Let us emphasize the importance of this “combination” as a leading factor of the situation. Prof. Perry is accustomed to draft his own syllabus and to act independently of colleagues. He is very fortunate, and it is delightful to find him introducing into his published scheme (*vide* “Board of Education Directory,” page 33) a paragraph declaring that each teacher should plan his own course, and be his own examiner. (The Board of Education may permit such language to be printed in its “Directory,” but many years will pass before it will enforce that doctrine upon those who control the teaching of mathematics.) But in most schools, where a number of teachers are associated in the teaching of mathematics, these must all agree upon a common plan of action; and for this purpose they must all study the situation in order to realize the principles at issue. If one solitary teacher on a staff tries to “reform” his teaching in antagonism to his colleagues, the result will be confusion and disaster.

Hence, surely, it follows that the immediate problem is to devise means whereby the great mass of teachers may be made acquainted with these principles and may witness successful achievement in teaching conducted on reformed methods. It is true that the agitation has done a little in this direction, but surely it has done but little. We are, indeed, assured by Prof. Perry that his pupils have profited by his methods, and we are inclined to believe him. But we teachers, as a body of professional men, cannot take these matters on trust; we must witness the elaborate working out of these principles in classes similar to those which we teach day by day. And we must study the whole subject more thoroughly. I do not think Prof. Perry and his friends quite realize how fragmentary and disjointed their own suggestions are, and what a great gulf separates their work with adults and artisans from that conducted by teachers of boys and girls in school classes.

Experience here may help us to a remedy. Reforms both in modern languages and in science teaching have been greatly aided by teachers' holiday courses, in which experiences can be interchanged and reports presented on work done by practical teachers. Further, a great opportunity is presented by the development of training colleges; the Order of the Privy Council establishing a Register will bring the great body of future teachers under the influence of educational principles; and those who care for reform in mathematics ought to see to it that this subject is brought home to the intelligence of every student teacher.

One more hint as to the lines on which reform can be approached. The British Association Committee are to deal with *elementary* mathematics; but this term covers an immense field of study, commencing at the age of four. Now, is this Committee going to deal chiefly with older pupils in secondary schools and discuss the calculus and logarithms, or is it going to begin at the beginning? The latter is the more scientific, as well as the more practical, plan. For, in the later stages, you are at once met by the difficulty of external examinations; whereas in the years between four and fourteen that stumbling-block may

\* Reference is made throughout to *British Association Meeting at Glasgow: Discussion on Mathematics*, edited by John Perry (Macmillan, 1901).

be left out of account. Here is the real field for experiment and reform. Work from the bottom upwards, and difficulties, both from examinations and otherwise, will disappear as you proceed. (I speak here from personal experience in dealing both with the mathematics and the modern languages of a large school.)

As far as examinations are concerned, I have one suggestion, founded also on happy experience. It is useless, it is unjust, for this or any other Committee to try and induce examining bodies to draft new styles of syllabus or examination-paper before the schools are ripe for change; but they can, and should, encourage "freedom and variety." There are only two examining bodies in Great Britain, to the best of my knowledge, which permit this freedom\*—the Oxford and Cambridge Joint Board and the Central Welsh Board. These permit a school to send up its own syllabus and to have a paper of questions set thereon, instead of being obliged to take the general papers set to other schools. This plan is a little more costly, but the cost can be met in a variety of ways, and, in my opinion, it offers the one road by which, in the higher forms of schools, these doctrines can get fair play. One school, to my knowledge, has, under this system, abolished Euclid entirely, and presents its pupils year by year for Junior and Senior Certificates on a syllabus of plane geometry devised by the staff.

One final hint before I conclude this part of my subject. The examiner is one of the masters to whom we pay respect, but the inspector is another; and the inspector can do much to help this reform. He has no right to dictate to schools, or to force his views upon professional men; but he may ask questions. And it would be a most timely act for inspectors during the next few years to interrogate the schools as to what the views of teachers are as to these reforms, and to what extent it has been found practicable to modify the syllabus of the school. An inquiry of this kind undertaken by the Central Welsh Board has had a most beneficial effect upon modern language teaching, simply by showing the schools that the authorities are in sympathy with progress, and are willing to recognize honest effort towards reform.

3. And now, ladies and gentlemen, you will be wondering whether I am coming at all to the actual subject under discussion, or, indeed, whether I know anything about it. I must confess that I am not a mathematician by profession, and that I have forgotten much that I learned since I was a mathematical scholar at the University, but I trust that I have retained enough to be able to speak with some confidence as to the conditions under which mathematics can be apprehended by pupils at school. And as I have been teaching mathematics off and on for nearly twenty years, and have studied the theory of the business with some industry, I feel no shame in handling this topic in the presence of those whose mathematical knowledge reaches far beyond that to which I or any ordinary teacher can pretend. Furthermore, I am at the present moment teaching little boys, on experimental lines, to try and see how far these reforms can be put into practice, and before I conclude I propose to describe that work so far as it has gone. But, first, I desire to make some observations of a more general nature. I wish to point out how all that is valuable in these proposals for reform depends upon *certain general principles of teaching*. This, I submit, is a scientific way of approaching the matter. We are not concerned with some new patent process, to be labelled the Perry Method. Heaven forbid! I am sure that Prof. Perry himself would be the last to desire that. We have surely had enough in our calling of specific methods labelled with the names of their inventors. There is the Herbartian Method, the Gouin Method, and even in science some teachers (in spite, I trust, of Professor Armstrong) advertise themselves as exponents of "the Armstrong Method," which other teachers, in their ignorance, confound with a novel device in corporal punishment! No, the only firm foundation for these reforms are general principles relating to the way in which mathematics reach the pupil's mind. A few moments will suffice to indicate them.

(a) Mathematical knowledge, like all other knowledge, has its foundation in the senses; abstract thought must be based on concrete experience, and in the immature mind must constantly revert to concrete experience as an aid to abstraction.

(b) The aim of mathematics teaching is not regarded by these reformers as satisfied by "discipline," or training of so-called

\* They permit it because they can afford to do so. I have no reason to believe that other examining bodies are less inclined to aid the cause of freedom.

faculties, but is directly intended to the use of mathematics "as a part of the pupil's mental machinery" ("Directory," page 33, and introduction to "Castle's Practical Mathematics," Macmillan, 1901. Mr. Castle is a pupil of Prof. Perry).

(c) *Correlation*.—This whole movement is the outcome of the desire to rank mathematics in its place as the handmaid of science. Not, be it observed, as a tool for engineers, but in close correlation with the needs of the science syllabus right through the school. And, in another aspect, it emphasizes the necessity of bringing the various parts of elementary mathematics into correlation with each other.

(d) *Self-activity*.—By "using" squared paper, by measuring, by plotting curves, &c.

(e) *Intuition*.—Many mathematical truths can be apprehended and rationally employed long before they can be reduced to formal expression in a system of philosophic thought.

These are the characteristic general ideas underlying the reform, and the novelty of them, so far as they are novel, is in their rediscovery by the mathematicians and physicists for the special needs of mathematics. But, surely, this exhibits a terrible waste of energy! These principles have long been taught and applied by teachers. The first is simply our old friend *Anschauung* (sense-observation), and is due to Pestalozzi. The second, as to aim of mathematics teaching, brings up the attack on the faculty psychology which Herbart commenced in Germany and which James Ward, at Cambridge, has so ably seconded.

The third and fourth are the stock-in-trade at this moment of every lecturer on education, and have been preached, as well as practised, in every country where teaching is a matter of scientific meditation. And the only difficulty before us is to determine ways and means by which these saving principles can be applied to school mathematics.

And here I venture to reproach the mathematicians a little. What have you done, especially those of you who influence the Universities, on behalf of these principles and of those who have striven to teach them? You have done nothing at all! Nay, your activity has been mischievous. By your contempt for the theory of education and its exposition in training colleges, by your indifference, if not hostility, to that movement, you have led successive generations of schoolmasters, coming out of your Universities into our schools, to despise these principles and to sneer at the very name of theory when applied to the art of teaching. Many of those who are now crying out for reform are, or have been, tutors at Cambridge. The Chairman of this British Association Committee is himself a distinguished Cambridge mathematician. But what have you gentlemen done, as regards the training of teachers, to help, for example, the movement conducted by my friend Dr. Fletcher, during recent years, to instil these very principles into the minds of Cambridge men about to become schoolmasters?

And now, when the discovery is made that students of mathematics at our schools are ill trained, you are turning round upon our schools and upon the schoolmasters, and declaring that they have done their work badly, and that they must reform! The sufferings of the Israelites when they lacked straw wherewith to make their bricks were light, indeed, compared with those of the teacher who, after mislearning mathematics, and learning little besides, at his University, is maligned in later years by the very men who denied him the light. Teachers are, however, a long-suffering tribe, like Issachar, "the strong ass crouching between two burdens." If it were not so, I think we might find here the materials for a very pretty quarrel, were we so inclined. But there is no need to quarrel, since the victory is already won for the study of education. The Order in Privy Council establishing a Register will do more for the promotion of these fundamental principles than could be achieved by the private efforts of mathematicians in a century. And I should not have ventured to speak in this irreverent way of professors and tutors, if I were not sure that they themselves are prepared to welcome the new day which is dawning, not only for those who teach mathematics, but for all who seek to place the art of teaching on a scientific basis of theory.

4. Finally, so far as time will permit, I wish to offer an illustration as to how I think it possible for teachers in practice, like myself, to make a beginning of reform in our own schools. The start must obviously be made with the youngest Form; for these can be expected to grow up with the desired mathematical habits, and, even if they leave us soon, they will have learned something of value.

I will simply describe what I have commenced this term with a class, as I think it is not only most helpful, but most in accord with the scientific spirit, to record one's own experiments, precisely as the chemist or the medical man is accustomed to do when he presents a record of experiments to a company of his professional brethren. I am taking a class, since Christmas, in what is known as the First Year's Course under Clause LXXIII. of the "Directory"; hence their average age is twelve years or so. Such pupils might easily do similar work at an earlier age, and will do so when these reforms are an accomplished fact, but at present, since the ground has not been covered, it must now be begun at the beginning.

In the syllabus, it is described as Elementary Physical Measurements in the Science Section, and First Notions of Geometry in the Mathematics Section. *These two are interlaced into one course of study, associated also with Arithmetic and Drawing. The pupils do not know whether they are "doing" Science or Mathematics.*

The following are the principal topics, taken from my Notes of the Lessons:—

Section I. *The Line*.—Straight, curved, leading to apperception of regular curved lines, circle, ellipse, &c.

*Experiment*.—Ratio of circumference to diameter, done as physical measurement with proper apparatus—result, a formula. *Here algebra also may commence in symbolic expression.* Exercises in ratio and in substitution on this formula.

Section II. *Angles*.—Curvilinear angles are observed, but left on one side. The definition is dwelt upon; an angle is a difference between two directions. Parallel lines. Unit of measurement—the straight angle.

*Practical Experiment*.—Ratio of angle to arc, and making a protractor.

*The Right Angle*.—Use of compasses in various constructions of 90°, 60°, 45°, 30°, &c. (Commencement of a course of geometrical drawing, leading to geometrical designing, with use of compasses, T-square, set squares.)

*Arithmetic*.—Arising out of factors of 180, and further work in ratio.

Section III. *Areas*.—(1) Kinds of areas, classified according to their boundaries as regular and irregular, rectilinear and curvilinear figures. Triangles, quadrilaterals, polygons. Here is an appropriate place for the commencement of a course of conventional designing. (2) Comparison of shapes of areas, similar figures, photographs, plans, &c.

*Practical Experiment*.—To discover whether equiangular triangles are similar, leading to arithmetical work in proportion and equality of ratios.

*Properties of the Triangle*.—Ascertained by measurement. Application of law of similar triangles to simple exercises in surveying out of doors (*vide, e.g.*, Paul Bert's "Experimental Geometry"), leading again to arithmetical exercises.

Section IV. *Measurement of Area*.—Selection of a unit; the square; measurement of rectilinear areas (1) by use of squared paper, (2) by multiplication, (3) by weighing cardboard models; measurement of curvilinear areas, leading, for example, to  $\pi r^2$  and further use of algebraic symbols.

From this point squared paper will become a familiar tool.

The method by which this material is being handled may be described as the developing method, *i.e.*, the pupils have been allowed an abundance of concrete examples on the blackboard, and with paper and cardboard. From these they have made comparisons, and arrived at concepts. The teacher then supplies the technical terms, and the results are expressed in appropriate language, and written carefully in a note-book.

Now this is as far as I have reached during these few weeks, and I hesitate to prophesy what I intend to do hereafter, because I desire to emphasize the importance of working out in school practice the details of a syllabus before venturing to dogmatize as to what teachers can accomplish. Syllabuses drafted by committees and examining boards are not worth the paper they are printed upon, unless they are the direct outcome of detailed work. This, surely, is the only sound course of procedure; and scientific men, accustomed to patient research in the laboratory, ought surely to approve the same practical mode of solving problems in teaching. But it is remarkable to observe how eminent men of science, accustomed in their own branch of study to accept the restraints of the inductive principle, feel at liberty to dogmatize with the utmost freedom, and to lay down the law for others with the utmost assurance, when they come to discuss the processes of school teaching.

I may conclude by indicating what I shall aim to do next year

when this syllabus comes to be rewritten. (1) It will be possible to alter materially the subject-matter of arithmetic. Many examples relating to money may be banished from this first year's Course, and be taken up, if required, in later years. (2) In place thereof an abundance of exercises in ratio, proportion, and percentage can be introduced, employing exclusively the metric system (which has been already learned, in connexion with decimals, in a lower form) and treating of the measurements of area, as well as of simple experimental work in physics proper. (3) Algebra will commence in close connection with mensuration, and, although it must develop on its own lines, it will constantly find points of contact with geometry. (4) Thus the whole of the mathematics for this year can be handled as one "subject" instead of three, and the class will lay the foundation of that intimate relation between number and form which is one of the keystones of this "reform" movement. (5) Conventional designing and the use of instruments in elementary geometrical drawing can be taken up at the same time in the art lessons for this year.

Beyond that "First Year" I can only imagine what may be possible. Theoretical geometry will make headway; algebra may be advanced so far as to open an easy approach to logarithms, and abundant use of arithmetic may be found in an elementary syllabus of physics proper. Thereafter, the "Third Year" would make possible the mastery of much of what Prof. Perry has described in his syllabus of practical mathematics (elementary stage), including the beginnings of trigonometry; but I should be most unwilling to admit that the differential calculus could be introduced until I had myself witnessed such work with a school class.

5. I must apologize for the personal character of this address, but, if you accept my point of view, you will pardon that. I expressly desire to force those who deal with this subject to treat it in what I have ventured to call the scientific spirit, giving out the record of their own work, with all possible detail, and drawing a sharp line between that and the mere expression of criticism and advice. It was my hope to have had another two months of work at this subject before presenting it to you; but our Secretary desired me to come in March, so I have put together my materials as well as I was able. One further conclusion with reference to the time-table, and I have done. This work has convinced me of the difficulty of keeping separate the mathematics and the science work of little boys. The Board of Education requires you to draft a time-table showing a series of precise lesson periods allotted to mathematics and science as distinct subjects. If Prof. Perry's syllabus, which is printed by royal command in one part of the Directory, be carried out, the requirements as to time-table in another part must be modified. The science (so-called) and the mathematics in the work I have described become so closely linked that it is impossible to run them apart. The same teacher must handle both, and he must take his syllabus straight on, regardless as to whether the business of the moment is labelled Science or Mathematics in the time-table. I do not think this will prove a serious difficulty, for His Majesty's inspectors are, I gather, in thorough sympathy with the spirit of this reform; but I dwell upon it because it shows how absolutely necessary it is to maintain elasticity in all our relations with administrative authorities. We welcome their control so long as their vigilance is directed towards checking laxity or disloyalty; but there is a danger, especially now that the Board of Education is beginning to wield so potent an influence over secondary schools, lest they should stifle the very movements which they desire to promote. In the present instance I believe that regulations relating to time-tables, copied from the old methods of Whitehall, indicate a possible source of danger, which should be foreseen by those who have a voice in such matters.

Thus, to summarize what I have put before you, this reform movement embraces (i.) the study and application of a number of fundamental pedagogic principles which must become part of the mental equipment of the great body of teachers in schools before they can be applied to the desired reform in mathematics; (ii.) the only safe mode of testing these principles is to conduct detailed and prolonged experiments with classes of pupils; (iii.) the final hope of success is bound up with the attitude and action of those who control our work from the outside—the Universities, the various examining boards, and the officers of the Central Authority.

The Rev. J. O. BEVAN remarked that the lecturer's experiences were very interesting, and that it was only by such experiments that

teachers could prevent their methods from becoming stereotyped. The old notion that every single branch of knowledge must be treated as if it were independent of every other had long been given up, and there was no reason why reform in the teaching of mathematics should not be effected by a fuller recognition of the correlation of the several branches. Thus, algebra and arithmetic could be taught together, as arithmetic might be regarded as a particular case of algebra. The advantages of teaching algebra with Euclid and with trigonometry were obvious. In dealing, for example, with the second book of Euclid alternative algebraical proofs might be used, and the fourth book might be adequately illustrated by trigonometry. Teachers would also find it helpful to enlarge the number of axioms and definitions and to treat some of the propositions as riders. As further reforms he would advise the earlier use of logarithms, and even the use of the calculus in senior forms. The object aimed at by the British Association Committee did not seem to be the same as that with which teachers in schools were concerned; for, while the latter had regard chiefly to the development of the faculties of the mind, Prof. Perry's scheme appeared to be designed for the purpose of smoothing the path of those who had to deal with engineering problems.

Dr. FLETCHER said that the lecturer had rightly pointed out that the principles underlying the reforms under discussion were not new, and had long been recognized by educators. Valuable service to the cause of reform was rendered by experiments like those described by Dr. Findlay, and he hoped that educational journals in England would assist in developing new methods by publishing the experiences of practical teachers, as the German papers did. Much of the difficulty experienced by young children in the study of mathematics arose from the abstract nature of the subject-matter, and this would largely disappear if the subject were taught at the beginning in connexion with physical science. Pupils would find their work more interesting and profitable if they were encouraged to find out things for themselves, instead of being obliged to take for granted whatever the teacher told them. It was not desirable to lay too much stress on the utilitarian side of education; but, on the other hand, they could not afford to neglect this phase of the question; for, as Prof. Dewey, of America, had reminded them, a large portion of our life was directly concerned with utility, which must, therefore, receive due attention in schools. For this reason he thought it would not be advisable to leave money examples to the last year of school life, as, even under present conditions, children when they left school were often quite unable to deal satisfactorily with monetary calculations.

Mr. KETTLE said the question of the origin of new methods was of small importance, and that any influence which assisted improvement in teaching should be welcomed. Examining boards placed obstacles in the way of reform by their conservatism and their want of sympathy with new movements, and the teacher that desired to use better methods had to sacrifice his reputation for preparing candidates for examinations. This was especially the case in regard to geometry, which examiners required to be taught in accordance with Euclid's methods. He could not agree with the lecturer that it was advisable to exclude money sums in the earlier stages of arithmetic. The processes of arithmetic were more easily comprehended by children when taught by means of concrete examples, and money sums had the further advantage of possessing a direct bearing on the work of the pupils after they left school.

Mr. HAMILTON remarked that hitherto the interests of everybody had been adequately considered except those of the pupil. If teachers generally only knew the immense advantage of a course worked out from the pupil's standpoint, one based on experiment and having relation to what his development demanded, the work of reform would proceed much more rapidly, many of the difficulties in the subject would disappear, the work would become pleasurable, and the results in every way more satisfactory. In illustration of the method he had followed for some years he sketched a lesson given to boys of thirteen years. Each boy drew a large circle with chalk on his desk, and at the ends of a diameter two straws nine or ten inches long were fixed with drawing-pins, about which the straws were turned till they crossed at a point on the circumference. Their point of intersection was to be moved along the circumference of the circle, and each boy was to find out what he could about the angle formed, and was left as far as possible to his own resources. The boys clearly guessed that it was constant and a right angle, for set squares and folded pieces of paper were fitted into the angle and moved along between the two straws. It was now suggested to them that the apparatus was somewhat clumsy and not capable of fine work. In reply, circles were drawn on paper with compasses having fine-pointed pencils, and careful measurements made of angles drawn at various points on the circumference. The boys still maintained that the angle was always a right angle, and with younger boys this would have been accepted as quite satisfactory. These, however, were capable of more; so the reason for the fact was demanded, and, after a little time and much discussion among themselves, the geometrical proof was forthcoming. One boy next suggested that one of the straws should be fixed at another point of the circumference, and this experiment in turn led

on to the conception of a tangent as the limiting position of a secant, and also to the fact—quite obvious when arrived at in this way—that the angle between the tangent and a chord drawn from the point of contact was equal to the angle in the opposite segment. The pupils thus took an active part in the development of the various points, theoretical and practical work were dovetailed into one another, the method was scientific, the knowledge—unlike mere book-acquired knowledge—was real, and the pupils throughout were keenly interested, as they invariably are, with the living method of treating the subject.

Mr. KING considered that the scheme sketched out by Dr. Findlay was eminently suitable for boys leaving school at the age of fourteen. He, however, thought that a very skilful teacher would be needed to carry out the principles of co-ordination as sketched by the lecturer. He hoped Dr. Findlay would publish his results after a year's working, as his own experience on somewhat similar lines had not been satisfactory, the final results lacking accuracy and exhibiting a lack of power of consecutive reasoning in the pupils. He suggested that a modification of the unitary method would enable pupils to approach the difficulties underlying ratio and proportion. He expressed the opinion that the method advocated would be extremely misleading if persevered in after the elementary course had been passed.

The CHAIRMAN said that the object of teaching mathematics was twofold—to give a training in logical reasoning and to familiarize pupils with certain ideas which had a practical bearing on engineering problems and on every form of science. Under the existing system of teaching it was quite possible that undue attention was given to the first of these objects. At any rate a large number of pupils left school without the power to apply their knowledge to practical work, such as engineering, and without having carried their mathematical studies sufficiently far to understand the scientific bearing of them. Economy of time was secured by methods like those described by the lecturer. In teaching geometry it was useful to adhere generally to Euclid's order of reasoning, but hypothetical constructions might well be allowed in the early stages, the simple properties of circles might be taken before the second book, and there were many propositions which might with advantage be treated as riders, or left out altogether. In algebra there was a danger of spending too much time on elaborate factorization and combination of fractions, and losing sight of general principles. It was important to get to simple trigonometry as early as possible.

Dr. FINDLAY having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

MARCH, 1902.

THE Supplementary Examination by the College of Preceptors for Certificates recognized by the Board of Education, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, was held on the 4th, 5th, and 6th of March, in London, and at seven other local centres, viz., Birmingham, Bristol, Edinburgh, Glasgow, Inverness, Leeds, and Liverpool. The following candidates obtained Certificates:—

FIRST CLASS (OR SENIOR).

Pass Division.

Curle, R.	Gow, J. F.	Horner, H. W.
Thompson, Miss A. M.	Withers, Miss H. M.	

SECOND CLASS (OR JUNIOR).

Honours Division.

Beaton, Miss M. A.	Partridge, T. G.
Challenger, W. R. B.	Wright, S. J.

Pass Division.

Barker, M.	Hawks, F. S.	Miller, H. C.
Brown, A. J.	Jackson, A. C.	Minett, E. P.
Caton, Miss H. O.	Lawrence, E. I.	North, D.
Clarke, C.	Ledger, P. G.	O'Reilly, B. C. N.
Clibborn, A. S.	Lewin, I. B.	Price, C. E.
Coleman, G. C. H.	Little, W. E. S.	Reynolds, A. J. S.
Coppack, C. A.	Lloyd, H. O.	Singleton, H. R.
Eccles, H. N.	Lloyd, R. H.	Stansfield, G.
Edkins, R. F.	Lucas, G. B.	Startin, J.
Foulds, C. E.	Mackenzie, H.	Webber, B. E.
Harrison, Miss N. G.	Marks, F.	Winterbottom, B.

## REVIEWS.

## AN OWENS COLLEGE "FESTSCHRIFT."

*Historical Essays.* By Members of the Owens College, Manchester. Published in Commemoration of its Jubilee (1851-1901). Edited by T. F. Tout, M.A., and James Tait, M.A. (Longmans.)

The celebration of the Jubilee of Owens College has been among the most notable educational events of the month, and the present volume of essays will form one of the most influential and permanent memorials of the occasion. Both the birth and the majority of the college were celebrated by the publication of similar collections, which, however, had no such intrinsic unity as this, and were mainly chance (though choice) fragments clubbed together by the professorial staff. The present collection exhibits original work in the one department of history, more than three-fourths of it having been done by past students not upon the teaching staff, and the rest by "teachers not educated at the college, but who have devoted periods varying from twelve years to thirty to its service." The editors acknowledge that it is "more or less of an accident" that the historical students of the college should have undertaken the special commemoration of its jubilee in this form, and that "there are many other larger departments which might, even with fuller appropriateness, have taken a similar part in the celebration." That is frankly and justly said; but, none the less, this collection of twenty essays forms a marked testimony to the vitality of the historical department. It is instructive to observe the opinion of the editors that "so long as the college was compelled to prepare its students for the degrees of the University of London, in which history was at that time very imperfectly recognized, the progress of historical teaching at Owens was greatly impeded," and to note that they look forward with expanding hope to the time when "the growth of the colleges of the Victoria University will ere long result in a further development which will put an end to the limitations of freedom." The child has shown that he can walk alone, and naturally claims release from the leading-strings.

The twenty essays are new to print, and have been specially written for the book. The editors explain generally:—

The essays are all based upon a study of first-hand authorities, and in several cases unpublished materials have been utilized. Some may claim to throw new light upon old problems; others restate succinctly, and with reference to the latest results of research, matters which must be studied in a wide variety of sources not always very accessible.

In a word, each one of the essays advances the knowledge of its subject; and, though the collection is very miscellaneous, yet the spirit of insistent inquiry pervades the whole, and the results sum up to a very considerable total.

Four out of the twenty essays come from the pens of lady graduates, who fully hold their own in diligence of investigation and in vigour of thought, as well as in power of expression. Mrs. T. F. Tout, M.A., examines "The Legend of St. Ursula and the Eleven Thousand Virgins" with patient exhaustiveness. She distinguishes the various stages in the growth of the legend, traces the development of a sceptical attitude, and describes the reaction leading to the counter-reformation glorification of Ursula, the foundation of the Ursulines, the Jesuit spreading of her fame and translation of relics, and the growth in numbers, influence, and distinction of the Ursuline gilds. Especial interest attaches to the attraction of Ursula for artists, and to the prolonged educational work of the Ursuline nuns. Miss Speakman, B.A., explains the origin and true quality of "the Rule of St. Augustine," and traces its peculiar history. Miss M. M. Newett, B.A., sets forth an elaborate and most curious account of "The Sumptuary Laws of Venice in the Fourteenth and Fifteenth Centuries," drawn directly from the records of the "Provveditori sopra le Pompe" preserved in the State archives of the city. She "traces the development from the earliest known statute, that of 1299, to the downfall of the Republic," at the same time availing herself of the principal literature on the subject. The "Provveditori," as might have been anticipated, were not conspicuously successful: "for they waged war on the Mode, and the Mode is immortal"—"come se io non fossi immortale!" as Leopardi makes "Moda" exclaim. Mrs. Haworth's paper we shall consider presently.

For the rest we must limit ourselves to cursory notice of the more outstanding papers, though there is not one of them that is

not well worth permanent record. The most elaborate and important of all, it seems to us, is Prof. Tout's monograph on "Wales and the March during the Barons' Wars, 1258-67"—a subject that, for one reason or another, "has not yet been studied with any particularity." The paper "aims at showing, by a narrative of nearly ten years of struggle, how both the relations of the Welsh and English peoples and the alliances and hostilities of the Marcher nobles with each other and their Welsh neighbours reacted on English politics, and how in the end they largely strengthened the martial and feudal element in the English State, and permitted the establishment of that strong Welsh power which subsequently cost Edward I. so many efforts to dominate." Prof. Tout concludes:

It is not too much to say that the whole constitutional and political development of the English nation was profoundly and permanently affected by the part which Wales and the March played in the momentous years when the "greatest of the Plantagenets" was learning his lessons of statecraft.

The sympathetic and charming paper on "Elizabeth, Princess Palatine," by Dr. A. W. Ward, formerly Principal of Owens, displays a fine maturity of historical capacity and of literary execution. Mr. Fiddes, College Tutor and Secretary to the Council and the Senate, investigates with care and judgment "The Beginnings of Caesar Worship," finding that "the peculiar nature of the Roman Republican constitution" deferred its appearance to "a comparatively late date in Roman history," and that "there was nothing sudden or surprising in the worship of Emperors." An interesting episode of local history is "The Siege of Manchester in 1642," by Mr. Ernest Broxap, B.A.; and with this we may couple the able article on "The Borough of Preston and its Gild Merchant," by Mr. H. W. Clemesha, M.A. There are two papers on Napoleon. Mr. Spencer Wilkinson, B.A., reviews "The First Phase" of Napoleon's career, "which culminated in the capture of Toulon and ended with his transfer, in March, 1794, to the headquarters staff of the army of Italy"—a very illuminating inquiry. "Intense concentration on the problem of the hour, unrelaxed until the situation has been mastered and a definite solution worked out and determined upon, is the secret of Bonaparte's military success. It is also the key to the process by which he prepared for that success." And Mr. J. H. Rose re-examines "The Detention of Napoleon at St. Helena" by the light of materials in the British Record Office that, strangely enough, do not seem to have been drawn upon so fully as other European archives. He makes a strong defence of Sir Hudson Lowe, and incidentally has a word of criticism for Lord Rosebery:—

Sir Hudson Lowe was paid £12,000 a year to see that Napoleon did not escape; he took his duties seriously—who would not after Elba and Waterloo?—and was therefore unable to view the situation with the lambent humour and serene detachment that constitutes one of the many charms of Lord Rosebery's narrative. The standpoints of the Governor of St. Helena in 1816 and of a literary man in 1900 are, in truth, somewhat remote; and I submit that his lordship's criticism of our policy in St. Helena fails, firstly, because of this vital defect; secondly, because he has not studied the British archives where many of the reasons for our actions may be seen; and, thirdly, because of his exaggerated deference to French sources of information.

The other papers mainly testify to a most creditable historical interest and activity on the part of younger men.

The two final papers deal with education. Mrs. Alfred Haworth, M.A., expounds her ideas as to "Historical Training in Secondary Schools." The chief existing faults, she says, "are (1) the exclusive stress laid on English history, (2) the lack of time given to the subject, (3) the want of good text-books, and (4) the nature of the questions set at our public examinations." This reminds us of the defects of the Irishman's gun, which wanted new stock, new lock, and new barrel. Mrs. Haworth suggests a scheme of historical study in secondary schools from "ages 4, 5, and 6" up to "ages 17 and 18," which we leave to the criticism of the pedagogists, not without a sense of relief that effluence of time has placed us beyond the columns of her tabular analysis. Still, the article has its shrewd points. Finally, Mr. Thomas Bateson, M.A., gives his experience on "The Teaching of History under the English System of Elementary Education," mainly in regard to the results on pupil-teachers—"the part best illustrative of the system." Mr. Bateson's expectations seem to be less sanguine than Mrs. Haworth's. And as to present conditions, pupil-teacher instruction, "so far as history is concerned, very often starts from nothing; for in many primary schools history has been displaced by other subjects, and in particular

by an odd mixture known as elementary science." Both papers are suggestive, and may evoke further special criticism of their important subjects.

#### HUXLEY: A POPULAR MEMOIR.

*Thomas Henry Huxley.* By Edward Clodd. (Blackwood.)

By his admirable summary of the work of the late Prof. Huxley, Mr. Clodd, in this latest volume of the "Modern English Writers" series, has conferred a great benefit upon the reading public, and his estimate of Huxley's place among the great men of a great century will be endorsed by all save the hopelessly prejudiced.

Beginning with a chronology, the book deals with its subject under five aspects—as a man, a discoverer, an interpreter, a controversialist, and a constructor—followed by a note on the doctrine of the unknowable.

In the first section a general sketch is given of the busy life of Huxley, the materials being of necessity mainly drawn from the large biography recently published. The story of his upward progress by strenuous effort from the position of an assistant naval surgeon to the topmost pinnacle of fame is well and aptly told. Scarcely enough justice, however, is done to Huxley as an educationist. His advocacy of the scientific method and his championship of natural history as a subject of liberal education—a subject, too, that has opened out new horizons in almost all other departments of learning—have profoundly influenced our educational systems, from elementary school to University.

The second section says enough about Huxley's original work to convince the general reader that this master mind has greatly furthered our knowledge of many important branches of the animal kingdom, from jelly-fish up to man. Few men of science have possessed in the same degree the power of minute and laborious observation, combined with a rare gift for broad generalization. Huxley's work in his own subject would alone give him a very prominent place among great men, although, except to specialists, he is least known in his capacity of discoverer. But why does Mr. Clodd call the cæcum a "true stomach"?

In the third section we see Huxley in his well known rôle as an interpreter of Darwinism, the far-reaching influence of which at the present time owes very much to his convincing eloquence as a speaker, his unequalled lucidity and vigour as a writer of English prose, and his stimulating earnestness as a teacher. Nor must we forget Huxley's luminous presentment of the views of Descartes and Hume.

Section four deals with Huxley as a controversialist, and, though this is a characteristic side of his work, it is, in our opinion, of far less significance than his more important efforts in other directions, and perhaps scarcely justifies the large space assigned to it in a small book. Every one knows that for many years this many-sided man waged bitter war with the extreme and ultra-dogmatic clerical party, and was far in advance of most of his contemporaries in such matters. The chief authorities on the higher criticism now hold him in the main substantially right. "Truly, 'wisdom is justified of her children'; well-nigh all for which Huxley contended is conceded, and the rest will follow in due time."

In section five is presented a sketch of Huxley as a constructor of a practical system of ethics. As Mr. Clodd well remarks, "in theology he separated the accidental elements from the essential, leaving as *residuum* a religion that, co-ordinated with the needs and aspirations of human nature, would find its highest motive and its permanency in an ethic based on sympathy." The final note states, in his own words, Huxley's position as an agnostic.

We consider that Mr. Clodd has been very successful in his attempt to give, in a short space, a telling account of a many-sided genius, whose influence upon the world has been great, and who "remains alike an example and an inspiration to all men for all time."

#### GEOGRAPHY AND TRAVEL.

*Central and South America.* Vol. II. By A. H. Keane. (Stanford.)

The volume of Stanford's "Compendium of Geography and Travel" dealing with Central and South America appeared in 1878. It was a translation of von Hellwald's "Die Erde und ihre Völker," executed by Mr. Keane, and supplemented by him with an ethnological appendix. The editor was the late Mr. H. W. Bates, who added to it from his experience as a traveller

and a naturalist. Since 1878 much has been added to our knowledge, and it has become necessary to divide the book into two. The second volume, on Central America and the West Indies, is published first. It is practically a new work, and is thoroughly up to date. It includes details of history and archæology as well as the ordinary topics of a geological manual. Ethnology is a specially strong point with the author, and, though he necessarily leaves many problems unsolved, modern research has enabled him to fix the relation of the Aztecs to their more highly developed predecessors, from whom their civilization was borrowed. Fresh light, too, has been thrown on the geographical history of the "American Mediterranean," with its traces of an unbroken, or almost unbroken, isthmian bridge from Florida to Venezuela; and, on the other hand, of an archipelago occupying the area of what is now Central America. To pass to modern times, we have much interesting information both as to the natural resources and the political condition of the several countries dealt with; and it is interesting to compare this volume with the earlier work, and to note the progress made in the last quarter of a century, especially in Mexico. With regard to the future of the West Indian Islands the author naturally speaks with reserve, but is, on the whole, hopeful. In Jamaica, as to which he quotes Sir David Barbour's report of 1899, as well as the testimony of recent observers, he shows that there is distinctly a bright side to the picture. On the pressing question of the Isthmian Canal, Mr. Keane calls attention to observations indicating a steady fall in the level of Lake Nicaragua, which might be fatal to that solution of the problem. The illustrations are well chosen and almost entirely new. What we miss are small inset maps, such as appear in Mr. Mackinder's recent work. They would make it much easier to follow the letterpress. A good example of this defect is the elaborate account of the difficulties experienced in draining the City of Mexico, which is not very readily understood without some such aid.

#### THE INVESTIGATION OF GASES.

*Study of Gases.* By Morris W. Travers, D.Sc. (Macmillan.)

The object of this book is to give an account of the experimental methods used in investigations of the constitution and properties of gases, and the author is to be congratulated on having attained his object as well as can reasonably be expected for so wide a subject in a volume of three hundred and twenty pages. A large amount of useful information only to be previously found scattered through several books and papers is collected together, and placed before the reader in a clear and intelligible manner. This alone would make the volume valuable to the student of physics or chemistry.

The book is, however, much more than a compilation of the methods and results of others; it is a record of the author's own experience in carrying out difficult and interesting researches upon the properties of gases and gaseous mixtures and upon the determination of their chief constants. As such, it includes descriptions of apparatus and methods used, and of precautions to be taken in the manipulation of gases, most useful to any who may have to deal with this branch of experimental work.

To some extent the most important part of the book is where the author deals with the helium group of gases and with the study of the gases of the atmosphere by fractionation of liquefied gaseous mixtures. It is here that he is more particularly on the ground of his own personal experience, and the whole description of the liquefaction of gases and of their manipulation in the liquid state should be of especial value to such as may wish to work on similar lines. Several tables of constants of gases are given throughout the book, and there is evidence that considerable and critical care has been exercised in the tabulation. The author has added to the value of his work by frequently pointing out where knowledge on the subject is incomplete, and by suggesting the directions for further experiments. The wide scope of the book should render it of much use both to the student and to the advanced worker in this interesting and important branch of chemistry and physics. Of course, with so wide a scope, details cannot be complete in all parts of the subject, but in such cases the essentials are given. Perhaps in another edition the author may see his way to some modification of the chapters on gas analysis and spectrum analysis, which are not quite up to the standard of the rest of the book. The volume contains a decidedly thoughtful and able treatment of the subject in an eminently readable and interesting form. It is fully and carefully illustrated.

## GENERAL NOTICES.

## CLASSICS.

*Xenophon, Anabasis I.* Edited by G. M. Edwards. (Cambridge University Press.)

This edition has a vocabulary, a list of un-Attic words, a very satisfactory commentary, in which are included copious excerpts from other writers, and an introduction, chiefly historical. What Mr. Edwards means when he says that his text is conservative we do not understand. The only prudent course to adopt now in editing the earlier books of the "Anabasis" is surely to follow the first hand of "Paris. C." This Mr. Edwards does not do. But he does not appear to have made himself acquainted with the problem of the text. For instance, in chapter vii., Mr. Edwards prints *προθύμους* where "Paris. C." has *πρότερον θυόμενος*. And here it happens that the reading of "Paris. C." is almost demonstrably correct. For *προθύω* does not mean "sacrifice beforehand," as Mr. Edwards supposes, but "perform ceremonies preliminary to sacrifice," being a synonym of *προκατάρχουμαι*—and this sense does not suit the passage. The form *ἔγνων* in chapter iv. requires a comment, as it has given rise to controversy.

*Virgil's Æneid, Books I.-VI., Selections VII.-XII.* Edited by C. Knapp. (American Text-Book Agency.)

Dr. Knapp's introduction extends to a hundred pages; but the matter is so well chosen and so clearly arranged that the length may be excused. The notes, which are printed at the foot of the page in accordance with American custom, are short and simple. The editor avoids all discussion, and in matters of controversy merely gives the interpretation he prefers. Thus, he prints:

"Gnosius hæc Rhadamanthus habet durissima regna castigatque, auditque dolos subigitque fateri"

—we omit the quantities, which are not required in English textbooks—and he comments thus: "*Castigatque* belongs with what precedes. *Regna-castigat* strikingly describes the function of Rhadamanthus: he is jailer and executioner, not judge." But, of course, the question that at once arises in the mind of any one at all familiar with the text is: "*Can castigatque* belong with what precedes? Is it conceivable that the second *-que* joins *audit* to *habet castigatque*, so that there are only two and not three limbs here?" This question cannot be answered in the affirmative unless other passages are forthcoming in which *-que ... que* is used in the way Dr. Knapp supposes. That with consecutive words they should be so used seems most unlikely. English teachers, we think, like their pupils to know when there is clearly more than one way of taking a sentence. We do not think that the commentary shows much insight, or is equal in merit to the excellent introduction. There is a vocabulary, and some good reproductions of statuary.

*The Latin Period.* By E. A. Wells. (Blackie.)

The first part of this little book consists of sentences to illustrate the chief form of dependent sentences and the use of the infinitive and gerund. The rest of it is occupied with the usual ways of replacing one of the English co-ordinate sentences by a subordinate sentence or a participial clause. There is a short chapter on the connexion of sentences by particles, but the use of the relative for this purpose is only incidentally touched upon. The book may be used to supplement a fuller treatment of the subject, but is hardly sufficient in itself.

## MATHEMATICS.

*Cours de Mathématiques.* By Carlo Bourlet, Docteur ès Sciences. (Paris: C. Naud.)

Prof. Bourlet's work comprises the more original portions of the course of instruction given by him at the Ecole des Beaux Arts, and contains certain additional information, included for the sake of completeness. The subjects dealt with are the really elementary parts of the differential and integral calculus, and of analytical geometry of two and three dimensions. The course is specially adapted to meet the requirements of students of architecture and engineering. The various fundamental principles involved are discussed and explained with great clearness, and, although the book is written in French, both the words and the phraseology are so simple that any student possessing a fair knowledge of the language may readily follow the propositions from beginning to end with little or no aid from a dictionary, and with very great advantage to himself. For those requiring to obtain a knowledge of the subjects either wider or deeper than that necessary for the practical application of them, the treatise would necessarily be insufficient; yet students of this class, also, would derive great benefit from it. In the sections devoted to the differential calculus the practice of discussing together differentials and differential coefficients is one whose utility is questionable. The treatment of the elements of plane analytical geometry is excellent, and the portion of the book that deals with curve-tracing and its applications is equally good. Numerous examples are worked out in the course of the volume in order to illustrate the theory. The diagrams, while not constituting a special feature of the publication, are nevertheless very good and clear.

## MODERN LANGUAGES.

"Blackie's Little French Classics."—(1) *Madame de Sévigné, Select Letters.* Edited by Mabel F. Vernon Harcourt. (2) *Théophile Gautier, Le Pavillon sur l'Eau and Le Nid de Rossignols.* Edited by W. G. Hartog. (3) *Victor Hugo, Waterloo.* Edited by G. H. Clarke, M.A. (Blackie.)

These small brochures continue worthily an admirable series, furnishing easy classical reading in great variety. (1) Most of the letters here selected from Madame de Sévigné's correspondence are addressed to her daughter, Madame de Grignan. They "show us what a loving, eager-hearted woman she was, and how many-sided—sometimes grave, usually gay, always clever, witty, and kindly withal." (2) The two pieces from Gautier are excellent examples of his delicate fancy and his masterly style. But was it Gautier that punctuated the last two sentences of the first paragraph of "Le Pavillon sur l'Eau"? (3) Hugo's vivid account of the battle of Waterloo is taken from "Les Misérables," where it forms a not very relevant episode. The introductions and notes are adequate, and this taste of the extracts ought to lead to a desire for wider acquaintance with the writings of the distinguished author.

*French Poetry for Children.* Selected by François Louis. (Marlborough.)

This book has reached its seventh edition, which shows that it has been found serviceable. It contains nearly two hundred poems, many of the nursery type, while others are offensively goody-goody. On the whole, however, there is a very fair proportion of poems which the teacher will be glad to have. It is strange that a book which has passed through six editions should be disfigured by misprints: for instance, *on* for *sont* (page 86), *Melle.* for *Mlle.* (page 87), *ferra* for *fera* (page 89), *déjà* for *déjà* (page 90), *vite* for *vite* and *on* for *ont* (page 95), *lautre* for *l'autre* (page 118), *chantré* for *chanter* and *plait* for *plait* (page 119), *des* for *de* (page 121).

*German Vocabularies for Repetition.* By Sophie Wright. (Methuen.)

The words are divided into sections, each containing about a dozen, with the English rendering, and are taken from the most varied spheres of interest. Needlework and compliments, scenery and zoophytes are represented, as well as a host of other subjects. The book is compiled with some skill, but more care should have been taken in reading the proofs, for there are a number of slips and inconsistencies. In some cases it may well be doubted whether the most common words have been chosen: thus *Lebwohl* is surely more common than *Ade*, and, if there was room for *unzeitgemäss* under the heading "Die Jahreszeiten," *der Lenz* should have appeared also. If the plural of *Zahn* is given, why not that of *Hals*, and, still more obviously, why not that of *Herz*? The words in *-ieren* are no longer written with *-ir*. *Möbliren* is given in No. 83, *möblirt* in No. 85. Capital modified letters are no longer written *Æ*, &c., but *Ä*, &c. These are only a few instances of the lack of care displayed in what might have been a helpful little book.

## MISCELLANEOUS.

*Hindustani Self-taught.* By C. A. Thimm, F.R.G.S. (Marlborough & Co.)

The method adopted by Mr. Thimm in the present work is the method he has already applied in preceding volumes of "Marlborough's Self-taught Library." There are vocabularies on numerous groups of common subjects and a considerable variety of idiomatic expressions and phrases, disposed in three parallel columns (English, Hindustani, pronunciation), with tables of money and weights and measures. The selection is judiciously practical. But it would be rather sanguine to expect "to acquire an exceedingly good knowledge of Hindustani for colloquial purposes by means of the method and system contained herein." A companion grammar, however, is in preparation, and that may complete the necessary linguistic outfit of "travellers, students, officials, soldiers, traders, &c.," who want to speak Hindustani intelligently and intelligibly.

*Scott's Marmion.* Edited by R. Scott. (Bombay: K. & G. Cooper.)

This edition, by a professor of Wilson College, is intended for the use of Indian students. The notes are extremely full, explaining almost every poetical expression. They would hardly suit English schoolboys, but might be suggestive to young teachers who have yet to learn that the language of poetry needs a good deal of interpretation. It seems rather a pity to introduce technical terms like metonymy, hypallage, synecdoche, and some of the derivations, as *dis-cum-operire* for "discovery," or *rebellare* for "revel," might well be spared. The introductory matter consists of a life of Sir Walter Scott, a sketch of the story and the characters, and an estimate of his merits and defects as a poet. The estimate is thoughtful, but a little too learned, we should think, for students who need all the explanations given in the notes.

*The Aspirate.* By Geoffrey Hill. (Fisher Unwin.)

We have here a readable little book, combining interesting details as to the fate of the aspirate in different parts of the country and different periods of our language, with some good stories. Catullus's satire on Arrius is well known; less familiar is a passage of St.

Augustine quoted by Mr. Hill, where he complains that the conventional laws of pronunciation are more revered than the laws of God, that *qui 'ominem dixerit* is more looked down upon than *qui hominem oderit*. To come to more modern instances, a father was asked by his son the meaning of *canard*. "What you can 'ardly believe," was the answer. Good, too, is the story of the poacher turned preacher, who read: "This is the heir, come let us kill him." A good example of the tendency to insert an *h* is found in the two hands in the arms of "Antwerp" (*an t'werf*, "on the wharf"). Legend (so Motley tell us) associates the name with "hand-throwing," the town having been originally the dwelling of a giant who cut off the hands of those who refused to pay toll, and threw them into the water.

We have received from Messrs. A. & C. Black and from Messrs. Macmillan volumes of a new edition of the more popular of Scott's novels, intended for school libraries. There is little to choose between these two editions as to handiness of size and clearness of print, and they are equally provided with editorial introductions and notes. We have also received a set of five volumes, well printed and copiously illustrated, of Fenimore Cooper's works, the popularity of which with the younger generation has not been surpassed by the stories of the great Sir Walter himself, and "The Last of the Mohicans" will continue to claim a place in the school library in preference to books of adventure of greater literary merit.

Fresh series of School Readers are continually being issued. Messrs. Nelson & Sons have just published two books of the *Royal Prince Readers*, with the prettiest and most artistic coloured illustrations. Book IV. of *Chambers's Twentieth Century Readers* is as attractive as its predecessors, and the coloured illustrations are specially to be commended.

A new idea is worked out in *Blackie's Illustrated Continental Readers*, in which each continent is separately dealt with in a systematic way, the characteristic features of each country being described in popular language and illustrated by coloured pictures and photographs, with a complete miniature atlas at the end.

## FIRST GLANCES.

### CLASSICS.

Alford, M.: Latin Passages for Translation. 3s. Macmillan.

"For the use of higher forms in schools and of students working for Pass Degrees." Aims at "giving an abundance of the best Latin prose." "Arranged approximately in an order of increasing difficulty."

Balgarnie, W. H., M.A.: Tacitus, Histories, Book III. (University Tutorial Series.) Clive.

[Historical introduction; notes; index of proper names.]

Mills, T. R., M.A.: Euthyphro and Menexenus (Plato). 4s. 6d. Clive.

[University Tutorial Series. Introduction (16 pp.); well printed text; notes.]

Ormiston, F. M.: The Old Senate and the New Monarchy. (Black's Historical Latin Readers.) 2s. Black.

[Third and last volume of a series "forming a continuous history of Rome," to A.D. 14. Extracts mainly from Cæsar, Velleius Paterculus, Florus, Cicero, and Suetonius; text occasionally simplified.]

Rogers, B. B., M.A.: The Comedies of Aristophanes, edited, translated, and explained.—IX. The Frogs. X. The Ecclesiazusæ. 15s. Bell.

[In six volumes. The present volume, the first published, makes Vol. V. Greek and English (verse) on opposite pages, notes underneath; appendices.]

### MODERN LANGUAGES.

Lanciarini, Giuseppe: Gentile Brancaleoni de Montefeltro. 3 lire. Società Editrice "La Poligrafica" (Milano).

[Historical romance of the fifteenth century. An English translation is in preparation.]

Mascarenhas, The late Prof. C.: English and Portuguese Grammar and Commercial Handbook. Hirschfeld.

"Revised and brought up to date, and specially adapted to the commercial requirements of the day, with exercises and questions," by Prof. Mascarenhas, City of London College.]

Siepmann's Elementary French Series: Napoléon (Dumas). Edited and adapted by W. W. Vaughan. 2s. Macmillan.

[Biographies of Dumas and Napoleon; list of irregular verbs in text; vocabulary. Appendices (by the General Editors, Otto Siepmann and Eugène Pellissier); words and phrases, sentences on syntax and idioms for *viva voce* practice, and passages for translation into French.]

Word and Phrase-Book for "Napoléon" (by the General Editors). Separate, 6d.

Key to Appendices of "Napoléon" (by the General Editors). 2s. 6d. net.

### PHYSICS.

Hobbs, W. R. P.: Arithmetic of Electrical Measurements. (Murby's Science Series.) Ninth Edition. Murby.

[Revised to date by Dr. Richard Wormell, M.A.]

Stewart, R. W.: Text-Book of Magnetism and Electricity (The Tutorial Physics, Vol. IV.) Fifth Edition. 3s. 6d. University Tutorial Press.

[Aims at "suitability for class use and novelty of treatment."]

### ENGLISH LANGUAGE AND LITERATURE.

Cartwright, T.: The Master of Ballantrae (Stevenson). Cassell.

[Introduction, biographical and literary; notes and glossary. Rather close type.]

Cunnington, Susan: Emerson's Essay on Beauty. 1s. 6d. net. Speight (Simpkin, Marshall, & Co.).

[Edited as "a class study in English composition." Intended for upper forms in schools or for private students.]

Dictation and Spelling, Advanced. 64 pp. 8d. Relfe.

[Exercises (68) arranged according to vowels and vowel sounds. Special prominence in type to words of similar sound likely to be misspelt. Spelling lists precede exercises.]

English Tales in Verse. (Warwick Library of English Literature.) 3s. 6d. Blackie.

[Introduction by C. H. Herford. Nicely got up.]

Harris, R., M.A.: One-Hour Exercises in English Grammar. 6d. Relfe.

[52 sets of papers; progressive; "specially designed for home work" and "to develop the pupils' intelligence"; aimed at "the Junior Oxford and Cambridge Local and College of Preceptors' Examinations."]

Knight, Dr. W. T.: A Second Arithmetic. 8d. Relfe.

[One difficulty tackled at a time. Reasons for each rule. Copious examples from examination papers.]

Macmillan, M.: Shakespeare's Julius Cæsar. 3s. 6d. Methuen.

[Introduction (pp. 93); notes, critical and literary; appendix on special points.]

Smith, E. E.: Waverley. (Sir Walter Scott Continuous Readers.) 1s. Black.

[Historical introduction; notes; illustrations. Open type.]

Thomson, Clara L.: Tales from the Faerie Queen. 2s. 6d. net. Speight.

[Illustrated by Helen Stratton.]

### HISTORY AND GEOGRAPHY.

Dyer, T. H., LL.D.: History of Modern Europe. Vols. V., VI. (completing the work). 6s. each. Bell.

[Revised and continued to the end of the nineteenth century by Arthur Hassall, M.A.]

Firth, C. H., M.A., LL.D.: Cromwell's Army. 7s. 6d. Methuen.

"A history of the English Soldier during the Civil Wars, the Commonwealth, and the Protectorate." The Ford Lectures (Oxford University), 1900-1.]

Gregorovius, Ferdinand: History of the City of Rome in the Middle Ages. Vol. VIII., Parts I. and II. 4s. 6d. net each. Bell.

[Translated from the fourth German edition by Annie Hamilton. Completing the work.]

Herbertson, F. D., B.A., and A. J., Ph.D.: Central and South America, with the West Indies. (Descriptive Geographies from Original Sources.) 2s. Black.

"A text-book or reader, or both"; or else for supplementary reading.]

Meiklejohn, M. J. C., B.A., F.R.G.S.: Asia. 6d. Holden.

"Its Geography, Commerce, and Resources, with tables of salient distances."]

Morfill, W. R., M.A.: A History of Russia. 7s. 6d. Methuen.

[From the birth of Peter the Great to the death of Alexander II.; "a succinct account" for "the general reader"; "mostly drawn from Russian sources." 12 maps and plans.]

Taylor, W. R.: Synthetical Maps. 2d. each, net. Black.

[Lothians and Tweed Basin; South-Western District; and Leinster.]

The World and its People: Europe. 1s. 6d. Nelson.

"A new series of Geographical Readers"; "in accordance with the geographical courses outlined in the latest specimen schemes of the Board of Education."]

### DRAWING.

Crosskey, Lewes R., and James Thaw: Advanced Perspective. 4s. 6d. Blackie.

[For "perspective examination of the Education Department."]

Schofield, Arthur, A.R.C.A. Lond.: The Normal Guide to Normal Drawing. 2s. 6d. net. Normal Correspondence College Press.

[Normal Tutorial Series.]

Vaughan, J.: Nelson's Free-Arm Drawing Cards. Set IV. 1s. 6d. Nelson.

[For blackboard, slate, or paper work. 12 cards printed on both sides in soft chalk line.]

MISCELLANEOUS.

Airy, Reginald, M.A.: Westminster. (Handbooks to Great Public Schools.) 3s. 6d. Bell.

[Numerous illustrations, mostly "from photographs which have been taken, with great care and trouble, for this work, by Mr. William Rice."]

Allies, T. W., K.C.S.G.: The See of St. Peter. Fourth Edition. Catholic Truth Society.

[Inscribed to Pope Leo XIII., and "now republished at his desire."]

Brodrick, M., and A. Anderson Morton: A Concise Dictionary of Egyptian Archaeology. Methuen.

["A handbook for Students and Travellers." 80 illustrations and many cartouches.]

Calendar, The School. 1s. net. Whittaker.

["A Year-book of Scholarships and Examinations for 1902." Fifteenth year of publication.]

Carpet Plays. Edited by Lucian Oldershaw. 6d. each, net. Brimley Johnson.

["Designed to provide pieces suitable for performance by amateurs, schools, society entertainers, or any persons outside the dramatic profession."]

Folks, Homer: The Care of Destitute, Neglected, and Delinquent Children. 4s. 6d. net. Macmillan.

["The purpose of the present series is to bring to bear on the practical problems of American social workers a concise knowledge of the historical evolution through which the charities of the country have passed."]

Glancey, Rev. M. F.: Catholics and the Education Question. Midland Educational Co.

[Pamphlet. Address delivered in the Town Hall, Birmingham.]

Glover, N. L., and Mrs. M. A. Harris: Sunshine Melodies. 1s. 9d. net. American School and College Text-Book Agency.

["A recreation song-book for primary schools, kindergartens, and private classes."]

Grant, John: Underground Watering of Plants and Gardens, with Chapters on the Culture and Propagation of Rose Trees. 1s. Ward, Lock, & Co.

["Surface watering is a great mistake."]

Martin, Alice, E. A.: The Book of Books; a new Game of Scripture History. Jaques.

[Cards bear names, dates, &c., of the several Books of Scripture. "Not intended for children under ten years of age."]

Matriculation Directory, No. XXXI., January, 1902. 1s. net. Clive.

[With list of text-books, including the special subjects for June, 1902, and January and June, 1903. University Tutorial Series.]

Murché, V. T., F.R.G.S.: The Teacher's Manual of Object Lessons for Rural Schools. 2s. 6d. Macmillan.

[For senior classes. "Prepared as the outcome of the 'Circular to Managers and Teachers of Rural Elementary Schools' which was issued by the Board of Education in April last." The author is "himself an old rural teacher."]

Murché, V. T., F.R.G.S.: Rural Readers, for Senior Classes. 1s. 9d. Macmillan.

["Intended to be used in conjunction with the author's 'Object Lesson Manuals.' "The author has made the three intelligent and inquiring little boys on the farm his mouthpiece." Follows the Board of Education's circular in attempting "to develop in every boy and girl that habit of inquiry and research so natural to children." Many illustrations, several coloured.]

Paget, Francis, D.D.: Christ the Way. 1s. 6d. net. Longmans.

[54 pp. Four addresses at Haileybury by the Bishop of Oxford.]

Procter, Rev. F., M.A., and Rev. G. F. Maclear, D.D.: The Baptismal Office and the Order of Confirmation. 6d. Macmillan.

["Extracted from the author's 'Elementary Introduction to the Book of Common Prayer.' "To "cover the ground of one season's work with scholars, pupil-teachers, confirmation candidates, and church reading-circles."]

Shirley, Edward: Little Poems for Little People. Nelson.

[64 pp. Forty-five pieces, chiefly by the author.]

WEBSTER'S INTERNATIONAL DICTIONARY: Twentieth Century Edition. £1. 10s. to £2. 8s. (according to binding). Bell.

["Revised throughout, with a new supplement of 25,000 additional words, phrases, and definitions, prepared under the direct supervision of W. T. Harris, Ph.D., LL.D."]

Yoxall, J. H., M.P.: The Girl from St. Agneta's. 3s. 6d. Ralph, Holland, & Co.

[A novel. "A fantasia on a fugue."]

## OXFORD UNIVERSITY PRESS.

**ARITHMETIC.** With or without Answers to the Exercises. By R. HARGREAVES, M.A. Crown 8vo, cloth, pages viii + 424, 4s. 6d.

*Educational Times.*—"This publication is an important addition to the number of existing text-books on arithmetic. . . . Technical terms are defined and business transactions explained with a clearness and conciseness which make the book especially successful in its latter aspect. The collection of notes on the 'tables' is very good; and a method of dealing with compound multiplication, which the author believes he may claim as original, is likely to prove very acceptable, and may possibly be generally adopted when it becomes known among teachers. . . . The number of exercises and miscellaneous papers is large; and included among the questions will be found very many that have been set at various public examinations."

**GEOMETRICAL EXERCISES FROM NIXON'S "EUCLID REVISED."** With Solutions. By ALEXANDER LARMOE, M.A. Crown 8vo, cloth, pages viii + 172, 3s. 6d.

*School World.*—"As little like a 'crib' as it is possible for a book of the kind to be; and if it is used judiciously it will be profitable to teachers and students alike. The solutions are very elegant, and some of the articles treat of certain classical propositions with great freshness and skill."

**EUCLID REVISED.** Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his first Six Books. Edited by R. C. J. NIXON, M.A. Third Edition. Crown 8vo, cloth, 6s.

Sold separately as follows:—

Book I, 1s.  
Books I-IV, 3s.

Books I, II, 1s. 6d.  
Books V, VI, 3s. 6d.

**THE "JUNIOR" EUCLID. Books III and IV.** By S. W. FINN, M.A. Crown 8vo, cloth, pages vi + 200, 2s.

*Educational Times.*—"Throughout the work clearness and simplicity characterize the proofs, and point to the author as an able teacher of his subject. Variety in the type has been freely used to indicate the nature of the matter under consideration. . . . Our notice would be incomplete if it did not draw attention to the exceptional excellence of the figures."

Previously published.

**BOOKS I and II.** Crown 8vo, cloth, pages viii + 148, 1s. 6d.

**COMPANION TO ENGLISH HISTORY.** Middle Ages. Edited by FRANCIS PIERREPOINT BARNARD, M.A., F.S.A. With 97 Plates. Crown 8vo, cloth, 8s. 6d. net.

**SCHOOL HISTORY OF ENGLAND.** Down to the Death of Queen Victoria. With Maps, Plans, and Bibliographies. By O. M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON, A. J. CARLYLE, and W. G. POGSON-SMITH. Crown 8vo, cloth, 3s. 6d.

**POEMS OF ENGLISH COUNTRY LIFE.** Selected and Edited with Introduction and Notes by H. B. GEORGE, M.A., and W. H. HADLOW, M.A. Crown 8vo, cloth, 2s.

**A FRENCH PRIMER,** consisting of Accidence and Syntax, for use in Middle and Lower Forms. By ARTHUR H. WALL, M.A., Assistant Master in Marlborough College. Crown 8vo, cloth, 2s.

**A CONCISE FRENCH GRAMMAR.** Including Phonology, Accidence, and Syntax, with Historical Notes. By the same Author. For use in Upper and Middle Forms. Crown 8vo, cloth, 4s. 6d.

**A GUIDE TO ADVANCED GERMAN PROSE COMPOSITION.** Containing Selections from Modern English Authors, from the Sandhurst Papers, and from Magazines and Newspapers; with copious Notes and Idiomatic Renderings of some of the more difficult Phrases and Sentences; the whole being preceded by an exhaustive Grammatical Introduction. By EDUARD EHBEKE. Extra fcap. 8vo, cloth, 3s.

A KEY to the above, 5s. net, may be obtained on application to the Secretary, Clarendon Press, Oxford.

**TALES OF THE ROMAN REPUBLIC.** Parts I and II. Adapted from the Text of Livy. With Notes, Maps, Vocabularies, and English Exercises. By J. B. ALLEN, M.A. Extra fcap. 8vo, stiff covers, 1s. 6d. each.

**SCENES FROM SOPHOCLES.** Edited, with Introduction and Notes, by C. E. LAURENCE, M.A. **Ajax. Antigone.** With Illustrations. Extra fcap. 8vo, cloth, 1s. 6d. each.

**MANUAL OF THE FOUR GOSPELS.** By T. H. STOKOE, D.D. PART I: **The Gospel Narrative.** PART II: **The Gospel Teaching.** Crown 8vo, cloth, 3s. 6d.; or separately, Parts I and II, 2s. each.

**OLD TESTAMENT HISTORY FOR SCHOOLS.** By the same Author. PART I. Third Edition. From the Creation to the Settlement in Palestine. PART II. From the Settlement to the Disruption of the Kingdom. PART III. From the Disruption to the Return from Captivity. Extra fcap. 8vo, 2s. 6d. each, with Maps.

**THE STUDENT'S HANDBOOK TO THE UNIVERSITY AND COLLEGES OF OXFORD.** Fifteenth Edition. Revised to January, 1901. Crown 8vo, cloth, 2s. 6d. net; by post, 2s. 6d.

## PASTOR AGNORUM.

A SCHOOLMASTER'S AFTERTHOUGHTS.

BY

**JOHN HUNTLEY SKRINE,**

Warden of Glenalmond,

Author of "A Memory of Edward Thring," "Joan the Maid," &c.

### Advertisement.

THIS book is an endeavour to picture the life and work of the Public-School Master, but especially of the Head Master, on that side of it on which it might be described as "a cure of souls."

The argument is addressed to lay masters as well as to clerical. The schools which the writer has in view, and from which all his illustrations are drawn, are the public schools; but the book makes appeal to the interest of the workers in schools of other types, and (as the dedication "To Brothers of the Craft and Sisters" indicates) to the interest of women workers as well as men.

The first half of the book, entitled "The Shepherd," is occupied with the character, aims, and methods of the "Pastor" of the school in the three capacities of Teacher, Ruler, and Guide. In this part falls the treatment of such subjects as the dependence of education on a principle which is central in Christianity; the special ideals of Public School life, and their historical connexion with Chivalry; and the use of Athletics. The second part, "The Flock," discusses the relations which this pastorate involves between the "Pastor" and his fellow-workers, the parents of boys, and the flock itself. Such questions are treated as the true bond between colleagues, the mutual duties of parent and "pro-parent"; the moral care of boys, the question of Confession at schools, the use and the limitations of personal influence; religious instruction and worship.

As to the method of the book, the author, in an introductory chapter, disclaims the intention of writing a formal treatise on Education. The whole matter is presented as if it were the record of a veteran master's experiences, and with the free manner which such a standpoint allows.

There is an analytical Table of Contents. A dedicatory verse "To Edward Thring" may recall the early association of the writer with that great master, and indicate some of the lines on which his thought travels.

# BLACKIE & SON'S NEW LIST

WRITE FOR COMPLETE EDUCATIONAL CATALOGUE.

## BLACKIE'S ILLUSTRATED LATIN SERIES.

General Editor—Prof. R. Y. TYRRELL, Litt.D.

### NEW VOLUMES.

**TERENCE—PHORMIO.** Edited by W. CECIL LAMING, M.A.  
Cloth gilt, 4s. 6d.

This contains 22 Illustrations, including several reproductions from the Vatican MS. There is no vocabulary.

**HORACE—THE ODES.** (Complete.) Edited by STEPHEN GWYNN. Cloth gilt, 5s.

This is the prettiest annotated edition of the Odes in existence. It contains 48 Illustrations, including 3 coloured plates. There is no vocabulary.

**VIRGIL—GEORGICS III.** Edited by S. E. WINBOLT, M.A.  
With or without Vocabulary. 1s. 6d.

**CAESAR—GALLIC WAR. Book VI.** Edited by Prof. BROWN.  
With or without Vocabulary. 2s.

**THE LATIN PERIOD.** An Elementary Latin Exercise Book.  
By E. A. WELLS, M.A. 1s.

This book contains well-graded hints towards the construction of Latin periods, with copious exercises. It will prove an excellent introduction to Latin prose.

**A FIRST LATIN COURSE.** A Latin Book for Beginners, based throughout on Oral Methods of Teaching. By E. H. SCOTT, B.A., and FRANK JONES, B.A.

## BLACKIE'S ILLUSTRATED GREEK SERIES.

General Editor—Prof. TYRRELL, Litt.D.

**AESCHYLUS—EUMENIDES.** Edited by LIONEL D. BARNETT, M.A., Litt.D. 3s. 6d.

The *Athenaeum* says: "The work is on the whole excellently done."

The *Educational Times* says: "A judiciously illustrated and well edited school edition. Indeed we consider it on the whole to be unquestionably the best school edition so far produced."

**HOMER—ODYSSEY. Book I.** Edited by the Rev. E. C. EVERARD OWEN, M.A. 2s.

The *Educational Times* says: "A bright, serviceable and scholarly edition. . . . The well executed illustrations enhance the value of the book."

The *Literary World* says: "The introduction to this book is capital, accurate, interesting, and unpretentious."

**XENOPHON—ANABASIS II.** Edited by the Rev. G. H. NALL, M.A. 2s.

**A FIRST GREEK READER.** By R. A. A. BERESFORD, M.A., and R. N. DOUGLAS, M.A. Fully Illustrated. [In the press.]

## English.

**KING LEAR.** Edited by D. NICHOL SMITH, M.A. (*Warwick Shakespeare*). [In April.]

**RICHARD THE SECOND.** Edited, with Introduction, Notes, &c., in *The Picture Shakespeare*. Price 1s.

**ENGLISH TALES IN VERSE.** With an Introduction by Prof. C. H. HERFORD, M.A., Litt.D. In decorated cover, 3s. 6d.

**MILTON—LYCIDAS.** Edited by H. B. COTTERILL, M.A. 1s. 6d.  
This is a fresh and stimulating edition of *Lycidas*. It is provided with a frontispiece consisting of a reproduction of a page of Milton's own manuscript in Trinity College, Cambridge.

**MILTON'S ENGLISH SONNETS.** Edited by E. H. BLAKENEY, M.A. Price 2d.

## BLACKIE'S LITTLE FRENCH CLASSICS.

Carefully Edited—Clearly Printed—Well Bound. Price, cloth, 4d. each.

**SELECTIONS FROM RABELAIS.** Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

**MOLIÈRE—SCENES FROM LE MÉDECIN MALGRÉ LUI.** Edited by W. J. CLARK, M.A., Ph.D.

**LESAGE—SELECTIONS FROM GIL BLAS.** Edited by H. W. ATKINSON, M.A., of Rossall School.

**PROSPER MÉRIMÉE—MATEO FALCONE, &c.** Edited by J. E. MICHELL, M.A., of Westminster School.

**MADAME DE SÉVIGNÉ—SELECT LETTERS.** Edited by Miss M. F. VERNON HARCOURT, of Notting Hill High School.

**BOSSUET—ORAISONS FUNÈRES.** Edited by the Rev. H. J. CHAYTOR, M.A., of Merchant Taylors' School, Crosby.

**LA FONTAINE—LONGER FABLES.** Edited by A. H. WALL, M.A., of Marlborough College.

**THÉOPHILE GAUTIER—LE PAVILLON SUR L'EAU.** Edited by W. G. HARTOG, of Liverpool Institute.

**BREUYS AND PALAPRAT—L'AVOCAT PATELIN.** Edited by É. B. LE FRANÇOIS, of Redcliff House, Clifton.

**VICTOR HUGO—WATERLOO.** Edited by G. H. CLARKE, M.A., of Hymers College, Hull.

**MUSSET—SELECTIONS IN VERSE AND PROSE.** Edited by F. W. B. SMART, M.A., of Eastbourne College.

**FRENCH IN PICTURE AND TALK.** A Series of Eight Pictorial Conversation Sheets. Printed on strong Manilla paper, and mounted on roller. Price, 6s. per set.

**FRENCH IN PICTURE AND TALK.** A Handbook of Conversational French, corresponding to the sheets. By MARGUERITE NINET. Price 2s. 6d.

## German.

**A SKELETON GERMAN GRAMMAR.** By Prof. H. G. ATKINS, of King's College. Cloth limp, 1s.

This, the first of a series of Skeleton Grammars, is designed to give the necessary minimum of grammar, sufficient to enable the student to begin reading. Important points are emphasised by the use of red ink in printing.

**FIRST STEPS IN GERMAN.** By W. SCHOLLE, Ph.D., and G. SMITH, M.A. [Nearly Ready.]

A book of reading lessons, conversations and songs, the whole designed on the new method, for use with Holzel's pictures.

**A GERMAN GRAMMAR.** By the same Authors. Designed as a systematic companion to First Steps in German. [Nearly Ready.]

**A FIRST GERMAN BOOK.** By Miss L. A. LOWE, Modern Language Mistress in Blackheath High School for Girls. A companion volume to Miss Ninet's popular *My First French Book*. With Vocabularies and many Illustrations. 1s. 6d.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

**MATHEMATICS.**

*Solution of  $x^3 + y^3 = 17z^3$  in positive integers.* By Lt.-Col. ALLAN CUNNINGHAM, R.E.

In his *Mémoire sur la Résolution en nombres entiers de l'Equation  $aX^m + bY^m = cZ^m$*  (Art. 10), M. DESHOVES gives general formulæ (two sets) for the solution of the more general equation  $X^3 + Y^3 = cZ^3$  in integers (not necessarily +) when one solution (say  $x, y, z$ ) is known. These are

- i.  $X = x(x^3 + 2y^3), Y = -y(2x^3 + y^3), Z = z(x^3 - y^3)^{1/2}$ ;
- ii.  $X = x^9 - y^9 + 3x^3y^3(2x^3 + y^3), Y = -x^9 + y^9 + 3x^3y^3(2y^3 + x^3), Z = 3xyz(x^6 + x^3y^3 + y^6)$ .

Formulæ i. are said to be due to PRESTET and EULER, and formulæ ii. to ED. LUCAS.

These operations may evidently be repeated and combined, thus leading to an infinity of solutions (usually increasing in magnitude very rapidly). If  $x, z$  be both + and  $x > y$  (numerically), the sign of  $Y$  will usually be opposite to that of  $y$ ; and will change at each solution.

Ex.— $x = 18, y = -1, z = 7$  is a known solution.

The first set of formulæ give

$$X = 18(18^3 - 2) = 104940, \quad Y = (2 \cdot 18^3 - 1) = 11663, \\ Z = 7(18^3 + 1) = 40831,$$

which is the lowest solution in + integers obtainable in this way (this solution had already been obtained by Mr. R. F. DAVIS by a similar process). The results from formulæ ii. run very high.

[\* The value of  $Z$  is misprinted  $Z = z(x^3 + y^3)$  in the original.]

*Further Note on the above equation.*

Mr. R. W. D. CHRISTIE writes:—The late Prof. SYLVESTER states (see Quest. 2431) that the simplest representation of 17 as two cubes is

$$\left(\frac{104940}{40831}\right)^3 + \left(\frac{11663}{40831}\right)^3 = 17.$$

Consequently  $(104940z)^3 + (11663z)^3 = 17(40831z)^3$

for all values of  $z$ .

**12904.** (Professor MORLEY.)—The tangents at the points where any tangent of a hypocycloid of class 4 (the so-called four-cusped hypocycloid) meets the curve again meet on the cusp circle.

*Solution by W. J. GREENSTREET, M.A.*

Let  $t_0, t_1, \dots, t_4$  be the values of  $t$  at the point of contact and the four points of intersection. The curve has for equation  $x^3 + y^3 = a^3$ . The tangent is

$$(y + t_0^3) \sqrt{1 + t_0^2} - at_0 = 0 \dots\dots\dots(1).$$

Any one of the four points is  $[a/(1 + t_1^2)^{1/2}, at_1^3/(1 + t_1^2)^{1/2}]$ . Substituting and arranging,

$$(t_1 - t_0)^2 (t_1^3 + 2t_1^3t_0 + 2t_1t_0^3 + t_0^3) = 0,$$

the first bracket corresponding to the point of contact. But, if  $(x, y)$  be a point on the cusp circle  $x^2 + y^2 - a^2 = 0$ , then the equation (1) is

$$t^4 + 2t^3y/x + 2ty^3/x + y^2/x^2 = 0;$$

or, writing  $y = xt_0$ , this becomes  $t^4 + 2t_0t^3 + 2t_0t + t_0^2 = 0$ , showing that the points of contact of tangents from  $(x, y)$  are on one of the two tangents  $y = xt_0$ . Therefore, &c.

**15015.** (Rev. T. ROACH, M.A.)—If  $PQ$ , perpendicular to  $SP$  in the ellipse, meets  $CD$  in  $Q$  and  $S'P$  meets  $CD$  in  $E$ , show that the normal at  $P$  will touch the circle about  $PEQ$  in  $P$ .

*Solution by R. TUCKER, M.A.; G. G. MORRICE, M.A., M.D.; H. L. TRACHTENBERG; and many others.*

- $\angle SPQ =$  right angle
- $=$  GPT,
- and  $\angle S'PG =$  SPG = TPQ
- $=$  PQE;

therefore, &c.

*Note to Quest. 14761.* By R. BIGGS.

The following suggests itself as a full statement of the properties involved:—

The circumcentres  $O, O_1, O_2, O_3$  of the four triangles of any orthocentric system  $I, I_1, I_2, I_3$  form a second orthocentric system congruent and parallel to the first, and so placed that  $I, I_1, I_2, I_3$  are the circumcentres of its four triangles. The two systems are in perspective at  $P$ , the centre of a circle which is the nine-point circle of both. This may

be called the twelve-point circle of the twin system, as it passes through  $L, M, N, L', M', N'$ , the middle points (common in pairs) of the twelve

joins, and through  $A, B, C, A', B', C'$ , the six pedal points. Given this centre  $P$  (which is the circumcentre of the original triangle  $ABC$  in the question, and of its analogue  $A'B'C'$ , i.e., of the pedal triangles of the two systems), and any two points of one system, or one point in each, other than two corresponding ones, the whole figure can be constructed much as in the solutions given, or more readily by the property that the radius of the eight equal circumcircles is double that of the twelve-point circle. The actual question is, in fact, equivalent to "Given base and nine-point centre, construct triangle."

This twelve-point circle touches, of course, the thirty-two in- and ex-circles of the triangles composing the two orthocentric systems; and  $A, A'; L, L', \&c.$ , are diametrically opposite points.

**15014.** (Professor NANSON.)—A conic touches  $BC, CA, AB$  in  $D, E, F$ . If  $DO, EO, FO$  cut the conics again in  $P, Q, R$ , prove  $AP, BQ, CR$  concurrent.

*Solution by A. M. NESBITT, M.A.*

If the conic be  $\sqrt{x} + \sqrt{y} + \sqrt{z} = 0$  and the coordinates of  $O$  be  $a, b, c$ , it is easy to show\* that the equation to  $AP$  is  $(x-b)^2y = (x-c)^2z$ , where  $2s \equiv a + b + c$ . Hence the truth of the theorem is obvious.

[\* For equation to  $DO$  is  $x(b-c) = a(y-z)$  and, if we take  $y + kz = 0$  for equation to  $\Delta P$ , the condition that these should meet on the conic is

$$\begin{vmatrix} 1 & -1 & -1 & b-c & 0 \\ -1 & 1 & -1 & -a & 1 \\ -1 & -1 & 1 & a & k \\ b-c & -a & a & 0 & 0 \\ 0 & 1 & k & 0 & 0 \end{vmatrix} = 0,$$

which at once gives  $k = -1$ , or

$$k = -\left(\frac{a+b-c}{a-b+c}\right)^2.]$$

**14659.** (D. BIDDLE.)— $N$  being any odd number that is prime to 3 and 7, prove that  $N^6 \equiv 1 \pmod{168}$ .

*Solution by Rev. T. WIGGINS, B.A.; ALETROP; and Lt.-Col. ALLAN CUNNINGHAM, R.E.*

By FERMAT'S theorem (C. SMITH, § 380, or MATHEWS, p. 15),  $N^{7-1} - 1 = M(7)$ , when  $N$  is prime to 7, and  $N^{3-1} - 1 = M(3)$ , when  $N$  is prime to 3. Also when  $N$  is odd  $N^2 - 1 = M(8)$ ; therefore

$$N^6 - 1 = M(7) \quad \text{and} \quad (N^2 - 1)(N^4 + N^2 + 1) = M(24);$$

therefore  $N^6 - 1 = M(168)$  or  $N^6 \equiv 1 \pmod{168}$ .

**14920.** (ALETROP.)—Généralisation du théorème de FERMAT. Démontrer, sans se servir d'aucune interprétation géométrique, que l'expression

$$\Sigma(x) = x^n - \Sigma x^m a + \Sigma x^m ab - \Sigma x^m abc + \dots,$$

où  $a, b, c$ , sont les facteurs premiers de  $n$ , est divisible par  $n$ , quels que soient  $n$  et  $x$ . [M. KANTOR, dans sa mémoire:—"Wie viele cyclische Gruppen gibt es in einer quadratischen Transformation der Ebene?" (*Annali di Matematica pura ed applicata*, Tom x., p. 64), trouva le théorème de l'énoncé pour le cas  $x = 2$ ; et M. PICQUER le démontra en

général par d'autres considérations géométriques (*Comptes Rendus*, 1883, Vol. xcvi., p. 1137].

*Solution by J. P. HJØRSN.*

Dans une note complémentaire : "Sur la généralisation du théorème de FERMAT de à M. SERRET," *Comptes Rendus*, 1883, Vol. xcvi. p. 1424, M. PICQUET lui-même écrit : "Effectivement M. SERRET a énoncé le même théorème et en a donné la démonstration dans son *Algèbre supérieure*," et cette démonstration est une algébrique. Voir aussi une démonstration de M. ED. LUCAS dans le même volume, p. 1300.

**10824.** (J. L. MACKENZIE, B.A., B.Sc.)—The tangents at points A and B on a circle, and their chord of contact, cut a given line in L, M, P respectively. Any circle through L and M cuts the given circle in H and K, and PH, PK cut the given circle in X and Y; prove XY parallel to LM.

*Solution by J. C. ST. CLAIR.*

The sides and diagonals of the inscribed quadrilateral HKXY form on the line LMP an involution of which the double points are P and the point Q in which the line meets the polar of P with respect to the circle. In this involution the points in which LM meets the circle are conjugates, as also are L, M, which lie on the tangents at the extremities of the chord AB passing through P. Hence the centre of the involution is the intersection O of the line LM with HK, the common chord of the two circles; and the opposite side XY meets LM in the conjugate of O, namely, at infinity. Therefore XY is parallel to LM.

**12174.** (Rev. T. C. SIMMONS, M.A.)—Three or more circular wafers of different sizes are fastened at random on the surface of a cylinder. Find the probability that they will all lie (1) on the same generating line, (2) on a generating line drawn at random; also (3) prove that (2) may be reduced to a particular case of (1).

*Solution by Rev. Prebendary WHITWORTH, M.A.*

Let  $s$  be the circumference of the cylinder,  $\alpha, \beta, \gamma, \dots$  the diameters of the  $n$  wafers. If we replace the curved section of the cylinder by a polygon of  $sm$  equal sides, so that the diameters of the wafers, in terms of one of the equal sides, are  $\alpha m, \beta m, \gamma m, \dots$ , we find the chance of all the wafers covering the same side of the polygonal cylinder to be

$$\{ \alpha \beta \gamma \dots - (\alpha - 1/m)(\beta - 1/m)(\gamma - 1/m) \dots \} + s^{n-1}.$$

Hence, ultimately, when  $m$  is infinite the required probability (1) is  $(1/\alpha + 1/\beta + 1/\gamma + \dots) \alpha \beta \gamma \dots + s^{n-1}$ .

The probability (2) may be written down at sight, viz.,  $\alpha \beta \gamma \dots + s^n$ . (3) It is obvious that (2) may be obtained from (1) by introducing one more wafer of diameter zero.

**15042.** (H. BATEMAN.)—Eliminate A, B, C from the equations

$$\begin{aligned} \sin 2A \sin A &= l \sin B \sin C, & \sin 2B \sin B &= m \sin C \sin A, \\ \sin 2C \sin C &= n \sin A \sin B, & A + B + C &= \pi. \end{aligned}$$

*Solution by Professor SANJANA, M.A. : Rev. T. ROACH, M.A. ; and others.*

We readily get  $lmn = 8 \cos A \cos B \cos C$ ; also

$$\begin{aligned} (l + m + n) \sin A \sin B \sin C &= \sum \sin 2A \sin^2 A = \frac{1}{2} \sum \sin 2A (1 - \cos 2A) = \frac{1}{2} \sum \sin 2A - \frac{1}{4} \sum \sin 4A \\ &= \frac{1}{2} (4 \sin A \sin B \sin C) + \frac{1}{4} (4 \sin 2A \sin 2B \sin 2C), \end{aligned}$$

whence  $l + m + n = 2 + lmn$ .

**14575.** (J. A. THIRD, M.A., D.Sc.)—If A'B'C' be the first BROCARD triangle of ABC, and D, E, F be the points where B'C', C'A', A'B' meet BC, CA, AB respectively, show (1) that DA', EB', FC' are tangents to the BROCARD circle of ABC, and (2) that DA, EB, FC are tangents to the circumconic of ABC which passes through the BROCARD points.

*Solution by C. E. YOUNGMAN, M.A.*

The BROCARD points  $\Omega, \Omega'$  are concyclic with A'B'C', and AC', BA', CB' meet at  $\Omega$ , and AB', BC', CA' at  $\Omega'$ ; therefore, by the PASCAL hexagon A'A'ΩB'C'Ω', A'A' and B'C' meet on BC; i.e., the tangent at A' goes through D. Similarly, by the hexagon AA'Ω'BCΩ on the conic ABCΩΩ', AA and BC meet on B'C'.

**14764.** (Professor NEUBERG.)—Construire un triangle ABC, étant donnés les côtés indéfinis AB, AC et le centre K des symédianes.

*Solutions (I.) by Professor JAN DE VRIES, H. W. CURJEL, M.A., and R. F. DAVIS, M.A.; (II.) by J. BLAIRIE, M.A.; (III.) by Professor SANJANA, M.A.; (IV.) by the PROPOSER.*

(I.) AZ being the isogonal conjugate of AK with respect to the given angle XAY, from a point N on AZ draw parallels to AX and AY meeting AY and AX in C' and B'. If K' is the symmedian point of AB'C', parallels to B'K' and C'K' passing through K will cut AX, AY in the angular points B, C of the triangle.

(II.) On p. 73 of *The Companion to the Weekly Problem Paper*, Mr. DAVIS has shown that the symmedian point is the centre of gravity of weights  $a^2, b^2, c^2$  placed at the angular points. If, then, AK be produced to L, so that  $KL/AK = a^2/(b^2 + c^2)$ , L is a point in BC. Through K draw C'B' so as to be bisected at K. The line B'C' is antiparallel to BC, and the sides  $a', b', c'$  of AB'C' are proportional to  $a, b, c$ ; therefore

$$a^2/(b^2 + c^2) = a'^2/(b'^2 + c'^2),$$

and L is known. Through L draw BC antiparallel to B'C', and the triangle is constructed.

(III.) Let  $\beta, \gamma$  be the known perpendiculars from K on AC, AB; then  $\frac{1}{2}b \tan \omega = \beta, \frac{1}{2}c \tan \omega = \gamma$ . But

$$\tan \omega = \frac{4\Delta}{a^2 + b^2 + c^2} = \frac{bc \sin A}{b^2 + c^2 - bc \cos A};$$

substituting, we have the two equations

$$2\beta(b^2 + c^2 - bc \cos A) = b^2c \sin A, \quad 2\gamma(b^2 + c^2 - bc \cos A) = bc^2 \sin A,$$

whence  $b$  and  $c$  are to be found,  $\beta, \gamma, A$  being given. We obtain easily

$$c = \frac{2(\beta^2 + \gamma^2 - \beta\gamma \cos A)}{\beta \sin A}, \quad b = \frac{2(\beta^2 + \gamma^2 - \beta\gamma \cos A)}{\gamma \sin A}.$$

Measuring these lengths on AB, AC, and joining the points obtained, the triangle is constructed.

(IV.) Soient P, Q, R les projections de K sur BC, CA, AB; K étant le centre de gravité du triangle PQR, on joint K au milieu S de QR et on prend sur la droite SK une longueur KP' = 2SK, &c.

**6021.** (E. W. SYMONS, B.A.)—Prove that (1) the cosine of the angle between the planes  $Ax + By + Cz = 0, A'x + B'y + C'z = 0$ , referred to oblique axes inclined at angles  $\alpha, \beta, \gamma$ , is

$$\frac{AA' \sin^2 \alpha + \dots - (BC' + B'C)(\cos \alpha - \cos \beta \cos \gamma) - \dots}{[A^2 \sin^2 \alpha + \dots - 2BC(\cos \alpha - \cos \beta \cos \gamma) - \dots]^{\frac{1}{2}} [A'^2 \sin^2 \alpha' + \dots - 2B'C'(\cos \alpha' - \cos \beta' \cos \gamma')]^{\frac{1}{2}}}$$

and (2) the length of the perpendiculars from the point  $(xyz)$  on the plane  $Ax + By + Cz + D = 0$  is

$$(Ax + By + Cz + D) \left( \frac{1 - \cos^2 \alpha - \cos^2 \beta - \cos^2 \gamma + 2 \cos \alpha \cos \beta \cos \gamma}{A^2 \sin^2 \alpha + \dots - 2BC(\cos \alpha - \cos \beta \cos \gamma)} \right)^{\frac{1}{2}}.$$

*Solution by Professor NANSON.*

Taking two sets of four lines and denoting by  $(pq)$  the cosine of the angle between the  $p$ -th line of the first set and the  $q$ -th line of the second, we find by compounding the arrays formed with the two sets of direction cosines that  $|(pq)| = 0$ . Taking the first three lines in each set to coincide with the oblique axes, we get

$$\begin{vmatrix} 1 & \cos \gamma & \cos \beta & \lambda \\ \cos \gamma & 1 & \cos \alpha & \mu \\ \cos \beta & \cos \alpha & 1 & \nu \\ \lambda' & \mu' & \nu' & \cos \theta \end{vmatrix} = 0 \dots \dots \dots (1),$$

where  $\alpha, \beta, \gamma$  are the angles between the axes,  $\lambda, \mu, \nu; \lambda', \mu', \nu'$  are the cosines of the angles made with the oblique axes by any two lines, and  $\theta$  is the angle between the two lines. Solving for  $\cos \theta$ , we get

$$-\delta \cos \theta = \left( \frac{\lambda \mu \nu}{\lambda' \mu' \nu'} \right) \dots \dots \dots (2),$$

where  $\delta$  is the minor of  $\cos \theta$  in (1), and  $\left( \frac{\lambda \mu \nu}{\lambda' \mu' \nu'} \right)$  is the result obtained by replacing  $\cos \theta$  by zero in the first member of (1).

Making the two lines coincide, we get, from (2),

$$-\delta = \left( \frac{\lambda \mu \nu}{\lambda \mu \nu} \right) \dots \dots \dots (3),$$

which is the relation connecting the oblique direction cosines  $\lambda, \mu, \nu$  of a line with  $\alpha, \beta, \gamma$ .

Taking the two lines in (2) to be perpendicular to the given planes, we have  $\lambda, \mu, \nu$  proportional to  $A, B, C$ , and  $\lambda', \mu', \nu'$  proportional to  $A', B', C'$ . Hence from (2), (3), we get

$$-\cos \theta = \left( \frac{ABC}{A'B'C'} \right) \left\{ \frac{(ABC)(A'B'C')}{(A'B'C')(ABC)} \right\}^{-\frac{1}{2}},$$

and on expansion of the determinants this gives the first formula in the question.

Again, by projection, the distance of the point  $(xyz)$  from the plane  $\lambda x + \mu y + \nu z - p = 0$  is  $\lambda x + \mu y + \nu z - p$ . Hence, from (3), it follows that the distance of the point  $xyz$  from the plane  $Ax + By + Cz + D = 0$  is

$$(Ax + By + Cz + D) \delta^4 \left\{ - \frac{(ABC)}{(ABC)} \right\}^{-1},$$

and on expansion this gives the second formula in the question.

**15040.** (R. CHARTRES.)—Find the mean value of the  $n$ -th power of the area of a cyclic quadrilateral whose perimeter ( $2s$ ) is constant, and deduce the results for (1) a kite, (2) a triangle.

*Solution by the Proposer.*

$(\text{Area})^n = \{(s-a)(s-b)(s-c)(s-d)\}^{4n}$ , where  $a+b+c+d=2s$ ; therefore

$$\text{mean value} = (2s)^{2n} \iiint x^{4n} y^{4n} z^{4n} w^{4n} dx dy dz dw + \iiint dx dy dz dw \\ = 3!(2s)^{2n} \{G(\frac{1}{2}n+1)\}^4 + G\{4(\frac{1}{2}n+1)\}.$$

If  $d = 0$ , we get the case for a triangle

$$= 2! s^{2n} \{G(\frac{1}{2}n+1)\}^3 + G\{3(\frac{1}{2}n+1)\}.$$

If  $a = b$  and  $c = d$ , we get the case for a kite

$$= s^{2n} \{G(n+1)\}^2 + G\{2(n+1)\}.$$

But this can also be obtained in a very elementary way.

We require the mean value of  $(xy)^n$  when

$$x + y = s.$$

Now  $s^{2n} = (x+y)^{2n}$ ,

containing  $(2n+1)$  terms, each of the same mean value, a theorem first given by Prebendary WHITWORTH; therefore mean value

$$\frac{s^{2n}}{2n+1} + \frac{(2n)!}{(n!)^2}.$$

**QUESTIONS FOR SOLUTION.**

**15084.** (A. M. NESHITT, M.A.)—If  $u_r$  denote the chance that  $r$  letters, intended for  $r$  different recipients and placed at random into  $r$  envelopes correctly addressed, not one shall reach its proper destination (disregarding errors of delivery, &c.), it is fairly obvious a priori that

$$u_n + u_{n-1}/1! + u_{n-2}/2! + \dots + u_0/n! = 1.$$

Solve this difference equation directly; i.e., prove that  $u_n$  is the first  $n+1$  terms of the expansion of  $e^{-1}$  without reference to the problem from which it originally sprang.

**15085.** (H. MACCOLL, B.A.)—Each letter denoting a proposition, let  $\phi = (ax = ay)(ax = az)$ , and let  $\psi = \alpha(x = y) + \alpha'(x = z)$ . Show that  $\phi$  implies  $\psi$  when the propositions  $(x = y)$  and  $(x = z)$  are constants, but not necessarily when they are variables. [Defn.—A constant is either certain or impossible; a variable is neither certain nor impossible. See solution of Quest. 14665 in the Educational Times for March.]

**15086.** (LT.-COL. ALLAN CUNNINGHAM, R.E.)—Factorize completely (into prime factors)  $N = (60,000^6 + 1)$ .

**15087.** (Professor E. B. ESCOTT.)—In Nature for May 6, 1897, we have the following "Sieve for Primes" given:—"In order that a number  $n$  be prime, it is necessary and sufficient that the  $\frac{1}{2}(n+1)$ th term of the following recurrent series give a remainder 1 when divided by  $n$  :—

$$1, 4, 11, 29, 76, 199, 521, \dots$$

where the scale of relation is  $u_n = 3u_{n-1} - u_{n-2}$ ." Show, by a numerical example, that this condition is not sufficient.

**15088.** (Rev. T. WIGGINS, B.A.)—(1) Of numbers between 1 and 20, how many sets of 3, 4, or 5 can be found such that the square of one number in each set equals the sum of the squares of the remaining numbers in the same set? Also, if the numbers from 1 to 100 are taken, how many sets of 3 numbers satisfy the above conditions? No set should be a multiple of any other. (2) Find in two ways  $a_1, a_2, \dots, a_9$ , such that  $a_1^2 = a_2^2 + a_3^2 = a_4^2 + a_5^2 = a_6^2 + a_7^2 = a_8^2 + a_9^2$ , where each of the  $a$ 's lies between 1 and 100, but the suffixes have no reference to order of magnitude.

**15089.** (The late Professor R. B. CLAYTON.)—Normals lying in a given plane are drawn to a series of confocal quadrics. Show that they envelop a parabola.

**15090.** (Professor NANSON.)—Through a curve of order  $a$  are drawn three surfaces of orders  $l, m, n$ . Prove that the number of points common to the three surfaces, exclusive of those which lie on the curve, is  $a(l+m+n) - \beta$ , where  $\beta$  is a number depending on the curve only; and hence show that, when the curve is the complete intersection of two surfaces of orders  $\lambda, \mu$ , then  $\beta = \lambda\mu(\lambda + \mu)$ . Prove also that, if the three surfaces pass respectively  $p, q, r$  times through the curve, the number of intersections is  $a(lqr + mpr + npq) - pqr\beta$ ; and find the modification which this formula undergoes when the surfaces touch all along the common curve.

**15091.** (Professor HUDSON, M.A.)—Prove that the evolute of  $r = a(2 + \cos \theta)$  has three cusps lying on a straight line perpendicular to the initial line.

**15092.** (R. TUCKER, M.A.)—ABC and A'B'C' are a triangle and its medial triangle.  $\Omega, \Omega', \Omega_1, \Omega_2$  are the BROCARD points; and K, K' the symmedian points. Prove that  $\Omega\Omega_1, \Omega'\Omega_2$ , the join of the BROCARD ellipse centres, and KK' pass through the common centroid. Also  $\Omega\Omega_2, \Omega'\Omega_1$  intersect in  $a^2a = b^2\beta = c^2\gamma$ . (Cf. MILNE, Companion, p. 174, Ex. 11.)

**15093.** (C. E. YOUNGMAN, M.A.)—On the circumcircle of ABC points D, E, F are taken such that AD, BE, CF meet at P; and D', E', F' are the images of D, E, F for BC, CA, AB, respectively. AD', BE', CF' meet at P'. Find the locus of P and the envelope of PP'.

**15094.** (Professor UMES CHANDRA GHOSH.)—If tangents be drawn to KIEPERT'S hyperbola of a triangle at its vertices and orthocentre, prove that the three diagonals of the quadrilateral formed by these tangents intersect in pairs at the feet of the perpendiculars of the triangle drawn from its vertices to the opposite sides.

**15095.** (Professor NEUBERG.)—ABC étant un triangle donné, trouver un point M tel que si A', B', C' sont les points de rencontre de BC, CA, AB avec les droites AM, BM, CM, M soit le centre de gravité des points A', B', C' pour les masses données  $\alpha, \beta, \gamma$ .

**15096.** (ROBERT W. D. CHRISTIE.)—Find two distinct sets of triangles equal in area and infinite in number, the respective products of whose circumscribed and inscribed radii are as the longest and shortest sides of one set.

**15097.** (H. BATERMAN.)—PP', QQ' are two pairs of isogonal conjugate points. PQ, P'Q' meet in R; P'Q, P'Q' meet in K'. Prove that R and K' are isogonal conjugate points.

**15098.** (D. BIDDLE.)—One of the walls of a room is covered by a mirror, and in a horizontal line parallel to it are the eye of an observer and the centre of a sphere 2 feet in diameter. The distance of the line from the mirror is 12 feet, and the distance of the centre of the sphere from the observer's eye is 12 feet. Find the portions of the sphere's surface that are visible directly and by reflection respectively, and give the total amount which the observer commands.

**15099.** (R. KNOWLES.)—From a point T ( $h, k$ ) tangents are drawn to the parabola  $y^2 = 4ax$ ; from a point P ( $x', y'$ ) a third tangent is drawn meeting these in M and N. Prove that the equation to the circle TMN

$$\text{is } x^2 + y^2 - \frac{ky' + 2a(a+h)}{2a}x - \frac{2ak + y'(a-h)}{2a}y + \frac{ky' + 2ah}{2} = 0.$$

**15100.** (Professor SANJANA, M.A.)—On the principal axis produced of a conic, a point B is taken whose distance from the corresponding focus S is  $b$ ; a secant BMN is drawn making with BS an angle  $\theta$ ; and  $\beta$  and  $\gamma$  are the angles made by the radii vectors SM and SN with the axis. It is required (1) to calculate  $\tan \frac{1}{2}\beta$  and  $\tan \frac{1}{2}\gamma$  in terms of  $b, \theta$ , and the semi-latus rectum  $l$ ; (2) to show that  $\tan \frac{1}{2}\beta \cdot \tan \frac{1}{2}\gamma$  is constant for all values of  $\theta$ ; and (3) to prove that the minimum value of  $\tan^2 \frac{1}{2}\beta + \tan^2 \frac{1}{2}\gamma$  is  $2(b-l+bc)/(b+l-bc)$ . [Extension of Quest. 13296; with slight changes the proposition will hold when B is on the axis itself.]

**15101.** (Professor COCHEZ.)—On donne une circonférence C,

$$x^2 + y^2 = R^2,$$

et la droite  $\Delta (x = a)$ . On construit la circonférence C' tangente à C et à  $\Delta$ . La tangente commune T rencontre le diamètre C'A en M. Lieu de M.

**15102.** (J. PRESCOTT, B.A.)—Given a square ABCD; draw a line through A to meet CD in X and BC produced in Y so that XY may be equal to a given length.

**15103.** (J. S. LAWSON, M.A.)—Show that the sum of the harmonic series  $\frac{1}{a} + \frac{1}{a+b} + \frac{1}{a+2b} + \dots$  to  $n$  terms  $> \frac{2n}{2a+(n-1)b}$ .

**15104.** (R. KNOWLES.)—Prove that the sum to  $r$  terms of the series  $1 - 10 + 35 - 84 + \dots \pm \frac{1}{2}r(4r^2 - 1)$  is  $-\frac{1}{2}r(4r^2 + 6r - 1) \dots (r \text{ even})$  and  $\frac{1}{2}(4r^3 + 6r^2 - r - 3) \dots (r \text{ odd})$ .

**15105.** (SARODA PRASAD BAUERJEE.)—From a point O, taken at random in a triangle ABC, the lines BO and CO are drawn to meet the opposite sides in E and F. Find the mean area of the circle circumscribed about AEF.

## OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**4475.** (Dr. HART.)—Find, if possible, a rational value of  $n$  that will make at least one root of the equation

$$x^4 - 4nx^3 + 6(1 - 2n^2)x^2 + 16n^3x = 8n^4 - 1$$

rational.

**8474.** (Professor GILLILAND, M.A.)—A closed conical vessel whose height is twice the diameter of the base is just filled with liquid and suspended from a point in the rim of its base. Prove that, if the weight of the vessel be neglected, the vertical component of the pressure on its curved surface will be  $\frac{1}{3}$  of the weight of the liquid.

**8492.** (SATS CHANDRA RAY, B.A.)—Two uniform rigid rods, lengths  $2a$  and  $2b$ , are connected by a smooth hinge and rest on the convex side of a vertical parabolic arc whose latus rectum is  $2l$ . If, in the position of equilibrium,  $\theta$ ,  $\phi$  be the angles which the focal chords to the points of contact make with the rods, show that

$$a/b \cdot \sin \theta \sin \phi - b/a \cdot \sin \phi \sin \theta = l(1/a + 1/b)(x/y^2 - y/x^2),$$

where  $x$  and  $y$  are given by  $x + y = \sin(\theta + \phi)$ ,  $x \tan \phi = y \tan \theta$ .

**9163.** (Professor ATH BHAJ BHVT, M.A.)—Show that the reciprocal polar of the evolute of the parabola of the  $n$ th degree  $y = \lambda x^n$  is the curve  $\{k^2nx/(nx^2 + y^2)\}^{n-1} = y/\lambda nx$ , where  $k^2$  is the constant of inversion.

**9453.** (Professor NEUBERG.)—Un jeu de trente-deux cartes est étalé en cercle. Quelle est la probabilité que deux cartes de même valeur (deux sept, deux huit, &c.) ne se suivent pas immédiatement?

**9814.** Show that, for all integer values of  $n$ ,

$$\frac{1}{2n+1} - \frac{1}{1} \cdot \frac{1}{2} \cdot \frac{1}{2n+3} + \frac{1 \cdot 3}{1 \cdot 2 \cdot 2^2} \cdot \frac{1}{2n+5} - \frac{1 \cdot 3 \cdot 5}{1 \cdot 2 \cdot 3 \cdot 2^3} \cdot \frac{1}{2n+7} + \dots$$

$$= \frac{1}{2^n} \left\{ 1 - \frac{2n-1}{2(n-1)} + \frac{(2n-1)(2n-3)}{2(n-1) \cdot 2(n-2)} - \dots \right\}$$

$$+ (-1)^n \frac{1}{2^{2n+1}} \cdot \frac{(2n!)}{(n!)^2} \log(1 + \sqrt{2}).$$

**10198.** (JOHN GRIFFITHS, M.A.)—The coordinates  $x$ ,  $y$ ,  $z$  being proportional to the perpendicular distances from the sides of a triangle ABC, prove that (1) the locus of a point  $(x, y, z)$  such that its pedal circle (i.e., the circle which passes through the feet of the perpendiculars drawn from the point in question upon the sides of the triangle) touches the nine-point circle is the cubic

$$x(y^2 - z^2) \cos A + y(z^2 - x^2) \cos B + z(x^2 - y^2) \cos C = 0;$$

and (2) trace this curve.

**10236.** (ARTEMAS MARTIN, LL.D.)—What is the greatest number of equal spheres, each 1 inch in diameter, that can be packed in a hollow sphere whose internal diameter is 3 inches?

## NOTICES TO CORRESPONDENTS.

ERRATUM.—Mr. MACCOLL, B.A., writes:—"In the *Educational Times* for March, 1902, p. 155, second column, line 8,  $(\phi = z)$  should be  $(\phi = \psi)$ . Also, in the preceding line,  $\alpha_n$  should be  $\alpha^n$ ."

A solution to Quest. 15054, bearing neither name and address nor *nom de plume*, has been received. The Editor reminds contributors that it is essential that every question, solution, and note should be signed with the name or known pseudonym of the author, and that first contributions should be accompanied by both the name and the address of the contributor.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

*Vol. I. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

## THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 13th. — Major MacMahon, R.A., V.P., and subsequently Lieut.-Col. Cunningham, R.E., in the Chair. Thirteen members present.

Mr. G. H. Hardy was admitted into the Society.

The Rev. J. Cullen read a paper "On the Solutions of a System of Linear Congruences." Messrs. Mathews and Cunningham spoke on the subject of the paper.

Mr. Hardy gave an abstract of his paper "On the Theory of Cauchy's Principal Values (iii)."

Mr. R. Hargreaves communicated a paper "On the Algebraical Connexion between Zonal Harmonics of Orders differing by an Integer."

"On Quadrature Formulæ," by Mr. J. Buchanan, was taken as read.

Dr. Macaulay gave an expression for the resultant of  $n$  homogeneous equations in  $n$  variables as a determinant divided by a minor of that determinant.

## NATURE STUDY.

Just Published.

## EYES AND NO EYES.

By ARAHELLA B. BUCKLEY,

Author of "Life and Her Children," "The Fairyland of Science," &c.

With 48 FULL-PAGE COLOURED PLATES and other Illustrations expressly executed for the work by Mr. A FAIRFAX MUCKLEY.

Handsomely bound in cloth gilt, gilt edges, 3s. 6d.

**A HISTORY OF ENGLAND.** By H. O. ARNOLD-FORSTER, M.A. Fourth and Revised Edition. From the Landing of Julius Caesar to the Present Day. Extra crown 8vo, 852 pages, copiously illustrated, 5s.; or, handsomely bound, gilt edges, 6s. 6d.

**MARINE PAINTING IN WATER-COLOUR.** By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. 60 pages, crown 4to, 5s.

**LANDSCAPE PAINTING IN WATER-COLOURS.** By J. MACWHIRTER, R.A. With 23 Coloured Plates. 5s. Three large editions have already been called for.

**CASSELL'S FRENCH DICTIONARY.** (French-English and English-French.) 615th Thousand. Revised and Corrected. 1,150 pages, cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S GERMAN DICTIONARY.** (German-English and English-German.) 277th Thousand. 1,120 pages, demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S LATIN DICTIONARY.** (Latin-English and English-Latin.) 132nd Thousand. Cheap Edition, 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

## EDUCATIONAL REVIEW.

Edited by NICHOLAS MURRAY BUTLER.

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GORBY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

14s. 6d. a Year, 1s. 10d. a Copy. Ten Numbers, none being issued for July and August. Current numbers kept in stock.

# MAGMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

## MACMILLAN'S MANUALS FOR TEACHERS.—New Volume.

**PRINCIPLES OF CLASS TEACHING.** By J. J. FINDLAY, M.A., Head Master of the Cardiff Intermediate School for Boys. Globe 8vo. [Ready shortly.]

### PERSONAL PROBLEM SERIES.

**THE COLLEGE STUDENT AND HIS PROBLEMS.** By JAMES HULME CANFIELD. Globe 8vo, 4s. 6d. net.

*Pilot.*—"Mr. Canfield's advice is sound, and given with a healthy tone of conviction."

**MENTAL GROWTH AND CONTROL.** By NATHAN OPPENHEIM, M.D. Globe 8vo, 4s. 6d. net.

## ENGLISH.

**WORDS AND THEIR WAYS IN ENGLISH SPEECH.** By Professor JAMES B. GREENOUGH and Professor GEORGE L. KITTREDGE. Crown 8vo, 5s. net.

*Pilot.*—"The popular price at which it is issued ought to ensure for it the success which its merits deserve."

**KEY TO OUTLINE OF ENGLISH GRAMMAR.** By J. C. NESFIELD, M.A. Globe 8vo, 2s. 6d. net.

**A TEXT-BOOK OF APPLIED ENGLISH GRAMMAR.** By Professor E. H. LEWIS, Ph.D. Globe 8vo, 2s.

## FRENCH AND GERMAN.

### MACMILLAN'S PRIMARY SERIES.—New Volume.

**LES HISTOIRES DE TANTE.** By R. D'ALISSAS (M. and K. ROGET). With Notes and Vocabulary by the Authors, under the direction of F. F. ROGET. Globe 8vo, 1s. 6d.

*Educational News.*—"An excellent feature of the book is the notes, which are very helpful and thoroughly up-to-date. The stories are interesting and provide a good general vocabulary."

### SIEMMANN'S ELEMENTARY FRENCH SERIES.—New Volume.

**NAPOLEON.** Par ALEXANDRE DEMAS. Adapted and Edited by W. W. VAUGHAN, M.A., Assistant Master at Clifton College. With Map. Globe 8vo, 2s.

**Word and Phrase Book for "Napoléon."** Globe 8vo, sewed, 6d.

**Key to Appendices of "Napoléon."** Globe 8vo, 2s. 6d. net.

### SIEMMANN'S ELEMENTARY GERMAN SERIES.—New Volume.

**HERMANN DER CHERUSKER UND DIE SCHLACHT IM TEUTOBURGER WALDE.** Von FERDINAND GOEBEL. Edited by J. ESSER, Master of Modern Languages, Madras College, St. Andrews. Globe 8vo, 2s.

**Word and Phrase Book** to same. Globe 8vo, sewed, 6d.

**Key to Appendices** of same. Globe 8vo, 2s. 6d. net.

## GEOGRAPHY.

**TARR AND McMURRY'S GEOGRAPHIES.** With numerous Maps and many Illustrations.

**FIRST BOOK—Home Geography and the Earth as a Whole.** 3s. 6d.

*Schoolmaster.*—"A most excellent production. . . . No short review could be adequate to express all we feel with regard to this book. It is a gem for the school library."

**SECOND BOOK—North America, with an especially full treatment of the United States and its Dependencies.** 4s. 6d.

**THIRD BOOK—Europe and other Continents, with Review of North America.** 4s. 6d.

## LATIN AND GREEK.

**LATIN PASSAGES FOR TRANSLATION.** For the Use of Higher Forms in Schools, and of Students working for Pass Degrees. Selected by M. ALFORD, Lecturer in Classics at Girton and Westfield Colleges. Globe 8vo, 3s.

### CLASSICAL SERIES.—New Volume.

**THE ANTIGONE OF SOPHOKLES.** With Introduction, Notes, and Appendices. By M. A. BAYFIELD, M.A. Fcap. 8vo, 2s. 6d.

*Educational News.*—"Annotated in as thoroughly exhaustive and intelligent a manner as the most fastidious teacher could desire. . . . A more useful edition could not be placed in the hands of the young student."

### MACMILLAN'S GREEK COURSE.—New Volume.

**GREEK PROSE COMPOSITION.** By S. O. ANDREW, M.A., Head Master of the Hulme Grammar School, Oldham. Globe 8vo. [Ready shortly.]

## MATHEMATICS AND SCIENCE.

**ALGEBRAICAL EXAMPLES.** Supplementary to HALL and KNIGHT'S *Algebra for Beginners and Elementary Algebra*. (Chaps. I.—XXVII.). By H. S. HALL, M.A. With or without Answers. Globe 8vo, 2s.

*Educational News.*—"Very carefully graduated in accordance with the books mentioned above. . . . Although compiled for use with these books, it will be of use as supplement to any work."

**AN ELEMENTARY TREATISE ON THE CALCULUS.** With Illustrations from Geometry, Mechanics, and Physics. By Professor GEORGE A. GIBSON, M.A., F.R.S.E. Crown 8vo, 7s. 6d. *Guardian.*—"In all ways a most scholarly and noteworthy treatise."

**SPHERICAL TRIGONOMETRY FOR THE USE OF COLLEGES AND SCHOOLS.** By the late I. TODDENTER, M.A., F.R.S. Revised by J. G. LEATHEM, M.A., D.Sc. Crown 8vo, 7s. 6d.

*Royal College of Science Magazine.*—"The reviser has produced a book of which he might well be proud. It should rank as high in the present as Toddenter's has in the past, and no higher tribute could be paid. . . . A model text-book. . . . Should be in the hands of every student of spherical trigonometry."

**OUTLINES OF METAPHYSICS.** By JOHN S. MACKENZIE, M.A. Glasg., Litt.D. Camb., Professor of Logic and Philosophy in the University College of South Wales and Monmouthshire. Crown 8vo, 4s. 6d.

**PRACTICAL EXERCISES IN MAGNETISM AND ELECTRICITY.** Being a Laboratory Course for Schools of Science. By H. E. HADLEY, B.Sc. Lond. Globe 8vo, 2s. 6d.

*Educational News.*—"It is impossible to speak too highly of this book."

**AN ELEMENTARY BOOK ON ELECTRICITY AND MAGNETISM,** and their Applications. By Professors D. C. and J. P. JACKSON. Illustrated. Crown 8vo, 7s. 6d.

**A COLLEGE TEXT-BOOK OF CHEMISTRY.** By IRA REMSEN. Extra crown 8vo, 8s. 6d. net.

*Royal College of Science Magazine.*—"This text-book is written in an extremely good, intelligent style, and is quite up to date. . . . Can be recommended as a thoroughly sound text-book of chemistry."

**INTRODUCTION TO CHEMISTRY AND PHYSICS.** By Professor W. H. PERKIN, Jr., Ph.D., F.R.S., and BEVAN LEAN, D.Sc., B.A. Lond. In Two Vols. Globe 8vo, 2s. each.

*Educational News.*—"We have little doubt but this edition will be eagerly welcomed by all who wish a trustworthy manual on the more elementary sections of chemistry and physics."

**THE ELEMENTS OF PHYSICAL CHEMISTRY.** By Professor H. C. JONES. 8vo, 17s. net.

{ By Post, 7d.

### COLLEGE OF PRECEPTORS AND ASSISTANT MASTERS' ASSOCIATION.

A Meeting will be held at the College, Bloomsbury Square, on Wednesday, 21st May, at 7.30 p.m., when a Paper on "Some Notes on American Universities" will be read by Prof. KNIGHT, of St. Andrews University.

A Discussion will follow the reading of the Paper.

### COLLEGE OF PRECEPTORS.—EXAMINATIONS, 1902.

**1. DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 8th of July, 1902.—At the *Midsummer* Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

**2. CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 1st of July, 1902.

**3. LOWER FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 1st of July, 1902.

**4. PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 2nd of September, 1902.

**5. INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

#### PRIZES.

**Diploma Examination.**—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Dorock Scholarship of £20 will be awarded on the results of the Christmas Examination.

**Certificate Examination.**—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

**First Class.**—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

**Second Class.**—Four Prizes for General Proficiency.

**Third Class.**—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

### PROFESSIONAL PRELIMINARY EXAMINATIONS.

—The COLLEGE of PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 2nd, 3rd, and 4th of September, 1902.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

### COLLEGE OF PRECEPTORS.

#### THE CALENDAR FOR 1902

is now ready, and may be obtained from Mr. F. HODGSON, 89 Farringdon Street, E.C. Price, free by post,

To Members of the College ... 1s. 6d.

To Non-Members ... 2s. 6d.

The Calendar contains, in addition to the Lists of Members, and of Schools sending in candidates to the Certificate Examinations, the Regulations respecting the Examinations to be held in 1902, &c., and the

#### EXAMINATION PAPERS

set at the Certificate, Lower Forms, Professional Preliminary, and Diploma Examinations held in 1901.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

The Session began on October 1st, 1901. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Seasonal Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

The Board of Trinity College are prepared to receive applications from candidates for two Readerships in Indian Languages:

- (1) A READERSHIP IN BURMESE AND HINDUSTANI.
- (2) A READERSHIP IN TAMIL AND TELUGU.

The Salary of each will be £150 per annum, in addition to Fees from Students. The duties will be to lecture on three days in the week during each of the eighteen weeks of the University Arts Course, beginning in the first week of November, 1902, and also during six weeks in the months of August-September, beginning in 1903, and such other duties as the Board of Trinity College may direct.

Candidates must send copies of their testimonials, before May 15th, to the REGISTRAR, Trinity College, Dublin.

## UNIVERSITY OF WALES.

### IMPORTANT NOTICE.

Owing to the date of the Coronation, the Matriculation Examination of the University of Wales will be held on Monday, June 30th, 1902, and following days, instead of Monday, June 23rd, and following days, as originally fixed. Applications for Entry Forms must be made not later than Monday, May 26th, to IVOR JAMES, Registrar of the University, Brecon, March 19th, 1902.

## HARTLEY COLLEGE, SOUTHAMPTON.

Principal—S. W. RICHARDSON, D.Sc. (Lond.).  
SUMMER COURSE OF NATURE STUDY FOR TEACHERS.

A Summer Course of Nature Study will be held at Sandown, in the Isle of Wight, from August 2nd to August 16th, 1902. The arrangements will be made by Dr. Richardson, Principal of the Hartley College, and T. G. ROOPER, Esq., H.M.I. The Higher Grade School at Sandown has been kindly lent by the Sandown School Board for the purpose of lectures and demonstrations. The main feature of the Course will be work on the Downs and the Sea-shore. The Course will be conducted by J. T. JENKINS, D.Sc., Ph.D., Lecturer in Biology and Geology at the College.

For further particulars apply to D. KIDDLE, Registrar.

## ST. GEORGE'S HOSPITAL MEDICAL SCHOOL,

HYDE PARK CORNER, S.W.

The SUMMER SESSION of 1902 will commence on Thursday, May 1st.

Particulars of Classes, Fees, Entrance Scholarships and Exhibitions, and Prizes, &c., may be obtained on application to the DEAN of the School at the Hospital.

## THE ANSTY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS

(LING'S SWEDISH SYSTEM).

There are more openings for Students trained at this College than can be filled.

Apply for Prospectus to the PRINCIPAL, The Leasowes, Halesowen.

Further particulars may be obtained on application to the PRINCIPAL.

## ROYAL HOLLOWAY COLLEGE FOR WOMEN.

(UNIVERSITY OF LONDON.)

ENTRANCE SCHOLARSHIPS.—Ten Entrance Scholarships from £75 to £40, and several Bursaries of £30, tenable for three years at the College, will be awarded on the results of an Examination to be held from July 1st to 5th, 1902. Names must be entered before June 3rd. The College prepares Students for London Degrees and also for Oxford Honour Examinations. Inclusive fee, £90 a year.

For forms of entry and further particulars apply to the SECRETARY, Royal Holloway College, Egham, Surrey.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

## JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Headmasters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## WESTFIELD COLLEGE (FOR WOMEN),

HAMPSTEAD, LONDON.

FOUR SCHOLARSHIPS, of the value of from £30 to £60 a year for two years, will be offered for competition at an Examination to be held on June 24th and 25th, 1902.

Candidates must not be under 18 years of age, and must have passed the Matriculation Examination of the University of London. The successful candidates will be required to come into residence in October next, and to read for the B.A. or B.Sc. Degree of the University of London. Entrance forms and full particulars may be obtained from the Secretary, Miss S. M. SMEK.

FREE.

## PROFESSOR DENNEY AND MR. LYDDON-ROBERTS,

Principals of the Normal Correspondence College, have, through the courtesy of the College of Preceptors, issued the following

## FREE GUIDES.

- |   |           |

# CAMBRIDGE UNIVERSITY PRESS.

## A SELECTED LIST OF EDUCATIONAL WORKS PUBLISHED BY THE CAMBRIDGE UNIVERSITY PRESS.

**A SHORT HISTORY OF THE GREEKS FROM THE EARLIEST TIMES TO B.C. 146.** By E. S. SHUCKBURGH, M.A., late Fellow of Emmanuel College, Cambridge; Author of "A Translation of Polybius," &c. Crown 8vo, with Illustrations and Maps, 4s. 6d.  
*Times*.—"Clear, scholarly, and readable."  
*School World*.—"Mr. Shuckburgh's work is sound, scholarly, and interesting."  
*Academy*.—"Mr. Shuckburgh's work is worthy of his reputation."  
*Saturday Review*.—"An excellent school history, equally suitable for teacher and learner."

**A SHORT HISTORY OF THE HEBREWS TO THE ROMAN PERIOD.** By R. L. OTTLEY, M.A., Rector of Winterbourne Bassett, Wilts.; sometime Student of Christ Church and Fellow of Magdalen College, Oxford. Crown 8vo, with 7 Maps, 5s.  
*Spectator*.—"Mr. Ottley faces with courage the critical problem as it concerns Old Testament history. . . . On the whole Mr. Ottley's book will be found a sober and cautious effort to accommodate the old and the new. Something of the kind is absolutely necessary, and we are thankful for an honest and devout effort to supply the want."  
*Journal of Education*.—"It marks an immense advance in the popular treatment of the Bible history, and teachers and students alike will find it a most valuable aid."

**CAMBRIDGE COMPOSITIONS, GREEK AND LATIN.** Edited for the Syndics of the Press, by R. D. ARCHER-HIND, M.A., and R. D. HICKS, M.A., Fellows and Classical Lecturers of Trinity College, Cambridge. Crown 8vo, 10s.

**DEMONSTRATIONS IN GREEK IAMBIC VERSE.** By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge; Head Master of the Perse School, Cambridge. Crown 8vo, 6s.  
*School World*.—"This is a good book, which should be obtained by every classical master."

**GREEK AND LATIN COMPOSITIONS.** By RICHARD SHILLETO, of Trinity College, late Fellow of Peterhouse, Cambridge. Crown 8vo, 7s. 6d. net.  
*Cambridge Review*.—"This collection of compositions, by one of Cambridge's most famous scholars, executed by his sons, will be welcome to every student of classics."

**HERODOTUS.** Edited by E. S. SHUCKBURGH, M.A. Book V., 3s. Books VI., VIII., and IX., 4s. each. Books VIII., 1-90, IX., 1-89, 2s. 6d. each.  
*Journal of Education*.—"We could not wish for a better introduction to Herodotus."

**PLATO.—APOLOGIA SOCRATIS.** Edited by J. ADAM, M.A., Fellow and Classical Lecturer of Emmanuel College, Cambridge. New Edition. 3s. 6d.  
*Classical Review*.—"A worthy representative of English scholarship."

**PLATO.—CRITO.** By the same Editor. 2s. 6d.  
*Guardian*.—"A scholarly edition of a dialogue which has never been really well edited in English."

**PLATO.—EUTHYPHRO.** By the same Editor. 2s. 6d.

**PLATO.—PROTAGORAS.** Edited by J. and A. M. ADAM. 4s. 6d.

**SOPHOCLES.—OEDIPUS TYRANNUS.** School Edition. With Introduction and Commentary by Sir R. C. JEBB, Litt.D. Second Edition, Revised. 4s.

**THUCYDIDES. BOOK III.** With Introduction and Notes by A. W. SPRATT, M.A., Fellow and Tutor of St. Catharine's College. 5s.  
*Athenæum*.—"At last an editor has proved himself capable of doing for Thucydides what it was once hoped that Richard Shilleto would do, namely, produce a thoroughly satisfactory and permanent edition."

**THUCYDIDES. BOOK VII.** Edited by H. A. HOLDEN, M.A., LL.D. 5s.  
*Academy*.—"Dr. Holden's admirable scholarship and his methodical way of working have enabled him to turn out as comprehensive and as lucid an edition of a single book as can be found in any language."

**XENOPHON.—HELLENICS. BOOKS I. and II.** Edited by G. M. EDWARDS, M.A. 3s. 6d.  
*Classical Review*.—"The name of Mr. G. M. Edwards on the title-page of a school commentary is a sufficient guarantee that it will be practical and well adapted to its object, and in this edition his careful preparation and cautious judgment do not fail. The most noticeable feature of the book is the pains bestowed on grammatical elucidations."

*Journal of Education*.—"A well written edition of an important book from the point of view of the historian, and one which should prove of service to students. The book will be found useful by all students of Greek and Greek history."

**CICERO.—IN CATILINAM I.** Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A., Emmanuel College, Cambridge. 1s. 6d.  
*School Guardian*.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

### CICERO'S ORATIONS.

Edited by J. S. REID, Litt.D., Professor of Ancient History in the University of Cambridge.

**CICERO.—DE AMICITIA, DE SENECTUTE.** 3s. 6d. each.  
*Athenæum*.—"This volume (De Amicitia), like Dr. Reid's other editions, is a solid gain to the scholarship of the country."

**CICERO.—PRO BALBO.** 1s. 6d.

**CICERO.—PRO ARCHIA POETA.** 2s.

*Academy*.—"It is an admirable specimen of careful editing. . . . The notes are clear and scholarlike. . . . No boy can master this little volume without feeling that he has advanced a long step in scholarship."

**CICERO.—PRO SULLA.** 3s. 6d.

**CICERO.—PRO MILONE.** 2s. 6d.

*Athenæum*.—"The whole commentary displays the touch of a master."

**HORACE.—SATIRES. BOOK I.** Edited, with Introduction and Notes, by J. GOW, Litt.D., Head Master of Westminster School. 2s.  
J. SARGENT in the *Classical Review*.—"Not only an excellent school book, but a very considerable contribution to our knowledge of the 'Satires.' . . . Dr. Gow's edition is one which no Horatian will choose to be without."  
*Guardian*.—"Decidedly the best edition for school purposes."

By the same Editor.

**HORACE.—ODES AND EPODES.** In One Volume. 5s.

Or, in separate Parts—Odes, Books I. and III., each 2s. Odes, Books II. and IV., each 1s. 6d. Epodes. 1s. 6d.  
*Guardian*.—"Most admirable little books by a first-rate scholar and schoolmaster. The notes are brief, clear, accurate, and are just what would be wanted by any ordinary student of Horace. There can, to our thinking, be no question about the satisfactory character of Dr. Gow's work."

**JUVENAL.—SATIRES.** Edited, with Introduction, Notes, and Index, by J. D. DUFF, M.A., Fellow of Trinity College. 5s.  
*Athenæum*.—"One of the best school books which we have seen for some time. . . . The notes are capital."  
*Guardian*.—"For the present it seems to us the best English school edition of Juvenal."

**LIVY. BOOK II.** With Introduction, Notes, and Map. By R. S. CONWAY, Litt.D., Professor of Latin in University College, Cardiff. 2s. 6d.  
*Guardian*.—"This volume ranks with the best of the Pitt Press Series, and bears on every page the trace of a master hand. . . . We trust that this volume will receive from sixth-form masters the attention that it deserves."  
*School World*.—"This edition must be used in all classes where Livy is to be begun or continued."

*Journal of Education*.—"This is another useful, or even valuable, edition, with a good introduction, and notes which show that the editor is interested in them, and which are therefore likely to interest other people."  
*Educational Times*.—"No better edition could possibly be desired for sixth forms and University students. . . . We trust that this book will meet with the success that its unusual excellence merits."

**OVID.—SELECTIONS FROM THE TRISTIA.** For the use of Middle School Classes. Edited, with Notes and Vocabulary, by H. F. MORLAND SIMPSON, Rector of Aberdeen Grammar School, formerly Scholar of Pembroke College, Cambridge. 1s. 6d.  
*Guardian*.—"Schoolmasters who wish to read Ovid with their middle forms will do well to look at this excellent little book."

**VERGIL.—COMPLETE WORKS.** Edited by A. SIDGWICK, M.A., Reader in Greek in the University of Oxford. Vol. I., Text. 3s. 6d. Vol. II., Notes. 4s. 6d.  
*Guardian*.—"Mr. Sidgwick's 'Vergil' is, we believe, on the whole, the best school edition of the poet."

Or, separately, as follows:

**VERGIL.—ÆNEID I. to XII.** 1s. 6d. each. **BUCOLICS.** 1s. 6d.

**VERGIL.—GEORGICS I., II., and III., IV.** Each Volume, 2s.  
Also with Vocabulary, by the same Editor.

**VERGIL.—ÆNEID I., II., V., VI., IX., and XII.** Edited, with Introduction, Notes, and complete Vocabulary, by A. SIDGWICK. 1s. 6d. each.

Complete Educational Lists will be sent on application.

The Educational Times.

*The Education Bill.*

THE congestion of Parliamentary business has prepared us for the announcement of an Autumn Session. The Education Bill, we take it, will be left over till that more convenient season. It would be rather sanguine, however, to expect that the intervening space for deliberation will wholly exorcise the pugnacious temper either of supporters or of opponents of the measure. It seems only too probable that the Bill will be disputed pertinaciously, with a bitterness obscuring the real educational issues.

Though the opposition so widely and hotly displayed is largely based on educational grounds, it can hardly be doubted that the main impulse is religious or ecclesiastical. Nonconformists “indignantly protest”—and will certainly continue to protest more or less indignantly—against “paying rates and taxes to schools whose teaching is repugnant to their conscience,” against the perpetuation of “the unjust subjection of a State-paid teaching profession to sectarian tests,” and against the prospect of “the multiplication of sectarian schools.” Indeed, some of their most honoured leaders have approved the suggestion of a refusal to pay rates. It is futile to reply that there are, under the existing system, which they champion, very many citizens that “pay rates and taxes to schools whose teaching is repugnant to their conscience,” and that quietly recognize the principle of submission to the general will expressed in constitutional form. The promoters of the Bill, on their side, must be allowed credit for equal conscientiousness. Is it beyond the resources of statesmanship to find a means of rational compromise? There is no trouble in Scotland. There is no difficulty in Canada. Why should there be an educational embroilment of this character in England?

Apart from intractableness on the religious difficulty, the Bill might be worked into passable shape. There are indications that the Government will not struggle hard to maintain the feeble option. The “single Local Authority charged with the superintendence and provision of both elementary and secondary education,” which Mr. Chamberlain already perceives in the Bill, may by conciliatory accommodation be eventually found in the Act. As the Bill stands, it is not

too much to say that there may be within the same area “a School Board, a Technical Education Committee, a Local Authority under Clause VII.,’ several sets of voluntary school managers, a School of Art Council, and privately constituted committees of science and art classes, an endowed grammar school, under separate management, competing with a higher-grade Board school, and sometimes a technical day school competing with both.” Such a “unification” seems preposterous enough. But, with discreet handling, there should be no insuperable difficulty in achieving at least a very near approach to real unification. There would still be lacking the promised co-ordination of primary and secondary education in any effective sense; but for that we shall have to wait for more extensive and particular inquiry.

If the system is to be national in any real sense, there will be demanded a larger measure of public control. The working of School Boards, whatever their failings, has unquestionably engaged the public interest in education and helped to raise the standard in no inconsiderable degree, while it has greatly improved the position of the teachers and the school equipment. If the powers given to managers by the Bill be not brought under the control of the Local Authority, there will be a break in the principal of unification that must seriously interfere, especially in country districts, with the efficiency of education and perpetuate discrimination against capable teachers on specifically religious grounds. With every desire for absolute freedom in religious teaching, we cannot but hold that the arrangements for it must not prejudice the secular teaching. There ought not to be any reasonable difficulty in accommodating the two subjects.

Another point that will call for attention under the same head is the strong concentration of control in certain official hands. The Councils are to find the money, but their powers are very stringently limited—as has been pointed out clearly by the Northern Counties Education League, and as any one can verify by going through the clauses of the Bill. The Local Government Board is an excellent institution, but it seems a retrograde movement to cast such wide powers into its lap; and, if the Councils are to throw their energies, even by deputy, into the work, they must have larger scope. No man or body of men can do satisfactory work if bound hand and foot. Notably, it has been justly pointed out, the

Local Government Board is set up as a court of appeal in cases where the Local Authority wants an increase of the rate for secondary education. What are the qualifications of the Local Government Board for this purpose? The Local Authority—which, we think, is not likely to be aggressive—ought, where it has any large purpose in view, to go with a statement of its wants and its objects to the Board of Education, which is competent to decide the matter, and then, and not till then, to pass on to the Local Government Board. On this point we should be inclined to lay particular stress.

We should like to discern signs that a spirit of reasonable accommodation will prevail in the settlement of substantial differences. We trust we shall hear no more those wild and whirling words of threatened resistance to demands of rates and taxes. If the Government would but lay hold of the Bill in a broad national spirit, disregarding fanatical extremists on both sides, and not fearing their fate too much, they might yet shape the Bill on such lines as would settle the question for our time and brighten their somewhat tarnished educational record.

### NOTES.

THE eighth and ninth volumes of "Special Reports on Educational Subjects," just issued by the Board of Education, bring together an immense quantity of most varied information, which ought to be turned to practical account here. In Vol. 8, we learn that Latin is taking a low place in secondary schools, and practical matters a higher place in elementary schools, in Norway and Sweden. There is also much interesting information about education in Switzerland, Holland, Hungary, Portugal, Servia, Japan, the Transvaal, &c., as well as discussions of the methods of teaching arithmetic and Latin at home, and of the order and method of language teaching in our secondary schools. The 13 reports in Vol. 9 examine various aspects of education in Germany. They deal

with recent changes in secondary education for boys in Prussia; with primary education in Prussia and Saxony; with school gardens in Germany; with the German higher schools for girls, and with certain contrasts between secondary education for girls in Germany and in England; with the continuation schools in Berlin; with the growth of Technical High Schools; with recent developments of higher commercial education; with the methods of measuring mental fatigue which have been adopted by some German students of education; and with the education of feeble-minded children and the care of neglected children in Germany.

Vol. 10 will be devoted to the United States.

THE spirit of reform appears to have breathed—across the Sussex Downs?—upon the Governors of Christ's Hospital. It is not only that the exodus from Newgate Street has actually taken place—and been completed on Primrose Day. More than that: they are credibly reported to be deeply exercised over the perplexing problem of the boys' traditional habiliments. It has been borne in upon them that some modifications of the ancient Blue-coat outfit are, if not absolutely necessary, yet peradventure desirable. Indeed, it is stated, though not without judicious reservation, that the picturesque amplitude of the gown will be curtailed,

that the buckled shoes will yield to commonplace serviceable boots, and that the invisible blue worsted cap will be replaced by headgear of special design. But what of the corduroy breeches? And what of the yellow stockings—those lovely ducks' legs? There is really no ground for alarm; a more modern toggery will scarcely administer any violent shock to the archaeological sensibilities of Horsham.

THE new broom at Merchant Taylors' is labouring to justify the old proverb. The clean sweep of assistant masters in that institution may, however, be stayed by wiser thoughts induced by the strong opinion of the profession and of the public. We have no sympathy whatever with incompetence; but when a head master of six and twenty, who came to Merchant Taylors' a year ago with no experience of a great public school, dismisses, or causes to be dismissed, teachers that were in active service when he was in his cradle, we look for very sufficient reasons. The resignation of the head of an important department, whose public record of more than a quarter of a century flings any suggestion of incompetence back in the teeth of the assessor, has been followed by the dismissal of three more assistant masters, who have given the best energies of their life to the school—for 26, 23, and 12 years respectively. Two of the three are over 50, and the other is 45; and they are all married men. Not one of them, we understand, had any complaint addressed to him before the disastrous bolt from the blue fell upon him; and one of them was dismissed simply "in consequence of changes in the school work." We recognize fully the trust committed to head masters and governors, but we insist on the duty of equitable consideration for assistant masters as well as for pupils and parents.

THE pittance granted to two of these three assistant masters—the third gets absolutely not a stiver of *solatium*—is scarcely worth mention, and we must hope that the Court of Governors will promptly awaken to the dread prospect they have so suddenly and inconsiderately opened out before these old servants of theirs. There is matter for very serious consideration in the argument of a writer in the *Westminster Gazette* (April 10):

If these two masters [of 23 and 12 years' standing] proved incompetent, how is it that the Company has taken from 12 to 20 years to discover the fact? Both men must have been as incompetent 10 years ago as now. If so, one is forced to the conclusion that the Company is to blame for permitting the lads at its school to remain so long in incompetent hands. To neglect it now adds injustice; for it makes its masters suffer for its own remissness.

We cannot but believe that the Company will yet reconsider the situation and make reasonable provision for every one of the dismissed teachers. But, further, the case has an interest that reaches far beyond the individual masters concerned, and far beyond the profession. For, as Mr. F. B. Kirkman has pointed out in the same article in our contemporary, "insecurity of tenure, added to low salaries and the difficulty of making provision for old age, is known to be injuriously affecting the quality and quantity of the supply both of secondary and elementary teachers, and hence the efficiency of the instruction given in our schools."

THE past month has been tolerably fruitful of educational endowments. Liverpool appears to promise no less promptitude of liberality than Birmingham. University College, London, starts fair on its quest of the million; and it will do well to take Mr. Astor's sensible hint to make first and creditable provision for the unendowed chairs it already has. Mr. Rhodes's spacious gifts naturally converge on Oxford, while Edinburgh, which has done so much for colonial students, has just missed a share on a rather insufficient plea. It seems quite hopeless to expect that Oxford can ever develop a medical school that can for a moment pretend to rival Edinburgh. The foundation of these munificent scholarships, creating so many spiritual ties between England and other English-speaking countries, and between England and the central Power of Europe, constitutes the noblest expression of Mr. Rhodes's "Imperialism." It stands in violent contrast with the amazingly crude and benighted destination of the residue of his estate. We congratulate Oriel, without any misgivings as to the administrative capacity of her "children." Mr. Shadwell is not the man to swell his totals with the figures of the current year of grace.

THE multiplicity of text-books and the changes in the same school, as well as the lack of uniformity in different schools, are common causes of parental vexation, whatever may be said on the side of the teachers. The trouble is not confined within the four seas, however; and M. Leygues, the Minister of Public Instruction in France and Grand Master of the University, has girt up his loins to apply a remedy within his jurisdiction, at any rate to some extent, by way of a beginning. He has informed all the State *lycées* and *collèges* by circular that he proposes to appoint a commission of specialists to prepare Greek and Latin grammars for universal and exclusive use in every one of these institutions. M. Poincaré, ex-Minister, has at once taken the field in opposition: he pronounces the project useless, and even dangerous, as trammelling scientific research. M. Bréal, the distinguished Professor at the Collège de France and Member of the Institute, joins forces with M. Poincaré. So there is a general mella over the business, as hot as if it were a question of spelling reform. The *Temps* interposes with the suggestion that, while the official volumes should be provided for the schools, the use of them should be decreed optional, in reliance on their merit to win them preference or exclusive adoption. Was it M. Nisard or another that took out his watch and said: "Now, at this moment every public school in France is at such and such a lesson"? Uniformity may readily become a fetish.

PROF. D'ARCY THOMPSON, in a recent lecture at Aberdeen, drew pointed attention to an aspect of University economy that must eventually attract more consideration than it has yet received in this country. He was describing what he had seen in American institutions of the higher learning, and he stated that one of the chief advantages of free education in the United States is that it gives the teacher or the authorities control over the selection of their students. He said:

In America it is an essential condition of free education that there

shall be a severe test of the students' talents to begin with, and of their industry and performance as time goes on. There is a constant weeding out of those that seem unfit. In this country a good half of our students might well not be in the University. This is a strong statement; but, honestly, there are a great many outside lads better able to take their places.

There can be no doubt that the statement is correct. Yet the error lies on the safe side. An examiner that performs the weeding-out process had need of a very special gift of insight and discretion, and probably it is only the student's teacher, confirmed by an independent external examiner, that could be entrusted with so momentous a decision after reasonable experience of the student's work. One recalls Tait's fury at the examiners that awarded Clough a Second Class in the Final Schools. "They had not only a first-rate scholar, but a man of original genius, before them, and were too stupid to discover it." Stupidity of this sort has not died out. At the same time there ought to be some firm hand to remove a student from the wrong place, and some discerning intelligence to put him in the right place.

MR. JESSE COLLINGS does well to be jealous for the interests of the poor in the charitable endowments of the country. At a recent meeting of the Governors of the Blue Coat School in Birmingham he is reported to have charged the Charity Commissioners with defrauding the poor, in pursuance of their "policy of laying hold of everything they could in the form of charitable endowments and applying them to middle and higher class education." We do not essay to verify his calculation that the Commissioners have thus diverted a total sum of "millions of pounds." Of course, "neither the country nor Parliament knows of these things, because it is only such schemes as are opposed that ever come before Parliament, and these are not 4 per cent. of the schemes the Charity Commissioners frame." There is a good deal to be said for the policy of the Commissioners, undoubtedly; but it is a policy that can very readily be overstrained, especially where the Commissioners are not in personal touch with the conditions of the poor. The greater, therefore, is the responsibility of the local trustees for unsleeping vigilance.

IF Dr. Percy Gardner's advocacy of the teaching of classical archaeology in schools would lay a further burden on teachers and pupils, yet there would be a compensating relief in the enlightenment and variety it would introduce. As a result of a recent conference between some University teachers of the subject and a committee of head masters, Dr. Gardner has formulated his ideas on the kind of archaeological teaching suitable for schools, and embodied them in an interesting and instructive pamphlet just issued from the Clarendon Press. The object in view is simply to "help and supplement" school education in the classics—"to help the imagination and to impress the memory of the learner," and to supplement the merely literary study "by engaging the learner's attention and arousing his curiosity through bringing before him evidence as to the art, the customs, and the daily life of the nations among which civilization arose." Dr. Gardner condemns certain illustrated editions of the classics as "incorrect or inadequate, and tending to mislead as much as to help"; but he admits

that far more reliance may be placed on some of the atlases and handbooks of antiquities. To correct this essential defect he sets out in an appendix a considerable list of useful archæological apparatus, for which he gives large credit to Mr. J. L. Myres, of Christ Church.

DR. GARDNER does well to indicate the activity of the Germans in archæological teaching—an activity largely impelled by a dread of the superior attractions of physical and biological science. The argument will apply here as forcibly as in Germany. Dr. Gardner thinks “that the archæological illustration of the classics, to be at all effective, must be done by a special teacher, and at special times”; and, as to subjects, he suggests that “the best plan would be to secure for every school, either as resident master or as visiting lecturer, some man”—or woman?—“who has studied archæology, who knows something of Greek and Roman lands and of the great museums of Europe, and then leave him a free hand to teach any branch of the subject that interests him, and is likely to interest the boys.” Except in large towns—and even in most large towns—is not this, in the meantime at least, a counsel of perfection? Still, it is better to make the right start when the start is made at all. The best method will be “brief lectures, illustrated with the lantern”; and the direct illustration of Greek and Roman literature will be less valuable than a systematic study of some branch of ancient art—temples, columns, tombs, vases, coins, &c. The movement “can be but tentative and gradual.” But it now lies with the head masters to see what can be done in this direction.

PRESIDENT JAMES, of Northwestern University, has been telling his Board of Trustees that “recent events point to a serious crisis” in the history of the system of co-education. Hitherto the strongest institutions of the West—Oberlin, Michigan, Chicago, Wisconsin, and Northwestern—have admitted women on the same footing as men; whereas in the East—Vassar, Bryn Mawr, Smith, Wellesley, Barnard, Radcliffe—the separate or “co-ordinate” system prevails. Chicago contemplates the substitution of “co-ordination” for “co-education” in the first two years. The objections to co-education appear to be mainly two: the curriculum is planned primarily for men preparing for men’s work, and “difficult problems of administration and discipline” tend to emerge. There does not seem to be any substantial trouble from such problems in this country, but it may be that the American lady student of the Wild West is less amenable to discipline and to Mrs. Grundy. By the way, is it the fact that President James’s predecessor was dismissed on the ground that he was unable to raise for the University chest only some two or three million dollars? The precedent is not without interest to our Principals.

PROF. NICHOLAS MURRAY BUTLER, editor of the *Educational Review*, leaves the Chair of Philosophy and Education to become President of Columbia College, in succession to Mr. Seth Low. We congratulate both College and President.

## SUMMARY OF THE MONTH.

THE Education Bill, though pretty widely accepted in general terms by teachers, has evoked a storm of Nonconformist denunciation. The grounds of objection are religious and political as well as educational. The main points are these:—

1. The unification of the educational machinery is not attained. The essential plan of a sole authority is permissive merely.
2. Option is given to County, Borough, and District Councils, but not to School Boards.
3. The Local Authority is not elected *ad hoc*. The controlling bodies are neither directly elected by, nor directly responsible to, the ratepayers.
4. The powers of the Councils are so severely restricted that there is little real municipal control.
5. The provision for higher education is very insufficient, and there is no real co-ordination of primary and secondary education.
6. The extinction of School Boards, which have admittedly done good work, and the transference of their duties to Councils already overweighted with responsibility, will not tend to the advance in primary education that is urgently called for by the necessities of the times.
7. There are no adequate guarantees of efficiency.
8. The areas are too large for effective management.
9. The religious difficulty is intensified. The whole cost of sectarian schools is paid by the people, while the people have no real control of the schools. Religious strife is likely to be introduced into municipal elections and work.
10. Sectarian schools will be multiplied.
11. No attempt is made to rectify the anomalies of the training colleges for teachers “with their sectarian tests, accompanied with the injustice of well-nigh exclusive public maintenance.”
12. Women are electorally excluded from educational work.
13. Teachers, though State-paid, are subjected to sectarian tests.
14. The sphere of officialism, already too wide, is enlarged.

By his will, Mr. Rhodes bequeathed the sum of £100,000 to his old college, Oriel College, Oxford, and directed his trustees to establish 60 Colonial scholarships of £300 a year for 3 years, and 2 American scholarships (inferentially of the same value) for each of the present States and Territories of the United States, all tenable at Oxford. “I consider,” he wrote, “that the education of young Colonists at one of the Universities of the United Kingdom is of great advantage to them for giving breadth to their views, for their instruction in life and manners, and for instilling into their minds the advantage to the Colonies, as well as to the United Kingdom, of the retention of the unity of the Empire.” And: “I also desire to encourage and foster an appreciation of the advantages which I implicitly believe will result from the union of the English-speaking people throughout the world, and to encourage in the students from the United States of North America, who will benefit from the American scholarships, . . . an attachment to the country from which they have sprung, but without, I hope, withdrawing them or their sympathies from the land of their adoption or birth.”

My desire being that the students who shall be elected to the scholarships shall not be merely bookworms, I direct that, in the election of a student to a scholarship, regard shall be had to (1) his literary and scholastic attainments; (2) his fondness for, and success in, manly outdoor sports, such as cricket, football, and the like; (3) his qualities of manhood, truth, courage, devotion to duty, sympathy for the protection of the weak, kindness, unselfishness, and fellowship; and (4) his exhibition during school-days of moral force of character, and of instincts to lead and to take an interest in his schoolmates; for those latter attributes will be likely in after life to guide him to esteem the performance of public duties as his highest aim.

Further, by codicil, he established 15 scholarships at Oxford of £250 each, tenable for three years, for students of German birth, to be nominated by the German Emperor, for “a good understanding between England, Germany, and the United States of America will secure the peace of the world, and educational relations form the strongest tie.”

IN connexion with Mr. Rhodes’s scholarships, the *Westminster Gazette* (April 7) appropriately recalls the following passage in Mr. Bryce’s valedictory lecture on resigning the chair of Civil Law in 1893 (“Studies in History and Jurisprudence,” II., 523):

Perhaps those who dwell in Oxford have scarcely yet realized the magnificent position this University holds, as not only the oldest and the most externally beautiful and sumptuous place of education in the

English-speaking world, but as a spot whose name and fame exert a wonderful power over the imagination of the English peoples beyond the sea, many of whose youth would gladly flock hither were they encouraged to do so by arrangements suited to their needs. For those among the studious youth of the United States and Canada who desire to follow out their special studies, I can safely say from what I have seen of Canada and the United States that, did Oxford and Cambridge provide what the Universities of Germany provide, and were it as easy to enter here and choose the subject one seeks to study as it is in the Universities of Germany, it is to Oxford and Cambridge, rather than to Germany, that most of them would resort; nor could the value be over-estimated of such a tie as their membership here would create between the ancient mother and the scattered children, soon to be stronger than their mother, but still looking to her as the hallowed well-spring of their life.

THE National Union of Teachers held their 33rd Annual Conference at Bristol (March 31-April 3), under the presidency of Mr. Allen Croft, of Nottingham, who delivered a vigorous address, largely on the Education Bill. "A number of circumstances," he said, "impel me to believe that something in the nature of a conspiracy against the better education of the people is on foot in certain influential quarters to-day." After a day's discussion, a compromise was effected, and the following resolution was agreed to:—

That this Conference expresses approval of those principles of the Education Bill, 1902, under which may be created Local Authorities for controlling and maintaining all forms of education within wide areas, and hereby records its satisfaction with the Government's desire to place our educational system on a sound basis; but is of opinion that the measure cannot become educationally effective unless the permissive clauses of the Bill relating to elementary education be struck out, and it be made compulsory on the Local Authorities to take over the control of elementary as well as higher education, and that, in view of the unjust and unequal incidence of local rates, it is essential that additional grants should be made to Local Authorities from the Imperial Exchequer.

At an Extraordinary Meeting of the Senate of the University of London (April 16) the following resolution was adopted with reference to the death of the Earl of Kimberley, Chancellor of the University:—

The Senate desire to express their deep sense of the loss which the University has suffered by the death of its Chancellor, the Earl of Kimberley, K.G., D.C.L. Lord Kimberley was for forty-three years a member of the Senate, and throughout that long period not only showed a strong personal interest in the progress of the University, but from his great experience in public affairs, his wisdom in council, and his characteristic moderation and candour contributed materially to its welfare. On the lamented death of Lord Herschell the appointment by the Crown of Lord Kimberley as his successor in the Chancellorship was welcomed by all who had the interests of the University at heart. Until prevented by illness, his constant presence at the Senate meetings and his scholarly and statesmanlike views upon all matters concerned with the advancement of true learning were of the utmost service during the critical period of the reorganization of the University. The Senate beg most respectfully to express their deep sympathy with the family of the late Chancellor, and to assure them of their cordial appreciation of the services which he rendered to the cause of higher education in the kingdom and throughout the Empire by his long connexion with the University of London.

THE Court of Governors of the University College of North Wales passed the following resolution (April 16) on the lamented death of Mr. William Rathbone:—

The Court desires to place on record its profound sense of the irreparable loss sustained by the whole community, and especially by those engaged in the conduct of the Welsh educational movement, by the death, in a ripe and honoured old age, of Mr. William Rathbone, one of the chief founders of this College and for many years its President. The Court recognizes in him a unique example of unselfish, energetic, and lifelong devotion to the moral and social elevation of his fellow-countrymen. It recalls not only the unflinching generosity with which, during a long life, he supported every movement for the public good, but also the statesmanlike largeness of view, the breadth of personal sympathy, the insight amounting to intuition which enabled him to discern the possibilities of a country and people with whom he first came into contact after middle life, and, above all, the invincible faith in his fellow-men—qualities which together made him one of the most potent forces for social amelioration during the last half-century. The Court feels that the memory of his life and work will remain an imperishable inspiration for philanthropic and educational effort in this country, and that thus

the ardent desire of Mr. Rathbone himself will be fulfilled that the causes to which he devoted his life might continue to command the enthusiasm of devoted workers. Finally, the Court desires to convey to the members of his family an expression of its deep and respectful sympathy in their bereavement.

Principal Reichel said that their late President seemed to him to be the pivot of the movement which led to the establishment of the College.

LORD REAY, President of University College, London, has formally issued (April 11) the appeal for a million. He says very justly:

By the new statutes of the University of London a teaching University has been created. It is impossible, however, for the University to exercise its proper functions with regard to teaching and research until it has capital funds and adequate buildings at its disposal. The part of the Imperial Institute allocated to the University does not more than suffice for the purposes of examination and secretariat. University College, London, has, from its foundation seventy-five years ago, been a seat of University education and research. Its yearly output of original work is not exceeded by that of any University in the land. Its buildings, freehold land, and endowments represent a capital value of at least £800,000, and its present accommodation could be trebled by the extension of the buildings in its own grounds. It is evident, therefore, that the policy of incorporating the college in the University is an important step in building up the Greater London University on existing institutions. The great need of our country at the present time is an increase in the supply of men with trained brains, men who will act as leaders in the world of thought and of affairs and in the struggle for mastery over the forces of Nature. The recent industrial development of Germany, the growing ascendancy of America, are largely due to the recognition of this fact, and to the provision by the State or by private individuals of the necessary means—of Universities well equipped with laboratories and well supplied with endowments.

Donations and subscriptions should be sent to the treasurer, Sir Richard Farrant, at the College.

The *Times* says (April 12): "The condition of University College is grievous, . . . not creditable to London. . . . The appeal is the bitter cry of learning in distress. . . . It will be a pity if they [the College] do not meet with a generous response. It will be a public misfortune if they ask altogether in vain."

PROF. MARSHALL laid before the Senate of Cambridge University (April 11) a vigorous plea for the establishment of a Tripos in Economics and Political Science, these subjects having no due scope as a part of the Moral Science Tripos. The grounds of his project he expressed as follows:—

If similar economic changes continue for long, and go much farther, our surplus of revenue over expenditure, available for naval and military use, will be less than that of Germany. England is not, and probably never again will be, completely mistress in her own house. She is not free to weigh the true benefits of a higher culture or a more leisurely life against the material gains of increased economic vigour, without reference to the rate at which the sinews of war are growing elsewhere. There is need for a larger number of sympathetic students, who have studied working-class problems in a scientific spirit; and who, in later years, when their knowledge of life is deeper and their sense of proportion more disciplined, will be qualified to go to the root of the urgent social issues of their day, and to lay bare the ultimate as well as the immediate results of plausible proposals for social reform.

In the course of his plea, Prof. Marshall strongly urged that a knowledge of economics is now of vital importance not only to the legislative, executive, and diplomatic corps, occupied with economic issues half their time, but also to business men. He also suggested an outline scheme. Meantime, a memorial requesting the Council of the Senate to nominate a syndicate to inquire into and report upon the best means of enlarging the opportunities for the study in Cambridge of economics and associated branches of political science has been numerous signed by members of the Senate.

THE Lord Mayor of Liverpool has issued an appeal for funds to establish a Liverpool University upon the University College of the city. About £330,000 will be required, of which there has already been promised £145,000 by some 60 leading citizens. The College endowment of chairs and lectureships amounts to £186,300; sites acquired and buildings erected and in course of

erection, £251,550; fellowships, scholarships, and prizes, £32,800 (exclusive of value of fellowships and scholarships established by annual gifts or granted by City and County Councils, the Royal Institution, the Ladies' Educational Association, the Tate Trustees, and other bodies outside University College); endowments for maintenance, £20,275; and day training college hostel and endowment, £10,000. The total of £500,925 does not include the value of books in the library and apparatus in laboratories, nor does it take account of sums, amounting to many thousands of pounds, given to the College year by year for immediate expenditure, nor of the annual income of the affiliated schools of architecture and applied art, public health, and tropical medicine. The additional lectureships to be endowed include electrotechnics, geology, and chemistry, besides others in connexion with commerce, engineering, and medicine.

At a meeting of the governors of the Yorkshire College, Leeds (April 9), the following resolution, moved from the Chair, and seconded by the Right Hon. A. H. D. Acland, was unanimously carried:—

In view of the recent expressions of public opinion contained in the resolutions passed at meetings of the West Riding County Council, the Leeds City Council, the Technical Instruction Committee of the Bradford City Council, the Convocation of Victoria University, and other important bodies against the proposed dissolution of the Victoria University, the Board of Governors of the Yorkshire College authorize the Council to take such steps as may appear to them desirable to obtain the appointment by the Crown of a Royal Commission or other suitable body to inquire into the whole subject, including, if possible, (1) the working of the Victoria University as at present constituted; (2) the reasons for its proposed dissolution; (3) the comparative educational advantages of the present University and of the three separate degree-giving bodies which it is suggested should replace it; (4) the probable effect of a dissolution of the Victoria University upon the professional and academic standing of graduates and undergraduates of that University.

THE Central Welsh Board Executive Committee have resolved, in connexion with the next half-yearly meeting of the Board at Blaenau Festiniog in May, to convene a conference of science teachers in intermediate schools, to be attended also by His Majesty's inspectors and the professors and lecturers at University Colleges. The Committee, in reply to a letter from the Cardiff Cymmrodorion Society emphasizing the importance of encouraging Welsh pupils to attain proficiency in the Welsh language, side by side with a knowledge of English, said the Board was prepared to do all they could to encourage the study of Welsh, including Welsh history and Welsh literature, but that they wished carefully to guard against the teaching of Welsh instead of English.

PRINCIPAL FAIRBAIRN, Principal Reichel, and Prof. Gwatkin attended (April 10) at St. David's College, Lampeter, as a deputation from the Theological Board of the University of Wales, and discussed with the College Board the proposed arrangements for conferring the B.D. degree of the University of Wales after residence at Lampeter. "It is to be hoped," says the *Western Mail*, "that the scheme to bring Lampeter College within the scope of the University of Wales will be carried out successfully, for it would be the means of removing a great deal of friction from Welsh higher educational circles."

THE Special Committee of the British Association appointed at the last meeting to consider the conditions of health essential to the carrying on of the work of instruction in schools is addressing itself, in the first instance, to the collection of information upon the following matters:—

A collection and tabulation of recorded original observations on the periods of day appropriate for different studies, the length of lessons, and the periods of study suitable for children of different ages.

A collection and tabulation of anthropometrical and physiological observation forms in use in various schools with a view to preparing a typical form for general use.

A collection and tabulation of anthropometrical and physiological observations recorded in different schools for a series of years on the same children.

A collection and tabulation of recorded investigations into the causes of defective eyesight in school-children and a definition of the conditions necessary for preserving the sight.

An inquiry into the practical knowledge of hygiene possessed by school teachers.

The subject is of general importance as well as of scientific interest, and we have no doubt that these investigations will attract the willing co-operation of teachers. Any facts or references relating to the subjects under consideration sent in to the Chairman (Prof. C. L. Sherrington) or to the Secretary (Mr. E. White Wallis, 72 Margaret Street, W.) will be very helpful.

LAST autumn Prof. J. W. Jenks, of Cornell, was sent out to India by the Government of the United States, to report on the system of Anglo-Indian government and administration, with a view to finding out how the Philippines should be managed. Now the University of Chicago has "determined to procure special information in regard to the condition and future prospects of the Philippines," and has commissioned Mr. Alleyne Ireland, the author of "Tropical Civilization" and other studies of Colonial questions, to visit the European colonies in the Far East and to make a report on their systems of government, and their financial, social, and commercial condition. Mr. Ireland's inquiry is expected to occupy two or three years. They have large views in Chicago.

THE Recreative Evening Schools' Association have memorialized the Board of Education, in connexion with the Education Bill, "so to revise and strengthen the law as largely to encourage and promote evening continuation schools of a kind suited to the needs of various localities." They urge the menace of "hoolliganism" and of "the keen and aggressive industrial competition" of other countries, and make specific recommendations.

THE Froebel Society (whose annual meeting at the College of Preceptors we failed, through accident, to record last month) is thriving vigorously. Its membership has risen from 661 to 706; and its balance sheet has improved. Lord Beauchamp is the new President. In his address, he maintained that "in education a continual advance is necessary," that "the individual in education has been too much neglected," and that "the general rate of remuneration of teachers is far too small."

## CURRENT EVENTS.

On May 21 there will be held at the College of Preceptors a joint meeting of members of the College and of the Assistant Masters' Association, when Prof. Knight, of St. Andrews University, will read a paper entitled "Some Notes on American Universities."

UNIVERSITY COLLEGE, LONDON, will give a *conversazione* on June 19, when each of the departments of science and research will set out exhibits illustrating the progress of its work.

A COURSE of inter-collegiate lectures (University College and Bedford College) on "Althochdeutsche und Altsächsische Litteratur," will be delivered in German by Prof. R. Priebisch, Ph.D., at University College, on Fridays, at 5, beginning on May 2.

MISS C. SPURGEON'S special course of 8 weekly lectures at Bedford College for Women on "The Rise and Development of the English Novel" commences May 1 (if not April 29).

MISS CECILIA WAERN commences a similar course on "Some Principles of Art Criticism, with special reference to the Wallace Collection," on May 9.

THE School of Art Wood Carving, South Kensington, has been re-opened in rooms at the Royal School of Art Needlework in Exhibition Road. Some free studentships are vacant. The evening class meets on three evenings a week and on Saturday afternoons.

In consequence of the illness of Lady Warwick, the Conference on the Co-ordination of Rural Industries, at Warwick Castle, is postponed till further notice.

THE London Geological Field Class has commenced its seventeenth year of Saturday afternoon excursions, and will continue them till July 12. They are under the conduct of Prof. H. G. Seeley, F.R.S., and are arranged to illustrate the geology and higher physical geography of the Thames Basin. Particulars from the Hon. Gen. Secretary, Mr. R. Herbert Bentley, 43 Gloucester Road, Brownswood Park, N.

ON May 9 the last monthly meeting of the London Branch of the Association during this session will be held at the Sesame Club, Dover Street, Piccadilly, at 8 p.m.

THE Long Vacation Course of the School of Geography, Oxford, will be given in the Old Ashmolean Building, Broad Street, from July 29 to August 19.

THE fifth Annual Conference of the British Child Study Association will be held at Liverpool on May 8-9.

MODERN languages holiday courses have been arranged by the Teachers' Guild at Tours, Honfleur, and Santander. Particulars from the Secretary, Teachers' Guild, 74 Gower Street, W.C.

THERE are rival attractions at Greifswald, Jena, Kiel, Marburg, Lausanne, Neuchâtel, Villerville-sur-Mer (near Trouville), and Grenoble. Particulars from the Special Inquiries Branch of the Board of Education.

THE Executive Committee of the Central Welsh Board will hold a Conference of Science Teachers at Festiniog on May 15. A collection of apparatus for science teaching in schools will be on view. Admission tickets from Mr. Hammond Robinson, Central Welsh Board, Cardiff.

ONE of the first responses to Lord Reay's appeal for a million on behalf of University College, London, has come from Mr. William Waldorf Astor. Mr. Astor gives £20,000 for the endowment of existing unendowed professorships at the College—a gift not only munificent, but also wisely discriminating.

THE Lord Mayor of Liverpool issued an appeal for funds to equip University College as a University (March 27). At the same time he announced subscriptions to the amount of £140,000, including two of £25,000 each (from Sir John Brunner, M.P., and Mr. William Johnston, shipowner), four of £10,000, and several of £5,000.

MR. ROBERT IRVINE, F.C.S., of Granton, by his will directs his trustees to hold the residue of his estate (after bequests to relatives) as a separate trust until it amounts to £25,000—or, in their discretion, £30,000—to found a Professorship of Bacteriology in Edinburgh University, and to equip a class-room and a laboratory for original research.

MR. JAMES S. DIXON, of Fairleigh, Bothwell, has offered £10,000 towards founding a Chair of Mining in the University of Glasgow.

MR. GEORGE RAE, Chairman of the Directors of the North and South Wales Bank, has given £1,500 to the North Wales University College for the foundation of a Lectureship in Political Economy, with special reference to banking and finance.

SEVEN Cambridge colleges will hold a combined examination for 67 entrance scholarships and various exhibitions, commencing December 2. Pembroke: 1 scholarship of £80, 4 of £60, 4 of £40. Gonville and Caius: 2 scholarships of £80, 2 of £60, 6 of £40. King's: 3 scholarships of £80, 2 of £60; 3 exhibitions of £40; 5 Eton scholarships, or, if these be not filled up, Eton exhibitions of £40 to £70 may be awarded. Jesus: 2 scholarships of £80, 2 of £60, 3 of £40; four of these being restricted to sons of clergymen of the Church of England (special application to the Senior Tutor). Christ's: 1 scholarship of £80, 3 of £60, 2 of £40. St. John's: 3 scholarships of £80, 5 of £60, 3 of £40; open exhibitions of £30; certain close exhibitions of various values, thrown open for this time and subject to no age limit. Emmanuel: 1 scholarship of £80, 3 of £60, 4 of £40; 2 subsizarships, no age limit (special application to the Master). Candidates to be not more than 19 on Oct. 1. Forms of admission and particulars from the Rev. J. Kennedy (Pembroke), Rev. E. S. Roberts (Caius), Dr. M. R. James (King's), Mr. Gray (Jesus), the Master (Christ's), Dr. D. MacAlister, Rev. C. E. Graves, Mr. Tanner, and Mr. Sikes (St. John's), and the Master (Emmanuel). Forms to be lodged by November 25.

AT King's College, London, some scholarships and exhibitions will be open in September. Two exhibitions of £15 each and 2 of £10 are offered to the candidates passing highest in the Matriculation Examination on entering the engineering division: examination begins September 22. Two science exhibitions, £30 and £20, for 2 years, are open to candidates under 19 (on October 1): examination begins September 23. Two medical entrance scholarships, £70 and 60 gs.: examination (anatomy and physiology) commences September 23. Two medical exhibitions (Sambrooke), £60 and £40: examination commences September 16. Two scholarships (Warnford), £25 each, for 3 years: open to matriculated students of the Faculty of Medicine, being also perpetual pupils of the Hospital, at beginning of their first winter session: examination commences September 23. Names of candidates to be sent to the Secretary of the College on special form a week previous to examination.

TWO exhibitions, £50 and £30, are offered by Trinity College, Cambridge, to candidates selected for admission to the Civil Service of India at the Open Competitive Examination in August. Apply to the Senior Tutor before September 1.

A NEW scholarship of £35 per annum, tenable for 3 years, and carrying with it a free studentship, has just been founded in connexion with the engineering department of University College, Liverpool. It is restricted to the sons of Liverpool working men. Examination, May 12-17.

AT the Royal Holloway College for Women (University of London) 10 entrance scholarships from £75 to £40, and several bursaries of £30, tenable for 3 years at the College, will be awarded on the results of an examination to be held July 1-5. Candidates must enter their names before June 3. Particulars from the Secretary, Royal Holloway College, Englefield Green, Surrey.

AT Bedford College for Women (University of London) an arts scholarship, £31. 10s. a year for 3 years, and a science scholarship, £48 a year for 3 years, will be awarded on an entrance examination June 19. Forms of entry to be returned by June 7. Apply to the Principal.

AT Lady Margaret Hall, Oxford, four scholarships (£60, £50, £30, £30), tenable for 3 years, are offered for competition in March, 1903.

\* \* \*

AT St. Hugh's Hall, Oxford, one scholarship of £25 a year will be open to competition in March, 1903. Exhibitions of small value may also be awarded at the same time.

\* \* \*

THE Technical Education Board of the London County Council gives notice that the last day for receiving applications for intermediate county scholarships and Swanley horticultural scholarships is Saturday, May 3; and that the date of the commencement of the final part of the examination for these scholarships has been postponed from Monday, June 30, to Monday, July 7. The last day for receiving application forms for senior county scholarships is Monday, May 12.

\* \* \*

THE Senate of the University of London Appointments, has appointed Dr. R. D. Roberts, M.A. (Camb.), D.Sc. (Lond.), Registrar of the Board to promote the Extension of University Teaching.

\* \* \*

THE REV. DAVID MILLER KAY, B.D., B.Sc., of the Church of Scotland Mission, Constantinople, has been appointed Professor of Hebrew and Oriental Languages in the University of St. Andrews, in succession to the late Prof. Birrell, D.D.

\* \* \*

THE REV. HENRY MELVILL GWATKIN, M.A., D.D., Professor of Ecclesiastical History at Cambridge University, has been appointed Gifford Lecturer in the University of Edinburgh for 1903-5.

\* \* \*

MR. H. B. BAKER, B.A., science master at Dulwich College, has been appointed Head Master of Alleyn's School, Dulwich, on the retirement (after twenty-seven years' service) of the Rev. J. H. Smith, B.A.

\* \* \*

MR. ALFRED TRICE MARTIN, M.A. (Oxon.), F.S.A., has been elected to the Head Mastership of Bath College in succession to the Rev. W. Yorke Faussett, M.A.

\* \* \*

THE REV. CORNWELL ROBERTSON, M.A., senior mathematical master of St. Peter's School, York, has been appointed Head Master of King Edward's School, Stratford-on-Avon, in succession to the Rev. E. J. W. Houghton, who has gone to St. Edmund's School, Canterbury.

\* \* \*

MR. A. CARDEW, Mr. A. C. Eddis, Mr. A. F. Leach, and Mr. R. E. Mitcheson, formerly Assistant Charity Commissioners under the Endowed Schools Acts, have been appointed administrative Examiners for Endowed Schools under the Board of Education.

\* \* \*

THE following gentlemen have been appointed Junior Inspectors under the Board of Education:—Mr. G. S. Hodson, assistant master, Woodlands School, Manchester; Mr. E. M. Battiscombe, classical lecturer, St. David's College, Lampeter; Mr. W. M. T. Lawrence, demonstrator, Owens College, Manchester; Mr. H. H. Piggot, assistant master, Bradford College; Mr. H. H. Quilter, assistant master, King Alfred School, Hampstead; Mr. A. Abbott, assistant master, Intermediate School for Boys, Cardiff; Mr. H. Price, assistant master, Bedford Grammar School; Mr. E. T. Campagnac, classical lecturer, University College, Cardiff; Mr. A. F. Page, science master, Mill Hill School; Mr. J. Maudsley, science master, Bradford Grammar School; Mr. E. E. Roberts, assistant master, St. Paul's School; Mr. A. L. Thornton, science master, Bolton Higher-

Grade Board School; Mr. H. J. Dean, assistant master, Great Bookham National School; Mr. F. W. Cape, assistant master, King William's College, Isle of Man; Mr. D. A. Macnaughten, assistant master, Tonbridge School; Mr. E. F. D. Bloom, science master, Cambridge County School; Mr. F. W. Thompson, assistant master, Manchester Grammar School; Mr. E. Hackforth, assistant master, Westminster School.

\* \* \*

Literary Items. MESSRS. A. & C. BLACK announce that the first of the new supplementary volumes of the "Encyclopædia Britannica" will presently be published by them in conjunction with the *Times*. The volumes will not only complete and bring up to date the ninth edition, but, in combination with the already existing volumes, will constitute a tenth edition. The chief editors are Sir D. MacKenzie Wallace, President Hadley, of Yale University, and Mr. Hugh Chisholm. There will be in all 11 new volumes, including more than 10,000 articles by more than 1,000 contributors, 150 full-page plates, 125 coloured maps, and 2,300 other illustrations. The volumes will be published at monthly intervals, approximately.

\* \* \*

MESSRS. SWAN SONNENSCHN & Co. propose to publish, at the end of the present year and annually, a Schoolmasters' Year-Book, containing "biographical notices, from a professional standpoint, of the masters and others engaged in or connected with the work of secondary education," as well as "a large amount of information likely to be of interest and service to these masters, particulars of societies, magazines, institutions, examinations, &c., connected with secondary education, a review of the educational year, a record of events," and so forth.

\* \* \*

General. PROF. SCHECHTER received a hearty send-off to his new post in the United States. There was a farewell dinner at the Trocadéro, with a presentation and an address, in which English joined with Jewish friends and admirers. The address expressed grateful appreciation of Dr. Schechter's eminent services to the cause of Judaism, his solid and brilliant contributions to Jewish learning, and the high standard of Hebrew and Rabbinic scholarship he had uniformly maintained at University College, London, and at Cambridge.

\* \* \*

THE Royal Society of Sciences of Denmark has conferred its membership upon Prof. T. W. Rhys Davids, Sir John Scott Burdon-Sanderson, and Dr. Henry Sweet.

\* \* \*

PROFS. JAMES DEWAR, William James, and Wilhelm Wundt have been elected honorary members of the New York Academy of Sciences.

\* \* \*

WE are glad to note that a Civil List pension of £75 a year has been bestowed on Mrs. J. Viriamu Jones, widow of Principal Jones, of the University College of South Wales and Monmouthshire, and Vice-Chancellor of the University of Wales, in recognition of her late husband's services to higher education in Wales.

\* \* \*

THE London College of Music will commemorate the Coronation by an award of "Coronation Bronze Medals" on its June and July examinations. Particulars from the Secretary.

\* \* \*

IT is hoped that the new Training College, which the London County Council is establishing in connexion with the University of London, will be opened in October.

THE CORONATION OF HIS MAJESTY KING EDWARD THE VII<sup>TH</sup>. THE CORONATION

**A UNIQUE OFFER TO OUR SCHOOLS.**

With the view of associating themselves with Head Masters and Principals of Schools in providing the pupils with instructive and lasting Souvenirs of the coming Coronation, **THE EDUCATIONAL SUPPLY ASSOCIATION** have decided to make the following unique offer:—  
Subject to the sole condition that the book is either given to the children or sold to them without profit, the Association will supply, until June 30th, their new book (now publishing at 1s. 6d.)—

**KING EDWARD'S REALM.**

Crown 8vo, 224 pages, superior illustrations, bevelled boards, sides gilt lettered, at the nominal price of **6d. each net.**

And a **SUPERIOR EDITION** of the same, published at 2s. 6d., at **1s. each net.**

This Superior Edition is on superfine paper, sides and backs gilt lettered, and with gilt edges, and will make a most elegant Gift or Prize Book. It is now being very largely ordered for this purpose.

It is felt that no more **interesting, instructive, and lasting** Souvenir of the Coronation could possibly be found than this simply told story of the growth and greatness of the vast Empire over which King Edward is called upon to reign.

In addition to the above, the following Souvenirs have been provided at prices ranging from 2d. to 6d. The exceptionally low prices at which they are offered place them quite outside all ordinary commercial transactions, and have been made possible only by the production of enormous quantities.

**PHOTOGRAPH OF HIS MAJESTY THE KING.**

- |                  |                   |  |                |
|------------------|-------------------|--|----------------|
| CABINET SIZE     | (6½ in. x 4½ in.) | On thick white cardboard mount, with facsimile of King's Signature                               | 8d. each NET.  |
|                  |                   | On thick tinted mounts, with gilt edges and strut at back, with King's Signature stamped in gold | 4½d. each NET. |
| EXTRA LARGE SIZE | (9½ in. x 6½ in.) | On thick white cardboard mount, with facsimile of King's Signature                               | 4d. each NET.  |
|                  |                   | On thick tinted mounts, with gilt edges and strut at back, with King's Signature stamped in gold | 6d. each NET.  |

**CORONATION CARD.** (Size 9½ in. x 7½ in.) A special and very elegant design.

Beautifully illuminated in gold and 12 colours, on thick, superfine card ... (15s. per 100) **2d. each NET.**

**Illustrated Circulars, giving full particulars, together with Specimens of any of the Souvenirs, may be had on application.**

**The Educational Supply Association, Ltd.,**

42 HOLBORN VIADUCT, LONDON, E.C.

**SHORT FRENCH EXAMINATION PAPERS (110),**

Each containing Six Idiomatic Sentences to render into French.  
Suitable for *Oral* work.  
Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

- "A very useful set of questions."—*Modern Language Quarterly*.
- "The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.
- "The exercises in the use of idioms are especially good."—*Bookman*.
- "We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.
- "We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.
- "We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

**THE PUBLIC SCHOOL SPELLING CARD.**

Fortieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

**French Essentials and French Conversation Sentences.**

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

[An APPENDIX, embodying the final official changes in the Simplification of French Grammar Rules, will be presented with each copy.]

**RELFE BROTHERS, LIMITED,**

WHOLESALE SCHOOL STATIONERS, PUBLISHERS, AND BOOKSELLERS,

Have a large stock of Exercise Books and General School Stationery always on hand.

Exercise Books, &c., can be made to suit customers' requirements without extra cost.

School Text-Books by all the Leading Publishers kept in Stock.

**SPECIAL ATTENTION GIVEN TO THE PROMPT DESPATCH OF ORDERS.**

**NEW PUBLICATIONS.**

**QUESTIONS ON "A MIDSUMMER-NIGHT'S DREAM." By GEORGE CARTER.** Crown 8vo, cloth, 1s.

**SOUND AND SENTENCE PRACTICE FOR BEGINNERS IN FRENCH.** A New Series of French Exercises, in Three Parts, by Mistresses in the Wimbledon High School. Parts I., II., and III. now ready, price 6d. each.

**RELFE BROTHERS' ADVANCED DICTATION SENTENCES AND SPELLING.** Arranged according to vowels and vowel sounds. Words of similar sound likely to be misspelt are given prominence in type to appeal to the eye. Each Dictation Exercise is preceded by a Spelling List of difficult words and their meanings. Crown 8vo, 8d.

**MACAULAY'S HOBATIUS, LAKE REGILLUS, AND ARMADA.** (In One Volume.) By F. GORSE, M.A. With Full Notes, Maps, and short Life of Macaulay. Crown 8vo, bold, clear type, 8d.

**RELFE BROTHERS, LTD.,**

Educational Publishers, Booksellers, and School and College Stationers, 6 Charterhouse Buildings, Aldersgate, London, E.C.

# MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

## GREEK AND LATIN.

LIBRARY EDITION NOW READY.

**A HISTORY OF GREECE TO THE DEATH OF ALEXANDER THE GREAT.** By Professor J. B. BURY, M.A., Hon. Litt.D., Hon. LL.D. With Maps and Plans. In 2 vols., 8vo, 25s. net.

\*\*\* SCHOOL EDITION. 3rd Impression. Crown 8vo, 8s. 6d.

**MACMILLAN'S GREEK COURSE.—New Volume.**

**GREEK PROSE COMPOSITION.** By S. O. ANDREW, M.A., Head Master of the Hulme Grammar School, Oldham. Globe 8vo, 3s. 6d.

\*\*\* KEY, for Teachers only. 5s. net. [Ready shortly.]

**LATIN PASSAGES FOR TRANSLATION.** For the Use of Higher Forms in Schools, and of Students working for Pass Degrees. Selected by M. AIFORD, Lecturer in Classics at Girton and Westfield Colleges. Globe 8vo, 3s.

*Educational News.*—"A better work of its kind we have not seen. The passages have been selected with scholarly skill, and their arrangement is excellent."

## FRENCH AND GERMAN.

**SIEPMANN'S ELEMENTARY FRENCH SERIES.—New Volume.**

**NAPOLEON.** By ALEXANDRE DUMAS. Adapted and Edited by W. W. VAUGHAN, M.A. With Map. Globe 8vo, 2s.

**Word and Phrase Book.** Sewed, 6d. **Key to Appendices.** 2s. 6d. net.

*Educational News.*—"The treatment throughout is thorough and complete, and this volume distinctly maintains the high character of the series."

**SIEPMANN'S ELEMENTARY GERMAN SERIES.—New Volumes.**

**WILHELM DER SIEGBRICHTE.** By KARL ZASTROW. Edited by E. P. ASH, M.A., Master of Modern Side, Haileybury College. Globe 8vo, 2s.

**FRIEDRICH DER GROSSE.** By FERDINAND SCHRAEDER. Adapted and edited by R. H. ALLPRESS, M.A. Globe 8vo, 2s.

**Word and Phrase Books.** With German Translations. Sewed, 6d. each. **Keys to the Appendices.** 2s. 6d. net each.

## MATHEMATICS.

**AN ELEMENTARY TREATISE ON THE CALCULUS.** With Illustrations from Geometry, Mechanics, and Physics. By Professor GEORGE A. GIBSON, M.A., F.R.S.E. Crown 8vo, 7s. 6d.

*Nature.*—"Among several notable characteristics possessed by this work, the most prominent appears to be the severity of its logic. In one important respect it differs also from the usual English mathematical treatise—it seems to speak to the student, warning him against too probable error and giving him advice. This is a feature which should be encouraged. . . . A work which seems to leave no difficulty unnoticed."

**SPHERICAL TRIGONOMETRY FOR THE USE OF COLLEGES AND SCHOOLS.** By the late I. TODDUNTER, M.A., F.R.S. Revised by J. G. LEATHAM, M.A., D.Sc. Crown 8vo, 7s. 6d.

*Educational News.*—"We must congratulate Dr. Leatham on the way in which he has re-clothed an old friend, and we hope the book may have as long a career of usefulness as its predecessor had."

**SOLUTIONS OF THE PROBLEMS AND THEOREMS IN SMITH AND BRYANT'S GEOMETRY.** By CHARLES SMITH, M.A. Crown 8vo, 8s. 6d.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

# A SELECTION FROM CASSELL'S EDUCATIONAL WORKS.

### IMPORTANT

**Marine Painting in Water-Colour.** By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. 5s.  
"The plates strikingly show the remarkable range and variety of marine painting. Mr. Wyllie's method is fully described, and the book will appeal in this respect to the student."—*Liverpool Post.*

### ART MANUALS.

**Landscape Painting in Water-Colour.** By J. MACWHIRTER, R.A. With 23 Coloured Plates. Second Impression. Price 5s.  
"With the sketches to refer to, Mr. MacWhirter's precepts and hints, based upon long and varied practice, will be completely intelligible to the veriest beginner, and the student who follows his directions will find that many apparently formidable difficulties can be easily surmounted."—*Globe.*

Fourth Edition, Revised.

**A History of England.** By H. O. ARNOLD-FORSTER, M.A.  
From the Landing of Julius Caesar to the Present Day. 852 pages, copiously illustrated, cloth, 6s.; or, superior binding with gilt edges, 6s. 6d.

# SOUTH KENSINGTON EXAMINATIONS.

SUITABLE BOOKS IN

## The Organized Science Series.

**FOR THE ELEMENTARY STAGE.—2s. each Volume.**

- I. **PRACTICAL PLANE AND SOLID GEOMETRY, FIRST STAGE.** By G. F. BURN, A.M. Inst. M.E. (Medallist in Plane and Solid Geometry). [In preparation.]
- III. **BUILDING CONSTRUCTION, FIRST STAGE.** By BRYSSON CUNNINGHAM, B.E., Assoc. M. Inst. C.E.
- V. **MATHEMATICS, FIRST STAGE.** Containing all the Algebra and Euclid required. Edited by Dr. WM. BRIGGS, M.A., F.R.A.S. [In the press.]
- VIA. **MECHANICS (SOLIDS), FIRST STAGE.** By F. ROSENBERG, M.A., B.Sc. Fourth Edition. KEY, 1s. net.
- VIB. **MECHANICS OF FLUIDS, FIRST STAGE.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. Second Edition.
- VII. **APPLIED MECHANICS, FIRST STAGE.** [In preparation.]
- VIII. **SOUND, HEAT, AND LIGHT, FIRST STAGE.** By JOHN DON, M.A., B.Sc.
- IX. **MAGNETISM AND ELECTRICITY, FIRST STAGE.** By R. H. JUDE, M.A., D.Sc. Second Edition.
- X. **INORGANIC CHEMISTRY (THEORETICAL), FIRST STAGE.** By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. Edited by Dr. WM. BRIGGS, M.A., F.C.S., F.R.A.S. Second Edition.
- XI. **ORGANIC CHEMISTRY (THEORETICAL), FIRST STAGE.** By R. A. LYSTER, B.Sc. [In preparation.]
- XVII. **BOTANY, FIRST STAGE.** By A. J. EWART, D.Sc., Ph.D., F.L.S.
- XVIII. **MINING, FIRST STAGE.** [In preparation.]
- XXII. **STEAM, FIRST STAGE.** [In preparation.]
- XXIII. **PHYSIOGRAPHY, FIRST STAGE.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.
- XXIII. **PHYSIOGRAPHY, SECTION ONE.** [In preparation.]
- XXV. **HYGIENE, SECTION ONE.** By R. A. LYSTER, B.Sc. [In preparation.]
- XXV. **HYGIENE, FIRST STAGE.** By R. A. LYSTER, B.Sc.

**Price 1s.**

- Xp. **INORGANIC CHEMISTRY (PRACTICAL), FIRST STAGE.** By F. BEDDOW, Ph.D., D.Sc. Second Edition.

**Price 1s. 6d.**

- XIp. **ORGANIC CHEMISTRY (PRACTICAL).** By GEORGE GEORGE, F.C.S.

**FOR THE ADVANCED STAGE.—3s. 6d. each Volume.**

- V. **MATHEMATICS, SECOND STAGE.** Being the Additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by Dr. WM. BRIGGS, M.A., F.R.A.S. Second Edition.
- VIA. **MECHANICS, ADVANCED.** By Dr. WM. BRIGGS, M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., DYNAMICS. Vol. II., STATICS. Second Edition.
- VIIIc. **HEAT, ADVANCED.** By R. WALLACE STEWART, D.Sc. Lond. Second Edition.
- IX. **MAGNETISM AND ELECTRICITY, ADVANCED.** By R. WALLACE STEWART, D.Sc. Lond. Second Edition.
- X. **INORGANIC CHEMISTRY (THEORETICAL), ADVANCED.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by Dr. WM. BRIGGS, M.A., F.C.S., F.R.A.S. Second Edition.
- XXV. **HYGIENE, ADVANCED.** By A. E. IKIN, B.Sc., and R. A. LYSTER, B.Sc. [In preparation.]

**Price 2s.**

- Xp. **INORGANIC CHEMISTRY (PRACTICAL), ADVANCED.** By Dr. WM. BRIGGS, M.A., F.C.S., F.R.A.S., and R. WALLACE STEWART, D.Sc. Lond.

**Price 1s. 6d.**

- XIp. **ORGANIC CHEMISTRY (PRACTICAL).** By GEORGE GEORGE, F.C.S.

**THE FEELINGS AS A FACTOR IN SCHOOL TRAINING.**

ON Wednesday evening, April 23, Mr. H. COURTHOPE BOWEN presided at the monthly evening meeting of members of the College of Preceptors, when Mr. J. L. PATON, M.A., read the following paper:—

The word *sensibility* is a word which has of late lost caste. It is used by the novelist to describe the young lady who is morbidly impressionable and romantic; it is used by a Cabinet Minister to describe the tender-heartedness of the peace-lover, the Quaker, and the pro-Boer. It carries with it nowadays a connotation of over-sensitiveness and sentimentalism. It is used with a tone of disparagement.

The adjective *sensible*, on the other hand, though it has not lost caste, is used in a sense quite foreign to its original meaning, to denote rather intellect than feeling, a person whose judgment is cool, impartial, and dispassionate.

It was not in this way that Edmund Burke used these words. To him the word "sensibility" denoted one of those attributes which distinguish the higher types of men. One of the qualities which has passed with the age of chivalry is "that sensibility of principle which felt a stain like a wound"; and one of the qualities of the true law-giver is that he must be "full of sensibility."

I would like, for the purposes of this paper at any rate, to reinstate the word in the high place among human qualities which was accorded to it by Edmund Burke. To my mind, every well bred and well trained man and woman ought to be, in his phrase, "full of sensibility"; they must have that delicate feeling of personal honour, that quick response of sympathy, that fine tact in dealing with others which the word "sensibility," and, so far as I know, no other word in the language, implies. The great difference to me between man and man, the difference according to which men are ranked as higher or lower, is just this, that one *feels* more than another, feels more promptly, more deeply, and more truly, and acts according to such right feelings. "The heart that is soonest awake to the flowers" and "first to be touched by the thorns"—the heart that, being so awake and so touched, is ready to work at the extraction of thorns and the cultivation of flowers—that is, after all, the highest type of educated man.

It is for that reason that I venture to take the subject of the feelings as the subject of this evening's lecture.

"The true lawgiver should be full of sensibility." So should every teacher. He is alive to the slightest indication, because, just as a slight indication in the body may be to the physician a symptom of grave disorder, so in our much more delicately adjusted moral nature the slightest outward sign—a tone of the voice, a glance of the eye, a curl of the lip, a titter in the tone—may be symptomatic of inward disorder.

May I take a homely illustration? The captain had retired about an hour ago, and but for the man at the wheel and the look-out there was no one on deck. Suddenly the captain's door opened, and the captain stepped out in his pyjamas and bedroom slippers. "Holloah, Captain, I thought you were in your bunk and sound asleep." "So I was right enough, but I thought I heard a noise. I think it's somewhere in the engine-room." There was indeed plenty of noise: there was the noise of the waves, and the swish of the water, and the regular thud of the engines. "Lots of noise, Captain, for that matter." But it wasn't any of these noises that got him out of bed. It was a rope at the far end of the ship which had not been properly made fast, and it was flapping irregularly against the side of the vessel. "Bless you, sir," said the captain, "when you have a ship on your mind, you've got to be thinking all the while when you're asleep; you've got to have an eye in the back of your head and listen with your toes."

The true schoolmaster must be full of sensibility. If he can't listen with his toes, let him seek some other profession. Over the door of Plato's Academy was the inscription *Μηδεις ἀγεωμετρητος*

*είσιτω*. If Plato had run a normal school for the training of teachers, the inscription would have been *Μηδεις ἀναίσθητος είσιτω*. There is no entrance here for the insensate man, the pachyderm who cannot feel.

Not only must the true teacher have feeling himself—he must understand, sympathize with, and utilize the feeling of, his pupils. How fatal is the mistake of ignoring the feelings in education, and how tragic are the consequences of so doing, is shown in fiction by "The Ordeal of Richard Feverel" and in real life by the autobiography of John Stuart Mill. George Meredith's novel is highly prized by all interested in education. The resultant impression of that book, to my mind, is that no amount of cleverness in the teacher and no amount of excellence in system or curriculum is of any avail if one leaves out of account the natural propensities, feelings, and desires of the child whom we educate. Training is like a game of dominoes—it is no good having the best of pieces in one's hand, however high they may be; unless one can fit them in with the pieces played by one's adversary, one loses the game. I commend "The Ordeal of Richard Feverel" to any one who does not know it as a most helpful piece of educational thinking. As to John S. Mill, every one knows the story of his early training—how splendidly it answered as a training in intellectual gymnastic and the accumulation of knowledge, how utterly it ignored both his hands and his feelings, and how prolonged and turbid and painful was the reaction of outraged Nature.

But I will not dwell on this. The old system is no more. All I wish to point out is that practically the whole of the advance which has been made in educational science has been made precisely by taking into account the natural feelings of children, studying them, and adapting to them both ourselves and our teaching. The old philosophy of education kept its eye on knowledge—such and such knowledge was to be inculcated, such and such instruments of knowledge were to be mastered. The matter of the teaching, the system of the teaching was the same for all. It was simple—delightfully simple—but it was wrong. One kind of feelings this school did take into its cognizance—the bodily feelings. "Blessed are the pure in heart," said Dr. Keate. "Be pure in heart, boys. If you aren't pure in heart, I'll fog you." Such was the old school. And there was no advance in educational science until another school arose, who said: "We are beginning at the wrong end. We have been planning out education for children in the same way as the French Government makes clothes for its soldiers. First they make the suit; then they fit the man to the suit. We have got hold of the wrong end of the stick. Before we make the suit of clothes, we must take the measure of the child that is to wear them. The first thing to study is the growing organism that we have to develop—we must find out its latent powers, the laws of its growth, and its instinctive tendencies; observe the lines along which these tendencies develop, and take them as our rule in the planning out of methods." This is what Pestalozzi (following Fichte) called "Der Prozessgang der Natur in der Entwicklung des Menschengeschlechts." This was the secret of what has been called his "gift of divination, his luminous guesswork." The discovery was the outcome of his experience. His experience was not, of course, unique; but the reason why Pestalozzi saw the lesson of his experience, while others who had the same experience did not see, was due precisely to the intense sympathy of his nature; he was "full of sensibility," and therefore he had eyes to see.

Now I think, if Pestalozzi could see to-day the results in European and American education of the new truth which he discovered, he would have no reason to be discouraged. Those results are most apparent perhaps in primary education. Consider the difference between the modern kindergarten and the old elementary school. Contrast the freedom, sociableness, and spontaneous joyousness of the present infant class with what Edward Thring tells us of his own preparatory school, where all talking at meals was forbidden; and young Edward Thring himself was flogged for "a very little laugh at dinner." "All my life long," he says, "the evil of that place has been on me. It is even now one of my strongest impressions, with its misery, the misery of a clipped hedge, with every clip through flesh and blood and fresh young feelings; its snatches of joy, its painful but honest work—grim, but grimly in earnest—and its prison morality of discipline. The most lasting lesson of my life was the failure of suspicion and severity to get inside the boy world, however much it troubled our outsiders."

Let that stand for evidence which might be multiplied indefinitely. Such things as this are dealt with nowadays by a special

society, and the policeman, the family butcher, the family milkman, the family washerwoman, and the grocer's boy all combine to bring such occurrences to the notice of the society and protect child life from such inhumanity.

The results of the new theory of education are, as I have said, most easily seen in primary education. The results in secondary education have been slower in maturing; they are not nearly so universal, they are less easily discerned, but I believe they are every bit as real. Within my own time there has been a wonderful change in the relations between masters and boys. I don't think the credit can be ascribed to any one personality or any one school—it has been in the air, it has been everywhere silently operative, but it seems to me so real and so important that the word "change" is too weak, and perhaps the proper word for me to use would be "revolution." In what does this silent revolution consist, and how has it come? It consists in the closeness and freedom of the personal intercourse between master and pupil. Thirty or forty years ago the masters lived apart from the boys. The master was what a master still is in Continental schools—an officer—and the boys were the rank and file. The idea of a master corresponding with a boy was unheard of. If a command was given, he no more dreamed of saying "please" than the officer on parade thinks of saying, "Right turn, gentlemen, if you please," or "Kindly turn to the front." The relationship is very different now. I remember when I went to Rugby as a master being surprised at the quite informal way in which boys and masters foregathered out of school hours, how after evening preparation one would drop in to a study to give back a composition, or even without any such pretext, just for a bit of a chat, and not infrequently also a bit of a cake, without there being the slightest suspicion on the part of the boys that you were an intruder, or the slightest feeling on the part of the master that he was unwelcome or *de trop*—and all this without there being any laxness of discipline or any other advantage taken by the boys. As it has been wittily phrased, "The masters are still boys, and the boys are still mastered." Now this is the old Greek idea of education being a *ξυνουσία* or companionship (*Miterziehung*, as the Germans call it)—it is the quiet, unnoticed, and unobtrusive influence of one who is with the boys in games and in hobbies as well as work, who shares in all their life and to whom deference is paid, not because of any official position he holds, but because of what he is in himself.

What this change has accomplished it is not for me to estimate. I will just notice on the negative side that it has abolished in our English public schools, first of all, bullying, and, secondly, those coarse vices of self-indulgence and drinking which figure so largely in Dr. Arnold's sermons.

How has it come about? It has come about mainly through games. "Sympathy," as Mr. Herbert Spencer says, "is best cultivated by participation in the pleasures of people." The pleasures of boys—English boys at any rate—are chiefly cricket, football, rowing, and outdoor games. It has become the custom of masters to share in these, and, so sharing, they have learned a sympathy which they would never have learned in the mere class-room routine; and this sympathy has given them *insight* and *influence*, and has enabled them to put their finger on the central *sensorium* of the genus boy, without his knowing it, in a way which was never possible before. And herein I should like in justice to say how much is due to junior masters, especially in our boarding schools. Boys take their ideals and their tone much more readily from a younger man. I have been often surprised at the influence on senior boys of one who is perhaps only three years or so their elder. With a grey beard or a bald head they are apt to say unconsciously to themselves: "Yes, that's all very well for him; but then he's old and I'm young, and that's what makes the difference." They cannot say this of a man who is just fresh from his schools. Honour to whom honour is due. I think it is only right to make some public acknowledgment of the way the junior masters on the staffs of our different schools, too often wretchedly underpaid, have thrown themselves, without stint of leisure or of interest, into the life of the school to which they have been attached.

There are some, I know, who think that such men lower the profession by such conduct. "What becomes of your dignity?" they say. "Does not such familiarity inevitably breed contempt?" ["Commend me to a proverb for a thumping falsehood," as somebody has said.] When you call a boy by his Christian name, or—still more shocking—accost him as 'old man,' don't you find that he loses all respect for you?" To which I answer: "Not at all. One must stoop if one would raise. As long as it is natural, there is no danger in it. The one intolerable

thing in dealing with the young is affectation, and the worst affectation is the affectation of superiority. Go read your Shakespeare and see if Caliban did not learn more in one hour from two drunken rascally butlers than he learned in twelve years from the dignified and unbending Prospero. And why? Simply because they came down to his level; they found what the sage Prospero with all his sagacity never found, the right point of departure."

That education will be the best which finds the *point of departure*. In intellectual work it will secure, in the first place, interest, and through interest will prompt the mind to self-activity in acquiring ideas and knowledge. In all other matters, physical, social, æsthetic, and spiritual, it will watch for the unfolding of the several feelings, appetites, desires, and as each feeling, or appetite, or tendency unfolds it will provide the right opportunity and the right way for its exercise and its expression, so that each instinctive tendency of the organism may, as it develops, contribute its part to the building up of the whole "through that which every joint supplieth," and so conduce to the full-grown perfect manhood or womanhood. In fact, this seems to me to be precisely the difference between the Hooligan, we will say, on the one hand, and the best type of the English public-school boy on the other. Initially there was no difference; but in the one case, as each instinct awoke, it found a right sphere and a favourable atmosphere for its exercise; in the other case each natural instinct and feeling was warped and soured by wrong environment into a monstrous, an unnatural, and an unsightly perversion of Nature.

Let us then take stock of some of these feelings as they arise in the case of boys, for I would prefer to speak of what I know. But I shall be told at the outset that boys have no feelings; it's absurd to say that they have. We have all of us felt this at times when we have had a splitting headache and our classes have chosen just that day on which to be specially tiresome. Robert Louis Stevenson describes somewhere the callous way in which a child came up to him as he lay ill, and, airily disregarding the patient's complex and acute sufferings, requested his attention for some more pressing business of its own. It is true that children are delightfully incapable of entering into the feelings of their elders. It is a wrong deduction to say that therefore they have no feelings at all.

He jests at scars who never felt a wound.

And a boy who never had a headache in his life does not sympathize with your headache, simply because he doesn't understand what it means. If you had sore gums from teething, or what a little fellow of my acquaintance once called "a pain under your pinafore," through eating too much plum-pudding, then he would understand and you would have, for a time at any rate, his sympathy. The cruelty of boys (which is so well known that I need not illustrate it) is due largely to this anæsthesia. A boy, who habitually pelted toads, one day saw a toad, in its expiring agony, fold its forefeet together like hands. This touched him, it got home, it made him feel the pain he had inflicted, and afterwards he not only did not pelt toads himself with stones, but stopped other fellows from so doing. The boy had feelings, as all boys have, but they were dormant, inhibited by lack of perception.

Nor must we be surprised if we find their feelings absolutely irrational. I knew of a midshipmite who never could get to sleep ashore until the gardener came and played the garden-hose upon his window. And Prof. James tells the story of a child who, in the midst of a raging fire, in presence of devouring flames, showed neither astonishment nor fear, but the noise of the firemen's trumpet and the wheels of the engine made him start and cry. We must simply not expect them to be rational—we must take them as they are, however unreasonable—and work upon that basis. That must be our point of departure—at any rate, we shall never get any other.

We must not be annoyed to find these feelings changeable, not to say capricious. "The young," says Aristotle in his Rhetoric, "desire passionately, but quickly cease from their desire." The young mind is not stable or tenacious, nor can it hold much at a time, and a new interest quickly expels an old one. But, even so, by long suffering and judicious selection, certain moods may be encouraged, become habitual, and, gathering strength, gradually come to constitute temperament.

From this very changeableness of feeling the true teacher will learn to avoid, above all, monotony. There must be perpetual novelty and change; we must never get into a rut. Here, as much as anywhere, the skill of the true craftsman is seen. He has to go over

the same ground again and again, but he must always have fresh illustrations and fresh aspects, and work backwards and forwards over the same subject. "Small changes benefit the organism," says Darwin. This is specially true of the young. Dullness and monotony are the devil to them. If a thing has always been done one way, that is precisely a reason why it should be done the reverse way now and again. Beware of what Oliver Wendell Holmes calls "the ginger-bread rabbit expression" on the faces of your class. It is a sure sign that you have lost touch with interest. Rather do anything than suffer it to continue; stand on your head, if you like, or else do as a colleague of mine used to do, seat yourself in the class—take a humble place at the bottom—tell off one of the boys to take the lesson, and let them see how many places you can get by fair answering of questions. The first and the great commandment for a teacher is: "Thou shalt be alive." Let your teaching fairly tingle with life. Make your class feel they are under a man, not under a machine.

In enumerating some of the more marked instincts or natural feelings, it is impossible to speak in universals. The sequence according to which they develop is exceedingly diverse, and their expression is, if possible, more diverse still. Darwin wrote a treatise on the expression of the emotions. This gives us what we may call the normal and physiological mode of expression. But consider how different in different persons will be the expression of the same emotion. A party was climbing in the Rocky Mountains. It was a heterogeneous sort of party; there were ministers, business men, and professional men. Suddenly they breasted a ridge and the Pacific Ocean burst upon their view. It was a great moment. "Hallelujah!" said the Methodist minister; "Glory to God." "Well, I'll be condemned!" said the stockbroker. It was the same feeling—the same spirit; there was difference of expression, of ritual—that is all.

With these premisses and provisos we may pass in review briefly some of the instinctive feelings as they arise, and see what guidance we may get from the consideration.

The first instinct is for activity and motion. Every nurse knows how much more easily a child's attention is attracted by a moving object than by still life. The same instinct persists all through childhood. If it is an object lesson, keep, if possible, active objects before the class. Better than a diagram to show the breathing of the lungs is a double bladder with a tube to it by which you can inflate and deflate; better than a stuffed bird is a live cat; better than a dried botanical specimen or a whole herbarium is a growing haricot-bean. Don't let your class-room be a mausoleum. Even in physics let the expanding power of heat be demonstrated by a toy steam engine. Whatever the subject, give them plenty to do themselves. If it is science, let it be heuristic; if it is language, let there be quick, sharp question and answer in the language taught.

It is boys of the sprightliest temper who are commonly fullest of mischief. Their mischievousness is really their attempt to enliven their surroundings. They are bursting and itching with life at every pore themselves, and they cannot abide the sight of everything torpid about them. They can raise more life by vexing folk than by doing serviceable acts. *Ergo* they do vexatious things; *ergo* they throw stones, because that flutters old stagers badly. If they cannot see the vexation and flutter they cause, still, they can enjoy it in the mind's eye. They will break a window on the sly, or steal a workman's tool, or fasten up his door, just to enjoy the thought of how he will fret and fume. Last week, in Edinburgh, I could see them at work in the streets. They were picking up the High Street, and after 6 the workmen went away, leaving some poor old fellow with a fire in a brazier in charge. What high old times those were for the street arabs, when they trundled off his wheelbarrow, upset the heaps of stone, sneaked his lanterns, or threw squibs into his sentry-box just to see him start! This is an instinct. We have to reckon with it. It is as strong in the Edinburgh student as in the Edinburgh street boy. Repress it or coerce it we cannot in any considerable measure. Turn it out with a pitchfork: it will still recur. But divert it we can into more useful channels; and gymnastics, wood carving, carpentry, and such manual classes are some of the ways in which schoolmasters have endeavoured to exploit it.

But more important than all the manual exercises in the whole pedagogic cyclopædia is that the teacher should himself be sprightly. Who tends fat cattle should himself be fat. Who teaches boys himself should be a boy. And one of the wisest things Dr. Arnold ever said was when, speaking of the corkscrew staircase which led to his sixth-form room at Rugby, he re-

marked: "When I can't run up that staircase I shall not attempt to teach boys any more."

Another instinctive feeling which comes to the front very early is *acquisitiveness*. Whatever the increasing altruism of the day may have done for us elder folk, your boy is no altruist. He has a veritable John Bull appetite for annexation. He likes to have things for his very own, and as many of them as possible. He is a born collector. He collects anything, from soap coupons and cigarette pictures to postage-stamps, play-bills, birds' eggs, butterflies, or door-knobs. The Kaffirs in South Africa, Mr. Nevinson tells us, collect boots. They have no special use for them; they just hang them round their necks as ornaments, and the man who goes about with the greatest number of boots round his neck is a proud man. Boys are like this: they collect for the sake of collecting; but the sagacious educator can pretty readily exploit this instinct to serviceable ends. Whatever he learns about the special objects he collects, the collector will, at any rate, learn some amount of patience and perseverance; he will get some idea of classification with all that this involves of nice discrimination, neatness, and order. All this over and above what he will learn about the actual articles he collects. And this will be considerable. A boy, who is still at school, began as a coin collector at a very early age. His father had an aversion to threepenny-bits; the boy rather liked them. That was how it started. It chanced that one day in Bond Street, with his nurse, he happened to pick up an old English coin; the chance directed his attention to this particular branch of coin-collecting, and by the age of sixteen he was an authority of the first rank on Ancient British hammered coins and a Fellow of the Numismatic Society.

Another instinctive feeling which develops at an early age with boys is the combative and emulative tendency. This finds its legitimate scope in football and field sports, which not only give scope to the instinct, but regulate and discipline it, and exercise with it other higher qualities of self-control, concentration, courage, and unselfishness.

May I be allowed to cite here what seems to me a typical instance of the way in which games at a good school educe and educe all that is best in a boy's feeling, and produce that indefinable something which we call "good form"? At the cricket match between Rugby and Marlborough, three years ago, when Marlborough had finished their second innings, only one hour remained, and Rugby had a hundred runs to make. Marlborough could easily have spun out the time, instead of which they were out in the field in a minute, and every time the field had to change, either at change of over or when a left-handed batsman faced the bowler, the Marlborough boys one and all ran to their places. Rugby made the runs, but Marlborough, though she missed the victory, gained the undying respect of her rivals, and won the honour of having upheld the best traditions of English games.

The school games, and all the organizing work that they involve, serve also as a field for another instinctive feeling which is found, at any rate, in all vigorous specimens of boyhood. They want to manage things for themselves. With quite young children how frequent it is to hear them say: "Now let me do it." "Let me try it by myself"! It is so all the way up. And school games, a cadet corps, athletic sports, and all the other branches of school activity, a debating society, a musical society, a chess club, a camera club, a scientific society, a school magazine, all afford splendid scope for this instinctive desire to manage. In fact it is here that you find that training in citizenship and affairs which you do find in English schools and will scarcely find in any others. Let it have scope; there may be hitches, there may be mismanagement; but in this, as in everything else, boys learn by making mistakes. As Mr. Chesterton says: "What is worth doing at all, is worth doing badly." The feeling for leadership is the counterpart of the feeling for comradeship. The one implies the other, and it is the boast of our English schools that in their sports and in their system of prefect government they have recognized both these natural instincts and utilized them for the purposes of the corporate life.

It is in the comradeship of games and school societies that the *social* instinct finds its satisfaction and its growth. That is another of the most strongly marked feelings in boys. It is not always positive in character; about the difficult years of 13 to 16 the social instinct is chiefly shown by a shyness which seems to shrink from society, but which really is a sign of how strong the social sense is growing. Masters may work on this for purposes of punishment. For instance, one of my Rugby colleagues, instead of setting lines in the summer term, used to require a boy to bring him so many dockweeds dug

up from the cricket pitch. It wasn't the digging up the boy minded; it was the publicity of the proceeding, and I have known boys get up at unearthly hours of the morning to fulfil the stern mandate. Key used to punish a boy in this way. He would have him up before the whole school, and make him first take off his coat and then wear it inside out. Thring used to make the boys who were late for morning assembly come up before the whole school and sign their names solemnly in the register beneath his very eyes—a much worse ordeal for a boy than to be beaten with many stripes.

But this method of punishment must be used with great caution. It is quite easy by means of it, without meaning it and without knowing it, to injure a boy's self-respect; and self-respect, like a human tooth, has a sensitive enamel coating—the slightest scratch on the surface opens the door to a process of corruption and decay which it is no easy matter to arrest.

This raises the whole question of punishment in schools, a question on which I do not propose to enter. I will only say that there is no duty which needs so much sensibility on the part of a master, so much appreciation of a boy's own feeling. So many boys are good fellows and gentlemen in feeling and fools on impulse. Our danger as masters is twofold—on the one hand over-severity. It is a great mistake to treat a boy as though he were a bad lot altogether. Few boys—very few—are that. To treat a boy as such is the best way to make him into a bad lot. On the other hand, over-strictness is far better than slackness. I am no friend to coercion; but coercion is better than idleness, and punishment is better than evil or vicious habit. When a boy does wrong, the better part of that boy knows that he deserves punishment. If you let him down too lightly, the better part of him is disappointed in you, the worse part of him rejoices in its impunity. Let love here reinforce with all its power the better side, even though it takes the form of extreme severity. More than anything else this tests the right balance and discrimination of a master's "sensibility," and greater perhaps than any other reward in our profession is the love and respect in after life of a boy whom you have expelled from school. Prior, in one of his ballads, prescribes the way in which a man should treat his wife.

Be to her faults a little blind,  
Be to her virtues very kind.

This may, or may not be the proper way in which to treat a wife. That does not concern me now. I am certain that as regards schoolboys the first part of the maxim is quite wrong. Never be blind to his faults. But the second clause is admirable. Be very kind to his virtues. We lose our power over a boy when we degenerate into mere fault-finders. I am afraid our marking system rather encourages this, and when boys read their terminal reports I think they must often feel that our eye has been keener to detect failure than merit, that they have had

All their faults observed,  
Set in a note-book, learned and conned by rote  
To cast into their teeth.

Boys have an instinctive love of praise. Don't stint praise where praise is deserved. Some boys, and many of the better sort, are easily discouraged—they come to something stiff, they make a failure, and they are only too apt to say: "It's no use trying." Take any chance such a boy gives you of praising him. Fortunately he is as easily encouraged as discouraged.

What thou wilt  
Thou sooner shalt enforce it with thy smile  
Than hew to it with thy sword.

This is, I think, specially true of higher work. In teaching higher composition I found it had immense effect on some boys to tell them what were the best points in their compositions as well as the worst, and whenever a boy flashed out into something really good to adopt it as my own fair copy, or, at any rate, commend it as a good variant, when dictating the fair copy to the set. Don't put the blind eye to the telescope when there is any sign of excellence. Greet it as the heroes of faith greeted the promises "from afar." Give it its due meed openly before the class or before the school—

One good deed dying tongueless  
Slaughters a thousand waiting upon that.

There was one other point which I intended to treat. It was the question of humour and the value of a pervasive humour in putting a master *en rapport* with a boy; also the limitations of its use. But, being a Scotchman, perhaps it would be less painful for you if I left this untouched.

I do wish, in conclusion, to say one word on the discipline of

the feelings. In this more than any other question wise discrimination, right balance, due regulation are required. Indiscriminate indulgence is fatal.

I have laid stress on the importance of finding for each interest as it awakes in the growing boy an appropriate scope, appropriate objects, and the danger of either stunting the whole manhood, if no such scope is afforded, or of perverting manhood if the interest finds a vicious or unnatural channel of expression. It is also necessary, first of all, to keep the due balance between feeling and actions, and, secondly, to have all feelings, instincts, and due subordination to that great arbiter, *the will*, which stands behind all our ideas and impulses and acts. First, the balance between feeling and action. Nothing is further from my intentions than to produce an "emotional" creature, the sort of effusive namby-pamby, common in London, who goes to concerts and sermons, sits in comfortable ease and enjoys the titillation of the senses, emotional and spiritual, but allows the whole of the emotional impulse to melt into thin air without ever allowing it to translate itself into honest effort. It is for this reason that I profoundly distrust a musical education or an artistic education of any kind. I believe that it does not tend to produce stable and virile character.

Nor do I want to produce a creature incapable of doing anything that is disagreeable. In saying that we should take all advantage of a boy's *likes*, I do not mean that he should be taught to do nothing except what he likes. On the contrary, I believe that to endure hardness is an essential part of every training, and every child should have to do every day, as part of its training, something which it heartily detests. And for this there must be *compulsion*, there must be fear; only I would not have fear the main element.

Nor do I hold that one like is as good as another. The mind that admires a display of fireworks, a grandiose procession, or a street of showy shop-windows, is of a far lower calibre than one which admires the budding of a flower, the sunset, the plunge of a diving bird, or the graceful bound of a deerhound.

It seems to me that feelings become wrong through being put in their wrong place, when they are not related to a higher principle and subordinated to the supreme law. The mother who loves her son so much that she cannot bear to let him endure punishment or suffer hardship is no mother, but a curse, to her child. The mother who for ambition's sake prompts her son to deceit and aids him in it is also criminally foolish. But the error in both is not that they love their boy too much, but that they love him too little; that they do not love the best in him and desire the best for him. Such love in a mother is selfishness, even though she say with Rebekah: "Upon me, upon me be the curse." It is a species of idolatry, because it puts the lower in the place of the highest, and the highest is that which is writ large on the base of Wellington's statue in the Guildhall, and writ large in the story of our island race—it is the law of duty.

"The test of being educated," says Herbert Spencer, "is, Can you do what you ought; when you ought; whether you want to do it or not?"

Mr. KING thought that the disappearance of "bullying" from English public schools was not due so much to any progress in moral development as to the increased supervision now exercised by the masters. The methods of education at present in vogue tended to soften the character and unfit boys to face the difficulties that they would have to contend with in after life.

The CHAIRMAN thought that practical teachers were agreed as to the value of the feelings in education, but caution must be observed in appealing to the sensibility of children, or their studies would be detrimentally affected. Thus, excessive regard to the beauties of a flower used to illustrate a lesson in botany might result in the cultivation of the artistic sense, but would hardly conduce to the acquirement of the exact knowledge of the parts of the flower and their functions which was the more immediate object of the lesson. History lessons, again, were more interesting if the children's sentiments were aroused, but an undue indulgence in such sentiment prevented them from acquiring a real grasp of the historical facts which formed the subject of the lessons. The lecturer had rightly pointed out that the idea that children were naturally cruel was erroneous, and that conduct which was often ascribed to cruelty was really due to inability to comprehend pain of which they had had no experience. On the other hand, children, although lacking in sympathetic feeling, were keenly sensitive to the sympathy of other people, and in some instances showed a quite inordinate craving for such sympathy. He was able from his own experience to endorse what the lecturer had said as to the improvement that had been effected in schools through the change of attitude between masters and pupils. Some teachers, however, found it difficult

to be familiar with their pupils without sacrificing their own dignity, and it was necessary that the teacher should have a good knowledge of the character he was dealing with in order that he might know to what extent it was advisable to sympathize with the pupil's difficulties.

Mr. PATON having replied, a vote of thanks to the lecturer concluded the proceedings.

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

### REGISTRATION AND THE SUPPLY OF TEACHERS.

To the Editor of the Educational Times.

SIR.—It is quite beyond dispute that the present supply of graduate men teachers is altogether insufficient in number and in quality to meet the demand. The principal scholastic agents have been emphasizing this fact for some years, and, to show how acute the difficulty is becoming, I instance a recent case in which a head master had six applications for a vacant post which a year or two ago would have attracted perhaps sixty candidates. The reason is not far to seek. In the past teachers have been poorly paid for arduous work, and, now that the entire conditions of service have come under discussion and have for a time been uncertain in respect of increased severity, young graduates seek other careers.

The proper training of teachers is very desirable, but it is necessary to distinguish between what is ideal and what is practical. Many of the most ardent and worthy advocates of registration who are pressing for severe conditions of registration, and who would drive all future teachers into the training college, are, unfortunately, either connected with large schools well and easily supplied with assistants, or have, by reason of their position, no practical knowledge of the difficulties besetting the heads of the smaller secondary schools; and, if these theorists are not to prevail, they must be brought face to face with the practical difficulties of the situation.

The Order in Council for regulating the registration of teachers shows that after three years the conditions to be fulfilled by a teacher desiring to be placed in Column B (the list of secondary teachers) of the Register, are roughly these: (1) University degree; (2) training college year; and (3) trial year, with the alternative to the second condition that, instead of passing a year at a training college, it may be passed, under certain conditions, as a student-teacher at a recognized school.

With the exception of this alternative to the second one, these conditions resemble exactly those which prevail in Prussia; but it should be explained that previous to the year 1890 the Prussian training-college year (*Seminarjahr*) was not obligatory, but was added chiefly because so many candidates were seeking appointments in the higher schools, and it was desirable to lessen the number by increasing the difficulty of qualification, the immediate effect being to reduce the number of applicants for higher posts from 500 to 180.

In Prussia then the conditions of qualification of secondary teachers were regulated to some extent by the supply, and it would be absurd for us to adopt similar conditions without similar consideration.

The Prussian qualified secondary teacher is practically sure of employment; he has a liberal allowance during temporary ill-health, and finally he receives a pension. In England one is afraid of being "too old at forty"; nowhere is there security of tenure, as the recent dismissals at the Merchant Taylors' School very painfully show; there is no pension in old age. The reasoning which would demand, in addition to the University course, a further year of unpaid preparation may be ideal, but it certainly is not practical.

In England any secondary men's training institutions that we have appear to be tentative and experimental in organization, and it is altogether too much to expect that the University graduate will readily rush in and provide means for rendering them efficient. They must be the growth of time. At present they would generally fail to attract men who, in the majority of cases, have with difficulty found funds for their University course, and who, wanting value for money, as most Englishmen do, will hesitate before incurring further expense for pecuniarily speaking, so small an ultimate result.

It appears to me that the safety-valve of the present situation is that condition which in the Order in Council is allowed as an alternative to the training college year—namely, the year as student-teacher in a recognized school.

Those strongly in favour of pressing forward at this present crisis the claims of the training college would like to see the word "unpaid" inserted before "student-teacher"; but, failing this, their efforts will no doubt be given to adding to the difficulty of the conditions on which schools may receive student-teachers.

Any raising of the conditions will bear heavily on many graduates wishing to become qualified teachers, but it would especially affect that class of assistants, often very helpful in the smaller secondary schools, who take their degree at a University not demanding residence.

The whole alternative clause runs thus: "He must have passed an approved examination in the theory of teaching, have spent at least one year as a student-teacher, under supervision, at a recognized school (not being an elementary school), and have produced evidence of ability to teach."

If the candidate must produce evidence of his ability to teach, it can be produced (1) by the practical examination of the candidate himself, and (2) by the examination of the pupils under his care. The first method would suit a graduate, who, in addition to gaining his certificate in the theory of education, might practise as a student-teacher and obtain a certificate of ability to teach from an institution not requiring residence, such as the College of Preceptors.

I suppose that many non-graduate teachers will still find employment even in recognized schools, and, as these often take their degree, without residence, at London or at the Royal University of Ireland, after some years of teaching experience, I see no reason why their work in a recognized school should not be taken as evidence of their ability to teach.

I venture to urge, then, that the alternative clause should be freely interpreted, and that a candidate who can show a certificate granted by an institution such as the College of Preceptors, in the theory and also in the practice of education, should be allowed as much latitude as possible in the choice of the place where he should gain his knowledge and experience,—I am, &c.,

A. MILLAR INGLIS.

The College, Maidenhead, Berks, April 21.

#### ADMISSION AND REMOVAL OF PUPILS: UNIFORMITY OF CONDITIONS.

*To the Editor of the Educational Times.*

SIR,—With your permission, I should like to invite principals of private schools to send me copies of forms of admission of pupils, and also any newspaper or other reports of law cases in which judgment had been given relative to disputes between parents and head teachers respecting the removal of pupils.

Representatives of the Head Masters' Association, of the Preparatory Schools' Association, of the Private Schools' Association, and probably of the Association of Head Mistresses, are to meet shortly to try to come to some general agreement as to the conditions of admission and removal of pupils, and it would be very helpful to me, as representing the Private Schools' Association, if the request I have set forth in the beginning of this letter were to meet with hearty response. It seems hardly necessary to point out how generally advantageous it would be if, in the points referred to, uniformity of conditions were to prevail throughout the profession.—I am, &c.,

A. MILLAR INGLIS.

The College, Maidenhead, Berks, April 22.

#### PROFESSOR MEIKLEJOHN.

WE regret to have to announce the death, on April 5, in his 72nd year, of J. M. D. Meiklejohn, M.A., Professor of Education in the University of St. Andrews, who had been for more than a quarter of a century a member of the College of Preceptors and of its Examining Board. In the early years of the movement for the training of secondary teachers in connexion with the College, Prof. Meiklejohn played a conspicuous part: he took up the work of lecturing on the Practice of Education to a large audience of teachers when the Rev. R. H. Quick was obliged by ill-health to resign the professorship to which he had just been appointed.

Prof. Meiklejohn's career was more than ordinarily interesting and varied. His father was an Edinburgh schoolmaster, and it was at his school that young Meiklejohn received his education and preparation for the University of his native town, where he highly distinguished himself, obtaining the gold medal

for Latin. For some years after he left the University he was engaged in teaching and in literary work, one of his earliest productions being a translation of Kant's "Kritik der reinen Vernunft," a remarkable performance for so young a man. For two years he was employed as an Assistant Commissioner under the Endowed Schools Commission, and in the year 1876, when the Chair of Education was founded in St. Andrews University, he was appointed to the post, which he filled to the day of his death. His position as Professor of Education, his personal experience of the requirements of schools, and his special literary faculty explain the remarkable success of the series of educational works in various departments which he published in rapid succession, and which are still in very large demand.

It is interesting to note that his scholastic experience was gained largely in private schools; for some years he was Principal of Bowdon College, near Manchester, and afterwards of a preparatory school in Bayswater. It was, however, as a public lecturer that Prof. Meiklejohn's gifts were most conspicuous, and those who many years ago, at the College of Preceptors and elsewhere, had the privilege of listening to his lectures on English literature, and remember his impressive personality, his eloquent exposition, and his ringing voice, may possibly regret that his exceptional rhetorical gifts were not more in evidence. He has left a large family of sons and daughters, but we are not aware that any of them has elected to adopt the father's and grandfather's profession, and hand on the torch to future generations of teachers.

## REVIEWS.

### WHAT NEXT?

*The Discovery of the Future.* By H. G. Wells, B.Sc.  
(Fisher Unwin.)

If Mr. Wells raised "anticipations" by the subject of his discourse at the Royal Institution (January 24), it would be interesting to learn how far he succeeded in satisfying them. In the imaginative sphere we can all build our castles in the air, very much to our satisfaction; and in fiction the artist can forecast and fulfil within wide limits of speculation. But when one comes to the scientific handling of the business the results appear to be somewhat elusive.

Granted two general types of mind, the one looking backward and the other straining forward—call them "legal" and "creative," or oppose them under any other names—why, asks Mr. Wells, does the first prevail? "Though foresight creeps into our politics, and a reference to consequence into our morality," he says, "it is still the past that dominates our lives. But why? Why are we so bound to it? It is into the future we go; to-morrow is the eventful thing for us." But "foresight"—in the sense of "the broad creative idea"—is no new thing in politics, ours or other people's: though "beneath the legal issues the broad creative idea has been very apparent in the public mind during this war," was the idea any less apparent, say, in the Scottish War of Independence, or in the Punic Wars, or in the annexation of the vineyard of Naboth the Jezreelite? Again, is not morality the very child of reference to consequences? As for the hold of the past upon us, Mr. Wells himself cannot but acknowledge the force of our experiences, such as they are, in our interpretation of them. Our "impression of the superior reality and trustworthiness of things in the past" is no doubt "one of the results of the peculiar condition of our lives"; and, if it is "not an absolute truth," we shall hold it none the worse for that so long as we remain in "the peculiar conditions of our lives" and find no better guide of our steps. "The man of science," Mr. Wells assures us, "comes to believe at last that the events of the year A.D. 4000 are as fixed, settled, and unchangeable as the events of the year 1600"; yet he adds a rather important distinction: "only about the latter he has some material for belief, and about the former—practically none." But he does not assess the value of a belief that is confessed to have practically no basis. Such a belief may be perfectly right, but it can scarcely be claimed as a triumph of "scientific" investigation or of "intellectual methods."

However, Mr. Wells proceeds to inquire "how far this absolute ignorance of the future is a fixed and necessary condition of human life, and how far some application of intellectual methods may not attenuate, even if it does not absolutely set aside, the veil between us and things to come." And he suggests

"that along certain lines, and with certain qualifications and limitations, a working knowledge of things in the future is a possible and practical thing." To be sure, since the sixteenth century we have come into "a new and more critical way of looking at things"; Owen could build up an extinct animal from a bit of bone, and we can all, like Mr. Wells, believe in the *Megatherium*, which we have never seen, as confidently as we believe in the hippopotamus that has engulfed our buns. Adams and Leverrier calculated the spot and the moment for the discovery of Neptune. But when it is a question of "the future," outside the range of physical induction, our anticipations must be modest. "Suppose," however, says Mr. Wells, "the laws of social and political development, for example, were given as many brains, were given as much attention, criticism, and discussion, as we have given to the laws of chemical combination during the last fifty years—what might we not expect?" Well, that depends on our knowledge and temperament. Mr. Wells expects a vast deal more than we should expect. There have been very diligent, astute, and numerous theorists and practitioners in both these spheres during the last fifty years, and their conclusions do not encourage prophecy. We should recommend him to study, for example, the sixth chapter of the first volume of Mr. Bryce's "Studies in History and Jurisprudence," on the predictions of Hamilton and Tocqueville as to the future of the constitution of the United States. "The Republic fared far otherwise than as Hamilton and his friends either hoped or feared," and very differently also from the prognostications of Tocqueville. And so in many other cases. Who shall predict whether the Education Bill will pass? Where are the prophets of the South African War? Yet in both cases the essential facts seem peculiarly accessible for a basis of forecast. Of course, a careful study of the pertinent facts, with due precautions against error—a just application of scientific method to social and political facts—must do something to clear and steady one's vision. But Mr. Wells seems to hope for a good deal more from "a systematic exploration of the future." He sees the point of difficulty clearly. "Directly man becomes a factor the nature of the problem changes." Is man, then, "indeed, individually and collectively, incalculable"? Individually, he is; collectively, perhaps, not altogether. "The knowledge of the future we may hope to gain will be general, and not individual." Here, to begin with, is a far-reaching limitation of our prospects.

"How far, then, is it possible at the present time to speculate the particular outline the future will assume when it is investigated in this way?"—"scientifically" investigated, we presume, with a view to discovery of "general" knowledge of the future. Demolishing the Comtist notion of "any millennial settlement of cultured persons," Mr. Wells comes upon the fact "that man is not final," and this, he says, "is the great, unmanageable, disturbing fact that rises upon us in the scientific discovery of the future." Modestly, however, he acknowledges his inability to solve the question, "What is to come after man?" and accordingly he turns to "the nearer future, while man is still man." What, then, does he see through his telescope? A "mere irresponsible suggestion" of two years ago turned into a pretty general belief, even into a commonplace with Cabinet Ministers, "that our dense populations are in the opening phase of a process of diffusion and aëration." There does not seem to be much credit to prophecy in this example. Also "it seems pretty evident that the mass of white and yellow population in the world will be forced some way up the scale of education and personal efficiency in the next two or three decades." This is so "general" as to be practically useless. But further:—

It is not difficult to collect reasons for supposing, and such reasons have been collected, that in the near future—in a couple of hundred years, as one rash optimist has written, or in a thousand or so—humanity will be definitely and consciously organizing itself as a great world State: a great world State that will purge from itself much that is mean, much that is bestial, and much that makes for individual dullness and dreariness, greyness, and wretchedness in the world of to-day.

We find no balancing of opposing probabilities, but again the vagueness renders the conclusion wholly barren. Moreover, there is no "scientific" demonstration of this "great world state"; it is but "the sanguine necessity of our minds that makes us believe" in its eventual emergence. Thus, inevitably, Mr. Wells feels himself driven, step by step, to drop "scientific" discovery and "intellectual" methods, and to acknowledge that his speculations are "built finally upon certain negative beliefs that are incapable of scientific establishment," and particularly upon the belief "that neither humanity nor, in truth, any individual human

being is living its life in vain." The "scientific" process and the "intellectual methods" are calmly abandoned. And the inane result of the whole inquiry comes at last to this: that "it is possible to believe that all the past is but the beginning of a beginning, and that all that is and has been is but the twilight of the dawn"—"that all that the human mind has ever accomplished is but the dream before the awakening."

Seldom, if ever, has an audience at the Royal Institution—or elsewhere—solemnly gaped at such vacant bubbles. How many of them came away the wiser about "the discovery of the future," or took home with them any fresh inkling of "a working knowledge of things in the future," scientific or otherwise?

## EX CATHEDRA.

(1) *Thoughts on Education*. By Mandell Creighton, D.D., sometime Bishop of London. Edited by Louise Creighton. (Longmans.)

(2) *Pastor Agnorum: a Schoolmaster's Afterthoughts*. By John Huntley Skrine, Warden of Glenalmond. (Longmans.)

We have coupled these two volumes, published almost simultaneously, because they both profess to give the mature experience of an educator. Dr. Creighton will be remembered, first and foremost, as an historian, and next as a bishop of extraordinary activity and versatility, whose life was not spared long enough to show his full powers as an administrator and a Church reformer. But Mrs. Creighton tells us that education "was a subject of practical interest to him during the greater part of his life," that "he was a born educator," and that he often said himself: "I am nothing if I am not educational." Mr. Skrine is one of the fifty (or hundred, in the last edition) Victorian laureates, and an Oxford Newdigate, but he will be better known to our readers as the author of two charming monographs, "Uppingham by the Sea" and "A Memoir of Edward Thring." First a pupil, and then a master, at Uppingham, he has followed closely in his great master's footsteps.

The first volume, with all respect to the eminence of the author, need not detain us long. The addresses, with two exceptions, are merely reprints of newspaper reports. Excellent as impromptu (half a sheet of note paper, so Mrs. Creighton tells us, represented the maximum of preparation) and for their immediate purpose, they throw little light on the problems that most exercise us to-day. Though the style is easy and fluent, there is hardly a sentence or a turn of thought that clings to the memory; and, except as another proof of Dr. Creighton's ready wit and geniality, the book will not add to his fame. In theory, in systems, in professional training, Dr. Creighton has a profound disbelief. Teaching itself he holds to be "an incommunicable art." After the "three R's" he would have "no definite subjects taught at all, but, instead, things in general." "The body which has to do this kind of work for the community [the work of real education], there can be no doubt about it, is the Church." The random utterances we have quoted suffice to show that we who call ourselves educationalists—an "offensive" name, we may admit—take a different view of the problem from that of the Bishop. While freely acknowledging with him that the relation between the individual teacher and his pupil is of more importance than any system, and that the main part of teaching is to inspire a love of knowledge, we hold, no less firmly, that education is an art, based on science, reducible to rules, and communicable in the same degree as the art of medicine or of war. It is hard to understand how so able a man can have failed to grasp what seems to us so obvious. The simple explanation, we take it, is that Dr. Creighton was never a schoolmaster. The best of lecturers and private tutors may make the worst of form-masters.

Mr. Skrine, like Dr. Creighton, is somewhat sceptical as to pedagogics, and is careful to tell us that he is not composing a treatise on education, but he knows at first hand what he writes about, and with all our belief in theory we gladly sit at the feet of an *abnormis sapiens*, one who has consciously or unconsciously imbibed the first principles of Froebel and Pestalozzi. Mr. Skrine is a poet, and his doctrine is wrapped up in poetical allegories, images, and metaphors. In saying this, we do not intend to imply either that his meaning is obscure or that he confounds the separate arts of prose and verse composition. His prose is vivid and pictorial, but plain and unaffected. There is much we disagree with, but we cannot too highly commend his delineation of the "very perfect gentle" schoolmaster.

Let us see how Mr. Skrine stands the test of turning his imaginative and graceful poetry into bald, matter-of-fact prose. He may, indeed, object, on principle, to the test, and call in aid the authorities who tell us that a paraphrase of poetry is an.

impossibility, and that such an exercise as we set in our last number is an absurdity—"you seize the flower, its bloom is shed." Still, we stick to our guns, and, while awarding extra marks for excellence of style (to borrow the language of the schools), insist that the essays must be classed mainly according to the value of the ideas they contain, the truth of the theories they expound. We will choose for analysis the chapter entitled "The Parent, a Neglected Factor in Education," guided solely by the consideration that the subject is less trite than most of those treated in the volume. Here, then, is a brief *résumé* of the argument, which is couched in the form of a dialogue:—

Professors of pedagogy neglect the *crux* of the whole matter—the relation of parent and master. The ordinary master ignores one-half of his duty—the education of the parent. It is true that parents differ so widely in character and morals that it is impossible to treat them as a class; but they may, and should be, dealt with individually. The head master should make a point of seeing the parent—at least once—so as to establish a personal relation, and he should write to him fully at any turning point in his son's career. More than this cannot be expected of him; he has not the time. A *nevus* must be established; for the rest he must trust to chance and circumstance. Public schools may appear to an outsider a violation of nature in that they divorce a boy from his home; but they are justified by their results. A boy can grow to more in them than if he stays at home.

Now this argument tacitly assumes that the English public school is, or may be made, an ideal institution, and that its imperfections are due solely to the frailties and shortcomings of those that work it. The chapter begins with a sly hit at the College of Preceptors, and to talk of founding a Chair of Pedagogy seems to Mr. Skrine to show a lack of humour. We cannot help thinking that, if Mr. Skrine had sat under Dr. Findlay, or even attended a Winter Meeting at the College of Preceptors, he would have remembered that in "the land where philosophers be" this ideal public school is virtually unknown, and that some of the best thinkers among ourselves (not all of them Preceptors) look to the day school as the ideal school of the future, capable of combining all the advantages of home and cloister.

There is another assumption that runs not only through this chapter, but through all the book, and that is the autocracy of the head master. Mr. Skrine is not content that the head master should be *primus inter pares* (he says so *totidem verbis*); he would have him prophet, priest, and king. One of the objections urged in this essay against frequent correspondence with parents is that it would compel the head master to "toss over every detail which is indifferent to morals to a chief of the staff." Morals are the inalienable prerogative of the head, "a province with which no subordinate can be entrusted." This radically false conception of the relations between a head master and his assistants (for such we hold it to be) vitiates much of Mr. Skrine's theory. The *nevus*, if it is to be what Mr. Skrine desires—a co-trusteeship and not a mere business contract—must be between the parent and the boy's house master or tutor, not his head master. It is possible to stand *in loco parentis* to twenty or thirty boys; it is impossible to do so to two or three hundred. Only long use and wont can have reconciled us to that monstrous pluralist, the head master of a great public school, at once general manager and supervisor, chaplain, sixth-form master, and house master of probably the biggest boarding-house in the school, with a larger income than a bishop and the prospect of a bishopric as a retiring pension.

Let us be just. It is clear, from the whole tenour of the volume, that Mr. Skrine would repudiate this actual portraiture as his ideal. His head master, like Carlyle's King, rules by no divine right, but solely by virtue of his *caunting*:—

Let us suppose our Round Table has been set up in the school of our dreams, and an order gathered round it. Every master has a seat at it and counts for one. Even the King (for the roundest table must admit this one distinction) counts for one as knight, and when he counts for more, as the Grand Master of an order must, it is not for two or three he counts, but for all; he claims more than another only because he claims it in the name of the whole.

We have no doubt that Glenalmond under its present Warden is such a Round Table. The mistake Mr. Skrine makes is in thinking that the majority of head masters are like himself; that King Arthurs are, or may be, the rule among monarchs. *Ich dien* must be the badge of all our tribe, head masters and assistants alike; but, the more he is eager to do true service, the less will a man of independent temper be willing to take a post from which he can be ejected at the will and pleasure of an autocrat.

A recent incident that was brought to our notice may serve as a pendant to Mr. Skrine's "Idylls of the King." A beardless head master enters a class-room and finds a Latin lesson proceeding when Greek was down in the time-table. He thus addresses the form master, a man twice his age: "Mr. Jones, you are paid by the Governors to carry out my instructions, and, if you neglect them, you must expect to be reprimanded. Boys, put away your Cæsars and get out your Xenophons."

#### HEALTH IN THE SCHOOL.

*Hygiene for Students.* By Edward F. Willoughby, M.D. Lond. (Macmillan.)

Although the subject of health is one that appeals to all, there are special departments of hygiene which are devoted to special conditions of life: thus, there is the hygiene of the home, of the city, of the workshop, of the school, and so on. As, with the increasing complications of civilized life, these departments become more highly developed, so the laws regarding their health become more elaborate, and the special knowledge more exact. In this new edition of a well known text-book, Dr. Willoughby has endeavoured to embrace all these departments in one manual. For the examination candidate this is doubtless a wise arrangement, but for practical purposes it is obvious that a number of smaller manuals, each on its special department, would be more useful. For a general work of reference, however, it is excellent. The chapter on "School Hygiene" is somewhat disappointing, leaving several points untouched; not, apparently, from lack of space, since country holiday funds are discussed, as well as the comparative mental abilities of men and women. The treatment of infectious diseases, the lighting of schoolrooms, and the question of desks are all thoroughly dealt with. We would particularly draw attention to a table showing the right measurements of desks for scholars of varying heights. Such a table would be of great service to teachers who are provided with adjustable desks, but do not know how to adjust them, or forget to do so; for a desk that is fixed wrongly is far more unhygienic than the ordinary chair and table. In the question of lighting, a North aspect is advocated. This is doubtless best when an even light is wanted for drawing; but sunshine is too important a factor in the lives of children to be excluded from their ordinary schoolroom.

## GENERAL NOTICES.

### CLASSICS.

"Blackie's Illustrated Latin Series."—*The Phormio of Terence.* Edited by W. Cecil Laming, M.A.

Mr. Laming's introduction (27 pages) sketches the ancient comic drama, tells of Plautus and (at greater length) of Terence, describes the Roman theatre, outlines the plot of the "Phormio," and explains the Terentian metres. The text lays no claim to being critical; it follows in the main Hauler's revision of Dziatzko's edition. A few troublesome passages, however, are briefly considered in an appendix. There is no attempt to give stage directions, which form an interesting and helpful feature of Mr. Sloman's careful edition (Clarendon Press). The explanatory notes are full, accurate, and pointed. We cannot but think that Mr. Laming unnecessarily perpetuates the difficulty about *initiant* (Act I., Sc. i., l. 15). Though "the ceremony [of consecration on weaning] was a purely Roman one, and Terence is not likely to have found a reference to it in his Greek original," surely that can be no valid reason against a reference to it by Terence; and the alternative explanations seem to us to involve greater difficulties. There are 22 illustrations, mostly reproductions from the Vatican MS. These add greatly to the usefulness of the book. Altogether a careful, scholarly, and serviceable volume.

"Bell's Illustrated Classics."—*P. Ovidi Nasonis Tristium Liber Primus.* Edited by A. E. Roberts, M.A.

In a brief introduction Mr. Roberts gives the chief events in Ovid's career, a descriptive list of his writings, an analysis of the first book of the "Tristia," and a concise explanation of the metre. He breaks up the poem into sections, placing at the head of each a summary of the contents. The notes are ample, instructive, and suggestive. In appendices will be found a useful description of a Roman book (figured from a Pompeian wall-painting on another page), a map of Ovid's journey to Tomi, and a classified list of such grammatical and rhetorical usages in the text as seem worthy of special note. The vocabulary obviates the need of a dictionary, but the book may be had without it. There are nearly thirty well chosen illustrations. Mr. Roberts's Latin is better than his English.

## MATHEMATICS.

*Spherical Trigonometry.* By the late I. Todhunter, M.A., F.R.S.  
Revised by J. G. Leatham, M.A., D.Sc. (Macmillan.)

In its present revised form the well known work on spherical trigonometry by the late Dr. Isaac Todhunter has been very much enlarged and improved. Dr. Leatham has undertaken the task of reviser in a spirit that must call forth the thanks and admiration of all students that cherish a feeling of affection for and a sincere appreciation of the thorough, patient, and untiring investigation that marks all Dr. Todhunter's work. Nothing has been altered for the sake of alteration. The many changes and extensive additions which now bring the book into touch with the present state of the science enhance the value of the work in proportion as they increase its size. Special features of the new volume are the introduction of fresh and very valuable chapters on "Spherical Geometry" and the careful development of the principle of duality in connexion with circles on the sphere. The reviser has treated the theory of systems of coaxial circles in a manner that gives prominence to the analogy between such systems on the sphere and on the plane. Separate chapters at the close of the book are devoted to the generalized spherical triangles and to the application of determinants to spherical geometry. The numerical examples of the solution of triangles are placed in the chapters they naturally belong to, and not, as in early editions, at the end of the book. This rearrangement is a distinct improvement.

*Complete Mental Arithmetic for the Senior Division.* By James Lamb, F.E.I.S., F.S.A. (Scot.). (McDougal's Educational Co.)

This is a very good little book on mental arithmetic. It gives in clear and concise form the principal rules for the rapid and accurate performance of arithmetical processes, and for the solution of ordinary arithmetical problems. It contains also a large number of useful exercises and test papers, to which a time limit is attached. The answers are not included in the volume itself, but a "Teachers' Book" has been issued. The large type and serviceable binding selected for so inexpensive a publication deserve a special word of praise.

## ENGLISH LANGUAGE AND LITERATURE.

*Shakespeare: Julius Cæsar.* Edited by M. J. C. Meiklejohn, B.A. (Holden.)

"The first of a series edited under the general editorial supervision of Prof. Meiklejohn"—who, alas! is now no more. The apparatus of explanation and commentary is very complete. The introductory matter (19 pages) sets forth the probable date of the play (we should put it at least a year earlier), the source of the materials, the duration of the action, the dates of the historical events referred to, the details of the plot and a summary as well, and an account of the chief characters both as represented in the play and as known to history. The notes on the text are generally serviceable, though some of them might have been spared. Besides, there are good notes on scansion and on old or unusual grammar, and useful lists of the anachronisms and of the chief historical inaccuracies in the play. Add to all this a series of nine examination papers and an index to the notes on the text. "In O.E.," no doubt, "the infinitive ended in *an*; later, in *en*." But is it the fact that "then the Danish fashion of using *to* was introduced"? The Danes had no "*to*" to use or to lend us; and our "*to*" has surely been otherwise satisfactorily accounted for. Then it seems much too sweeping to say that "in the time of Shakespeare the *to* was employed or was omitted at pleasure." Again, in Act III, Sc. i., l. 262,

"A curse shall light upon the limbs of men"

—Mr. Meiklejohn (with others) thinks "*limbs* is probably a corrupt reading"; for "'domestic fury' and 'civil strife' [next line] would not affect the limbs of men." No? Then read on. Besides, "*limbs*" is not to be prosaically restricted to arms and legs: cf. Vergil, "*Æneid*," III. 137, where Conington translates *membra* "the human frame," and no critic proposes an emendation. In spite of all the "proposed readings," the text is plainly sound. Once more: Augustus died, not "in the seventy-seventh year of his age" (page xvii.), but 35 days short of 76: "septuagesimo et sexto ætatis anno diebus v. et xxx. minus," according to Suetonius. Such slips, however, detract but little from the comprehensive usefulness of the book.

*Composition and Rhetoric for Higher Schools.* By Sara E. H. Lockwood and Mary A. Emerson. (Ginn.)

The school system of the United States lends itself more completely than ours does to the systematic teaching of English composition. The book before us begins with a brief review of the chief rules of grammar and punctuation, followed by some exercises in paraphrase and retelling the thoughts of others. A good example of how not to do it is quoted from a pupil's version of a well known passage in "The Lady of the Lake": "But, before he took his swift racecourse, he shook off the dewdrops from his fleshy sides, and, like a proud and tall leader with a coat-of-arms, tossed to the sky his little front with its many beams." The more difficult problem of telling one's own thoughts is sensibly attacked. Among other contrivances may be mentioned the use of pictures (such as Stratford-on-Avon, Cromwell refusing the Crown, the Laocoon Group) as subjects for paragraphs. Pupils are first to write rough notes on the points to be observed, and then to work them up.

A good hint is: "Describe a place as if you were the only person who knew about it." A good deal of space is devoted to the important point of securing unity and coherence in the paragraph. The "topic-sentence"—that is, the sentence conveying the central idea—is specially dwelt on. One point in the arrangement of the book is striking as an illustration of the growing influence of the point of view of the "reformed" method of teaching modern languages. Exercises on the correction of ill-expressed sentences, and on the proper use of words involving some difficulty, follow those which involve the expression of thought in a story or paragraph. The authors have, in fact (perhaps unconsciously), reversed the order of the traditional method of teaching the classical languages.

## MODERN LANGUAGES.

*The French and English Word-Book.* By H. Edgren and P. B. Burnet. (Heinemann.)

The characteristic feature of this dictionary is the method of indicating the pronunciation. Transliteration, both phonetic and conventional, is (as far as possible) avoided, and the sounds of letters are indicated, for the most part, by symbols—like dashes, dots, &c.—placed under the letters, on the same principle as the *cedilla*, and by printing mute letters in italics, and occasionally by using special letters, as *E* for the *e* in *le, menace*, &c. The date of the introduction of a word is indicated by small figures, as *Huguenot*<sup>15</sup>, meaning that it dates from the fifteenth century. In the French-English part the Hatzfeld-Darmstetter-Thomas lexicon has been closely followed, and is generally responsible for the etymology. As far as meanings are concerned, this authority has not always been used judiciously. Thus, for *nid* we have "nest, cradle." The history of "cradle" is an interesting example of the methods of lexicographers. Littré quotes a passage of Boileau in which *nid* means "a source of moral evil." Darmstetter, at the end of his article, has "*Fig.[urative] berceau*," and quotes the same passage. The authors of the book before us have simply taken *berceau* from Darmstetter and translated it "cradle" without more ado. There are several cases in which a cursory inspection shows want of care in the compilation; thus *dépêcher* (transitive) is rendered "make haste," and "telegram" is not given among the meanings of *dépêche*; *frère de lait* is rendered "milk-brother," instead of "foster-brother"; *pousser une botte*, "give one thrust"—an odd expression; *il a poussé sa chance*, "he has made his chance count"—also odd; *qui diait're vous pousse à vous faire imprimer?* "what in [*sic*] the deuce brings you to go into print?"—certainly not idiomatic English. It is equally easy to find evidences of haste in the English-French part. Thus, among the French words for "indulge" (transitive) we find *permettre, accorder, se livrer, se laisser aller*; for the intransitive use of the same word, *se livrer à, se laisser aller à*. On the same page, *induire* (obsolete in this sense) is coupled with *entraîner* as a rendering for "induce"; while the student who had to translate "an induced current" would find no help.

*A Complete French Verb Drill.* By J. Lazare and H. Marshall. (Hachette.)

This is simply a table of the French verbs, with exercises of a commonplace type. No serious effort is made to teach French idiom or syntax, otherwise than incidentally. It might be used to supplement more general exercise-books.

## SCRIPTURE.

"The Century Bible." (Jack.)

(1) *Hebrews.* Edited by A. S. Peake, M.A.

Prof. Peake has successfully combined scholarly and popular treatment of a subject bristling with difficulties. In an introduction of some length he discusses fully and fairly the authorship, teaching, destination, and history of the Epistle. Though retaining in his title "the Epistle of Paul the Apostle," he concludes that Harnack's identification of the author with Priscilla, though not proved, "seems to be the most probable that has yet been proposed." The Authorized Version of "Hebrews" is reprinted, and then comes the main portion of the book, the Revised Version "with annotations." The running commentary is full, judicious, and instructive. Prof. Peake shirks no difficulty, and he is scrupulously careful to deal with all views of real importance. The references to the literature of the subject will be welcome to all inquiring readers. This is a kind of work that ought not to be confined to theological students or Sunday-school teachers, but to be studied widely for private edification. The get-up is very dainty and attractive.

(2) *Corinthians.* Edited by J. Massie, M.A., D.D.

Prof. Massie packs a great deal of matter into his 78 pages of introduction. He briefly establishes the authorship of the Epistles, narrates the founding and the conditions of the Church at Corinth, and examines, with minute care, the problems that emerge. In explaining the occasion of "the First Epistle (so called)," he deals with Apollos and his teaching, with the "parties," with the general state of the Church, and with the particular questions of ecclesiastical position and discipline, morals, the regulation of Christian worship, and the doctrine of the Resurrection. The Second Epistle presents much greater perplexities for disentanglement. Was there an intermediate letter? Was there an intermediate visit? Then we have

the Judaizers and their relations to Paul. Finally, the burning question: Is the Epistle a unity? As in the other volumes of the series, the Authorized Version is reprinted, and, thereafter, the Revised Version with notes and an index. There is a clear map showing the journeys of St. Paul in Asia Minor and Greece. Not a page but bears the marks of thoroughly competent workmanship. The volume should be in the hands of every thoughtful reader of the Bible.

(3) *Thessalonians and Galatians*. Edited by Walter F. Adeney, M.A.

Prof. Adeney makes an able contribution to the series of which he is general editor. The introduction deals very carefully and fully with the genuineness, date and place of origin, occasion and objects, and characteristics and teaching of the three Epistles, including also a useful section on the origin of the Galatian churches. Prof. Adeney utilizes the main arguments of Prof. Ramsay in favour of the South Galatians as the recipients of the Epistle to the Galatians. We are not satisfied that he is sure of his ground in discussing the argument based on the legal points. We hardly think it matters for the purposes of the text whether *διαθήκη* be taken as "covenant" or as "will"; in either case the son, by the adoption of faith, takes the benefit. The point of irrevocability is too complicated for discussion here. But, as to adoption, Prof. Adeney says: "The Greek custom of adoption carried with it certain religious rights and obligations. This had been so with the Roman custom in ancient times; but it had ceased to be the case before the commencement of the Christian era. Now in our Epistle the Apostle assumes that it is still a current custom. To be made a son of Abraham by adoption is to come into the privileges of the patriarch's covenant. This then implies a Greek civilization, rather than a Roman. Then, according to the old custom, to be an heir implied sonship, because the son had a right to inherit his father's property. Thus to make a will in favour of anybody implied the adoption of that person. This custom had ceased at Rome by St. Paul's time, but in our Epistle he argues that the possession of Abraham's faith carries with it the sonship, as the inheritance implies the adoption." We cannot help thinking that this passage contains both bad law and bad logic. To say that the son's right to inherit involves an implication of sonship in heirship seems an obvious logical fallacy. Again, the alleged custom whereby the institution of an heir was an implied adoption of him is, we imagine, not to be found in the extant writings of the Roman jurists. Further, it surely is not the fact that the Roman religious rights and obligations arising out of adoption had ceased before the Christian era. Else what does Justinian, some five centuries later, mean, for example, by "personis in sacris patris constitutis" ("Cod." viii. 47 (48), 4, 10)? Once more: "To be made a son of Titius by adoption is to come into the privileges of Titius's covenant"—is not this proposition valid in Roman law at (and long after) the time of Paul? Prof. Adeney also seems to identify *ius italicum* with "the proud rights of Roman citizenship" (pages 73-74), which would be somewhat hasty. Apart from these rather special technicalities, however, the work is thoroughly well done—clear, pointed, and instructive.

## FIRST GLANCES.

### CLASSICS.

- Carter, George, M.A.: *Rules of Latin Syntax*. Relfe.  
[Third Edition, with additions.]
- Parallel Grammar Series.—A Parallel of Greek and Latin Syntax. By C. H. St. L. Russell, M.A. 3s. 6d. Swan Sonnenschein.  
[Two objects: (1) "to simplify the study of Greek by a direct comparison with Latin idiom"; (2) "to provide a syntax of both languages which will cover the whole course of a boy's training at a public school." Print and binding excellent.]
- Scriptorum Classicorum Bibliotheca Oxoniensis.—Homeri Opera. By D. B. Monro and T. W. Allen. 2 vols. 3s. 6d. each. Clarendon Press.  
[Text elaborately revised; brief critical notes.]

### MATHEMATICS.

- Boole, Mary Everest: *The Cultivation of the Mathematical Imagination*. 6d. Colchester: Benham & Co.  
[34 pages. "Written by Prof. Perry's wish in order to facilitate comprehension of how to put pupils into the condition of mind in which such mathematical knowledge as they may acquire at school will be of use in after life for the understanding of the physical sciences."]
- Loomis, Elisha S., Ph.D.: *Original Investigation; or how to attack an Exercise in Geometry*. 1s. 6d. Ginn.  
[“With many model solutions and a complete discussion of the principles underlying the same.”]
- Smith, Charles, M.A.: *Solutions of the Problems and Theorems in Smith and Bryant's Geometry*. 8s. 6d. Macmillan.  
[230 solid pages, clearly and carefully printed.]

### MENTAL SCIENCE.

- Mackenzie, John S., M.A., Litt.D.: *Outlines of Metaphysics*. 4s. 6d. Macmillan.

[Aims "chiefly at indicating the place and nature of the various metaphysical problems, rather than at thrashing them out in detail." Genetic treatment. Handling grows firmer in latter half.]

Pierce, A. H., Ph.D.: *Studies in Auditory and Visual Space Perception*. 6s. 6d. Longmans.

[Experimental psychology. Treats the localization of sound, and offers explanation of certain optical illusions.]

### MODERN LANGUAGES.

- Cours Élémentaire Black.—France de Montereil (Jules de Glouvet). Abrégé et annoté par F. B. Kirkman, B.A. 1s. 6d.  
[“Roman de la guerre de cent ans (1418-29).” Footnotes in French. At end—and separate if desired English notes (4 pages) and vocabulary. Effective illustrations; frontispiece Henry V. of England. Beautifully printed.]
- Blackie's Little French Classics.—(1) *L'Avocat Patelin* (Brucys-Palapat). Edited by E. B. Le François. (2) *Oraisons Funèbres* (Bossuet). Edited by the Rev. H. J. Chaytor, M.A. 4d. each.  
[Very good additions to the series.]
- Siepmann's German Series (Elementary).—Friedrich der Grosse und der siebenjährige Krieg (Ferdinand Schrader). Adapted and edited by R. H. Allpress, M.A. 2s. Macmillan.  
[Introduction; notes; list of strong verbs; vocabulary. Also key to "Word and Phrase Book" (by the general editor of the series), which appears separately (6d.).]

### ENGLISH LANGUAGE AND LITERATURE.

- Black's School Shakespeare.—Henry IV., Part I. Edited by H. W. Ord, M.A. 1s. net.  
[Introduction, notes, one examination paper. Well got up.]
- Blackwoods' English Classics.—Samson Agonistes (Milton). By E. H. Blakeney, M.A.  
[Sympathetic treatment. Excellent introduction and useful notes.]
- Carter, George, M.A.: *Questions on Shakespeare's A Midsummer Night's Dream*. 1s. Relfe.  
[Papers on each scene, and 12 of general questions. Interleaved.]
- Columbia University Studies in Comparative Literature.—The Italian Renaissance in England. By Lewis Einstein. 1.50 dols. Macmillan (agents).  
[“To trace the Italian influence in England from the beginning of the 15th century until the death of Elizabeth.” Careful study. Some good portraits reproduced. Extensive bibliography.]
- Dinglewood Shakespeare Manuals.—Midsummer Night's Dream; Questions and Notes. By Stanley Wood, M.A. 1s. Heywood.  
[Flood of questions; "with full answers to a large number of the more difficult" of them.]
- Fowler, J. H., M.A.: *A First Course of Essay-Writing*. 6d. Black.  
[“To reduce the number of those unpleasant and often unprofitable minutes which a beginner spends in contemplation of the 'theme' that has been given him.”]
- George, Hereford B., M.A., and W. H. Hadow, M.A.: *Poems of English Country Life* (selected and edited). 2s. Clarendon Press.  
[Judicious selection; sensible notes. Nicely got up.]
- Jones, W. H. S., M.A.: *King Richard the Third* (Shakespeare). Ralph, Holland, & Co.  
[“To meet the requirements of Certificate students.” Full introduction; footnotes; questions. Text rather closely printed, but clear.]
- Luce, Morton: *The Tempest* (Shakespeare). 3s. 6d. Methuen.  
[Handsome and scholarly edition. Literary introduction on sources, date, and characteristics; footnotes critical and explanatory. Appendices treating particular points at some length.]
- Moffatt's Shakespeare's Richard III. 2s. Moffatt & Paige.  
[Elaborate introduction and exhaustive notes.]
- Wood, Stanley, M.A.: *Shakespeare's A Midsummer Night's Dream*. 1s. 6d. Gill.  
[“Gill's Oxford and Cambridge edition.” Very full introduction and notes—suitable, apparently, for teacher rather than for pupil.]
- The Windsor Shakespeare.—Othello. Edited by Henry N. Hudson, LL.D. Jack.  
[Pretty edition. Brief introduction and footnotes, with critical notes at the end.]

### HISTORY AND GEOGRAPHY.

- Barnard, F. Pierrepont, M.A., F.S.A. (with others): *Companion to English History* (Middle Ages). 8s. 6d. net. Clarendon Press.  
[“Designed primarily for higher educational purposes,” but also for “the reading public at large.” In 12 sections. Profusely illustrated; 97 full-page plates. Most useful “companion.”]
- Black's Elementary Geography Readers.—IV.A (the British Isles) and IV.B (Europe, including the British Isles). By L. W. Lyde, M.A. 1s. 4d. each.  
[Summary at the end. Liberally illustrated.]

Blackie's Illustrated Continental Geography Readers.—Asia. 1s. 6d.  
 ["Intended to give a clear and vivid view in reading lessons."  
 Sketch maps; numerous illustrations, some of them full-page and  
 coloured.]

Heroes of the Nations.—Edward Plantagenet (Edward I.). By Edward  
 Jenks, M.A. G. P. Putnam's Sons.

[Sub-title: The English Justinian, or the Making of the Com-  
 mon Law. "I have long been unable to understand how any one  
 but a lawyer can possibly appreciate the true inwardness of  
 Edward's reign." But the general history is not swamped by  
 legal discussions. Maps, plans, pedigrees, and many illustra-  
 tions.]

#### EDUCATION.

Von Bülow, Baroness: The Life of the Baroness von Marenholtz-  
 Bülow. 2 vols. 15s. 6d. American School and College Text-  
 Book Agency (for W. B. Harison, New York).

[Preface by Dr. W. T. Harris. "These studies of Fröbel's  
 philosophy," says Dr. Harris, "are made doubly interesting by the  
 setting that her devoted niece has given them," and "a very instruc-  
 tive picture of the obstacles which educational reformers meet."  
 "My aunt possessed a most marvellous gift of teaching."]

The Great Educators.—Pestalozzi, and the Foundation of the Modern  
 Elementary School. By A. Pinloche. 5s. Heinemann.

[M. Pinloche is Professor in the Lycée Charlemagne and the  
 Ecole Polytechnique, Paris. Life (pp. 1-118), educational theory  
 (pp. 119-286), influence (pp. 287-302); introduction, bibliography,  
 index.]

How to bring up your Children. 1s. net. Sampson Low.

[Dainty reprint of Locke's Thoughts on Education.]

Wilson, Ven. Archdeacon J. M., M.A.: Profession of Teaching. 6d.  
 Kendal Mercury and Times.

#### MISCELLANEOUS.

Books for the Bairns.—No. 74, The Kings and Queens of England.  
 2d. Office of Books for the Bairns, London.

[Coronation Double Number. "Many of the portraits are  
 drawn for this publication from famous paintings in the National  
 Portrait Gallery."]

Board of Education.—Special Reports on Educational Subjects. Vols. 8  
 and 9. 3s. 2d. and 2s. 7d.

[See "Notes" on another page.]

Bristol Conference Souvenir. Edited by Beatrice L. Taylor, L.L.A.,  
 and Henry D. Mockridge, B.A. 5s. net (to the public); 3s. 6d.  
 net (to members of the scholastic profession). Jarrold.

[Authorized official guide for the N.U.T. Conference, Easter,  
 1902. Articles on local geology, history, architecture, celebrities,  
 charities, commerce, educational facilities, libraries, &c. Descrip-  
 tion of short excursions. Profusely illustrated (photographs and  
 views). Comprehensive, serviceable, handy.]

The Education of the People and the Bill of 1902. 6d. King (for the  
 National Education Association).

[Adverse to Bill, but comprehensive and instructive.]

Eeles, F. C.: The English Coronation Service: its History and Teach-  
 ing. 6d. net. Mowbray.

["With the Coronation Services of King Charles I. and of Queen  
 Victoria." The Coronation is "a setting apart or consecration of  
 a special minister of the Church"—"a service of a quasi-  
 sacramental nature, in many respects not unlike Confirmation or  
 the Consecration of a Bishop"]

Ontario Education Department.—(1) Documentary History of Educa-  
 tion in Upper Canada, from the passing of the Constitutional Act of  
 1791 to the close of the Rev. Dr. Ryerson's Administration of the  
 Education Department in 1876. Vol. VIII., 1848-49. Edited,  
 under the direction of the Minister of Education, with explanatory  
 notes, by J. George Hodgkin, M.A., LL.D., Librarian and Historio-  
 grapher to the Education Department of Ontario. Toronto: L. K.  
 Cameron.

[Mainly about the affairs of King's College, which became the  
 University of Toronto in 1849. "Having been Chief of the Staff  
 to the Education Department from 1844 to 1890," says Dr.  
 Hodgkin, "I was personally cognizant of the various educational  
 events recorded in the volumes of this Documentary History."  
 Except in Germany, which has its "Monumenta Paedagogica" in  
 19 volumes, is there any other example of the national publica-  
 tion of such a detailed History of Education? But apparently  
 they still lack careful readers for the press in the Ontario Educa-  
 tion Department.]

(2) Report of the Minister of Education, Province of Ontario,  
 for the year 1901. Parts I. and II. Toronto: L. K. Cameron.

[Statistics of 1900; very instructive reports; excellent views of  
 a number of public schools.]

The Year-Book of New South Wales. Circulated by the Agent-General,  
 9 Victoria Street, Westminster.

[168 pages. Careful, lucid, and full.]

## OXFORD UNIVERSITY PRESS.

### COMPANION TO ENGLISH HISTORY (MIDDLE AGES).

Edited by F. P. BARNARD, M.A., F.S.A. With Ninety-seven  
 Plates. Crown 8vo, cloth, 8s. 6d. net.

**A SCHOOL HISTORY OF ENGLAND**, down to the Death of  
 Queen Victoria. With Maps, Plans, and Bibliographies. By OWEN  
 M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON,  
 A. J. CARLYLE, and W. G. POGSON-SMITH. Crown 8vo, cloth,  
 3s. 6d.

**POEMS OF ENGLISH COUNTRY LIFE**. Selected and  
 Edited, with Introduction and Notes, by H. B. GEORGE, M.A., and  
 W. H. HADOW, M.A. Crown 8vo, cloth, 2s.

**MOLIERE.—LES FÂCHEUX**. Edited, with Introduction and  
 Notes, by E. J. TRECHMANN, M.A., Ph.D. Extra fcap. 8vo, cloth, 2s.

**A FRENCH PRIMER**, consisting of Accidence and Syntax. For  
 use in Middle and Lower Forms. By ARTHUR H. WALL, M.A.  
 Crown 8vo, cloth, 2s.

**A GUIDE TO ADVANCED GERMAN PROSE COMPOSI-  
 TION**. Containing Selections from Modern English Authors,  
 from the Sandhurst Papers, and from Magazines and Newspapers.  
 With copious Notes and Idiomatic Renderings of some of the  
 more difficult Phrases and Sentences; the whole being preceded  
 by an exhaustive Grammatical Introduction. By EDUARD EHRKE.  
 Extra fcap. 8vo, cloth, 3s.

**SCENES FROM SOPHOCLES: AJAX, ANTIGONE**.  
 Edited, with Introduction and Notes, by C. E. LAURENCE, M.A.  
 Extra fcap. 8vo, cloth, 1s. 6d. each.

**EURIPIDES.—MEDEA**. Edited, with Introduction and Notes,  
 by C. B. HERBERDEN, M.A. New Impression. Third Edition,  
 Revised. Fcap. 8vo, cloth, 2s.

**TALES OF THE ROMAN REPUBLIC**. Adapted from the  
 Text of Livy. Parts I and II. With Notes, Vocabularies, and  
 English Exercises, by JOHN BARROW ALLEN, M.A. Extra fcap. 8vo,  
 stiff covers, with a Map, 1s. 6d. each.

**CLASSICAL ARCHAEOLOGY IN SCHOOLS**. By PERCY  
 GARDNER, Litt.D. With an Appendix containing Lists of Archaeo-  
 logical Apparatus by Professor P. GARDNER and J. L. MYRES,  
 M.A. Printed by request of a Committee of the Head Masters'  
 Conference. 8vo, paper covers, 1s. net.

**CHART OF THE RULES OF HARMONY FOR FORM  
 USE BY STUDENTS**. By ARTHUR SOMERVELL. 4to, printed  
 on thick card, 1s. net.

**MANUAL OF THE FOUR GOSPELS**. By the Rev. T. H.  
 STOKER, D.D. PART I: *The Gospel Narrative*. PART II: *The  
 Gospel Teaching*. Crown 8vo, cloth, 3s. 6d.; or separately,  
 Parts I and II, 2s. each.

**ARITHMETIC**. With or without Answers to the Exercises. By R.  
 HARGREAVES, M.A. Crown 8vo, cloth, 4s. 6d.

**THE "JUNIOR" EUCLID**. By S. W. FINN, M.A. Crown 8vo,  
 cloth. Books I and II, 1s. 6d. Books III and IV, 2s.

**GEOMETRICAL EXERCISES FROM NIXON'S "EUCLID  
 REVISED"**. With Solutions. By ALEXANDER LARMOR, M.A.  
 Crown 8vo, cloth, 3s. 6d.

**THE STUDENT'S HANDBOOK TO THE UNIVERSITY  
 AND COLLEGES OF OXFORD**. Fifteenth Edition. Re-  
 vised to January, 1901. Crown 8vo, cloth boards, 2s. 6d. net.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE,  
 AMEN CORNER, E.C.

# BLACKIE & SON'S NEW LIST

WRITE FOR COMPLETE EDUCATIONAL CATALOGUE.

## BLACKIE'S ILLUSTRATED LATIN SERIES.

General Editor—Prof. R. Y. TYRRELL, Litt.D.

NEW VOLUMES.

**TERENCE—PHORMIO.** Edited by W. CECIL LAMING, M.A.  
Cloth gilt, 4s. 6d.

This contains 22 Illustrations, including several reproductions from the Vatican MS. There is no vocabulary.

**HORACE—THE ODES.** (Complete.) Edited by STEPHEN GYNN. Cloth gilt, 5s.

This is the prettiest annotated edition of the Odes in existence. It contains 48 Illustrations, including 3 coloured plates. There is no vocabulary.

**VIRGIL—GEORGICS III. and IV.** Edited by S. E. WINBOLT, M.A. With or without Vocabulary. 1s. 6d. each.

**THE LATIN PERIOD.** An Elementary Latin Exercise Book.  
By E. A. WELLS, M.A. 1s.

This book contains well-graded hints towards the construction of Latin periods, with copious exercises. It will prove an excellent introduction to Latin prose.

**A FIRST LATIN COURSE.** A Latin Book for Beginners, based throughout on Oral Methods of Teaching. By E. H. SCOTT, B.A., and FRANK JONES, B.A. 1s. 6d.

**A FIRST LATIN READER.** By R. A. A. BERESFORD, M.A. With Vocabularies. Fully Illustrated. 1s. 6d.

## BLACKIE'S ILLUSTRATED GREEK SERIES.

General Editor—Prof. TYRRELL, Litt.D.

**AESCHYLUS—EUMENIDES.** Edited by LIONEL D. BARNETT, M.A., Litt.D. 3s. 6d.

The *Athenæum* says: "The work is on the whole excellently done."  
The *Educational Times* says: "A judiciously illustrated and well edited school edition. Indeed we consider it on the whole to be unquestionably the best school edition so far produced."

**HOMER—ODYSSEY. Book I.** Edited by the Rev. E. C. EVERARD OWEN, M.A. 2s.

The *Educational Times* says: "A bright, serviceable and scholarly edition. . . . The well executed illustrations enhance the value of the book."

**XENOPHON—ANABASIS I.** Edited by the Rev. G. H. NALL, M.A. 2s.

## English.

**KING LEAR.** Edited by D. NICHOL SMITH, M.A. (*Warwick Shakespeare*.) 1s. 6d.

**RICHARD THE SECOND.** Edited, with Introduction, Notes, &c., in *The Picture Shakespeare*. Cloth, 1s.

**ENGLISH TALES IN VERSE.** With an Introduction by Prof. C. H. HERFORD, M.A., Litt.D. In decorated cover, 3s. 6d.

**MILTON—LYCIDAS.** Edited by H. B. COTTERILL, M.A. 1s. 6d.

**MILTON'S ENGLISH SONNETS.** Edited by E. H. BLAKENEY, M.A. Paper, 2d.; cloth, 3d. [*Nearly ready.*]

## German.

**A SKELETON GERMAN GRAMMAR.** By Prof. H. G. ATKINS, of King's College. Cloth limp, 1s. 4d. [*Immediately.*]

This, the first of a series of Skeleton Grammars, is designed to give the necessary minimum of grammar, sufficient to enable the student to begin reading. Important points are emphasized by the use of red ink in printing.

**FIRST STEPS IN GERMAN.** By W. SCHOLLE, Ph.D., and G. SMITH, M.A. [*In May.*]

A book of reading lessons, conversations and songs, the whole designed on the new method, for use with Holzel's pictures.

**A GERMAN GRAMMAR.** By the same Authors. [*In May.*]  
Designed as a systematic companion to First Steps in German.

## BLACKIE'S LITTLE FRENCH CLASSICS.

Cloth, 4d. each.

**VICTOR HUGO—WATERLOO.** Edited by G. H. CLARKE, M.A., of Hymers College, Hull.

**MUSSET—SELECTIONS IN VERSE AND PROSE.** Edited by F. W. B. SMART, M.A., of Eastbourne College.

**CHATEAUBRIAND—SELECTIONS FROM LES MARTYRS.** Edited by E. T. SCHOEDLIN, B.A., of Highgate School.

**CORNEILLE—LE CID.** Edited by LOUIS BARBÉ, B.A.

**RACINE—LES PLAIDEURS.** Edited by D. LOWE TURNBULL, M.A., of George Heriot's School, Edinburgh.

**SELECTIONS FROM RABELAIS.** Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

**MOLIÈRE—SCENES FROM LE MÉDECIN MALGRÉ LUI.** Edited by W. J. CLARK, M.A., Ph.D.

**LESAGE—SELECTIONS FROM GIL BLAS.** Edited by H. W. ATKINSON, M.A., of Rossall School.

**PROSPER MÉRIMÉ—MATEO FALCONE, &c.** Edited by J. E. MICHELL, M.A., of Westminster School.

**MADAME DE SÉVIGNÉ—SELECT LETTERS.** Edited by Miss M. F. VERNON HARCOURT, of Notting Hill High School.

**BOSSUET—ORAISONS FUNÈRES.** Edited by the Rev. H. J. CHAYTOR, M.A., of Merchant Taylors' School, Crosby.

**LA FONTAINE—LONGER FABLES.** Edited by A. H. WALL, M.A., of Marlborough College.

**THÉOPHILE GAUTIER—LE PAVILLON SUR L'EAU.** Edited by W. G. HARTOG, of Liverpool Institute.

**BRUEYS AND PALAPRAT—L'AVOCAT PATELIN.** Edited by É. B. LE FRANÇOIS, of Redcliff House, Clifton.

**ERCKMANN-CHATRIAN—CONTES FANTASTIQUES.** Edited by Miss MARGUERITE NINET. [*In May.*]

**MICHELET—SELECTIONS FROM L'INSECTE.** Edited by MAURICE GEROTHWOHL, B.Phil. [*In May.*]

**FRENCH IN PICTURE AND TALK.** A Series of Eight Pictorial Conversation Sheets. Printed on strong Manilla paper, and mounted on roller. Price, 6s. per set.

**FRENCH IN PICTURE AND TALK.** A Handbook of Conversational French, corresponding to the sheets. By MARGUERITE NINET. Price 2s. 6d.

**SKELETON FRENCH GRAMMAR.** By Prof. H. G. ATKINS, of King's College. Price 1s. 4d. [*Immediately.*]

**A PRIMER OF HISTORICAL FRENCH GRAMMAR.** By Prof. WEEKLEY, M.A. Crown 8vo, cloth, 2s. 6d.

## Mathematics.

**EASY MATHEMATICAL PROBLEM PAPERS.** By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Containing numerous Problems in Algebra (up to and including the Binomial Theorem), Euclid (Books I.-VI. and XI.), and Trigonometry to the Solution of Triangles and Geometrical Applications. With Answers and Hints for Solution. Cloth, 2s. 6d.

## EDUCATIONAL STUDIES.

By T. G. ROOPER, M.A.

**Contents.**—Séguin—Manual Training—Obedience—Lord Collingwood's Theory and Practice of Education—Gaiety in Education—Individualism in Education—The Tree of Knowledge and the Tree of Life—On Spencer's "Education"—Geography in Elementary Education—On Methods of Teaching Geography—Miguel de Cervantes' Saavedra—An Experiment in School Gardening. Crown 8vo, cloth, 2s. 6d. net.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

**MATHEMATICS.**

*Elementary Integrals obtained by Calculation and not by Inference.*  
By GEORGE SCOTT, M.A.

Since, in general,  $d(uv)/dx = u dv/dx + v du/dx$ ,  
the general formula for integration by parts is

$$\int u dv/dx dx = uv - \int v du/dx dx.$$

In the integral  $\int x^m dx$ , let  $x^m = u$  and  $1 = dv/dx$ . Then

$$\int x^m dx = x^{m+1}/(m+1) - \int x^m dx$$

therefore  $(m+1) \int x^m dx = x^{m+1}$  or  $\int x^m dx = x^{m+1}/(m+1)$ .

In the case when  $m = -1$  this formula fails, but we may proceed as follows:—  $\int dx/x = \int dx \cdot 1/[1-(1-x)]$

$$= \int dx [1 + (1-x) + (1-x)^2 + (1-x)^3 + (1-x)^4 + \dots];$$

therefore  $\int dx/x = x - \frac{1}{2}(1-x)^2 - \frac{1}{3}(1-x)^3 - \frac{1}{4}(1-x)^4 - \dots$

$$= x - \frac{1}{2}(x-1)^2 + \frac{1}{3}(x-1)^3 - \frac{1}{4}(x-1)^4 + \frac{1}{5}(x-1)^5 - \dots;$$

therefore  $\int dx/x = 1 + (x-1) - \frac{1}{2}(x-1)^2 + \frac{1}{3}(x-1)^3 - \frac{1}{4}(x-1)^4 + \dots$

Now  $x - 1 - \frac{1}{2}(x-1)^2 + \frac{1}{3}(x-1)^3 - \dots$  is  $\log_e(1+x-1)$ , that is,  $\log_e x$ , and, as the expression above differs from this only in the constant 1, we have, apart from an arbitrary constant, the indefinite integral  $\int dx/x$  is equal to  $\log_e x$ .

If we apply integration by parts to  $\int \sin x dx$ , we have

$$\begin{aligned} x \sin x - \int x \cos x dx &= x \sin x - \frac{1}{2}x^2 \cos x - \int \frac{1}{2}x^2 \sin x dx \\ &= x \sin x - \frac{1}{2}x^2 \cos x - \frac{x^3}{2 \cdot 3} \sin x + \int \frac{x^3}{2 \cdot 3} \cos x dx. \end{aligned}$$

Proceeding thus, we get

$$\int \sin x dx = \sin x [x - x^3/3! + x^5/5! - \dots] + \cos x [-x^2/2! + x^4/4! - \dots],$$

or  $\sin x \sin x + \cos x (\cos x -$   
therefore  $\int \sin x dx = \sin^2 x + \cos^2 x - \cos x$  or  $1 - \cos x$ ;

therefore, neglecting an arbitrary constant, the indefinite integral  $\int \sin x dx$  is equal to  $-\cos x$ .

$$\begin{aligned} \int \cos x dx &= x \cos x + \int x \sin x dx = x \cos x + \frac{1}{2}x^2 \sin x - \int \frac{1}{2}x^2 \cos x dx \\ &= x \cos x + \frac{1}{2}x^2 \sin x - \frac{x^3}{2 \cdot 3} \cos x - \int \frac{x^3}{2 \cdot 3} \sin x dx. \end{aligned}$$

Proceeding thus, we have

$$\cos x [x - x^3/3! + x^5/5! - \dots] + \sin x [x^2/2! - x^4/4! + x^6/6! - \dots],$$

or  $\cos x \sin x + \sin x (-\cos x + 1)$ ;

therefore  $\int \cos x dx = \sin x$ .

The elementary integrals  $\int dx/(1+x^2)$ ,  $\int dx/\sqrt{1-x^2}$  are obtained at once by the assumption in the first case  $x = \tan \theta$ , in the second  $x = \sin \theta$  or  $\cos \theta$ .

**9300.** (GEORGE HEPPLE, M.A.)—If a whole number, when divided by prime numbers  $m$  and  $n$ , gives remainders  $a$  and  $b$  respectively, what will be the remainder when it is divided by  $mn$ ?

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (II.) by D. BIDDLE; (III.) by ROBERT W. D. CHRISTIE.

(I.) Let  $m > n$ ; then  $N$  is of form  $N = \lambda mn + \mu m + a$ . Now let  $m \equiv m_0 \pmod{n}$ , and  $a \equiv a_0 \pmod{n}$ . Then

$$N \equiv \mu m + a \equiv \mu m_0 + a_0 \equiv b \pmod{n} \text{ or } m_0 \mu \equiv b - a_0 \pmod{n}.$$

Since  $m_0, b, a_0$  are known, this congruence suffices to give  $\mu$ . Hence

$$N \equiv \mu m + a \pmod{mn}.$$

(II.) Let  $m > n$ , and  $N \equiv x \pmod{mn}$ , then  $x < mn$ ,  $x \equiv a \pmod{m}$ ;  $\equiv b \pmod{n}$ . Let  $x = my + a = nz + b$ , then  $y = \{nz - (a-b)\}/m$  and  $z = \{my + a - b\}/n$ ; whence

$$(m-n)y \equiv b-a \pmod{n} \text{ and } (m-n)z \equiv b-a \pmod{m}.$$

Here  $y$  and  $z$  are the only unknown quantities; moreover,  $y < n$ ,  $z < m$ . Consequently  $y, z$  can be found by trial with comparative ease. Where  $m = \mu n + \kappa$ ,  $(m-n)y \equiv b-a \pmod{n}$  reduces to  $\kappa y \equiv b-a \pmod{n}$ .

$$\begin{aligned} \text{(III.) } x &= my + a = nx + b \dots\dots\dots(1) \\ &= mnv + (cm + a) = mnw + (dn + b), \end{aligned}$$

by ordinary division by factors; therefore  $cm + a = dn + b$ , i.e.,

$$dn - cm = a - b \dots\dots\dots(2),$$

where  $m, n, a, b$  are given. Now, solving  $dn - cm = 1$  by G.C.M. of  $m, n$ , and then multiplying throughout by  $(a-b)$  given, we get the values of  $c, d$  (eliminating  $m$  and  $n$  when necessary), and the required remainder is either  $cm + a$  or  $dn + b$ .

Note.—The following particular case shows the method which the PROPOSER would have used:—Let some number divided by 43 and then by 29 leave partial remainders 14 and  $x$ ; and when by 29 and 43, 20 and  $y$ . Then the complete remainder when divided by 43 and 29 is

$$43x + 14 = 29y + 20, \text{ whence } y = x + \frac{1}{29}(14x - 6);$$

therefore  $\frac{1}{29}(28x - 12)$  or  $x - \frac{1}{29}(x + 12)$  is integral.  $x = 29t - 12$ . Least value is 17. Complete remainder is  $43 \times 17 + 14 = 745$ .

Note on Two Associated "Riders." By R. CHARTRES.

To find a point P within a triangle ABC, so that

- (1)  $\Sigma(PA)$  = a minimum, (2)  $\Sigma(PA)^2$  = a minimum.

Let P be the point; draw EPF perpendicular to PA, and let D be the middle of BC. Then PA is evidently a minimum to EF, and (1) the minimum PB + PC requires

$$\theta = \phi;$$

therefore APB = APC, ...;

(2) the minimum PB<sup>2</sup> + PC<sup>2</sup> requires DP to be a minimum, or DP to be perpendicular to EF; therefore APD is a median, &c.

**15078.** (Professor HUDSON, M.A.)—If a uniform chain of given length be fastened to two points at a given distance apart in the same horizontal line, and be acted on by vertical forces such that the force acting on a length  $ds$  is  $mgds + \mu g dx$ , prove that the horizontal tension is approximately  $(m + \mu)g \{x^3/6(s-x)\}^{1/2}$ , and that the sag at the middle point is  $\{3x(s-x)\}^{1/2}$ , assuming that  $(s-x)/x$  is small.

Solutions (I.) by the PROPOSER; (II.) by J. PRESCOTT, B.A.

(I.) Let C be the constant horizontal tension,  $\phi$  the angle which the tangent at  $(x, y)$  makes with the horizon,  $s$  the length of the arc from the middle point of the chain to  $(x, y)$ . Then

$$d/ds (C dy/dx) = mg + \mu g dx/ds,$$

$$\begin{aligned} \text{whence } ds/d\phi &= C/g \cos^2 \phi (m + \mu \cos \phi), \\ dx/d\phi &= C/g \cos \phi (m + \mu \cos \phi) &= C/g (m + \mu) \\ d(s-x)/d\phi &= C(1 - \cos \phi)/g \cos \phi (m + \mu \cos \phi) &= C\phi^2/2g (m + \mu) \\ dy/d\phi &= C \sin \phi/g \cos^2 \phi (m + \mu \cos \phi) &= C\phi/g (m + \mu) \end{aligned} \left. \vphantom{\begin{aligned} ds/d\phi \\ dx/d\phi \\ d(s-x)/d\phi \\ dy/d\phi \end{aligned}} \right\} \text{approximately.}$$

Integrating, since  $x, y, s, \phi$  vanish together,

$$x = C\phi/g (m + \mu), \quad (s-x) = C\phi^3/6g (m + \mu), \quad y = C\phi^2/2g (m + \mu);$$

from which  $C = (m + \mu)g \{x^3/6(s-x)\}^{1/2}$ ,  $y = \{3x(s-x)\}^{1/2}$ .

(II.) Let T be the constant horizontal tension,  $\psi$  the angle which the tangent to the chain at any point makes with the horizontal. Let  $2s_0$  be the length of the chain,  $2x_0$  the distance between the ends,  $l$  the sag at the middle. Then

$$T \tan \psi = \int mg ds + \int \mu g dx = mgs + \mu gx \dots\dots\dots(i.),$$

if  $s$  and  $x$  are measured from the lowest point. Hence, neglecting the difference between  $s$  and  $x$ ,

$$T^2 \tan^2 \psi = x^2 (mg + \mu g)^2, \text{ i.e., } T^2 \{ (ds/dx)^2 - 1 \} = x^2 (mg + \mu g)^2 \dots(ii.).$$

Put  $s = x + \theta$ , where  $\theta$  is small compared with  $x$ . Then

$$ds/dx = 1 + d\theta/dx.$$

Hence (ii.) becomes

$$T^2 \{ (1 + d\theta/dx)^2 - 1 \} = x^2 (mg + \mu g)^2 \text{ or } T^2 \{ 2 d\theta/dx \} = x^2 (mg + \mu g)^2 \dots(iii.),$$

neglecting  $(d\theta/dx)^2$ , since  $d\theta/dx$  is a small quantity. Integrating (iii.),

$$2T^2\theta = \frac{1}{3}x_0^3 (mg + \mu g)^2 \text{ or } T = (mg + \mu g) \{x_0^3/6(s_0 - x_0)\}^{1/2} \dots(iv.).$$

Again, neglecting  $\theta$ , (i.) may be written

$$T \tan \psi = mgs + \mu gs.$$

Differentiating with respect to  $\psi$ ,

$$T \sec^2 \psi = (mg + \mu g)(ds/d\psi) = (mg + \mu g) \rho.$$

But  $2\rho = \lim x^2/y$ . Hence, at the middle point  $2\rho = x_0^2/l$  approximately, and  $\sec^2 \psi = 1$ ; therefore  $T = (mg + \mu g)(x_0^2/2l)$ .

Substituting for T in (iv.), we get

$$\{x_0^3/6(s_0 - x_0)\}^{1/2} = x_0^2/2l; \text{ therefore } l = \{3x_0(s_0 - x_0)\}^{1/2}.$$

**14801.** (R. F. MUIRHEAD, M.A., B.Sc.)—Show that, if the sum of any number of quantities = 0, then the sum of their cubics is three times the sum of their products taken three at a time.

Solutions (I.) by ALETROP; (II.) by H. W. CURJEL, M.A., and LIONEL E. REAY, B.A.; (III.) by Professor SANJANA, M.A., and others; (IV.) by V. DANIEL, B.Sc.

(I.) Soit  $x^m + A_1 x^{m-1} + A_2 x^{m-2} + \dots + A_m = 0$  l'équation qui a pour racines les  $m$  quantités  $a_1, a_2, \dots, a_m$ , dont la somme  $S_1 = 0$ . En égard de cette valeur dans les relations connues  $S_1 = -A_1, S_3 = -A_1^3 + 3A_1A_2 - 3A_3$ , il vient  $S_3 = -3A_3$ ; d'où la proposition.

(II.)  $\Sigma a^3 - 3\Sigma abc = \Sigma (a^2 - ab) = 0$ .  
Hence  $\Sigma a^3 = 3\Sigma abc$ .

(III.) Let the theorem be true for the  $k$  quantities  $a_1, a_2, a_3, \dots, a_k$ ; so that,  $a_1 + a_2 + a_3 \dots + a_k$  being zero, we have  
 $a_1^3 + a_2^3 + a_3^3 \dots + a_k^3 = 3\Sigma (a_1 a_2 a_3 \dots a_k)_3$ .

Now let  $a_1 = a_1 + a_2$ ; then  
 $a_1^3 + a_2^3 + a_3^3 + \dots + a_k^3 = 3\Sigma [(a_1 + a_2) a_2 a_3 \dots a_k]_3 - 3a_1 a_2 (a_1 + a_2)$   
 $= 3\Sigma [(a_1 + a_2) a_2 a_3 \dots a_k]_3 + 3a_1 a_2 (a_2 + a_3 \dots + a_k)$   
 $= 3\Sigma (a_1 a_2 a_3 \dots a_k)_3$ .

But the theorem is true for three quantities; hence, it is true for 4, 5, ... or any number of them.

(IV.) Let  $a, b, c, d, \dots$  be any number of quantities, and  $x$  an infinitesimal in comparison with the least. We have the identity

$\{(1+ax)(1+bx)(1+cx)(1+dx) \dots\} = 1 + x\Sigma a + x^2\Sigma ab + x^3\Sigma abc + \dots$ ,  
which, when  $\Sigma a = 0$ , becomes  
 $\{(1+ax)(1+bx)(1+cx)(1+dx) \dots\} = 1 + x^2\Sigma ab + x^3\Sigma abc + \dots$

Taking logarithms of both sides, and expanding, the coefficient of  $x^3$  on the left is  $\frac{1}{3}\Sigma a^3$ , and on the right is  $\Sigma abc$ . Hence, with the given condition,  
 $\Sigma a^3 = 3\Sigma abc$ .

14820. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the product of the two series

$0 + 24 + 216 + 960 + 3000 + \dots$ , to  $n$  terms,  
 $2 + 40 + 270 + 1088 + 3250 + \dots$ , to  $n$  terms.

Solutions (I.) by Rev. C. V. DURELL, M.A., Rev. T. ROACH, M.A., and others; (II.) by JOHN ORCHARD, M.A.

(I.)  $S_1 = 0 + 24 + 216 + 960 + 3000 + \dots$  to  $n$  terms  
 $= (1^5 - 1^3) + (2^5 - 2^3) + (3^5 - 3^3) + \dots$  to  $n$  terms  $= \Sigma n^5 - \Sigma n^3$ ,  
 $S_2 = 2 + 40 + 270 + 1088 + 3250 + \dots$  to  $n$  terms  
 $= (1^5 + 1^3) + (2^5 + 2^3) + (3^5 + 3^3) + \dots$  to  $n$  terms  $= \Sigma n^5 + \Sigma n^3$ ;

therefore  $S_1 S_2 = (\Sigma n^5)^2 - (\Sigma n^3)^2$ ,  
 $\Sigma n^3 = \frac{1}{4} \{n^2(n+1)^2\}$  and  $\Sigma n^5 = \frac{1}{12} \{n^2(n+1)^2\} (2n^2 + 2n - 1)$ ;  
therefore  $S_1 S_2 = \frac{1}{144} \{n^4(n+1)^4\} \{(2n^2 + 2n - 1)^2 - 9\}$   
 $= \frac{1}{36} \{n^4(n+1)^4\} (n^2 + n + 1)(n^2 + n - 2)$   
 $= \frac{1}{36} \{n^4(n+1)^4(n+2)(n^3 - 1)\}$ .

(II.)  $S_1 = 0 + 24 + 216 + 960 + 3000 + \dots$  to  $n$  terms,  
 $S_2 = 2 + 40 + 270 + 1088 + 3250 + \dots$  to  $n$  terms:  
 $\frac{1}{2}(S_2 - S_1) = \frac{1}{2} \Sigma n^3, \quad \frac{1}{2}(S_1 + S_2) = \frac{1}{2} \Sigma n^5$ ;

therefore  $S_1 S_2 = \left[\frac{1}{2} \Sigma n^5\right]^2 - \left[\frac{1}{2} \Sigma n^3\right]^2 = \dots$

15045. (E. V. HUNTINGTON, Ph.D.)—The centre of gravity of the equally weighted vertices and ortho-centre of any triangle is the centre of the nine-point circle of that triangle.

Solution by J. H. TAYLOR.

A proof of this problem follows readily from the fact that the ortho-centre and the centroid of a triangle are the centres of direct and inverse similitude of the circumscribed circle and the nine-point circle of the triangle. (*Pitt Press Euclid*, pp. 448, 449.)

For, if ABC be a triangle, D, E, F the middle points of the sides, G the centroid, P the ortho-centre, O the centre of the circle ABC, O' the centre of the circle

DEF, then  $OG = 2O'G$   
and  $OP = 2O'P$ ;  
whence  $3GO' = O'P$ .

14947. (R. TUCKER, M.A.)—PQ, a chord of a parabola, passes through a fixed point O, on the axis: the normals at P, Q intersect in R. Show that the locus of R, for varying positions of PQ, is a parabola, and also that the envelope of these parabolas, for varying positions of O, is the evolute of the primitive parabola.

Solutions (I.) by the PROPOSER, A. M. NESBITT, M.A., and many others; (II.) by R. KNOWLES.

(I.) The equation to PQ is  $y(m+m') - 2x = 2amm'$ ; therefore, if  $AO = h$ ,  $h = -amm'$ .....(i).

Normals at P, Q are

$mx + y = am^3 + 2am, \quad m'x + y = am'^3 + 2am'$ ;  
hence coordinates of R are  $X = a(m^2 + mm' + m'^2 + 2)$ ,  
i.e.,  $X - 2a + h = a(m^2 + m'^2)$  and  $y = h(m + m')$ ;  
therefore locus of R is  $ay^2 = h^2(x - 2a - h)$ .

The envelope is formed by eliminating  $h$  between

$h^3 + h^2(2a - x) + ay^2 = 0$  and  $3h = 2(x - 2a)$ ,  
i.e., it is  $27ay^2 = 4(x - 2a)^3$ .

(II.) Let  $y^2 = 4ax$  be the equation of the parabola;  $h, k$  coordinates of the pole of PQ:  $m, 0$  those of O; then  $h = -m$ , and the coordinates of R are  
 $x = 2a + k^2/a + m, \quad y = mk/a$ .....(1, 2).

Eliminating  $k$  from (1), (2), the locus of R is the parabola

$u = ay^2 - m^2x + 2am^2 + m^3 = 0$ .....(3).

From  $du/dm = 0$ ,  $m$  is found  $= \frac{2}{3}(x - 2a)$ , and, substituting in (3), the equation to the envelope is  $27ay^2 = 4(x - 2a)^3$ , the equation to the evolute of the primitive parabola.

Proof of Euclid Book XI., Prop. 4. By the late Professor R. B. CLAYTON.

Let OC be perpendicular to OA, OB, and let OP be any line through O in the plane AOB; then OC is perpendicular to OP. Through P draw APB perpendicular to OP. Then

$AC^2 - BC^2 = AO^2 - BO^2 = AP^2 - BP^2$ ;  
therefore CP is perpendicular to AB;  
 $\therefore CP^2 + BP^2 = CB^2 = CO^2 + BO^2$ ;  
 $\therefore CP^2 - CO^2 = BO^2 - BP^2 = PO^2$ ;  
therefore COP is a right angle.

8796. (Professor BYOMAKESA CHAKRAVARTI, M.A.)—If OP, OQ be the arcs of a curve and of its circle of curvature intercepted between a point O and a neighbouring subtense perpendicular to the tangent, prove that OQ - OP is ultimately equal to  $OQ^4 \cdot 8\rho^3 \cdot dp/ds$ ,  $s$  being the arc of the curve measured from a fixed point up to O and  $\rho$  the radius of curvature at O.

Solutions (I.) by Professor NANSON; (II.) by A. M. NESBITT, M.A.

(I.) Differentiating the equation  $ds/dx = \sec \psi$  three times, we find, when  $\psi = 0$ ,  $ds/dx = 1, d^2s/dx^2 = 0, d^3s/dx^3 = 1/\rho^2, d^4s/dx^4 = -3/\rho^3 \cdot dp/ds$ . Hence  $OP = x + \frac{1}{6}(x^3/\rho^2) - \frac{1}{24}(dp/ds) \cdot x^4/\rho^3, OQ = x + \frac{1}{6}(x^3/\rho^2)$ ; and therefore  $OQ - OP = \frac{1}{24}(dp/ds) \cdot x^4/\rho^3 = \frac{1}{24}(OQ^4/\rho^3) dp/ds$  to fourth order.

(II.) Since  $s$  is a function of  $x$ , we may expand  $s$  by MACLAURIN'S theorem:

$s = s_0 + s_0'x + \frac{s_0''}{2!}x^2 + \dots$ ,

where accents denote differentiation for  $x$ , and  $s_0, s_0', \dots$  are the values of  $s, s', \dots$ , when  $x = 0$ . Now

$s' = \sec \psi$  and  $\psi' = 1/\rho \cdot s'$ ;

therefore  $s'' = \sec^2 \psi \tan \psi \cdot 1/\rho$ ,

$s''' = 2 \sec^3 \psi \tan^2 \psi \cdot 1/\rho^2 + \sec^5 \psi \cdot 1/\rho^2 - (\sec^2 \psi \tan \psi \cdot \rho')/\rho$ .

These all hold for the circle except that  $\rho'$  is here zero, and the term in which it occurs vanishes when  $x = 0$ ; so that we must proceed to a fourth differentiation. The only term in  $s_0''''$  which will not disappear will arise from differentiating  $1/\rho^2$  in the second term and  $\tan \psi$  in the last term of  $s'''$ . Thus

$s_0'''' = -[3 \sec^5 \psi \cdot \rho^3 \cdot \rho']_0 = -(3/\rho^3)(dp/ds)$ ,

which in the circle will vanish. Hence

$OQ - OP = \frac{x^4}{4!} \frac{3}{\rho^3} \frac{dp}{ds} = \frac{OQ^4}{8\rho^3} \frac{dp}{ds}$  ultimately.

15061. (J. PRESCOTT.)—From the fact that the inverse of a plane is a sphere through the centre of inversion, deduce that the inverse of a circle, with respect to a point not in its plane, is a circle.

Another Solution by R. F. WHITEHEAD.

The inverse of the meet of a sphere with a plane [or indeed of two spheres] is the meet of the two inverse spheres, and is therefore a circle.

QUESTIONS FOR SOLUTION.

15106. (Professor HUDSON, M.A.)—A string, length  $2l$ , the rate of mass of which at a distance  $s$  from the middle is  $m \cosh s/a$ , has it ends fixed at two points in a horizontal line, distant apart  $a (\Delta \tan^{-1} e^{l/a} - \pi)$ ; prove that it hangs in a catenary of equal strength.

15107. (I. ARNOLD.)—There are two opposite inclined planes each inclined to the horizon at an angle of  $15^\circ$ : viz., AB and BC; and touching each other at B. The planes are 100 feet long each; and a perfectly smooth metallic ball rolls down AB and then ascends BC. In what time will the ball come to rest between the two planes?

15108. (ROBERT W. D. CHRISTIE.)—Prove by two distinct methods the theorem  $2^n \equiv 1 \pmod{\frac{1}{2}(\mu-1)}$ , when  $\mu$  is a prime of form  $4m-1$  and  $n$  the number of its primitive roots.

15109. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find the least solution in positive integers of  $x^3 + y^3 = mz^3$ , where  $m = (3\mu-1)$ , a positive integer  $> 2$ , and  $x \neq y$ ; and  $x, y, z$  have no common factor.

15110. (Professor SANJANA, M.A.)—Prove that the solution in rational numbers (integral or fractional) of the equation  $Mx^2 - 2xN^2 = x^2 - 1$  will serve to factorize quantities of the form  $N_1^4 + N_2^4$ ; and show that  $x$ , supposed a positive integer, will always be of the form  $4y^2 + 1$ .

15111. (Professor NANSON.)—If  $a, b, c, f, g, h, r$ , where  $r = 1, 2, 3$ , are the coordinates of three lines each of which intersects the other two, prove that of the two arrays

$$\begin{matrix} (agh) & (bgh) & (cgh) & (fbc) & (gbc) & (hbc) \\ (ahf) & (bhf) & (chf) & (fca) & (gca) & (hca) \\ (afg) & (bfg) & (cfg) & (fab) & (gab) & (hab) \end{matrix}$$

one is symmetric and the other skew-symmetric.

15112. (G. H. HARDY, B.A.)—Prove that, if  $p, q > 1, a > 0$ ,

$$\int_{-1}^1 \frac{(1-\mu^2)^{a-1} d\mu}{(p-\mu)^x (q-\mu)^y} = 2 \int_0^{\infty} \frac{dt}{\sqrt{m_1 (t^2-1)^{a+\frac{1}{2}}}}$$

and deduce that, if  $\Theta_n(\mu, a)$  is the coefficient of  $\mu^n$  in  $(1-2\mu h + h^2)^{-a}$ , then  $\int_{-1}^1 (1-\mu^2)^{a-1} \Theta_n(\mu, a) d\mu = \frac{2a(2a+1)\dots(2a+n-1)}{1.2\dots n} \frac{1}{a+n}$ .

15113. (R. KNOWLES.)—(Suggested by Quest. 13375.) If

$$F_x/(1-x)^n = 1 + 3^{n-1}x + 5^{n-1}x^2 + \dots + (2r+1)^{n-1}x^r + \dots,$$

prove that  $F_x$  is a symmetrical function of the degree  $(n-1)$  in  $x$ , the sum of whose coefficients is the factorial of  $(n-1)2^{n-1}$ .

15114. (A. M. NESHITT, M.A.)—If  $a, b, c$  be real and positive, prove that  $a/(b+c) + b/(c+a) + c/(a+b) \geq \frac{3}{2}$ .

15115. (R. TUCKER, M.A.)—ABCD is a cyclic quadrilateral. ( $O_a, r_a$ ), ( $O_b, r_b$ ), ( $O_c, r_c$ ), ( $O_d, r_d$ ) are the in-centres and the in-radii of the tri-

angles BCD, CDA, DAB, ABC respectively. Prove that  $O_a O_b O_c O_d$  is a rectangle and  $r_a + r_c = r_b + r_d$ . Find also  $\Sigma(OO_a^2)$  where  $O$  is the circum-centre.

15116. (C. E. YOUNGMAN, M.A.)—If  $H$  be the orthocentre of ABC, and DEF any transversal, perpendiculars from A, B, C, H on HD, HE,

HF, DEF will meet at P. If this be still true when H is simply a fixed point in the plane, find the locus of P and the envelope of DEF.

15117. (D. BIDDLE.)—Prove that in a plane triangle the square of the distance of any vertex from the in-centre is in inverse proportion to the distance of the opposite side from the mid-point of the corresponding arc of the circum-circle.

15118. (Professor NEUBERG.)—On mène à deux cercles donnés A, B des tangentes  $a, b$  telles que la bissectrice de l'angle  $ab$  soit parallèle à une droite donnée  $m$ . Trouver le lieu du point de rencontre C des droites  $a, b$ , et construire la tangente à ce lieu au point C.

15119. (H. BATEMAN.)— $\xi, \eta, \zeta$  are the distances of a point from the angular points of a triangle. Prove that the two points for which  $\xi^l \eta^m \zeta^n$  is a maximum are the foci of the ellipse whose areal equation is  $\sqrt{(lx)} + \sqrt{(my)} + \sqrt{(nz)} = 0$ .

15120. (Professor COCHEZ.)

—On considère la parabole

$$y^2 = 2px.$$

Lieu des points P tels que, menant les tangentes PM, PM' rencontrant les axes en A, D, B, C, le quadrilatère ABCD soit circonscriptible.

15121. (R. KNOWLES.)—Two tangents are drawn to meet a rectangular hyperbola centre C; a third tangent meets those in M, N; O is the mid-point of MN; F, G are the projections of O on the asymptotes; O' is the mid-point of FG. Prove that (1) the points O, O', C are collinear; (2) if H is the projection of C on FG, the angle HCO is bisected by the axes.

15122. (Professor SANJANA, M.A.)

—With points on an arc of a circle BAC as centres, and the perpendiculars from them on a given straight line OM as radii, circles are described. Investigate the equation of the envelope: and examine its form near the axis AO of the arc, when the straight line approaches very near to the arc. Also, solve the problem when BAC is a parabolic arc.

15123. (S. F. S. HILL.)—The condition that the seven poristic equations between  $a\beta, \beta\gamma, \gamma\delta, \delta\epsilon, \epsilon\eta, \eta\zeta, \zeta a$  of type  $(\cos a \cos \beta) / a + (\sin a \sin \beta) / b = 1/c$

$$\Sigma (c^2 + a^2 - b^2)^4 (a^2 + b^2 - c^2)^4 - 2 (b^2 + c^2 - a^2)^2 (c^2 + a^2 - b^2)^2 (a^2 + b^2 - c^2)^2 = k,$$

where  $k = (a^2 + b^2 + c^2)^2 + 8abc(a+b+c)$ .

Hence deduce the condition for porism of seven of type

$$a \cos a \cos \beta + b \sin a \sin \beta + h \sin (a + \beta) = c.$$

15124. (Professor UMES CHANDRA GHOSH.)—(Suggested by Quest. 14012.) If  $\alpha + \beta + \gamma = s$ , prove the identities

$$\begin{aligned} (1) & 64 \{ \sin^2(\beta - \gamma) \sin(7s - 5\alpha) + \sin^2(\gamma - \alpha) \sin(7s - 5\beta) \\ & + \sin^2(\alpha - \beta) \sin(7s - 5\gamma) \} - \{ \sin(\beta - \gamma) \sin(s + 13\alpha) \\ & + \sin(\gamma - \alpha) \sin(s + 13\beta) + \sin(\alpha - \beta) \sin(s + 13\gamma) \} \\ & = -28 \sin(\alpha - \beta) \sin(\beta - \gamma) \sin(\gamma - \alpha) [ 3 \{ \sin(4s + \alpha) + \sin(4s + \beta) \\ & + \sin(4s + \gamma) \} - 2 \{ \sin 2(3s - \alpha) + \sin 2(3s - \beta) + \sin 2(3s - \gamma) \} ]. \\ (2) & -64 \{ \sin^2(\beta - \gamma) \cos(7s - 5\alpha) + \sin^2(\gamma - \alpha) \cos(7s - 5\beta) \\ & + \sin^2(\alpha - \beta) \cos(7s - 5\gamma) \} + \sin(\beta - \gamma) \cos(s + 13\alpha) \\ & + \sin(\gamma - \alpha) \cos(s + 13\beta) + \sin(\alpha - \beta) \cos(s + 13\gamma) \\ & = 28 \sin(\alpha - \beta) \sin(\beta - \gamma) \sin(\gamma - \alpha) [ 3 \{ \cos 4(s + \alpha) + \cos 4(s + \beta) \\ & + \cos 4(s + \gamma) \} - 2 \{ \cos 2(3s - \alpha) + \cos 2(3s - \beta) + \cos 2(3s - \gamma) \} ]. \end{aligned}$$

15081. (D. BIDDLE.)—[The Proposer wishes to add to the data in this question the SIMSON-line in respect of the point on the circum-circle determined by producing the lines joining the two centres.—EDITOR.]

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9382. (Professor HAUGHTON, F.R.S.)—FRESNEL made, in 1815, the following observations on the external fringes produced by a wire interposed in the path of a beam of light proceeding from a point:— $a$  = distance from light to wire;  $b$  = distance from wire to screen;

$x$  = distance between the first exterior fringes on both sides less the width of the geometrical shadow:—calculate these from  $\log(1/2\lambda)$ :—

No.	$a$	$b$	$x$
	m.	m.	m.
1	1.49	0.385	0.00138
2	1.49	1.107	0.00285
3	1.49	4.186	0.00789

**9388.** (Professor NASH, M.A.)—Show that (1) the foci of the conic  $la^2 + m\beta^2 + n\gamma^2 = 0$  are given by the equations  $laA = m\beta B = n\gamma C$ , where  $A = \beta\gamma + \alpha(\beta \cos B + \gamma \cos C - \alpha \cos A)$ , &c.;

and hence (2) if the conic touch four fixed straight lines, the locus of the foci is a circular cubic passing through the six vertices of the quadrilateral formed by the lines, and also through the feet of the perpendiculars of the harmonic triangle of the quadrilateral; and (3) if the conic pass through four fixed points, the locus of the foci is a bicircular sextic having double points at the vertices (acnodes), and at the feet of the perpendiculars (crunodes) of the harmonic triangle of the quadrangle.

[The foci can, of course, be obtained as the intersection of two conics, instead of two circular cubics, but apparently not in a symmetrical form.]

**9475.** (F. R. J. HERVEY.)—Prove that, if four concyclic points are projected, two and two, by parallels, upon the asymptotes of any hyperbola passing through them, the projections are concyclic; and, conversely, if the projections of four points upon certain axes, taken as above in any order, are concyclic, the given points are the intersections of a circle with a hyperbola having the given axes for asymptotes.

**9507.** (Professor SCHOUTE.)—Given four points A, B, C, D in a plane, find the locus of (1) the vertices, and (2) the centre, and (3) the envelope of the diagonals of a rhombus, the sides  $a, b, c, d$  of which pass successively through A, B, C, D.

**9526.** (Rev. T. C. SIMMONS, M.A.)—Show that the solution of Quest. 3619 ("Given the sides of three squares inscribed in a triangle, determine the triangle") can be made to depend on the solution of the equations

$mn(\sin A + \sin B \sin C) = nl(\sin B + \sin C \sin A) = lm(\sin C + \sin A \sin B)$ , where  $A + B + C = 180^\circ$ ; and hence, if possible, solve the former.

**9543.** (Professor SWAMINATHA AIYAR, B.A.)—Find the number of permutations of the first  $n$  natural numbers taken all together, subject to the condition that no number is immediately followed or preceded by the next higher number.

**9584.** (Professor SWAMINATHA AIYAR, B.A.)—G is the centroid of a triangle ABC, P its orthocentre, and Q a point in PG produced, such that  $GQ = 2GP$ . The angles  $a, b, c$  (equal respectively to A, B, C) of another triangle move on the sides BC, CA, AB; the circum-circle of  $abc$  cuts the sides of ABC again in D, E, F, and  $def$  is the ortho-centric triangle of  $abc$ . Show that (1) the centre of similitude of  $abc$  and ABC moves on the circle on GP as diameter, (2) the centre of similitude of  $def$  and DEF moves on the circle on GQ as diameter.

#### NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

*Vol. I. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 10th, 1902.—Dr. Hobson, President, in the Chair. Eleven members present.

Prof. C. J. Joly, Dunsink Observatory, Gamesh Prasad, D.Sc. Christ's College, Cambridge, and Miss Lilian Whitley, B.A., Westfield College, Hampstead, were elected members.

The President (Dr. J. Larmor *pro tem.* in the Chair) communicated a note "On Divergent Series." Prof. Love next gave results he had arrived at in connexion with "Stress and Strain in Two-dimensional Elastic Systems." Discussions followed on both communications in which the President and Messrs. Larmor and Love took part.

The President read the titles of the following papers:—

"Further Applications of Matrix Notation to Integration Problems." Dr. H. F. Baker.

"On the Convergence of Series which represent a Potential." Prof. Bromwich.

"On the Groups defined for an Arbitrary Field by the Multiplication Tables of certain Finite Groups." Dr. L. E. Dickson.

#### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 19. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Bidlake, Mr. Bowen, Mr. Butler, Miss Dawes, Mr. Eve, Mr. Kelland, Mr. Ladell, Mr. Millar Inglis, Mr. Montgomery, Mr. Pinches, Mr. Rule, Rev. Dr. Scott, Rev. J. Stewart, Rev. J. E. Symms, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

The Government Education Bill was considered, and it was resolved that steps should be taken to introduce an amendment with regard to requiring the consent of the Board of Education before application could be made for fresh rating powers by Local Authorities.

The Diploma of Associate was granted to Mr. J. S. Rathbone, who had passed the required examination.

The Report of the Finance Committee was adopted, and direction was given to remove from the members' list the names of a number of members whose subscriptions were in arrear.

Mr. J. L. Holland, B.A., 19 Tollington Place, N., was elected a member of the Council.

The following persons were elected members of the College:—

Mr. W. Clarke, A.C.P., Collegiate School, Lapford, N. Devon.

Miss F. E. S. Collins, A.C.P., 1 Norfolk Road, Horsham.

Mr. J. Lister, L.C.P., Sibson's House, Great Broughton, Cocker-mouth.

Mr. F. Pritchard, B.A. Camb., L.C.P., Myrtle Terrace, Dalton-in-Furness.

Mr. H. R. Yates, M.A. Camb., L.C.P., 1 West Cliff Mansions, Eastbourne.

The following books had been presented to the Library since the last meeting of the Council:—

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines, New South Wales, 1900.

By the REGISTRAR OF THE GENERAL MEDICAL COUNCIL.—The Medical Register and the Dentists' Register, 1902.

By BLACKIE & SON.—Blackie's Reversible Copy Books, Nos. 1, 2, 3, and 4; Blackie's Picture Shakespeare (King Richard II.); Harrison's Junior Chemistry and Physics; Smart's Selections from Musset; Wall's La Fontaine's Longer Fables.

By the CLARENDON PRESS.—Barnard's Companion to English History (Middle Ages).

By W. B. CLIVE.—Allcroft's Caesar's Civil War, Book I.

By J. M. DENT & Co.—The Temple Moliere (L'Avare, Le Bourgeois Gentilhomme, Les Fourberies de Scapin, Le Meecin malgré lui, Les Précieuses Ridicules); Alge's De Pressensac's Une Joyeuse Nichee; Alge and Rippmann's Dent's First French Book, Dent's Second French Book, and Dent's German Reader; Clarke and Murray's School Grammar of Modern French; Duhamel's Revel's Nouvelles Normandes; Dutoit's French Language-Drill, Part I.; Frazier's Asinette, Heine's Buch der Lieder; Kron's French Daily Life; Minssen's Book of French Song; Ninet's Souvenir's La Vieille Cousine, &c.; Rippmann's Hints on Teaching French; Spencer's Moliere's Le Bourgeois Gentilhomme and Les Précieuses Ridicules.

By A. M. HOLDEN.—Meiklejohn's Shakespeare's Julius Caesar.

By MACMILLAN & Co.—Alford's Latin Passages for Translation.

By RELFE BROS.—Carter's Questions on Shakespeare's Midsummer Night's Dream.

Calendar of the Royal University of Ireland, 1902.

Joint Scholarships Board Year Book, 1901-2.

Now Ready. Demy 8vo, cloth, price 2s. 6d., free by post.

To Members of the College the price is 1s., or 1s. 6d. free by post.

## THE CALENDAR

OF

## The College of Preceptors, FOR THE YEAR 1902:

CONTAINING

*All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—*

1. Papers set at Examination of Teachers for Diplomas, Midsummer, 1901.
2. Do. do. do. Christmas, 1901.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1901.
4. Do. do. do. Christmas, 1901.
5. Papers set at Professional Preliminary Examination, March, 1901.
6. Do. do. do. September, 1901.
7. Papers set at Lower Forms Examination ... .. Midsummer, 1901.
8. Do. do. ... .. Christmas, 1901.

\* \* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

LONDON: FRANCIS HODGSON, 89 FARRINGDON STREET, E.C.

ENTIRELY NEW EDITION.—THE ACCESSION EDITION.

# THE HOWARD VINCENT MAP OF THE BRITISH EMPIRE.

For Schools, Public Libraries, &c.

Adopted by the London School Board.

21s. on Cloth, Rollers, and Varnished, accompanied by Handbook, gratis.

NEW EDITION.

THOROUGHLY REVISED TO PRESENT TIME.

# IMPERIAL WALL MAP OF WORLD (Mercator), AMERICA, SCOTLAND, ASIA, & AFRICA.

Size, 72 by 63 inches.

Price, on Cloth, Rollers, and Varnished, 21s. each, with Handbook.

Catalogue of Maps, Atlases, Terrestrial and Celestial Globes, Wall Illustrations, and List of Object-Lesson Pictures, post free.

Edina Works, Easter Road, and 20 South Saint Andrew Street, EDINBURGH  
7 Paternoster Square, LONDON, E.C.

# CASEY'S EUCLID.

## THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI.  
Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.  
By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.  
Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

## A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."  
By JOSEPH B. CASEY, Tutor, University College, Dublin.  
Second Edition. Small 8vo, price 6s.

## A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."  
Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

A TREATISE ON THE

## ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS.  
Containing an account of its most recent Extensions, with numerous Examples.  
New Edition. Crown 8vo.

A TREATISE ON

## ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.  
Third Edition. Small 8vo, 148 pp., price 3s.

## KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.

# EDUCATIONAL REVIEW.

Edited by **NICHOLAS MURRAY BUTLER.**

"We find the 'Educational Review' absolutely indispensable at every turn."—MICHAEL E. SADLER, Director of Special Inquiries and Reports, Board of Education, London, England. September 13, 1901.

"I wish I could tell you how much of stimulus and inspiration I get from reading the 'Educational Review.' The educational world can never repay you for the work you have put into that richly stored magazine. I have just gone through the entire twenty-one volumes in order to get some things that I especially desired, and I am simply amazed at what I find in those volumes."—WILBUR P. GOBDY, High School, Hartford, Conn. September, 1901.

"To men like myself it is a sort of working library. Its volumes stand always at my elbow."—Prof. PAUL H. HANUS, Harvard University.

"The broadest and most able of the American periodicals devoted to education."—*New York Times*.

"An educational magazine of which the teaching profession may well be proud. There is nothing better in educational journalism in any country. And it has an editor who has convictions, and the courage of them."—*School and Home Education*, Bloomington, Ill.

"The 'Review' has from the first issue taken its place at the head of American periodicals devoted to education. It is, indeed, the first educational paper in America to win for our country the respect of educationalists abroad."—*Journal of Pedagogy*, Ypsilanti, Mich.

THE SECRETARY (Univ. Corr. Coll. London Office),  
32 Red Lion Square, Holborn, W.C.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)

*Principal*—H. R. REICHEL, M.A.

The Session began on October 1st, 1901. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Course, £11. 1s.; ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,  
*Secretary and Registrar.*

**WESTFIELD COLLEGE (FOR WOMEN), HAMPSTEAD, LONDON.**

FOUR SCHOLARSHIPS, of the value of from £30 to £60 a year for two years, will be offered for competition at an Examination to be held on June 24th and 25th, 1902.

Candidates must not be under 18 years of age, and must have passed the Matriculation Examination of the University of London. The successful candidates will be required to come into residence in October next, and to read for the B.A. or B.Sc. Degree of the University of London. Entrance forms and full particulars may be obtained from the Secretary, Miss S. M. SMER.

**ROYAL HOLLOWAY COLLEGE FOR WOMEN, (UNIVERSITY OF LONDON.)**

ENTRANCE SCHOLARSHIPS.—Ten Entrance Scholarships from £75 to £40, and several Bursaries of £30, tenable for three years at the College, will be awarded on the results of an Examination to be held from July 1st to 5th, 1902. Names must be entered before June 3rd. The College prepares Students for London Degrees and also for Oxford Honour Examinations. Inclusive fee, £90 a year.

For forms of entry and further particulars apply to the SECRETARY, Royal Holloway College, Egham, Surrey.

**THE ANSTEY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS**

(LING'S SWEDISH SYSTEM).

There are more openings for Students trained at this College than can be filled.

Apply for Prospectus to the PRINCIPAL, The Leasowes, Halesowen.

**LONDON COUNTY COUNCIL.—TECHNICAL EDUCATION BOARD.**

The London Training College for Teachers (for Primary and for Secondary Schools), to be established in connexion with the University of London, will be opened in October next.

In the first instance the services of two officers—a NORMAL MASTER and NORMAL MISTRESS—will be required, in addition to the Principal (who will probably be the Professor of Education in the University). Each should hold a University degree or its equivalent, have acquired suitable educational experience, and will be expected to devote his or her whole time to the work of the College.

Applications are now invited for these appointments. Among other duties the Normal Master and Normal Mistress will, under arrangements made and approved by the Principal, have the personal oversight of the men and women students respectively, will give lectures on Method and School Management, will supervise the attendance of the students at the Practising Schools, and preside at Criticism and Model Lessons, and generally act as tutors and directors.

The salaries for the Normal Master and for the Normal Mistress will be £400 a year in each case.

Forms of application and fuller information in reference to the duties and requirements may be obtained from the undersigned, as the Acting Secretary of the Local Committee. The last day for the receipt of applications is 16th June, 1902.

WM. GARNETT, *Secretary of the Board,*  
116 St. Martin's Lane, W.C.,  
May 17th, 1902.

**BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W. DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.**

*Head of the Department*—Miss HANNAH ROBERTSON, B.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

**BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W.**

A Courtauld Scholarship in Arts, annual value £31. 10s.; a Pfeiffer Scholarship in Science, annual value £48, both (tenable for three years), will be awarded on the results of the Examination to be held at the College on June 19th and 20th.

Candidates must be under 19 years of age on the first day of the examination.

For further information apply to the PRINCIPAL.

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

*Principal*—Miss M. PUNNETT, B.A. (Lond.).

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

**HOME AND COLONIAL SCHOOL SOCIETY.**

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS, Highbury Hill House, N.

*Secretary*—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

*Principal*—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

*Headmistress*—Miss A. YELLAND.

Further particulars may be obtained on application to the PRINCIPAL.

**HARTLEY COLLEGE, SOUTHAMPTON.**

*Principal*—S. W. RICHARDSON, D.Sc. (Lond.).

SUMMER COURSE OF NATURE STUDY FOR TEACHERS.

A Summer Course of Nature Study will be held at Sandown, in the Isle of Wight, from August 2nd to August 16th, 1902. The arrangements will be made by Dr. Richardson, Principal of the Hartley College, and T. G. Rooper, Esq., H.M.I. The Higher Grade School at Sandown has been kindly lent by the Sandown School Board for the purpose of lectures and demonstrations. The main feature of the Course will be work on the Downs and the Sea-shore. The Course will be conducted by J. T. Jenkins, D.Sc., Ph.D., Lecturer in Biology and Geology at the College.

For further particulars apply to D. KIDDFE, Registrar.

**JOINT AGENCY FOR ASSISTANT MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

*Registrar*—Rev. P. TAYLOR, M.A. Cantab.

Low Commissions. Liberal Discount.

Headmasters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only, when the Office is closed.

Single subjects may be taken—Latin, Greek, French, German, Italian, Mathematics, Mechanics, Physics, Chemistry, Logic, Psychology, Political Economy, &c.

FOR TERMS, TESTIMONIALS, &c.,

Address—**Mr. J. CHARLESTON, B.A.,**  
**BURLINGTON CORRESPONDENCE COLLEGE,**  
**27 CHANCERY LANE, LONDON.**

**BIBLE CHRISTIAN COLLEGE, SHEBBEAR, NORTH DEVON.**

Wanted, after the Long Vacation (August 28th), a SCIENCE MASTER for the above School. Must be a Graduate in Honours (Science) of some University of the United Kingdom. Subjects: Chemistry (Organic and Inorganic), Physics, and either Geology or Botany (Theoretical and Practical). A knowledge of German would be a recommendation. For terms apply to the Rev. W. B. LARK.

Also HOUSE MASTER, for the same School. Must be a Graduate of some University of the United Kingdom, and a thoroughly efficient disciplinarian, and able to teach ordinary English Subjects, Mathematics up to (at least) the standard of the Oxford Local Senior Pass Examinations, and good French or German, or both. A higher stipend would be paid to a Gentleman who has studied on the Continent. For terms apply to Rev. W. B. LARK, The College, Shebbear, North Devon.

**BOROUGH OF EASTBOURNE.—**

WANTED, an ASSISTANT MASTER for the Municipal Secondary School. Commencing salary, £80 per annum. Applications, stating age, qualifications, &c., to be sent to me by the 31st May, 1902.

H. W. FOVARGUE,  
 Town Clerk.

Town Hall, 21st May, 1902.

**CARLYON COLLEGE.**

55 AND 58 CHANCERY LANE.

**LONDON UNIVERSITY EXAMINATIONS.**

LONDON MATRICULATION, INTER. ARTS and SCIENCE, B.A., and B.Sc. Classes (small) Day and Evening. Vacation Tuition and Classes. Matric. and Inter. Arts Revision Classes.

Classes and Tuition for Legal and Medical Preliminaries, Accountants', Scholarship Examinations, Oxford and Cambridge, E.U.I., &c.

Papers Corrected for Schools. Private tuition for all Examinations. Prospectus and full details on application to R. C. B. KERIN, B.A. Lond., First of First Class Classical Honours, Editor of "Phedo," "Pro Plancio," &c.

**SUCCESSSES.**

1892-1901.—London Matric., 84; Inter. Arts, Sc., and Prel. Sci., 105, 6 in Hons.; B.Sc., 1896-1899, 11; B.A., 1891-1901, 63, 11 in Hons.; many other Successes, Scholarships, R.U.I., Indian Civil, Oxford and Cambridge, &c.

**B.A. LONDON, 1899 - 1901, 28 successful.**  
**M.A., 3 (1898, 1899, 1901).**

**JACKSON'S SYSTEM**

OF  
**UPRIGHT PENMANSHIP**

FOR BOTH HANDS.

WHAT IS SAID ABOUT IT BY THOSE WHO KNOW:

"Has no Rival," "Perfect."  
 (H.M. INSPECTORS.)

"Scientific," "Natural."  
 (SECONDARY TEACHERS.)

"The Ideal System," "The Best."  
 (ELEMENTARY TEACHERS.)

"Incomparably Superior."  
 (COLONIAL TEACHERS.)

If you wish to get  
**"THE BEST RESULTS"** in  
**"THE SHORTEST TIME"** with  
**"THE LEAST LABOUR"**  
 Adopt Jackson's System and you will certainly have them.

Send for Illustrated Pamphlet to the Publishers,  
**SAMPSON LOW, MARSTON & COMPANY, Ltd.,**  
 St. Dunstan's House, Fetter Lane, London, E.C.

**THE MOST NUTRITIOUS.**

**EPPS'S**

GRATEFUL—COMFORTING.

**C O C O A**

BREAKFAST—SUPPER.

**FREE GUIDE TO THE CAMBRIDGE HIGHER LOCAL EXAMINATION,**

BY THE

TUTORS OF THE UNIVERSITY EXAMINATION POSTAL INSTITUTION.

NEW EDITION (80 pages), containing advice as to books to read for the December 1902 and June 1903 Examinations, and the mode of Study, and statistical tables (not obtainable elsewhere). A copy of the Guide will be sent gratis and post free to any candidate on application to the Manager of the Institution, Mr. E. S. Weymouth, M.A., 27 Southampton Street, Strand, London, W.C.

401 U.E.P.I. candidates passed the Cambridge Higher Local from 1895 to 1901, 69 with distinction.

The Institution prepares through the post for various University Examinations and for the **A.C.P., L.C.P., and F.C.P.**

**EXAMINATION PAPER**

AS USED BY THE

**COLLEGE OF PRECEPTORS.**

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets... per Ream, 2s. 6d.  
 " " 960 " " " " 5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.  
 Music Paper, 1s. per 100 Sheets.

Remittance should accompany Order.

**HEWARD & SHELBORNE, Wholesale and Retail Stationers,**  
 63 HIGH HOLBORN, LONDON, W.C.

**New.**

**New.**

# GILL'S "CARTOGRAPHIC" WALL MAPS FOR SECONDARY SCHOOLS.

*Edited by* **GEORGE GILL, F.R.G.S.**

**Size,**  
80 x 60 in.

NOT OVER-CROWDED, NOT UNDER-SIZED, BUT BOLD AND CLEAR.

**Price 16s.**

MOUNTED ON STOUT LINEN, ROLLERS, AND VARNISHED.

Compiled from the latest statistics, artistically coloured, and thoroughly reliable.

**ENGLAND AND WALES.**

## The Educational Times.

### The Multiplication of Universities.

THE creation of the University of Birmingham has led to a very natural movement on the part of Liverpool and Manchester to break up the Victoria University and to establish separate Universities for themselves. The true solution of the problem thus raised is not easy. Perhaps it is worth while to begin by considering the difference between a University and a College. The most obvious distinction is that a University can grant degrees—can “brand its own herrings,” to use a cant phrase—and a College cannot. But there are Colleges and Colleges. The Colleges of Oxford and Cambridge originally stood, as far as the students were concerned, in much the same relation to the University as the boarding-houses of Eton or Rugby stand to those schools. Gradually the teaching functions of the University passed, to a considerable extent, to the Colleges; so much so that some fifty years ago Cambridge, for example, in order to provide work for the professors, required passmen to attend a professor's lectures as one condition of proceeding to their degree. The higher teaching had practically passed out of the hands of the University, and the only way in which an Honour student came into contact with it was through its examinations. In recent years the movement has been in the opposite direction. No doubt a large portion of the teaching is still done by the Colleges, and the “coach” has plenty of employment; but the institution of inter-collegiate lectures and the formation of Boards of Studies presided over by the professors have organized a great deal of the higher work on a University basis, so that competent teaching under University control is supplied not only in each subject but in each department of a subject. Thus the variety of courses distinguishing a German University and the personal relation of teacher and pupil which has always characterized the Colleges of Oxford and Cambridge are combined.

The Colleges of which University College, London, is the prototype are of quite a different character. Putting aside the question of residence, they have had, from the beginning, to discharge towards their students all the functions of a University, except that of examining them and conferring degrees. They have been obliged, and that with inadequate

resources, to offer a complete curriculum both for honours men and for passmen. The whole teaching of a subject has, as a rule, been in the hands of a single professor, with rarely more than one assistant, often with none at all, while the examinations for which their students were prepared were conducted by examiners not necessarily in touch with them. Nor have the professors been placed under the most favourable conditions for an important function of a University, that of adding to the stock of human knowledge, though there are brilliant examples to the contrary.

The ideal University, then, it seems, requires a large staff of teachers, among whom there should be several representatives of each subject, each with his special department. All teachers should have some leisure for research work, and it should be possible for some of them, at intervals, to give the greater part of their time to it. Those who have read the preface to Dr. Frazer's “Pausanias,” in which he expresses his gratitude to Trinity College, Cambridge, for renewing his Fellowship, will appreciate this point of view.

Again, the teachers should be in close touch with each other and with the examiners, not merely in formal University meetings, but, what is at least as important, in informal intercourse. If they can be dispersed in separate institutions, each with a life of its own, but all within reach of each other, so much the better. The *esprit de corps* of subdivisions is an important element in forming the *esprit de corps* of the whole, both as regards teachers and as regards students. It is important to stimulate the personal interest of a comparatively small group of teachers in a comparatively small group of students. One of the great charms of Oxford and Cambridge is that, by means of the Colleges, men following the most divergent lines of study are thrown into close intercourse. As to examinations, a University ought to be at once self-sufficing and willing to borrow some help from outside. Some think that a teacher should but rarely take part in the examination of his own pupils, inasmuch as few can hit the happy mean between following too closely the lines of their own teaching and (from conscientious motives) deviating too widely from it; and that a member of a group of teachers animated by a common aim is likely to be a better examiner of the work of his colleagues than any one of them would be of his own. A very successful plan is seen in operation in the degree

examinations of the Scottish Universities, where an external examiner in each group of subjects is associated with the professors.

Thus the question for the Northern towns and for the Privy Council to consider is whether they have a prospect in the present or the immediate future of developing their Colleges into a University, with a staff adequate alike for elaborate division of labour and for the formation of a healthy public opinion. It may well be that the stimulus of local patriotism will, to a certain extent, compensate for the want of a sufficiently large academic society. At any rate, it is difficult for such a society to exist in a federated University like Victoria; the time of professors is too valuable to be wasted in frequent railway journeys, and such journeys can do but little to promote informal intercourse and to produce solidarity of interests. Still less is there any real community of interests among the students of widely separated colleges.

One difficulty raised by the opponents of separate Universities for the three towns may be lightly dismissed. It is argued that they may be tempted to bid against each other for students by lowering the standard of their degrees. Probably the danger, if any, is in the other direction, as Mr. Haldane has pointed out. The London standard for pass degrees is certainly not lower than that of Oxford or Cambridge, nor has Victoria University taken any downward step. It is scarcely likely that, with their reputation to make, and a strong public opinion bearing upon them, the proposed new Universities will practically cut their own throats. Moreover, it would be easy for them to adopt a common standard, as is done in Scotland. One cannot help being amused at the fears expressed by some graduates of Victoria, that the worth of their own degrees will be lowered, as if one could estimate the value of a pass degree to two places of decimals. It is one more example of the intense desire of some people to create vested interests on the slenderest grounds. No doubt the Manchester, Liverpool, and Leeds graduates of Victoria will be allowed, if they wish it, to form the nucleus of the list of graduates of their respective Universities.

### NOTES.

THE Education Bill passed the second reading by the strong majority of 237. But even this bold figure falls short of the majority of 267 attained by the Bill of 1896, and it remains to be seen whether the present Bill will escape a like fate. The amendments set down for Committee are numerous and important, and the list will continue to grow. The debate was characterized by conspicuous ability and earnestness, with a most laudable absence of bitterness, and even of heated alarms and excursions. It did not, however, develop any arguments that had not already been urged on many platforms and in many journals. It was simply a formal joinder of issue. Plainly the Bill cannot get through the House of Commons without very prolonged discussion, unless the closure be applied somewhat remorselessly; and that, too, will raise deep questions. Everything will depend upon the promptitude of the Government in

cutting away all such elements of the Bill as they do not seriously mean to stand by. There can be no doubt that Mr. Bryce spoke the mind of the Opposition when he said "there has been, and there is, a universal and hearty wish to reorganize the schools and to spend more money upon them, if we are sure that the money will be usefully spent." This temper opens out a fair opportunity. But it must be met by more direct argument and more conciliation than were offered on the second reading.

THE Education Bill has naturally evoked a gush of literary commentary and criticism. Dr. Macnamara's pamphlet (Swan Sonnenschein) is a conspicuously pointed and level-headed examination of the whole scheme. As for secondary education, the Bill, he thinks, "can as it stands do but very little for this branch of the work." He calls the reference of a higher rate than 2d. to the Local Government Board "sheer nonsense." On the "terribly thorny problem" of the religious question, he avers that he has "worked in and about the Board school as pupil, pupil-teacher, assistant teacher, head teacher, and School Board member for the last thirty years, and never met such a case" as a parent that objected to the Bible teaching. This is a very striking declaration. Is there any experience to the contrary? If not, the practical conclusion is obvious and most important. Dr. Macnamara concludes his acute and temperate survey with a list of fifteen emendations that would, in his opinion, "vastly improve the Bill as an educational instrument, and would certainly facilitate its passing through the Houses of Parliament." "The Education of the People and the Bill of 1902" (King) takes a wider scope historically, and is well worth reading. Mr. Henry Smith writes "A Common-Sense Catechism" (Watts), whereby he hopes to show the way to "an end of the denominational controversy." Would that he could!

PROF. ADENEY makes a "bold suggestion"—but an eminently sensible one (if the money were forthcoming)—in the *Christian World* (May 8), for "the establishment of a great inter-denominational theological school in London" under the wing of the University. The University preserves a religious neutrality, and each of the theological colleges wishes to preserve its distinctive character; and, of course, Dr. Adeney has no desire to interfere with the one or the other. What he would like is "a teaching school voluntarily originated, organized, and equipped," with "no theological tests," dealing on common lines with a common curriculum; for "we have come to perceive that by far the larger part of the whole round of theological instruction is altogether independent of sects and parties." The different centres multiply the experts, but the expense presses on the colleges. Prof. Adeney is encouraged by the harmonious working of representatives of various denominations on the Board of Studies that has shaped the curriculum for the London degrees in Divinity.

THE action of the University of London in making Latin optional for the Matriculation Examination raises venerable controversies. The extreme step might, perhaps, have been obviated by decreeing a more rational style of examination

paper. Still it is but an option, and the teaching of Latin in schools will probably suffer less discouragement than is anticipated in some quarters.

THE public appeal for adequate support of the University work of London was prosperously launched at the Mansion House meeting, and it has been supported strongly by journals of every shade throughout the kingdom. The pecuniary basis of the incorporation of University College in the University of London is happily assured; but then the million remains to be found. The general assumption is that it should be found without difficulty. This is natural enough in the richest city in the world. "If our merchants and manufacturers appreciated the importance, as a factor in our national commercial success, of the higher education of the people of London," says *Nature* (May 1), "there would be no difficulty in obtaining the sum required by the Council of University College." True; but business men, even if satisfied with the general proposition, are not likely to give sums miscellaneously, and need to see clearly the connexion between cause and effect. To enable them to do so is a practical problem of much delicacy and complexity, and it requires time and tact. There are, however, large moneyed classes that owe a heavy debt to University College, and it should not take these any long time to make up their minds to lead the way. The millionaire cannot be expected to stand in first.

LIVERPOOL has discovered that it has practically no endowment for secondary education, while Birmingham has endowments equivalent to a rate of nearly 4d. in the £. Liverpool has £385 a year; Birmingham has £37,997. Not only does secondary education in Liverpool lack funds; it lacks also reorganization. With excellent elementary education and the prospect of a University, Liverpool must overhaul the middle stage, and bring it up to the times. A sub-Committee of the City Council has inquired and reported, and, no doubt, the educational fervour that now possesses the citizens will soon bring them abreast of Birmingham even in secondary education. Does not Liverpool claim to be the Second City of the Empire?

ARCHDEACON WILSON'S address on "The Profession of Teaching" to Kendal teachers, school managers, and parents is fresh, direct, and breezy, and ought to reach a wider audience. "I cannot exaggerate the loss to our secondary and technical schools," he says, "from the want either of method or of knowledge or of both; from the lack of training of teachers, the lack of a high standard of knowledge and of the value of research, and the lack of intelligent co-ordination." Why this multiplied lack? "No one, no Minister of Education in England, has arisen to grasp and mould and unify the education of the country as a whole." The Archdeacon was speaking three days before the introduction of the Education Bill, and it would be interesting to know whether this opinion still holds good. His own suggestion of the dominant aim of educators is substantially Wilhelm von Humboldt's: "Whatever we wish to see characteristic of our nation we must first implant in our schools." Mr. Wilson says:

Germany had then, and still has, the notion that seems to us so strange, so unaccountable, that it is best to follow the guidance of those who have made education their study, and not that of the man in the street. We have no educational ideals, because we have no educated authority with leisure to construct and power to impose them.

This is only too true. But it may be noted that the London County Council, in its educational sphere, has acted on the German principle; and its example may have wider influence yet. The great object, in Mr. Wilson's view, is "to prepare for life"—life in leisure (if any) as well as in activity; to develop, first of all, physical health (as to which we hope his suggestion of a record of facts will not remain barren), music and art, and "the observant eye," then history and literature, as well as technical knowledge of Nature. He does not emphasize the rather important consideration that "to prepare for life" includes preparation for making a living—the difficult basis of all.

THE Faculty of Commerce at Birmingham University will start work on October 1, and Prof. Ashley has already issued an account of "its purpose and programme."

Its object is the education, not of the rank and file, but of the officers, of the industrial and commercial army—of those who, as principals, directors, managers, secretaries, heads of departments, &c., will ultimately guide the business activity of the country.

The academic teacher cannot pretend to supply commercial brains or business experience any more than a medical school can create a great physician or surgeon. What he can do, however, is "to gather, arrange, and present the lessons of practical experience," and explain the interrelation of isolated conclusions in practical affairs, so as to afford a wider and instructed outlook, and "to enable the young man of business to profit by his early experience more rapidly and less painfully than is commonly the case." The curriculum of three years for the degree of Bachelor of Commerce (B.Com.) includes mainly (1) languages and history ("adequate equipment in two modern languages"), (2) accounting, (3) applied science and business technique, and (4) commerce—the last group being "intended to be the most characteristic feature of the Birmingham plan." Prof. Ashley sets out an admirable scheme of work, which ought to tell effectively in the long run.

It was a good idea to send a Welsh teacher to study the "Bilingual (Flemish and French) Teaching in Belgian Schools" on the spot. Mr. T. R. Dawes, Head Master of Pembroke Dock County School, as Gilchrist Travelling Student of the University of Wales, spent some thirteen weeks in Belgium in 1899, "visited elementary schools, secondary schools of various types, normal schools, and Universities," and "had interviews with inspectors, journalists, business men, professors, and schoolmasters"; and his "Report" (Cambridge University Press), though concise, is very pointed and instructive. The struggle for predominance is settling down into a sensible acceptance of bilingualism. Elementary education is free, but not compulsory; "it is not surprising, therefore, to find that as regards elementary education Belgium falls far behind most European countries." In the secondary schools the "constant linguistic training must have a great influence in producing the remarkable ease with which Belgians, more especially Flemings, acquire modern

languages"; but, on the modern side, "the tendency to leave the schools too early is continually deplored." "There are no pupil-teachers in Belgium." Both in the secondary and in the normal schools modern English stories—by Dickens, Stanley Weyman, F. Anstey, Conan Doyle, Kingston—are freely used as text-books. The pupils "who have gained the Leaving Certificate" of the secondary schools "have a good knowledge of two languages, and are able to converse in one or two others." This suggests comparisons. Yet in Belgium the direct method of teaching languages "is at present but imperfectly understood and only partially adopted." Still there is something to be learned from little Belgium.

THE current (April) number of the *Record* contains an elaborate article by Mr. Wilfred Mark Webb, F.L.S., on "Nature-Knowledge: its Progress and Interpretation." The Pestalozzians claim to have been teaching Nature-knowledge in this country for half a century or more, but the more immediate influence has been the enthusiastic exposition and practice of Prof. Bailey, of Cornell. What is the Cornell idea of "Nature-study"? Prof. Bailey says:

It is a point of view. It is the acquirement of sympathy with Nature, which means sympathy with what is. As a pedagogical ideal, nature-study is teaching the youth to see and know the thing nearest at hand, to the end that his life may be fuller and richer.

The purpose is to foster observation and deduction, as opposed to the storing up of dry facts imparted verbally. The method "is to be wholly informal," for Nature-study is not the study of a science, the study of the systematic relationships of the objects; and the subject is not to be "made a stated part of the curriculum," for in that case "its purpose would be defeated." In this country there is a considerable tendency, however, to give the subject its "fixed time and place" in the school work; and Principal Hall, of Wye College (*Journal of Education*, September, 1900), has stood out for the old didactic lines as against the heuristic method. The Board of Education takes the best of the American ideas, and tells teachers that "work of this kind is not of the nature of an additional study, but rather a change in the contents of lessons in the ordinary subjects." Yet this attitude tends to ultimate divergence from the Cornell type.

How is the teacher to be trained for this special work? Two types arise. If all the teachers of a district are to be appealed to at one and the same time, circulate among them leaflets and specimens illustrating object-lessons. If selected or individual teachers are taken, give them courses; "and it is with these we have principally to deal, for to their organization by far the most energy has been directed by the County Councils." Mr. Webb devotes much space to an instructive analysis of the courses given in three-fourths of the counties of England, setting forth syllabuses, notes of lessons, examples of the children's compositions and drawings, &c. Mr. Webb says:

It will be evident that, while hints, ideas, and additions to general knowledge can be gained from any good course, it is chiefly to the long ones that we must look for the giving of a systematic training in a definite science bearing upon "Nature-knowledge," although it would surprise many educationalists to learn how much in the way of principles can be imparted in two or three weeks of regular and practical work, if a single subject be adhered to.

The more scientific knowledge the teachers can eventually

assimilate the better. But the first thing is to get enough information to go on with.

MR. WEBB selects judiciously the following points for special emphasis:—

1. That those who are to train teachers should be broad-minded persons, who will do their best to put themselves into the place of the teacher and to appreciate his or her practical difficulties.

2. That the lecturer should present his object-lessons to the teachers in the same way in which the latter are in turn to give them to their pupils in school.

3. That, agricultural and horticultural schools being convenient places for the holding of courses, the industrial side should not be brought in unduly.

4. That in the case of rambles there should always, if possible, be some definite object to be studied, which is made known beforehand to those taking part in the excursion.

Teachers interested in this movement for a better system of rural education will study the article in the *Record* at first hand.

IN our last issue we enumerated various inquiries that have been undertaken by sub-committees of the British Association in connexion with schools and scholars, and invited the co-operation of teachers in rendering the inquiries fruitful. Since then we have received a circular from the sub-committee specially charged with inquiries as to "the practical knowledge of hygiene possessed by school teachers." The points of importance are set out in the following questions addressed to school managers:—

1. Are any certificates in hygiene for teachers recognized in your schools?

2. What certificates in hygiene have you found most suitable to the requirements of teachers?

3. If the teachers with whom you are connected have not been prepared for any special certificate in hygiene, have they received any instruction in it, or dealt with the subject at all, and, if so, in what manner?

4. To what extent are teachers required to exercise their knowledge of the subject—(a) in the management of the school buildings; (b) in arranging the curriculum and in the methods adopted for teaching; (c) in the scheme of physical training and drill; (d) in methodical observations of pupils' health, growth, eyesight, &c.?

5. What opportunities and encouragements are afforded to the teachers for the study of mental and moral as well as of physical hygiene?

"Copies of any curricula of study or courses of training in hygiene for teachers would be very acceptable." We hope that teachers will themselves respond to this appeal, and that too as promptly as possible. Information should be addressed to Mr. E. White Wallis, F.S.S., 72 Margaret Street, London, W.

THE report of the Minister of Education in Ontario for last year is marked by specific educational aspirations and breadth of view. The Minister affirms most truly that "the success of democratic institutions cannot be assured unless education holds a front place among topics of public interest"; and he states that "people have become so interested in school questions that the discussion of our educational system at a public meeting is almost sure to secure the presence of a large number of interested citizens," and regards it as "hopeful to find young people, especially, taking an interest in topics that affect so widely the national weal." "Education," he holds, "must continue to be subject to public control," though "there may be differences of opinion as to whether this public control should be by the Province or by the locality." He seems to lean to "decentralization in some directions," in accordance with the "Declaration of

Principles" of the National Educational Association of the United States. With open mind to suggestions for the solution of pressing problems, he exhibits a judicious practical caution. The question of consolidation of educational authorities is engaging attention in Ontario as well as here, but in the meantime the Minister concludes that, as "separate Boards have worked exceedingly well in some parts of the Province," while united Boards have also worked well in other parts, "it is better to give full freedom in the future, as in the past, to localities to settle the matter for themselves." At the same time, "to improve the status of the teacher should still be regarded as the most important question for future consideration."

THE "Regulations of the Ontario Education Department" contain the following provisions on the subject of religious instruction:—

97. Every public and high school shall be opened with the Lord's Prayer and closed with the reading of the Scriptures and the Lord's Prayer, or the prayer authorized by the Department of Education. . . .

98. The Scriptures shall be read daily and systematically; the portions used may be taken from the book of selections adopted by the Department for that purpose, or from the Bible, as the Trustees by resolution may direct. Trustees may also order the reading of the Bible or the authorized Scripture selections by both pupils and teachers at the opening and closing of the school, and the repeating of the Ten Commandments at least once a week.

99. No pupil shall be required to take part in any religious exercises objected to by his parents or guardians. . . .

100. The clergy of any denomination, or their authorized representatives, shall have the right to give religious instruction to the pupils of their own church, in each school house, at least once a week, after the hour of closing the school in the afternoon. . . . Emblems of a denominational character shall not be exhibited in a public school during regular school hours.

## SUMMARY OF THE MONTH.

THE second reading of the Education Bill was debated in the House of Commons for four days (May 5-8). Mr. Bryce moved the rejection of the Bill. He said with confidence there was a universal hearty wish on his side of the House to reorganize the schools and to spend more money on them if they were sure the money would be usefully spent. If the Government had omitted from the Bill "one element of political, or rather of ecclesiastical, controversy," he believed that object might have been attained. But the faults of the Bill were numerous, and they lay in its essence; and he had little hope that the Government would alter them. He defended the School Boards, which "even by the admission of Ministers themselves have done admirable work for the education of the country"; and he adhered to the recommendations of the Royal Commission of seven years ago. But a single Authority that is good for elementary education is not good for secondary education; and even this single Authority the Bill fails to provide. There are, in fact, four Authorities—the Board of Education, the County and Borough Councils, the Education Committees, and the local managers. The scheme was "replete with confusion, fertile of jarring claims, and interminable in controversies." Next was the question of educational improvements. Secondary education "is admittedly the greatest and most urgent of our educational problems," and "the Bill promises to do nothing for secondary education." It is purely permissive. "It is extremely probable that the large cost which elementary education will entail will greatly delay the additional rate for secondary education." In fact, secondary education should have had a Bill to itself; now it will probably go to the wall. Nor is there a word about training teachers. Mr. Balfour had said the Bill would put an end to barren ecclesiastical controversies and petty squabbles. "What he meant was that it will so rivet denominational schools on the educational system of the country that it will never hereafter be possible to disestablish them." "It is not an Education Bill, but a Voluntary Schools Bill"; "it is an absolute concession to clerical claims." "Sober judgment has already condemned it."

SIR JOHN GORST considered the present state of educational control "absolutely intolerable," and argued for a single Authority on the ground of preventing waste of money and deterioration of the education given. He had expressed his "strong approval and his strong admiration" of the work of School Boards in large towns, but he "could not be so complimentary to the School Boards in the country districts"—"they do not yet educate half the children in the county"; "their statutory authority is not clear"; and their districts "are wholly unsuitable areas for secondary education purposes." "To make the School Board the Education Authority would require a very great deal of very complicated legislation." "The Government think that an *ad hoc* Authority is an anachronism, and that to propose to revert to an *ad hoc* Authority is reactionary." Mr. Bryce's assertion that the Bill does nothing for secondary education "is a form of speech": the Bill creates an Authority, and provides that Authority with funds. "To a very large extent secondary education can be made self-supporting, and in many cases it is not so much a matter of money as of organization." Nothing for the provision of teachers? "Why, provision for teachers will be one of the first duties which the new Secondary Education Authority will have to consider. You cannot make teachers by Act of Parliament." The present unsatisfactoriness of our elementary schools arises, in the country districts, from want of money, and, in town districts, from "the neglect of the Education Authority, such as it is (the School Board), to properly supervise their schools; and, I think, in their desire to invade the field of secondary education they have neglected a considerable amount of their work as to elementary education." He would not enter upon the religious controversy; he would leave that to "the spread of common sense and Christian charity"; and he believed it existed "not in the schools themselves, but on the platform and in Parliament."

SIR WILLIAM HARCOURT attacked the finance of the Bill. "There is no more a single finance than there is a single Authority. Then there are four funds—the rates, the Government grant, the whisky money, and the voluntary subscriptions." The rate will be odious in the country districts, and the cause of education will be disliked: "the hatred of rates is stronger than the passion for education." Mr. Lloyd George urged the familiar arguments of the Nonconformists. In summing up the debate Sir H. Campbell-Bannerman and Mr. Balfour only emphasized previous arguments. The second reading was carried by 402 votes against 165—majority 237. At once a large number of amendments were handed in.

THE London School Board discussed the Education Bill on May 15 on a motion of approval. Mr. Lyulph Stanley moved an amendment setting forth that the Bill fails to secure an effective public Authority directly responsible to the electors; that it reduces the efficiency of elementary education by excluding scholars over fifteen from elementary day schools, by transferring evening schools to secondary education, and by preventing necessary training of pupil-teachers; that it gives no effective voice to parents or school authority; that it abolishes all obligation on the Board of Education to enforce on the Local Authority the making of due school provision; that it deprives the electors of the right of choosing women that should serve with the Education Authority; and that "by insisting on the appointment of managers for all schools, without giving the Education Authority the right to define the scope of their management, it impairs the efficiency which results from unity of direction, interferes with the power of promotion and transfer of teachers, diminishes the effective control of the Education Authority over the cost of the schools, and will lead to disputes which the Local Education Authority will be deprived of the power of deciding," and that therefore it should not become law. The amendment was carried by 29 votes against 24.

THE ARCHBISHOP OF CANTERBURY has sent the following letter to a correspondent:—

The Church has no desire to use the elementary schools for the purpose of making proselytes, but she requires her clergy to see that her own children are taught the Catechism, and taught the Catechism by men who believe it. Those who are taught by men who do not believe it are pretty sure to follow their teachers in not believing it. This is the ground for the action of the Church in this matter.

THE Bishop of Coventry, speaking at a dinner given (May 21) to the delegates of the School Board Clerks Association by the

Mayor of Bradford, where this body was holding its annual conference, said that, much as he admired the ancient Universities, he was in favour of multiplication of local Universities and free intercommunication between those Universities and elementary schools. He would have one senate or governing board of all Universities, clerks, or other representatives of elementary educational authorities. He contended that acquisition of knowledge was only part of education, and he insisted upon this, because he was pained beyond expression by certain words which fell from Dean Gregory in Convocation. He was quite sure of this, that School Boards had been a great moral and religious agency in this country. They had done a great religious work. While we had been annoyed with hooliganism and other conditions that had obtained in our great cities, fault was not to be laid at the door of the School Boards, but upon housing and other conditions under which children were brought up, and that every night of their lives undid the work that School Boards had been doing during the day. None of those that knew about it could deny that School Boards had been responsible for a great measure of moral and religious advance in this country.

MAY 14 was Presentation Day at the University of London. Lord Rosebery, the new Chancellor, occupied the Chair, and commemorated his predecessors. Principal Rücker stated that the number of entries for the examinations was larger than in any former year. There was no sign of falling off, for the entries for the matriculation examinations in June were about 10 per cent. greater than the maximum number previously recorded. It was determined to establish two Chairs of Chemistry at University College, one for general chemistry, which would be filled by Prof. Ramsay, the other for organic chemistry. In no subject had the difference between the completeness of English and foreign educational equipment been more marked than in chemistry. He believed that up to the present only two or three educational institutions in this country had more than one professor of chemistry, while in Germany even a university of the second class usually had several professors in that department. It was hoped that the chairs now established in University College would be the beginning of a great Chemical Department worthy of London. It was time that London should realize that it was not the want of men nor a dearth of intellectual effort which had hindered the University of London from taking its place as a great centre of teaching and research. Their needs were organization, which should make the results of the work of the teachers, their assistants, and students more fruitful and better known as results of which London might be proud, and funds to supply them with the materials for this work. The Chancellor then distributed the prizes and conferred the degrees on the successful candidates.

THE same day the Council and Principal of Bedford College for Women celebrated commemoration day at the college. There was a large attendance of visitors and friends of the students. During the past term there have been 190 students at the college, and 29 of them were successful in taking degrees at London University. The artistic work of the students was exhibited in one of the large rooms of the college.

THE mace of the University of London, presented to the University by Sir Henry Roscoe, on his retirement from the office of Vice-Chancellor, says the *Daily Graphic* (May 15), has a distinct character of its own, being evolved from a wand or staff of office. It is, therefore, larger and more elegant in form than the municipal mace, which has the ancient fighting weapon as its prototype. It is the work of Messrs. Ramsden & Carr, of Battersea. It is made entirely of hand-beaten, wrought, and *repoussé* silver, gilt, with panels of translucent *champ-levé* enamel. The head is surmounted by a royal crown, the orb of which is of lapis lazuli, carefully guarded by protecting bands of wrought metal. The crown is a new rendering of the old and traditional *motif* of alternating *fleurs-de-lys* and Maltese crosses. Inside the crown, fitting as a lid, incised in a line of mediæval character, are the royal arms, with the letters "E.R. VII." The head is formed by four crowned and winged figures, kneeling, and holding shields of *champ-levé* enamel. Two of these portray respectively the arms and the badge of the University, and the other two set forth the dates of its foundation (1836) and its reorganization (1900). Between the figures, which represent the triumph of light and education, rises the tree of knowledge, among the knotted roots of which the figures kneel. Immediately below is

a knot of struggling figures representing darkness and ignorance enslaved, and aspiring to light. All the figures are different, and portray different notes in the scale of pathetic woe. Among them swirl bands of wrought metal, typifying the rush and whirl of the present day.

The shaft, which is of great length, is divided into five unequal parts by four knots, each set with oblong panels of brilliant enamel, wherein fiery gleams of orange appear in conflict with dusky ruby. The panels are protected by wrought straps of metal. A pleasant grip is afforded to the shaft by its being overlaid with cables of twisted silver. Above the foot knob is a band of incised lettering, setting forth the gift of the mace, and underneath, in rich bold *repoussé*, are four renderings of the University badge, the crowned rose, with rays in all directions. These badges are displayed inverted, as at times this end is borne uppermost. The finial is completed by a solid spike for resting on the floor. The mace is enclosed in an oaken box, which is bound with hammered bronze mounts, and has a shield with the University arms in *repoussé*. Our contemporary figures as well as describes the mace.

THE Mansion House meeting (May 9) to make public the appeal of University College, London, for adequate funds, proved very successful. The Duke of Devonshire moved: "That this meeting is of opinion that the incorporation of University College, London, with the University of London will materially promote higher education and research in London, and that with this object a fund should be raised to equip and endow the College adequately for such education and research." He reviewed generally the necessities of the higher education, and explained the position of University College and the conditions of its incorporation in the University of London. Sir Michael Foster, M.P., seconded, and Principal Rücker supported, the resolution, which was duly carried. On the motion of Lord Brassey, seconded by Lord Avebury, and supported by Mr. Lionel Phillips (who promised, on behalf of his firm, £10,000), a further resolution was adopted urging upon the citizens of London the importance of a generous response for the million pounds necessary to equip and endow the University. Sir Richard Farrant (Treasurer) announced that £110,000 had been promised.

THE *Pall Mall Gazette* wrote (May 9): "A blow is struck today at London's self-complacency which is likely to leave her under a sense of shock." After discussing the needs of University College and the University of London, the writer concluded thus:

It is surely no remote or unlikely vision to see London, rich as she is, provided with a self-supporting University, to keep our teeming generations abreast of the time, in language and history, in science and in arts. Such a scheme implies a central group of colleges with subsidiary centres north, south, east, and west, with multiplied chairs on popular and essential subjects, and more exclusive studies relegated to the centre which proves most convenient. Such a University would be a true home of knowledge—knowledge which is not merely static and written and dealing with past times, but dynamic, full of the future, and rapidly accumulative. There would be adequate schools of research, rich in the proper appliances, to which our producers and manufacturers might apply for advice or assistance instead of referring, as they do now, to experimental schools abroad. And with a section of the Imperial Institute set apart for executive and secretarial purposes, as at present intended, one could hardly conceive a finer teaching centre than the completed fabric of University College, with its laboratories and libraries in full activity, its magnificent Edwards-Petrie collection for Egyptologists, its admirable pathological and other museums, and its providential nearness to the valuable records of the British Museum. We hope to-day's meeting will bring this ideal within practicable reach, and that before the century is very much older learning may be seated in our midst, as upon a seven-crested hill, honoured and giving honour.

THE recent annual report of King's College, London, recorded thoroughly satisfactory work in all departments of the college and school, and the maintenance of a large attendance. The college had closely associated itself with the re-organization of the teaching work of the University of London, and one of the new University Chairs of Engineering would be located at the college. There was again a deficiency on the year's working, due chiefly to the charge for interest on the college debt, and it would be necessary shortly to make an appeal not only for the extinction of the debt on the college, but for funds to provide for a considerable increase of expenditure in order that the continued

progress of the college might not be impeded and its usefulness as a school of the University crippled.

LIKE Cambridge, Oxford is striving for a more adequate recognition of economics. A petition, signed by nearly a hundred members of Convocation, and restricted to "residents engaged in teaching," has been forwarded to the Vice-Chancellor for presentation to the Hebdomadal Council. It suggests the establishment of "a new School of Economics and Political Science," "confined to such persons as have taken the degree of B.A. or B.Sc. or B.Litt., or have passed the examinations required for the degree of B.A." The idea differs from the Cambridge proposal in not asking for a complete curriculum forming a new and independent path to the degree of B.A. It aims really at a post-graduate course. But it marks the advance of economics and cognate subjects in academic appreciation.

SIR ALFRED L. JONES, "the energetic and Imperially-minded head of the great shipping firm of Elder, Dempster, & Co." (as the *Times* describes him, May 12), wrote to the *Times* (May 10):

As I consider the idea of the late Mr. Cecil Rhodes of granting scholarships to our colonies is a most excellent one, I have much pleasure in announcing that, with the object of aiding his scheme, I will agree to give a free passage backwards and forwards from any colonial port served by my firm's steamers to both Jamaican and Canadian scholars once a year during the tenure of their scholarships. I would also suggest that there should be a condition that the scholars enjoying this privilege should have a *bona fide* domicile in the colonies from which they hold their scholarships. Some of them might be qualified by colonial birth, but domiciled in this country while holding their scholarships. It would not, in that case, be reasonable for them to expect to secure a free passage to the colonies in which they are no longer domiciled. I trust that my example will be followed by ship-owners trading to other colonies, and I hope that it may thereby be made universal, so as to put all the Rhodes Scholarships from the colonies on an equal footing.

On this letter the *Times* wrote (May 12): "It is a small thing to ask of men so closely dependent on the welfare and solidarity of the Empire as steamship owners are, and it is a great thing to enable the colonial scholars brought to England by the Rhodes bequest to visit their distant homes almost as easily as an ordinary undergraduate goes home at the end of term. . . . If the example of Sir Alfred Jones were generally followed, its effect would be to enable every colonial scholar to devote himself to serious and sustained study at Oxford, without severing himself for three or four years from the colony in which he is domiciled and the home in which he has been nurtured."

MR. W. H. ALLEN, Chairman of Messrs. W. H. Allen & Co., Queen's Engineering Works, Bedford, wrote to the *Times* (May 15):

The offer from Sir A. L. Jones suggests to me that other methods to further the great ideas of Mr. Rhodes's will might be carried out. No doubt, many of those students leaving Oxford having a scientific turn of mind may desire practical training for an engineering life afterwards. This company would be prepared to take a Rhodes scholar to pass through the scientific and practical training at these works, where we have special opportunities for teaching, free of any fees, for a three years' course, at the rate of one per annum. I hope this suggestion may be of use to the trustees, and may at the same time give rise to others.

"OXONIENSIS" (*Times*, May 15) calls for an "Imperial-minded millionaire to provide for 'advanced studies in electricity' at Oxford, and for 'others' to 'follow the example [of Mr. Rhodes] in other directions'—in fact, for 'a new generation of liberal and pious founders inspired by the new Imperial idea.'"

THE Graduates' Defence Committee of the Victoria University have issued a pamphlet setting forth the case against disruption. It is urged that three small local Universities would not, from an educational point of view, be so efficient as one large associated University. It is estimated that for the three Universities there would be required £1,000,000 for Leeds, £750,000 for Liverpool, and £250,000 for Manchester, in addition to the money in hand; and the question is asked: Where is this £2,000,000 to come from? The Committee conclude thus:

There appear before us two alternatives. On the one hand a great federal University, strong already in attainment and prestige, and destined to become an educational Parliament, controlling and guiding the educational forces at work in the most populous districts of Eng-

land, and maintaining, equally with the older Universities, that breadth of outlook and that high standard of intellectual efficiency which ultimately affect both national and Imperial development.

On the other hand, it is proposed to create a number of small local Universities, owing their origin rather to so-called local patriotism than to broad educational ideals, with consequent narrowness of aim and a veritable anarchy of conflicting educational interests.

On these grounds, appeal is made to "all who have the true aims of education at heart" to use their influence to oppose the movement for disruption, "the ill effects of which, we believe, will be irreparable." These contentions will, no doubt, be promptly answered by the other side.

THE draft charter of the proposed University for Liverpool, settled by the Council of University College (May 13) gives large powers as to the conferment of degrees in all the recognized faculties, as well as in the Faculty of Commerce, which embraces the sciences of economics, geography, banking, and commercial law. It also gives powers to admit new constituent colleges; to recognize halls of residence for students; to establish new professorships and lectureships; and provides for the establishment of external examiners. The powers of the Senate and Convocation, and the rights and privileges of graduates, are dealt with on modern lines, and provision is made for the representation of the City Council on the governing body. Existing graduates of Victoria who have taken their degrees from University College may have conferred upon them an *ad eundem* degree of the Liverpool University.

WALES has evidently received a vigorous educational impulse. There is now on foot a movement to petition the Lord President of the Committee of Council on Education to make a grant towards the establishment of a Welsh national museum. Wales feels that she "is being neglected by the Government in museum matters," and thinks that "objects of the highest interest to the Cymry discovered in Wales" should be kept in Wales, and not stored in the British Museum. "This subject," says Mr. J. L. Wheatley, Town Clerk of Cardiff (*Western Mail*, May 13) "has, time after time, been debated in the House of Commons; but the Government have invariably shielded themselves by the want of agreement of the Welsh people on a recognized capital or distributing centre. This, however, is not the only point upon which Wales fails to be of one mind. Whilst many are in favour of one central museum at which objects should be collected for the whole country, and these objects, as far as possible, disseminated and circulated amongst the various museums and schools of art, educationalists whose opinions are entitled to the greatest respect urge that, having regard to the geographical and educational conditions of Wales, the purposes of the Museum grant would best be promoted by a distribution amongst the three University Colleges of Aberystwyth, Bangor, and Cardiff."

DR. E. H. GRIFFITHS, Principal of University College, Cardiff, has made an important offer to Wales. He considers it the duty of Welshmen to give opportunities for scientific research to the most promising students of the Universities of Wales, and regrets that such students have to forsake Wales for Germany or England to pursue their studies. He thinks that, if Welshmen are ever to make a name in science, the only hope is in the provision of a properly equipped laboratory dedicated solely to research. Accordingly he has generously offered his valuable collection of scientific apparatus to Cardiff provided a suitable home be procured. The collection has taken him fifteen years to construct and obtain. He estimates the cost of a suitable building at about £2,000, and suggests that it might form an appropriate memorial to the late Principal, and might fittingly be termed "The Viriamu Jones Research Laboratory." Students engaged in investigations might be maintained by a sustentation fund, and the investment would yield returns of academic and real commercial value. If Cardiff does not accept the offer, the collection will be presented to the National Physical Laboratory at Teddington.

THE Board of Education has intimated that, within reasonable limits, a teacher in receipt of a disablement allowance, under the Elementary School Teachers' Superannuation Act, may add to his, or her, income by undertaking some light employment other than teaching in school, and that the consent of the Board of Education is not necessary before undertaking such employment.

THE number of candidates that entered for the recent com-

mercial examinations of the Society of Arts was 16,344. The actual number of papers worked was 14,776, an increase on last year of 649. There are two grades, Preliminary and General. In both grades the most popular subject was book-keeping, for which there were in (Grade I. (Preliminary) 1,507 candidates, and in Grade II. 3,800. Shorthand comes next with 1,454 and 3,101 candidates. Of the other subjects there were, in Grade II., 795 candidates for typewriting, 544 in French, 270 in German, 222 in arithmetic, and 170 in Spanish. The numbers entering for the other commercial subjects were comparatively small. In Grade I. there were 471 in typewriting, 607 in French, 190 in German, and 276 in arithmetic.

THE American educational papers have been overflowing with memorial notices and eulogies of Colonel F. W. Parker, Director of the School of Education in the University of Chicago. Many bracket his name with that of Horace Mann. The *School Journal*, in a "Parker Memorial Number," calls him "the great apostle of primary education." "The whole history of American education," writes President Butler, "has never seen purer idealism or more sincere devotion than Colonel Parker's. He believed in democracy with all the fervour of his nature, and his love for the child and childhood knew no limits. As a great inspiring force, who was impatient of artificial trammels and of formulas when life and spirit were at stake, he has had no equal in our public school service."

IN connexion with the American University of Harriman, Tennessee, a College of Temperance is being organized as a monument to the memory of the late Dr. Frances E. Willard. There will be two years' teaching and training under specialists for such as desire to fit themselves for special temperance work. It is also intended to investigate specifically the effects of alcohol on the human system, and of the drink traffic on the public welfare and national prosperity. There will be two chairs endowed—to teach scientific temperance and political economy and prohibition.

IN Australia, New South Wales claims to lead in technical education. The work was successfully started by the formation of classes in one of the State-aided educational institutions in Sydney; then it was taken in hand by a Technical Education Board; and in 1889 it was handed over to the State Department of Public Instruction.

At this time there were 72 metropolitan classes, with an attendance of 2,077 students. In the same year the State purchased a block of land in one of the outlying portions of the city for about £30,000 on which to erect a technical college on an extensive scale, the completed building now forming one of the leading architectural features of Sydney. . . . The actual number of students during the third term of 1901 was: agriculture, 120; sheep and wool training, 79; chemistry and geology, 283; pharmacy, 24; mechanical engineering, 821; electrical engineering, 209; applied physics, 280; mathematics, 79; sanitation, 403; architecture, 371; art, 732; industrial and decorative art, 110; domestic economy, 130; separate classes, 454; total, 4,095. The number of students attending the colleges and branch schools was 9,267, as against 8,625 for the previous year, being an increase of 642. The weekly average attendance of individual students was 7,721. 4,225 candidates presented themselves for examination, of whom 3,126 passed. . . . The total expenditure on technical education during 1901 for the Sydney and branch colleges and branches was £23,076. 8s. 11d.; for technological museums, £4,597. 15s. 2d.; and for payment to teachers as part remuneration and purchase of chemicals and contingencies, £5,742. 12s. 7d.

### UNIVERSITIES.

(From our Correspondents.)

OXFORD has so long been inclined to consider herself the centre of creation that the Rhodes bequest, with its scheme for giving some practical basis for the belief, has, of course, served to foster the belief still more. But the chorus of approval which Mr. Rhodes's scheme seems to have received from outside critics has not been quite so hearty here. Two main difficulties suggest themselves. In the first place there is the question of finance. The popular and uninstructed world who are not Oxonians seem to imagine that Oxford has received a large bequest; this (excluding, of course, the provision for Oriel) is quite untrue. The Rhodes students will only pay the small University dues, and, if they are undergraduates, the college tuition fees. Now the fact is that, if it were not for endowments, neither the Universities nor the colleges could afford

to carry on their business. Indeed, the education given—whatever value, exaggerated or otherwise, we may assign to that education—is really provided at less than cost price; it was an Irishman who suggested, we believe, that the only way of making a profit under such circumstances would be to increase the business. Of course, it may be retorted that the same teaching staff will do for greater numbers; but this is not in reality true, for most colleges have now their full complement of undergraduates, and so must either reject more home competitors at their matriculation examination, or else make preparation to receive a larger number. Of course, the difficulty is not insuperable, we hope, but still it remains; and perhaps, had Mr. Rhodes known more of the inwardness of the question, he would have faced the position; as it is, we believe that it may still be open to the trustees of the will to do so. The second *crux* which the bequest creates is to be found in the status of the scholars themselves. They will not, of course, be "scholars" in the ordinary and accepted sense, but will, we imagine, either be undergraduate commoners or else post-graduate students who come with a degree from elsewhere, and proceed to read for one of our new research degrees. In the latter case, the position is simplified, though we do not fancy this is quite what Mr. Rhodes intended; in the former, we are at once faced by the question of the standard of admission. A writer in the *Oxford Magazine* has inclined to the belief that we shall interpret the University statutes and the requirements of Responsions "in a generous spirit." Needless to say, once the suggestion is in the air, the "old guard" stand to arms once more; it is really the question of Greek. Prof. Case has voiced the sentiments of the old guard in his recent eloquent defence of Greek as the best means of education, and there are doubtless many who, whether here or at Cambridge, will die with him in the last ditch. Oxford is so steadily tending towards specialized study that we shall soon have to decide between what is, or is held to be, the best education absolutely, and that which is likely to be commercially the most profitable. Of course, the promoters of the latter can point to Mr. Rhodes's views on a medical school; but, as a distinguished member of the University pointed out at Reading, Oxford can never aspire to give the practical and clinical instruction that the hospitals of a big town afford. The value of the Oxford Medical School must lie in the preliminary training, and we have little hesitation in saying that so much has been done for the equipment of Oxford science lately, and so able are the teachers, that the preliminary training will compare favourably with that of any other school in the world.

This is, perhaps, rather a lengthy dissertation on what has ceased already to be, outside of Oxford, a nine days' wonder; but the whole Rhodes bequest, and the terms in which it was framed, have caused so much discussion and difference here that an Oxford letter can hardly afford to disregard it.

The most recent topic of interest has been the University appeal, and that of many colleges, against the new "assessment" of University and college buildings. As at the moment of writing Mr. Lyttelton's judgment has not been made public, we can hardly venture to criticize the presentation of the case by the opposing sides. One or two points—not, perhaps, controversial—seem to emerge: for instance, that there is no real principle on which you can assess buildings used for teaching purposes. The idea of a faculty tax—familiar to students of Walker's "Political Economy"—was tentatively put forward—i.e., that the colleges should pay what they can afford to pay. A second, and somewhat amusing, point was the eagerness which University and college officials displayed in trying to demonstrate that their buildings should not be highly assessed, as being peculiarly unfitted for the purposes for which they were intended. Yet a third anomaly may be noticed—we hope without offence to the assessors—the chapel of Keble was more highly assessed than the rest of the college put together.

We have had for the first time an Honours Moderations list with four classes, and, though some profess themselves satisfied, others still maintain that the standard of the second and the third class should be raised still further. We are informed on good authority that the standard of the first remains as it was, and this is borne out by the numbers in the class, but that for the second the standard was raised to the requirement of twelve seconds, a first in any subject being equivalent to two seconds.

We have had lately quite a plethora of public lectures; and on May 21—surely owing to some want of foresight—those who go in for a fine assortment of mixed intellectual instruction could have had three consecutive discourses—Sir Hubert Parry, on "The Development of Music Style," in the Sheldonian, at 2.30

p.m.; the Slade Professor of Fine Art at the University Galleries, at 3.45 p.m.; and the Professor of Poetry at the Schools, on "Shakespeare's Theatre," at 5 p.m. Can it be that these distinguished men wished to be in Oxford for the first day of the Eights and the Australian match?

The Romanes Lecture on June 7 is to be delivered this year by Prof. Bryce, the subject being "The Relation of the Backward and Advanced Races of Mankind." A correspondent in the *Oxford Magazine* suggests that the subject borders too much on the political; and that, in view of Mr. Bryce's recent attitude, a discourse on "The Unholy British Empire" might have been even more suitable.

The new buildings in Oxford grow apace. Those of University are certainly effective, and will add, we think, to the appearance of the High. A bridge across Logic Lane is to connect the old and the new. University has thus been more successful than Hertford in obtaining permission for a bridge from the City Council; and Hertford must have an underground passage, in place of a bridge of sighs.

The weather has been so extremely wintry that both cricket and boating have been carried on in discomfort, though there has been the usual make-believe of summer by undergraduates in punts and Canadian canoes. Panama hats have made mock at the keen nor-easter.

The University Eleven—after much prophecy of a favourable kind—turns out to be miserably weak in bowling and unreliable in fielding, and made but a poor show against the Australians. On the river there was some exciting race for the headship between New College and University. The critics say unkind things of Oxford rowing; and the swing of the pendulum is certainly now just verging to Cambridge.

THE almanac says it is the May term, so we must believe it; but Cambridge for the last six weeks has combined the dullness of the Lent term with the rigours of November. Panama hats are fruitlessly exposed for sale, and a few adventurous youths wear them. The only consolation to be derived from the abnormal weather is that more work has been done than is usual at this time of the year.

University controversies are generally shelved in May till the Long Vacation is over; people have too much to do to trouble about fighting, though we have had a little skirmish on the subject of the Natural Science Tripos. At present a candidate that wishes to gain a first-class in Part II. has to show excellence in one subject and a competent knowledge of a second; the proposal of the Boards was to abolish the necessity for the second subject, and to give the class for knowledge of one subject only. The usual fly sheet war was waged, and one or two opposite remarks came from unexpected quarters. Mr. Pattison Muir remarked that there was no guarantee that the second subject chosen would be cognate to the first and leading subject; Mr. Darwin and Mr. Seward state boldly that the time is all too short for specializing in two subjects and that true specialization must be encouraged. Prof. Allbutt goes off on a side issue, but makes the extremely pertinent remark that the evils complained of in this and other Triposes are due to the inane scheme which put all the examinations in the busy and feverish May term instead of after the Long Vacation. In these notes the point has been reiterated that the change was due to considerations of the personal interests of examiners, and not of candidates. Great is the value of the last Long Vacation for consolidating and revising the work done in snatches and snippets during the busy terms; but this has been utterly sacrificed, and no gain has accrued in return. The Professor has done well in once more calling attention to the evil. The Senate adopted the proposal by the small majority of two.

The FitzWilliam Museum has been presented with a very valuable collection of Handel manuscripts—sixty-seven volumes, transcripts made by J. C. Smith. Handel's favourite amanuensis, have been presented by Mr. F. Barrett Lennard; and the whole collection is contained in a book-case once the property of Handel. Dr. James, the Director of the Museum, also calls attention to the fact that the late Mr. Pendlebury during the past twenty-five years made a present of about a thousand bound volumes of music annually, so that the collection is now one of surpassing interest and value.

Some little argument has taken place on the subject of buying more land from Downing for University purposes, but there is no doubt the bargain will be carried out. The western part of the college grounds is rapidly being covered with University

buildings, most of them rather unsightly in their present condition, and placed far too near the road: the importance of a southern aspect seems to have been forgotten by the architects. In a few years time we shall begin to feel the pinch caused by extra establishment expenses in connexion with this new brick-and-mortar craze of our rulers.

The great College of Caius has been very much in evidence this term. The "meat scandals," as they are called, have amused the readers of the paper, while "extraordinary revelations" have seemed far from extraordinary to those who know the business ways of colleges and their tradesmen. There is a sleek prosperity about everybody connected with the feeding of the undergraduate which is peculiarly exasperating to the hard-worked country parson who pinches himself to give his son a University education. The scandalous waste and extravagance of college management might be ended by an earthquake, but nothing less will shake the complacency of those that live and are happy upon a system that is scandalous and rotten. A pound a day is the average cost to the average undergraduate of his food, mental and physical, and, with all that, the coach, the pariah of academic life, can live as well as any of them. There is no use disguising the fact that Cambridge is run at present in the interests of the permanent staff. Things are inverted, and the parents outside are beginning to see the facts. With the exception of the largest colleges, the average pollman who reads, say, for medicine, cannot get the instruction he requires within his college walls, but must make extensive payments to the unrecognized teachers as well as still more extensive ones to the official teachers outside.

The races are fixed for June 4, and a great influx of Americans is expected for the fortnight's festivities, our humble entertainment being utilized as a mild preparation for the Coronation gaieties. Several of our leading residents are beginning to get fluttered at the thought of what the Coronation *Gazette* may bring forth for them: handles to a name are cherished possessions in democratic Cambridge.

## CURRENT EVENTS.

UNDER the management of the Readers' Board Fixtures. of the London Lay Helpers' Association, the twenty-second annual training course—"Summer School"—open to all duly licensed readers from any diocese, will be held at Keble College, Oxford, from July 26 to August 9. The Rev. J. O. F. Murray, M.A., Fellow and Dean of Emmanuel College, Cambridge, will again act as Principal.

A SUMMER school of Bible study, from August 27 to September 6, will be held at Cheshunt College, if at least fifty students offer. "The object is to help men who are Sunday-school teachers, and to combine a short course of systematic study with a holiday and the social intercourse belonging to college life." The Sunday School Union is co-operating. The lecturers will be the Rev. Principal Whitehouse on "Old Testament History and Literature in the light of Recent Discoveries," the Rev. Prof. H. T. Andrews on "The Life and Times of the Apostle Paul," the Rev. Prof. W. Johnston on "Moral Ideals in the Old and New Testaments," and Prof. E. W. Johnson on "Modern English Literature and Religious Thought."

THE annual exhibition of work executed in the Board schools of London will be held in the Examination Hall, Victoria Embankment, W.C. (adjoining Waterloo Bridge), on June 18-21. It will include specimens of drawings, colourwork, modelling, woodwork, wood carving, metalwork, needlework, infants' work, cookery, laundrywork, housewifery from the day and evening schools, work from the schools for the blind, deaf, and special instruction, work from the truant and industrial schools, and scientific apparatus constructed by the teachers and pupils. Lord Reay will open the exhibition on Wednesday, June 18, at 3 p.m.

A CONFERENCE of the British Child Study Association will

be held at Normansfield, Hampton Wick, on Tuesday, June 24, at 3 p.m., to be followed by a garden party. Apply for tickets (stamped and addressed envelope) to Miss K. Stevens, Carlisle House, Dartmouth Park Hill, N.W.

A CONFERENCE on Science Teaching and Nature Study, together with an exhibition of home-made and other simple apparatus, will be held at the Hartley College, Southampton, on June 14. The Committee invite exhibits from schools and colleges of all grades under any of the following groups:—(1) Apparatus for simple experiments in mechanics, physics, chemistry, or other subjects, to be home-made if possible; (2) apparatus for illustrating lessons in Nature study; (3) diagrams, models, and collections, including work done by pupils; (4) schemes of study and instruction; (5) pictorial illustrations; (6) reports, documents, and leaflets bearing upon the subjects of the meeting. There will be a separate section, arranged in another part of the building, for publishers and manufacturers of educational apparatus. The exhibition will be preliminary to the Nature Study Exhibition in London on July 23.

THE Rede Lecture at Cambridge will be delivered on June 10 by Prof. Osborne Reynolds, F.R.S., of Owens College. The subject is: "On the Inversion of Ideas as to the Structure of the Universe."

THE King's Scholarship Examination for 1902 will begin on December 16 next, not December 9.

THE appeal by the Governors of University College, Dundee, has already brought in over £24,000.

THE PRINCE OF WALES, Chancellor of the University of Wales, has made a donation of £100 to the fellowship fund of the University.

THE late Rev. Evan Penlyn Jones, Librarian of University College, Aberystwyth, has left his books and (on the death of Mrs. Jones) £100 to the College.

MR. LIONEL PHILLIPS has promised, on behalf of his firm, £10,000 towards the University College (London) endowment fund.

THE Council of Trinity College, London, or (as it will now be known) "Trinity College of Music," has voted out of its reserve funds a sum of £5,000 to the University of London, nominally "for the advancement of the art of music," but really to establish a Chair of Music at the University.

THE degree of M.A. has been conferred (May 20) by Decree of Convocation of the University of Oxford upon Mr. Andrew L. Herbertson, Ph.D. (Freiburg i. B.), and Mr. H. N. Dickson, B.Sc.

YALE UNIVERSITY has conferred the degree of LL.D. on Lord Kelvin.

DURHAM UNIVERSITY has conferred the honorary degree of D.C.L. on Sir W. S. Church, President of the Royal College of Physicians, London, and Prof. Annandale, of Edinburgh.

THE London County Council proposes, in connexion with the new Training College for Teachers, to offer 100 scholarships, to be awarded to candidates of either sex that are "ordinarily resident" within the administrative County of London, that

are qualified to hold King's Scholarships, and that have passed the London University Matriculation Examination. These scholarships will carry free admission to the three years' course of the Training College, and to three years' free instruction at one or other of the schools of the University.

UNIVERSITY COLLEGE, LONDON, offers the West Scholarship in English, £30 (open to women as well as to men); the Bucknill Scholarship, £30 a year for four years (entrance medical); and two exhibitions, 60 guineas each (medical); in September next. Apply to the Secretary.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL offers two entrance scholarships in science, £150 and £60, to candidates under twenty-four, in September next.

PEMBROKE COLLEGE, Oxford, offers four open classical scholarships, £90, £80, £70, £60. No limit of age. Examination, May 27. Apply to the Right Rev. the Master.

THE Governors of the Holborn Estate School for Girls offer three scholarships, consisting of exemption from tuition fees, together with not more than £5 in one year to any one girl, and tenable for three years. Candidates must have been three years in their present elementary school, and be not over thirteen. Examination at the school, June 21. Apply to the Head Mistress, 19 Houghton Street, Strand, W.C.

SIR ALFRED L. JONES has offered to guarantee twelve scholarships of £30 each at the University of Wales.

THE trustees of the late Sir Henry Tate have renewed for another twelve years the fund (originally established in 1890) to maintain the Tate Scholarship at the University College of North Wales. Two entrance scholarships—£20 and £15—will be offered, next December, to Welsh candidates taking scientific or technical courses.

MR. EDWARD GRANVILLE BROWNE, M.A., Appointments. M.B., Fellow of Pembroke College, has been appointed Professor of Arabic at Cambridge University, in succession to the late Prof. Rieu.

PROF. BARRETT WENDELL, of Harvard University, has been elected Clark Lecturer in English Literature at Trinity College, Cambridge, for the ensuing year.

MR. R. K. M'ELDERRY, M.A., Senior Classical Master at Campbell College, Belfast, has been appointed Professor of Greek in Queen's College, Galway, in succession to the late Prof. D'Arcy Thompson.

MR. DOUGLAS A. GILCHRIST, B.Sc., Professor of Agriculture and Director of the Agricultural Department at the College, Reading, has been appointed Professor of Agriculture at the Durham College of Science, Newcastle, in succession to Prof. T. H. Middleton, M.Sc., who was recently elected to the Chair of Agriculture in the University of Cambridge.

THE REV. W. H. HUTTON, B.D., Fellow, Tutor, and Lecturer of St. John's College, Oxford, has been elected Bampton Lecturer for next year.

THE REV. W. S. MACGOWAN, M.A., LL.D., assistant master in the Modern Department of Cheltenham College, has been appointed Principal of St. Andrew's College, Grahamstown.

DR. ALFRED PLUMMER has resigned the posts of Master of University College, Durham, and Sub-Warden of Durham

University, in order to obtain greater leisure for his literary work; and the Rev. Henry Gee, D.D., F.S.A., has been appointed to succeed him.

\* \* \*  
MR. HERBERT STANLEY JEVONS, son of the late Prof. Stanley Jevons, has been appointed to a lectureship in mineralogy at the University of Sydney, in New South Wales, the same city where his father began life as assayer of the Mint.

\* \* \*  
MR. GRAHAM BALFOUR, M.A., Assistant Secretary of the Oxford Examinations Delegacy, has been appointed Director of Technical Instruction under the Staffordshire County Council, in succession to Prof. Thomas Turner, recently elected to the Chair of Metallurgy at Birmingham.

Literary  
Items. To meet the wants of travellers Mr. Unwin is publishing a specially handy "Tourist" edition of some volumes of his "Story of the Nations" series. "Venice," "Switzerland," and "Florence" have just appeared. The volumes are bound (after the fashion of Baedeker's Guides) in red cloth, with rounded corners and marbled edges, and the price is the same as that of the ordinary cloth edition.

\* \* \*  
THE new volume of "The Story of the Nations" series is a history of "Mediæval Rome," by Mr. William Miller, M.A., who wrote the able volume on "The Balkans." The period covered (1073-1600) embraces many subjects of deep interest and importance. Mr. Fisher Unwin is the publisher.

\* \* \*  
MR. ENEAS MACKAY, of Stirling, will soon issue "A History of the Grammar and other Burgh Schools, now the High School of Stirling, with notices of Schools and Education in the Burgh from the Twelfth to the Twentieth Century," by Mr. A. F. Hutchison, M.A., Rector of the High School, 1866-96. The list of contents shows that the work, while describing "a typical Scottish grammar school of the olden time," will prove a valuable contribution to the history of education in Scotland.

\* \* \*  
THE current number of the *Modern Language Quarterly* (Nutt) commences a new volume (V.) with vigorous and varied contents. Every teacher ought to study this ably conducted journal.

\* \* \*  
THE first *Engineering Magazine* yet issued by an English University has just made its appearance at the University of Birmingham. It is proposed to publish the magazine twice each term.

\* \* \*  
MESSRS. A. & C. BLACK have commenced to issue the "Encyclopædia Biblica" in 16 monthly parts (5s. net each). The first part was published in mid-April. Three volumes—Aalar to Ararat—have now been issued, and the fourth, which completes the work, is in the press.

\* \* \*  
AFTER a good twenty years' work as Tutor and Lecturer at Corpus Christi, Oxford, Mr. Arthur Sidgwick has decided to release himself from teaching, and to devote his energies more exclusively to literary work. He proposes, for one thing, to write the life of his lamented brother, Prof. Henry Sidgwick.

\* \* \*  
MR. ALFRED LENGNICK, of Berners Street, announces the early publication by Simrock (Berlin) of certain posthumous works of Brahms—"Elf Choral-Vorspiele für Orgel, Op. 122." The Hungarian pianist Herr Ernst von Dohnanyi heralds them as "of immense value not only as technical studies, but also as music." Brahms's library is

now in the possession of the Gesellschaft der Musikfreunde, Vienna, of which the eminent composer was for some time president.

THE REV. C. R. CARTER, M.A., Dean of Divinity General. and Home Bursar of Magdalen College, Oxford, is taking over the preparatory school "Cordwaller," near Maidenhead. A "double honours man," as well as a "double blue," he is still well remembered at Wellington. He is an enthusiastic gardener.

\* \* \*  
THE PRINCE OF WALES was installed as Chancellor of the University of Wales (May 9) at Carnarvon amid "colossal demonstration."

\* \* \*  
THE PRINCE OF WALES has accepted the invitation to be patron of the fund that is being raised in connexion with the scheme for the incorporation of University College in the University of London, and for the endowment and equipment of advanced education and research at the college.

\* \* \*  
MR. C. T. RITCHIE, M.P., the Home Secretary, has been adopted as Unionist candidate for the Lord Rectorship of Aberdeen University. Mr. Asquith is the Liberal candidate.

\* \* \*  
A PROPOSAL is mooted for the affiliation of Queen's College, Birmingham, to the University.

\* \* \*  
THE Council of the Jews' College has applied for affiliation of the College to the University of London as a School of Semitic Languages, in connexion with the proposed degrees in Oriental studies.

\* \* \*  
MR. ALFRED MOSELY, C.M.G., has settled (with President Butler of Columbia University) the provisional itinerary of his commission of inquiry into American methods of education in their bearing on commercial and industrial efficiency. The prospect of an autumn Session of Parliament renders the date of starting still uncertain.

\* \* \*  
THE Council of the City and Guilds of London Institute spent £33,041. 19s. 4d. for the promotion of technical education in the past year. This year it is proposed to spend £34,045, exclusive of the balance of the initial cost of the extension of the Central Technical College.

\* \* \*  
NOTICE is given in the *London Gazette* that a petition has been presented to His Majesty in Council by the University College, Liverpool, praying for the granting of a charter incorporating a University in Liverpool. And, His Majesty having referred the said petition to a committee of the Lords of the Council, notice is further given that all petitions for or against such grant should be sent to the Privy Council Office, on or before the first day of July next.

\* \* \*  
WE are interested to learn that there is a girl at St. Anne's Soho School that "has made over 3,500 punctual attendances consecutively." She is just fourteen; so that since she was five "she has never been absent or even late," a remarkable eight years' record, especially for central London.

\* \* \*  
THE Board of Education have received through the Foreign Office an intimation that the Council of the University of Paris have decided to publish annually henceforth in the month of April a programme of the University lectures that will be delivered in the academic year beginning in the following November. This plan has been adopted in order to enable foreign students that may desire to attend the lectures to make their arrangements conveniently in advance. The

programme of courses for the academic year 1902-1903 can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W.

\* \* \*
